Boarding houses are opened in every place that offers enjoyable relaxation, and many of the class of people, who in former years spent a part of their leisure with their friends in the free intercourse of the family which was gladly reciprocated, now find it easier to go to the various places of public resort, thus absolving themselves from any obligations as entertainers.

The influence of this change is not favorable to the development of the social instincts; there is fostered an independence that is best expressed in the phrase "Pay as you go, and be under no obligations" which may not be heard from the lips, but is felt in the action. The entertaining of a friend or acquaintance, whose presence may bring added sunshine to the family circle, and widen the scope of thought and interest in what is going on in the outside world, should be one of the pleasures of domestic life, and if the friend to whom the invitation is extended, brings no charm to increase the store of home joy, the desire to make the stay pleasant to the guest, may overflow in gladness and open the unreciprocal heart to take in the warmth that is so freely bestowed.

No family that lives comfortably, and has something saved at the end of the year, can afford to be without a guest chamber, though it be small as the little room on the wall which the prophet as he went that way found waiting his occupancy, and the scant furniture,—all that the loving hearts of the social pair could provide—was no bar to the restful comfort of the "holy man."

"Be not forgetful to entertain strangers, for thereby some have entertained angels unawares," and that other like exhortation, "Use hospitality," come down to us with apostolic sanction, and if there is a gladness in the entertainer, it is sure to communicate itself to every member of the family, and the guest, feeling the welcome so generously extended, looks forward with increasing tenderness and affection to the time when in the same overflowing measure these hospitalities may be reciprocated.

We need to cultivate the grace of receiving as well as of giving. The feeling that prompts to give, without reciprocity is not very far removed from the selfishness that will neither give nor receive. Our best life has its fullness in interchange, and while there are chosen spirits whose presence fulfills the desires of social intercourse, we are the better of every such opportunity shared with any one whose sympathy touches our own, without the magnetism of entire congeniality.

The heart that shuts itself up in the narrow shell of its own individuality becomes still narrower as the years wear on. We see the effect of this in the dropping out of old friendships and the isolation that follows, and as years increase the reaction upon the individual becomes more and more apparent, until the heart in its barrenness feeds upon itself to the destruction of every feeling of fellowship with its kind.

We owe it to that old age, for the proper enjoyment of which every one ought to provide, whether it is attained to or not, to lay up a good store of genial, unselfish, social capital, that we may draw upon without fear of exhaustion when other resources fail us. He who is our chief exemplification of the joys of pure friendship and of social commingling taught a gospel that if fully accepted and lived up to, would make our human life a perpetual fountain of the truest and purest enjoyment.

MARRIAGES.

JOHNSON—MARPLE.—Fourth month 25th, 1888, at the residence of the bride's parents, under the care of the Monthly Meeting of Friends, held at Green St., Edward K. Johnson, son of Charles and Margaret Johnson, and Lydia M., daughter of John T. and Martha T. Marple, all of Frankford, Philadelphia.

WILLIAMS—FELL.—In Philadelphia, Fourth month 19, 1888, by Friends' ceremony, in the presence of the Mayor, Joseph P. Williams and Mary E., daughter of Samuel L. and R. Lizzie Fell, of Wilmington, Delaware.

DEATHS.

BLAKER.—On the 8th of Tenth month, 1886, at his home in Brighton, Patrocles Blaker, aged 86; a member of Rochester Monthly Meeting. He was born in Bucks county, Penn.

BLAKER.—On Third day of Fourth month, 1886, at Macedon Centre, N. Y., Elizabeth Blaker, daughter of Patrocles and Maria Blaker, aged 52; a member of Rochester Monthly Meeting.

BLAKER.—On Fourth-day, the 4th of Fourth month, 1888, at Macedon Centre, N. Y., Maria Blaker, widow of Patrocles Blaker, aged 82. She was born in Salem county, N. J., Second month 27th, 1806.

COOK.—Fourth month 14th, of consumption, at the residence of her son-in-law, James W. Davis, near Columbus, Ohio, Ellen B. Cook, aged 67 years; a member of Miami Monthly Meeting. Funeral from Friends' Meeting house, Waynesville, Ohio.

DUNLAP.—At her residence, Macedon Centre, N. Y., Sarah Dunlap, wife of the late George Dunlap, on Fourth month 1st, 1888, aged 91 years. She was the last but one of the large family of Isaac and Elizabeth Doty, of Dutchess Co., N. Y. She is survived by her only sister Susan Ann Carpenter, of Rochester, N. Y., who is the last and 13th child, and is in the 80th year of her age. Amy Ann Cornell, deceased, was 95 years old at her death. Isaac and Elizabeth Doty were both over eighty at the time of their decease. She belonged to the line of the first and earliest Friends in this country. For a great many years she was an Elder in Farmington Monthly Meeting and previous to this in Scipio Monthly Meeting. She was very widely known and her christian influence and power have been exerted for good on several generations who will rise up and call her blessed. She was a warm friend of the young people of the village and seminary, and her motherly counsel and advice were often sought and freely given. She was really a friend in need to the old and young by her warm, generous sympathies. She thus made the way easier and brighter to many souls. We all loved Aunt Sarah, and her loss will be mourned by her many friends and relatives, who have known her tender care and love in sickness and in health.

She was a most conscientious and regular attender of Friends' meetings from her earliest childhood, and her character was marked by strict fidelity to truth and the principles of Friends.

Her declining health and strength prevented her going to meeting for some little time past, but her love and interest did not abate, as she would entertain Friends at her home and enjoyed monthly, quarterly, and yearly meeting company to the last. Every one was sure of a warm and hearty welcome at her fireside, and she always entertained to the fullness of her capacity. She retained her mental faculties to the last, and has left a rich legacy to her friends in her example of a noble, christian, holy life in conformity to the usages of Friends. *

LEWIS.—Suddenly, 25th of Fourth month, 1888, Joseph Lewis, Jr., of Newtown Square, Delaware Co., Pa., aged 53.

MURDOCH.—Fourth month 27, 1888, William Butterworth, son of James E. (Jr.) and Susan B. Murdoch, aged 27 years, 5 months; formerly of Ohio; a member of the Monthly Meeting of Philadelphia.

PRESTON.—In Philadelphia, Fourth month 17, 1888, William B. Preston, M. D., in his 28th year; a grandson of the late William and Mary Lundy Barnard. Interment, Kennett Square, Pa.

PENROSE.—Fourth month 26, 1888, at the residence of her son-in-law, Edward Thomas, Torresdale, Pa., Rebecca A., widow of Morris Penrose, in her 84th year; a member of the Monthly Meeting of Friends of Philadelphia.

SEAMAN.—At his residence, Woodbury, Orange County, N. J., of pneumonia, Fourth month 25th, 1888., Jacob Seaman, in the 85th year of his age. An Elder of Cornwall Monthly Meeting of Friends.

VAN CISE.—In Mt. Pleasant, Iowa, Third month 15, 1888, Dr. Edwin G. Van Cise, aged 78 years.

The Mt. Pleasant *Journal*, in a sketch of his career mentions that he was born in Adams County, Pa., Second month 25, 1810. Bereft of his father in infancy, he was reared in the family of his mother. His early life was a struggle with poverty. For a time he was apprenticed to a shoemaker, after which he taught school, studying and reading medical books at night. In 1835 he graduated as a physician, and practised in Adams county, and then removed to Mt. Pleasant. One who knew him well and intimately has said: "Dr. Van Cise was a man of very marked character. He was fond of the study and practice of his profession and found his highest enjoyment in the amelioration of human suffering. The physician, perhaps, more than any other does a large amount of unremunerated work, and this was his experience. But he found his reward in the healing of his patients and a sense of duty done. He was early led to form deep religious convictions and in the dawn of manhood united with the Society of Friends, retaining his membership to the close of his life and taking an active interest in the work of this denomination. He was never sectarian, however, in his views or feelings, but entertained a lively sympathy for all religious effort under whatever name.

WHITE.—Near Mullica Hill, Gloucester county, N.J., on Fourth month 5th, 1888, James H. White, aged 72 years.

WILLETS.—At their residence, Manhasset, Long Island, Third month 31st, 1888, Esther Willets, in her 80th year; and

Fourth month 3d, 1888, Henry T. Willets, in his 77th year; members of Westbury Monthly Meeting.

WILLIAMS.—Suddenly, at Ocean Port, N. J., Fourth month 22d, 1888; Eliza Gillingham, wife of Thomas T. Williams, in her 75th year; a valued member and elder of Shrewsbury Monthly Meeting. A devoted wife and true friend, her loss will be deeply felt in her neighborhood. Her generous hospitality and unvarying cheerfulness, endeared her to a large circle of friends. She visited the widow and fatherless in their affliction, letting not her right hand know what her left hand did. Doing her work while it was yet day, we doubt not that the Lord at his coming found her waiting. * *

LETTERS FROM EUROPE.—XX. THE RULERS OF GERMANY.

BRUSSELS, BELGIUM, MARCH 30.

HAD my last letter been dated a few days later I might have added two striking illustrations of militarism: the nonagenarian Emperor of Germany in his coffin dressed in his uniform and wrapped in his old campaigning cloak, and Prince Bismarck in the uniform of a cavalry officer, with gauntlets up to his elbows, spurs on his heels, sabre by his side and helmet in his hand announcing to the parliament the accession of Frederic III.; much, we may suppose, as an adjutant would read to the troops an order from a newly appointed general taking the command. In fact, the civil administration of Prussia, (the King of which is Emperor of Germany, as if the Governor of New York were *ex-officio* President of the United States), is upon a military model. Many good measures are required by law, which the people would never submit to voluntarily: for example, every laboring man is compelled to lay by a small part of his wages, enough to give him a support when disabled by accident or old age A vigorous German writer, Th. Von Bunsen says, approvingly, that in Germany "the blood, liberty, and money of the subject are held rather cheap," and this, notwithstanding that the people enjoy universal suffrage, and are represented in a legislative assembly. But the constitution of Prussia is practically a strange anomaly, and the King who reigns by divine right and therefore puts the crown on his own head, has, during the present reign, carried into effect measures

which he had asked the legislature to sanction and which had been persistently refused. This tyranny for many years made him hateful to his people, but all was forgiven and forgotten in the glory and expansion and plunder acquired under his rule, and he died adored by the great majority. He was not the son of the late King Frederic William IV., but his brother, and was from his youth obnoxious to the people on account of his known arbitrary principles, so that during the constitutional agitation of 1848 it was found that his presence was increasing the odium of the royal family and for their sakes he left the country. Of course he returned when the reaction set in, and in 1858, when his brother, who was always silly, became imbecile, he was made regent, and on the death of his brother in 1861 without an heir, became king with title of William III. He was indeed only the instrument of his great minister, Prince Bismarck, and his iron firmness fitted him to work out that statesman's daring designs. This is stated in so many words by the present Emperor in a grateful letter which on his accession he addressed to the Prince. "You are [says he] the true and courageous counsellor who gave to his policy its aim and form, and secured its complete fulfillment." What then was left for the monarch to do?

The present German empire is the creation of Prince Bismarck; but before creating it he had to make Prussia great and predominant. The German States at one time consisted of several score of small, independent bodies, lying like the asteroids in our solar system, between vast Jupiter of Russia on one side and the fiery Mars of France on the other. By process of deglutition, one swallowing another, they became gradually reduced to about two dozen in 1870. From the time of Charlemagne the populations of these States were so homogeneous that they always had some common tie of government which was never close enough to prevent almost constant wars. They had an emperor who was elective until the dignity was made hereditary in the house of Austria, the Hapsburgs. This empire was destroyed by Napoleon I. The Hapsburgs exchanged the title of Emperor of Germany for that of Emperor of Austria. The larger German States separated from the smaller which were formed into a confederation under Napoleon's protection. On his downfall the Emperor of Austria without changing his title regained the leadership of the Germanic body, again united in a Band or Confederation like ours during and for a time after the Revolutionary War, the common interest being looked after by a congress or council of delegates deputed by the several sovereigns, and all nominally coëqual. But really Austria was preponderant, if not supreme, by virtue of her superior power, the imperial dignity of her sovereign and his presidency of the confederation.

It was as Prussian delegate to this Congress that Bismarck first entered upon his policy and displayed his qualities. He had a high idea of the capacity of Prussia to take a leading part in Germany, and at least to be the equal of Austria, and he asserted this equality in a singular manner. Germans smoke everywhere, and the delegates would have conducted the deliberations of the Congress in a cloud, but that the smaller fry were overawed by the Austrian dignitary, who alone was allowed to perfume the atmosphere with the odor of tobacco. What then was the astonishment of the assembled delegates when following the example of the Austrian, Bismarck lighted his cigar and proceeded calmly to blow a cloud a little bigger if anything than that of the imperial delegate. The small fry looked at Bismarck as the barbarians did at St. Paul during his encounter with the serpent, but seeing that he was neither swallowed up nor stricken dead, they took courage, lighted their cigars, also, and with vigorous puffs the coëquality of the sovereign States was vindicated and restored. From that hour Bismarck's reputation for nerve was established, and justly, for he had dared what no other one dared and succeeded.

The next venture in the line of this policy was not so fortunate; quite the reverse. The French revolution of 1848 sent a wave all over Europe. It was so strong in Germany that the then royalty of Prussia floated like a cork on the surface. But the tide receded and left the royalty again on firm land, and perhaps a little better off than before. This did not suit Austria and she made certain demands which not being agreeable to Prussia led to a war between the two great powers. Armies marched toward each other but before they met the courage of the Prussian prime minister gave way—Mauteuffel, not Bismarck. He gave up everything and at Olmütz concluded a humiliating and disadvantageous treaty, leaving Austria supreme in Germany. This was in 1850, in the time of King Federick William IV. But under Bismarck's influence the King now set himself to the task of improving his army, and when William III. came to the throne the work was carried on with renewed energy, to such an extent, indeed, that the legislature (Landtag, it is called), refused to go with the King or pass the necessary laws. He thereupon dissolved the assembly and held new elections; but these did not change the complexion of things and after trying the experiment several times the King abandoned the attempt to convert the people, and did as he pleased without their concurrence. And for so doing he was heartily detested until new events happened to win him a popularity which infinitely exceeded the hatred with which he had been regarded.

In 1863 commenced a series of profitable wars. The duchies of Schleswig and Holstein had long been held by the kings of Denmark. In 1863, on the death of the then King, the crown of Denmark went to a collateral branch, and a certain duke of Augustenburg claimed that the duchies did not go with it but rightfully came to him. The population of one of the duchies was German, that of the other somewhat so, and that was reason enough for the interposition of Germany. Austria and Prussia supported the claims of the duke, and sent an army against Denmark, beat her of course, and the King ceded the duchies to his conquerors, not to the duke whose quarrel they had taken up. After the fight was over, the Germans examined into the merits of it; found that really the Duke of Augustenburg had no title to the duchies, which really had belonged to the King

of Denmark, and that his cession gave the Germans a valid and wide feasible title. This unexpected piece of good fortune was the cause of a quarrel between Prussia and Austria, which resulted in a war in 1866, and a campaign of, I think, seven days, ending in a crushing defeat of Austria at Sadorra. Whereupon, by treaty, Austria retired from Germany never to show her face there again, and Prussia at last was at the head of the Germanic body. Of course, she became exclusive owner of the duchies, and moreover came in for another incidental piece of good luck. The King of Hanover—Queen Victoria's uncle—was, or [the same thing] was said to be, bound to assist the King of Prussia in his wars, but he refused to fight against Austria. Wherefore, when the war was over, Prussia sent him adrift and annexed his kingdom. So on the whole, Prussia's benevolent efforts to right the Duke of Augustenburg, mistaken though they were, were fully well rewarded. If it should occur to any one to think that when the mistake was discovered the duchies ought to have been restored to Denmark, I would remind him that at the Geneva arbitration the United States claimed and recovered from Great Britain fifteen million dollars as the amount of damages done by the Alabama, and when it was, on investigation, discovered that the true amount was only about a third of the sum, the surplus was not returned to England but put in our treasury. We had a similar experience with China, but the surplus being only about a million the national conscience, after many struggles, succeeded in disgorging it; but the ten millions it could never throw off.

Prince Bismarck's hand was plainly visible in the Danish, Austrian, and Hanoverian business. In the next, the French affair, it was not so manifest but all the more strongly believed to have been active. He is credited with having tempted Napoleon III., in 1870, to attack Prussia. All Germany marched under the Prussian flag, crushed France, and made the Prussian King William, Emperor of United Germany,—united as it never had been before. For whereas the former confederacy was, like our first Union, composed of independent states, the new empire, like our present union, is a veritable nation, represented by a popular assembly elected by universal suffrage.

The dislike entertained for the King by his people began to subside when the era of victory set in and after the French Conquest his popularity was without bounds. Nothing could be denied to a king who had won for himself so much glory, territory, and money. He became so strong in the affection of the people that they gladly passed laws to expel socialists without trial and suppress newspapers that said disagreeable things. They voted an army of 4,360,000 men and when within a few weeks the King wanted to equip 700,000 men and asked authority to do so and to borrow $70,000,000 for expense thereof, only three members of an assembly elected by universal suffrage were found hardy enough to vote against it. Of course they have been overwhelmed with abuse; and yet it would seem they might be pardoned for thinking it unnecessary to increase an army which already far outnumbered that which had with perfect ease vanquished the two greatest military powers of Europe.

The debate on this bill was remarkable for a speech by Prince Bismarck. It was announced a considerable time in advance that he would speak on the 6th of February, and shortly before the appointed day, he made public a treaty concluded between Prussia and Austria as long ago as 1879 and hitherto kept secret, the sole provision of which was that in the event of an attack by Russia upon either party the other would make common cause with the attacked party. Bismarck's speech was devoted to an explanation of the circumstances which led to the conclusion of this treaty. It is a very long speech—twenty-eight pages in close German text and forty-eight in looser French, but the substance of it is this:

Prussia owed a debt of gratitude to Russia for aiding her in putting down Napoleon I. in 1813, and recovering the territory he had torn from her. Prussia then for the next sixty odd years loyally adhered to Russia. She resisted all the efforts of the western powers to induce her to take part against Russia in the various wars in which the latter became involved. And when on the termination of the Balkan war, in 1877, a congress was held at Berlin to settle terms of peace, Bismarck, who presided, was of most essential service in softening the harsh terms demanded by the western powers. But Russia on her part never showed the least consideration for Prussia. At Olmütz the Czar left her at the mercy of Austria. In 1843 he was offended because Prussia would not join him against the western powers. For a long time he insisted that Prussia should break with Austria and adhere to Russia, and after the Berlin congress this urgent demand was accompanied by threats of war. It was then, said Bismarck, he became convinced that no degree of subserviency to Russia would prevent collision; and deliberately making the option which Russia had long been forcing upon him he preferred Austria for an ally and concluded the secret treaty. He declares that Austria is the natural friend and indispensable ally of Prussia, and the treaty is permanent because founded on a community of interests. No other can or ought to stand. He dilates on the necessity that Prussia, having three open frontiers should be strong—stronger than any other power in Europe, and declares she is so. Other nations have as many soldiers and as brave, but none have the officers or the material to make them. In the past Prussia has truckled to other powers. She will never do so again. She will be independent for she need now fear nothing on earth—nothing but God. But Prussia will never begin an aggressive war. The sentiment of the country will not sanction it, and the King cannot afford to disregard the sentiment of the country. Besides Germany courts nothing from other countries. All she desires is to develop her industries in peace. Her policy will be peace, and for peace she is strong enough to make even sacrifices if necessary.

This speech evoked unbounded applause and one of the authorized editions of it before me, the French

edition, prepared for the information of all Europe, has an appendix containing the declarations made by all the leaders of all the parties and subsection of parties giving it cordial approval. This will serve to give notice to all how thoroughly united is the German people and how determined they are to strengthen the hands of the government.

The recent events seem to confirm Bismarck in power for the rest of his life. He is trusted and relied on by the present Emperor, whose condition of health and approaching dissolution necessarily indispose him to change. And the heir apparent, who already shares in the business of government in order to relieve his father, is known to be devotedly attached to the Chancellor. The papers of to-day say that at a late council the Chancellor made an important statement on the subject of his foreign policy, and few believe that the magnificent military machine which he has been for nearly thirty years building up will be allowed to rust in idleness. In his speech there are some significant paragraphs about making Germany's voice heard in Europe, about the right to abrogation of treaties when circumstances change, about a purely defensive policy sometimes necessitating an attack. Besides, men are but children of a larger growth, and who ever knew a boy with a fine gun who failed to find something to shoot?

I have alluded to the health of the Emperor. Your readers all probably know that he has a disease of the larynx similar to that which killed General Grant. Breathing became so difficult that suffocation could be avoided only by making a hole in the windpipe below the swelling and inserting a tube through which he now breathes. By closing this with his fingers sufficient air can be forced through the larynx to produce a low tone or whisper, but he generally writes what he wishes to communicate. His German physicians long ago pronounced the disease cancer, and advised the immediate extirpation of the larynx as giving the only chance,—one in fifty perhaps,—of preventing an early fatal termination. His wife insisted on first consulting an English physician, Sir Morell Mackenzie, who after examination doubted the existence of cancer and advised against the operation. It is easy to imagine the storm that raged in Germany against the foreigner who dared to resist the united voices of the native physicians, and deprive their own prince of his slender chance of life, and against his English wife (she is the first born child of Queen Victoria) who upheld the English physician. But it seems that the result vindicates his advice. The prince has lived to be Emperor and seems stronger than he was months ago. But the unpopularity of his wife seems to grow. The papers publicly denounce the cabal which seeks to injure her in the esteem of her people by falsehood and calumny, amounting to little less than treason, and they charged that money has been freely used in disseminating those libels. So effective were these attacks that it is said to be certain that had her husband died before he became Emperor she would have gone to England to live.

While the Empress has in the past incurred some not unnatural odium by a too obvious preference for English ways and manners,it seems very certain that political causes are at the bottom of the movement against her; it existed before her husband's illness, and the medical question was simply availed of to aid it. The imperial pair are united in affection and opinion. They are sincerely desirous of peace, and the alleviation of burdens on the people. But as is perhaps natural, the young heir is of a warmer temper and more ambitious views, and a powerful party of the same sentiment desire to come into power with him. It is they who seek to render Germany uncomfortable to his mother,and to remove her from a position where her influence would be antagonistic to their policy.

JOHN D. MCPHERSON.

For Friends' Intelligencer and Journal.

EGYPT, THE OBELISKS, AND PYRAMIDS.

THE obelisk and pyramids of Egypt rank amongst the most ancient and renowned monuments of the world. King Thothmes the Third, in glory to himself and honor to his god, raised the Egyptian obelisks at Heliopolis. He was Egypt's greatest king. There were as many as thirty of these obelisks at one time standing in this renowned city. One only, of this number erected there, is still standing. And it is the sole object which marks the spot where once stood the three ancient cities of the world: the city of On described by Moses in the book of Genesis; the "City of the Sun," containing the Temple of the Sun and the university in which Moses was educated; and the city of Heliopolis in which Joseph the patriarch, when he was governor over all Egypt, was made known to his brethren. These three cities have risen and fallen on the same site, and wonderful tales of human life are told, which occurred here 4,000 years ago. Here, also, took place some of the great events in the world's history. The one ancient obelisk still standing is one of the most interesting objects in all Egypt. For it was not only standing here, but was *old*, when the patriarch Abraham came down to Egypt. Josephus, the historian, says that the city of On was given for a residence to the family of the patriarch Jacob on their first arrival in Egypt.

King Thothmes the Third was of the age in which Moses was born. He was one of the great conquerors ranking with Alexander the Great, the Cæsars, and Napoleon. The Roman Empire took as many as fifteen of these obelisks from Egypt, and twelve now remain in Italy. They were doubtless familiar objects to the patriarchs and prophets of old: Abraham, Moses, and Joseph, and many others have looked upon them, and Solon and Plato and other great philosophers, have learned wisdom under their shadow. The real "Cleopatra's Needle" is now standing in Central Park, New York City. It was one of the group of these thirty obelisks of ancient times, which stood in Heliopolis. It was raised 1,500 years before Christ was born; and twenty-two years after its removal to Alexandria did his birth occur. Marvelous is it in antiquity and wonderful in history. It was my great privilege to see it standing in

Alexandria by the sea, before its removal to New York by the engineering skill and talent of Commander Gorring, and the public spirit and generosity of one of New York's wealthiest citizens, William H. Vanderbuilt. There is probably no object anywhere of greater historic interest in this country. One of this group of obelisks of Heliopolis, went to Ninevah, the capital of Assyria; one, to Paris, in France; and one to Constaninople, in Turkey, the one erected, and now standing, on the bank of the Thames in London, was companion to Cleopatra's Needle in Alexandria. It was removed to its present location not many years since. The others are scattered over Europe at different places.

Heliopolis was situated in the Nile valley, about ten miles above Cairo. The Egyptian royal gardens and the Virgin's Tree, a very ancient sycamore under the shadow of which, it is said, the holy family rested,—Joseph, Mary, and the child Jesus,—are situated not far from here. It was at Heliopolis where the touching incident recorded in the Scriptures took place, the meeting of Joseph and his father Jacob with his family, who had come down to Egypt for corn; one of the most pathetic incidents in all Scripture history.

The art, culture, religion, and political organization of Egypt are carried back to the third dynasty, 4,450 years before Christ, which would push it into the far distant past, more than 6,000 years. Since the key to the hieroglyphs was discovered by Champollion, says Bayard Taylor, no scholar has thrown such a broad and clear light upon Egyptian life and history as Marietta Bey. To our esteemed friend, Judge B., the chosen representative of the United States before the high court of nations at Alexandria, whose acquaintance we formed on the steamer in crossing the Mediterranean, we are indebted for much valuable information concerning the Orient. The court dress of the different nations of the world was here to be seen in all its richness and singularity. Alexandria, became, under the Cæsars, the second city of the Roman Empire, celebrated for its wealth, commerce, art, learning, luxury, and refinement. It is recorded in history that St. Mark preached in Alexandria. Alexander the Great flourished about 332 B. C. In its most populous times, the city contained about 600,000 inhabitants. Mehemet Ali, Egypt's greatest modern ruler and reformer, rose into power about A. D. 1804. He is to modern Egypt what our first President, George Washington, is to the United States. On entering the Mohammedan mosque of Said Pasha in Alexandria, built on the site of the tomb of Alexander the Great, to see the tombs of the royal family, in obedience to Mohammedan custom and law, to put the shoes from off our feet, and enter the mosque either in stockings or slippers, that we might not defile the temple. The floor of the mosque was partly covered either with carpets or Turkish rugs, and the royal tombs had placed over them different colored rugs of great richness and value, in number proportioned to the rank of the member of the family.

It was our pleasure and privilege to dine and spend an evening with our friends, Judge B—— and his accomplished wife, in Alexandria, and thus an opportunity was offered of becoming somewhat acquainted with the modern customs and habits of Oriental social life in Egypt. We visited the catacombs of the Greek Church, supposed to have been erected about the third century. It has long been a ruin. Some portions of modern Alexandria are quite Parisian. The streets in some portions of the city are paved with square blocks of lava taken from Mt. Vesuvius, which hardens like granite when exposed to the air.

To visit the Roseltine royal palace of the Khedive requires some form and no little red tape in obtaining from our American Consul the necessary papers for admission; and when obtained, they have to be verified and endorsed by the governor of lower Egypt. The two European carriages of our party rolled over the streets of the city to the Governor's mansion and offices with a fleet Arab dressed as a Turk in flowing robe and elevated wand, running ahead of each carriage, and a runner boy, similarly dressed, following after. The choice fell upon the writer to take an interpreter and go in to see the Governor and obtain from him his royal signature and seal to our papers of admission. I found him seated at one end of a large luxurious divan, cross-legged, and propped up with pillows, by a raised window, with the breezes coming in from the Mediterranean sea most refreshingly. He bade me take a seat at his side on the divan, which I did; but he did not request that I should sit with legs crossed. I now endeavored to interest him, telling him about the extent of my country, its vast resources, its mineral and agricultural wealth, its form of government by States and that these were all consolidated in one grand government at Washington, forming the United States of America; and that there was one great ruler over the whole, the President of the United States. In all of this he seemed interested and said, yes, he had heard something of the kind before. But when I added that the late great head of the nation, General Grant, (who was then making a journey around the world), during the civil war of the Rebellion in the United States, was our greatest soldier and most successful general, he could contain himself no longer and burst out exclaiming "Was he? was he?" That was evidently the Egyptian Governor's ideal of greatness. He very cheerfully signed the papers which I had brought with me, affixing the great seal of state to his signature, and I bowed myself from his presence and joining my party in the carriages, we were soon off to the royal palace of the Khedive. Our papers and credentials being found correct and sufficient we were duly admitted. In this palace we found Oriental splendor and magnificence in all their perfection. It was almost painful for the eye to look upon. The floor of the great hall of ambassadors and dignitaries was of polished ebony. Would that the rich treasures of this costly establishment might be devoted to the relief and benefit of the suffering poor and down-trodden of earth!

Tropical plants and fruits and flowers abound in this country in great profusion, and birds of the most brilliant plumage are to be seen almost everywhere. An elegant bronze equestrian statue of Mehemet Ali

is erected in the public park of Alexandria in the central part of the city opposite the Hotel d' Europe On making a first entrance into the city of Alexandria one comes to a full realization of the Orient; and everything how changed! How very different are the life, the dress, the language, the customs, the habits, and the manners of the people! It seems almost marvelous! The tables of the money-changers are to be seen on some of the side-walks of the city, and generally near to the shops. Pompey's pillar is situated a short distance from the present city and without the gates. There appeared to be two walls and two moats at the place where we reëntered the city. Our dragoman was Calepha and the porter of the hotel was Hassan, both of whom were reliable and trustworthy. We took our meals on the deck of the steamer in passing from Alexandria to Port Said, the heat was so great.

On the Island of Roda, situated in the river Nile, not far distant from Cairo, is shown the traditional spot where the Lord's servant Moses, when an infant, was found among the bulrushes by Pharaoh's daughter. It is at this place, also, where the *Nileometer* is to be seen—an instrument by which the height of this wonderful river may be measured, and the crops of the coming season may be foretold and determined with considerable accuracy months in advance.

New York. THOMAS FOULKE.

For Friends' Intelligencer and Journal.

NOTES BY THE WAY.

I CALLED, not long ago, on William Still, and we spoke of his book, "The Underground Railroad."

He has been one of the most successful colored business men in this city. He told me that on that day, he had received three applications for agencies to sell his book; and that they were from Louisiana, Texas, and Georgia.

It is natural that a work of this kind should commend itself to the generation of colored people now growing up, as having been written and compiled by one of themselves, and as being a picture of what their immediate ancestors underwent.

William Still handed me a letter from a young colored woman, a missionary in the Congo Valley, in Africa. She was a pupil, he said, at Shaw University, North Carolina, where she took the highest honors. She is sent out by the Baptist Missionary Association. We also spoke of the old Anti-Slavery Society of this city, founded before Wm. Lloyd Garrison began his agitation for immediate emancipation. Benj. Franklin was the first president. This society is still in existence, as one of its aims was "improving the condition of the African race."

On a recent occasion, when disposing of funds in various directions, the Society gave $100 to the Storer College at Harper's Ferry, which college was founded by a donation of ten thousand dollars from a philanthropist of that name. This brought up some conversation about Harper's Ferry, and William Still said that on a visit last 6th month, he was delighted to see the wonderful change which has taken place there in twenty years. He says that when the white teachers went there to found the school, they could not find a hotel or a white family that would take them in to board. Now the head of the college, President Brackett, is one of the most respected citizens of the place, being a member of the Town Council, and receiving the votes of Democrats, Republicans, and Prohibitionists.

When at William Still's house, I met a colored man, very gentlemanly in appearance, and was told that he is a lawyer, and named Theodore Minton. He was formerly a clerk in one of the departments at Washington.

To return to William Still: his parents were originally slaves, who settled in New Jersey, where his father became a farmer and bought land. Levin Still, the father, wore the Friends' garb and used "the plain language," although he never became a member of our Society. He lived at some distance from the meeting-house, but Friends often notified him when traveling strangers were to be present.

Although almost without schooling in his childhood, Wm. Still has sold about 15,000 copies of his large work "The Underground Railroad."

His distinguishing characteristics appear to have been thrift, integrity, and love of learning. He is an elder in the Central Presbyterian Church, (colored), on Lombard St. below Ninth, and in 1885 he was sent by the Presbytery of Philadelphia, (white), as a delegate to the General Assembly of the Presbyterian Church at Cincinnati. He is also appointed alternate delegate to the great Centennial meeting of the General Assembly to be held in this city in the Fifth month.

While some portions of his volume were written by other hands, yet the narratives of many fugitive slaves were preserved by himself when he was a member of the Vigilance Committee. These narratives he had to keep carefully secreted.

William Still has been successful in business. When he came, a young man, to this city, he was quite poor. After being in other occupations, he obtained a place in the Anti-Slavery office, where he remained for fourteen years. He dealt in stoves, and entered into the coal business. When the camp of colored soldiers lay at Chelten Hills, (about 8 miles from the centre of the city), William held the place of post suttler. He now has a coal yard on Washington Avenue and owns considerable real estate.

* * *

Not a great while ago I was in John Wanamaker's store, and saw one of the young saleswomen with the white ribbon temperance badge. She told me that many in the store wore it, including John Wanamaker, himself. For many years he has been greatly interested in Bethany Sunday-school, (Presbyterian.) The young woman added that in Bethany Sunday-school over 2,000 of the 3,000 members belong to the "White Ribbon army." "It is remarkable," she said, "what a force of young men there are in the army." P. E. GIBBONS.

"THE longer I live," said an eminent divine, "the more I think religion to consist in candor, kindness forbearance, hoping and believing for the best.

For Friends' Intelligencer and Journal.

POINTS OF INTEREST ON PENSACOLA BAY.

On the 18th of Fourth month a small company of us started for a pleasure trip on the bay of Pensacola. Whilst waiting for the boat to get up steam, our attention was called to stone lying on the wharf near by, which had been brought as ballast by the numerous vessels that come to this port for lumber. Beautiful bright quartz, and a grey stone, which we were told had been brought from the neighborhood of the Mediterranean, were conspicuous. A gentleman on board informed us that in Mexico the women use the last mentioned for "wash-boards" reversing tho order, by rubbing the clothes with the stone. Many vessels were gathered in the offing, some bent on a day's sailing; others, of a larger size, were busy taking on board their several cargoes, one, a large, vessel from Scotland, named the *Glencairn*, another the *Cardiff* from Portugal, whilst German and Italian, with unpronounceable names, were on all sides of us as we steamed out on the bay.

The first point of interest touched was the "Navy Yard," situated about 9 miles below the city of Pensacola. The water at the wharf is about 100ft. deep, so that vessels of the largest size have no difficulty in landing here. A diving bell on the left, and a battery of 21 guns on the shore to the right are plainly seen from our deck. The buildings which have stood for many years are substantial and extensive. The Navy Yard is surrounded by stone walls which separate the grounds from the villages of Woolsey and Warrington, one on either side; the officers stationed at the Yard, have their residences at these places, which are noted for the cultivation of rare and beautiful plants. We understood that the "dry-docks" which we passed cost our government $200,000. The beach sand shone with great brilliancy in the noonday sun, and looked not unlike snow among the grass, as we approached the old Spanish fort Barrancas, a reminder of the first settlers of Florida. All who landed came aboard again with great branches of wild flowers, conspicuous among them was the many colored Phlox, the blossoms of which are larger than our northern species. The "Tidal Wave" was pointed out as we came nearer the Gulf of Mexico, evidenced by a line of what appeared like surf in the middle of the bay. Between Barrancas and Fort Pickens, the water was rough; a Lighthouse opposite the entrance to the harbor now became visible. Fort Pickens is situated on Santa Rosa Island, and as it is here where Geronimo and his tribe live, we of course, landed to see how they fare. The old chief was the first to greet us. Imagine a stout, full-faced man, with a broad smile, dressed in a pink shirt, blue vest and white pants, selling shells, for two bits, (a quarter.) A gentleman present informed us that Geronimo had $200 in silver, with which he proposes starting a bank after he gets back to his home. We were shown the quarters occupied by the women and children; good bedsteads and mattresses, and everything of comfort seemed to be provided. They all looked well-fed, and were eager to turn a penny. The women were even uglier than the men; their dark copper-colored faces seemed broader than long; and they, as well as the old chief had their long black hair hanging on their shoulders. We bought a couple of shells with Geronimo's name, printed by himself, as we were assured by one of the officers of the fort.

As we were not interested in things pertaining to warfare, we returned to the steamer and at a distance of thirteen miles, came in full view of the Northern Atlantic Squardron comprising the *Atlanta*, the *Ossipee*, the *Yantic*, the *Richmond*, and the *Galena*, just at that time coming into view; it was a new and beautiful sight for us, to see the signals from the Flag-ship *Richmond*, Admiral Luce commanding, and the latest arrived vessel. The Flag-ship had not been in these waters since the bombardment of Fort McRea, in 1861. Fort McRea is situated at the mouth of Pensacola harbor. The dredging machine, had been put to work on the sand-bar, and part of the ruins of the old Fort were removed to make the harbor wider, and now vessels of the greatest draught can come up. We were told that at Mobile these vessels have to be towed forty miles, and at New Orleans 100 miles. Pensacola bay is three miles wide at its widest, and one at its narrowest part.

As we were guests on the boat, (one of the owners having kindly extended us an invitation), we had an opportunity seldom afforded of going from point to point and stopping at the various places of interest. Near Magnolia Bluff all who wished went on board the ship *Atlanta*, which was built at Roach's shipyard, Chester, Penna. The quiet, peaceful employment of the sailors, was in strange contrast with the purpose for which the vessel was constructed. One of the men was sitting on the deck with several hand sewing machines around him, on one of which he was operating with great speed. The garment seemed to go together in less time than I ever remembered having seen with the regulation machine; another was sewing braid on a coat, the work being beautifully done by hand. The most of the party were asking all sorts of questions about the vessel, but the thought of what those great guns were built for made me feel so sad that I could not take the same interest, although the order, and cleanliness, and beauty of the vessel surpassed anything I had ever seen. The majority of the men belonging to this vessel, as well as those of the rest of the Squadron, have been in camp at Magnolia Bluff about four miles from Pensacola. As we had no desire to visit this place, the boat stopped at Pensacola. Here our party left it, having had a most delightful day which will long be remembered.

C. A. Kennedy.

Pensacola, Florida.

God alone can cure the selfish of narrowness of heart. The greatest and hardest lesson to learn and understand is that the Christian must do God's work, not his own work. "Christ's work was all of it utterly unselfish," and it is the example of the Son —patient and unmurmuring—that the Christian shall emulate.

There is no other recourse of refuge from God than in him.—*Persian.*

SWARTHMORE NOTES.

—Elizabeth E. Hart, of Philadelphia, a member of the Board of Managers, and Eli M. Lamb, Chairman of the Instruction Committee of the Board, attended the meeting on First-day morning.

—In connection with the First-day school exercises, the President spoke of "Evangelical Churches," and explained why a branch of the "Young Men's Christian Association" would not be in place among the students of Swarthmore College.

—The Annual planting of a class tree, (class of '90), took place upon the college grounds on the afternoon of Arbor Day. It has been decided that the class trees are to be planted hereafter, as they are usualy elsewhere, at the close of the Senior year.

—Allesandria Trygg, a young woman from Finland, teacher of Manual Training in one of their schools; and Rebecca Moore, of London, after attending the Woman's International Council at Washington, visited Swarthmore, to witness for themselves, the working of coëducation. They spent most of a day, visiting many classes, and expressed themselves as much pleased with their visit.

COMMUNICATIONS.

THE EVANS FAMILY OF WAYNESVILLE.

Editors INTELLIGENCER AND JOURNAL:

In your issue of Fourth month 14, "R. H.," in his mention of the Waynesville Evanses, gives (with a question mark) Clayton as a brother to Thomas, David, and Jason Evans. Miami Monthly Meeting's record of births and deaths shows the children of Benjamin and Hannah Evans to have been Thomas, David, Elizabeth, (married Stephen Cook), Owen, George, Sarah, Mary, (married Richard Pedrick), and Jason.

The parents and first five children came from Bush River Monthly Meeting, South Carolina, with a certificate which was accepted by Miami Monthly Meeting on the 14th of Sixth month, 1804. They were a family of very rugged people. When the youngest son, Jason, was about 17 or 18 years old, he could stand in a half bushel measure and shoulder four bushels of wheat. He could get no sack to hold more, and wanted his mother to sew a piece on to one so he could shoulder four bushels and a peck. On the old farm where he was raised, and which he became the owner of, and finally sold to my uncle, Samuel Butterworth, there was a large stone in one of the fields, which perhaps no other man than he had been found able to lift. After he became an old man he made occasional visits to my uncle and the old farm, and always, or nearly always, tried his strength on that stone, and at no time failed to be able to lift it.

C. B.

To AN honest mind, the best perquisites of a place are the advantages it gives a man of doing good.—*Addison.*

THE fountain-head of happiness is contentment of heart, which springs from the ascendancy of the good over the evil in us.

Selected for Friends' Intelligencer and Journal.

EDUCATION OF GIRLS.

A WIDE culture, offering many points of sympathy, is of greater importance for women than for men. Women ought to be more adaptive, and I deeply regret the great specialization which the present system of university life favors in both men and women. It certainly makes women less valuable as educators when they are trained only as specialists: men *unius libri* may be able to accomplish great works in the world of Nature, but seldom in that of Mind. I do not want girl's education to be what that of boys' is now, but that both should move on together to a higher ideal, not as yet realized by either; and perhaps it may be even given to the girls, "the weak things of earth," to improve the boys, and some day the vision of the laureate may be realized:

"And in the long years liker may they grow;
The man be more of woman, she of man;
He gain in sweetness and in moral height,
Nor lose the wrestling thews that throw the world;
She mental breadth, nor fail in childward care,
Nor lose the childlike in the larger mind."

—*Dorothea Beale in Nineteenth Century.*

HYMN FROM THE GERMAN.

THE following is an imperfect English version of what is said in Berlin to be the favorite hymn of the sick Emperor:

When to me He sorrow sends,
Let me bear it patiently,
Lifting up the heart in prayer;
Comfort He will not deny,
Therefore, let there come what will,
In the Lord my heart is still.

Though the heart is often weak,
In despair, and all forlorn,
When in days of utmost pain,
Never dawns a joyous morn;
Even then, let come what will,
In the Lord my heart is still.

So I pray, O Lord, my God,
That my faith and hope may stand;
Then no care I know nor need,
Guided ever by Thy hand!
Therefore, let there come what will,
In the Lord my heart is still.

"WHO knows how often he offendeth?"
When Conscience's white light burns dim
In doubt of Right, that word descendeth
Alone, from Him.

We cannot tell, we see but blindly
Through the strange cross-lights given to all,
By rule than all our own more kindly
We stand or fall.

So, if in this inspired disorder,
We seem at times to lose our way,
And by man's laws to cross the border—
We can but pray!

We can but say, we know not wherefore
Man's evil may be oft God's good;
We think He understands, and therefore
'Tis understood.

—*Herman Merivale in The Spectator.*

RUSKIN ON ACCUMULATION.

All the best things and treasures of this world are not to be produced by each generation for itself; but we are all intended not to carve our work in snow that will melt, but each and all of us to be continually rolling a great, white, gathering snowball higher and higher, larger and larger, along the Alps of human power. Thus the science of nations is to be accumulative from father to son; each learning a little more and a little more; each receiving all that was known, and adding its own gain. The history and poetry of nations are to be accumulative; each generation treasuring the history and songs of its ancestors, adding its own history and its own songs. And the art of nations is to be accumulative; just as science and history are; the work of living men not superseding, but building itself upon the work of the past; all growing together into one mighty temple; the rough stones and the smooth all finding their place, and rising, day by day, in richer and higher pinnacles to heaven.

NEWS AND OTHER GLEANINGS.

—An interesting problem is being solved by Prof. B. T. Washington, of Tuskegee, Ala. Professor Washington is a graduate of the Hampton, Va., Normal and Agricultural Institute, which has done so much for the industrial training of young colored men and women. Some seven years ago he started the Tuskegee Normal School with 20 pupils. To-day he has 405 bright young men and women from all parts of the South receiving training in this school. At present there are 12 industries taught in the school. All materials used in building are manufactured on the place by the students. The course of study extends over a period of four years.—*Iron Age.*

—Philadelphia is coming to time, and *vice versa*. The clock that is to be put into the tower of the public building at Philadelphia is to be a grand affair. The dial will be twenty-five feet in diameter, and the centre of the dial will be 361 feet above the street. The dial will be illuminated by electricity, and it is calculated that the time can be seen at night from any point in the city, and with a field glass the position of the hands can be distinguished at a distance of fifteen miles. The minute hand of the clock will be twelve feet long, and the hour hand will measure nine feet in length. The size of the Roman figures on the dial will be two feet eight inches in length. A steam engine will be placed in the tower to wind the clock up every day. The clock makers who have been invited to give their views concerning the building of the clock all say that nobody in this country is able to build such an enormous timepiece. It will take a whole year to place the clock machinery in the tower after the building has been completed. The bell for the clock is to weigh between 20,000 and 25,000 pounds, and will be calculated to peal out so loud that it can be heard in the distant parts of the city. There will be what are known as Westminster Chimes, and they will ring on the quarter, half, three-quarters, and hour. The bell will be the next heaviest on the continent. The heaviest is in the cathedral at Montreal and weighs 28,000 pounds.—*Exchange.*

—The total number of emigrants arriving at the ports of the United States for the three months ended Third month 31st, 1888, was 69,623. For the corresponding period in 1887 there were 61,295.

—Arbor Day was observed on the 27th ult. in all the public grammar schools of this city. Short addresses were delivered explaining the origin of the day and the effect of tree growing. A number of trees were planted.

—Pundita Ramabai is planning a trip to the Pacific coast. Societies along the route desiring to secure her to lecture for them will confer a favor by addressing her immediately at 553 North Sixteenth street, Philadelphia, Pa.

—The prison night school at Trenton, N. J., which was opened last summer by Keeper Patterson, has proved to be a gratifying success. The men have become greatly interested, and the discipline of the school has improved. All the 194 convicts who have been under instruction have made great progress, and a few of them have developed an extraordinary aptitude for learning. The school will be continued.

—One of the most noticeable characteristics of the Mohammedans is the fact of their temperance. They abhor a drunkard, and it is only about once in a year that a drunken man is seen upon the streets of Alexandria; and, though the peculiar facilities for travel in Egypt have brought many saloons, over ninety-five per cent. are kept by Europeans.

—The managers of the Philadelphia House of Refuge announce that, in addition to William Massey's gift of $100,000 to the House of Refuge to secure its removal to the country, I. V. Williamson has contributed $100,000; the families of Thomas P. Cope and Isaac Collins have subscribed $15,000 for memorial building, and Burnham, Parry, Williams & Co. have given $5,000. Other smaller contributions have also been received.

—The Children's Aid Society and Bureau of Information, 127 S. 12th street, Philadelphia, during the month of March, received one child from the City Department of Charities and Correction; one from the Society to Protect Children from Cruelty; one from the Children's Hospital; two were brought by the mothers and two by friends; nine children were placed in private families on trial, and suitable boarding accommodations were provided for four children; 61 visits were made to children during the month; service places were found for 37 women, each taking one child with her. At the present time there are 360 children in the care of the Society.

—It is announced that Matilda B. Carse has secured $250,000 worth of subscriptions for the proposed "temperance temple" at Chicago. The structure will be twelve stories high, with a tower on one corner surmounted by a statue of the Sistine Madonna. It is hoped that the corner-stone can be laid by a year from May 1.

—There are at present seventy female students at the University of Zurich, forty of whom are studying medicine.

—The new Methodist College for Women at Baltimore is to have a Hall of Physical Culture, the gift of B. F. Bennett, as a memorial of his wife.

—The editors of women's papers in Japan were all men until last month, when a temperance paper was established at Tokio by Miss Asia and Mrs. Sasaki, of the Tokio W. C. T. U.—*Woman's Journal.*

—The "Art Age" gives a most graphic and pleasing description of one of the beautiful houses in Newport. Drawing-room, dining-room, and hall walls are covered with heavy silks, embroidered and plain, beautiful, artistic, and expensive; but the kitchen surpasses them, at least from a sanitary point of view, and makes one wish for wealth: "Descending to the kitchen, we notice a departure from the usual methods of finishing that room. Here the floor is tiled and the walls covered with glass."

—A Baptist minister of Louisville, Kentucky, Rev. T. T. Eaton, opposes the celebration of Easter as without warrant in the Bible, savoring of heathenism, tending to formalism, and not conducive to true spirituality.

—The movement to secure a union of all the "Evangelical" churches is apparently not approved by Robert J. Burdette, who, though best known as a "humorist," is an active member of the Baptist denomination. He says in the Brookyn *Eagle:* "You can establish a uniform gauge for railway tracks, but that's somewhat different from a man's religion. A machine made religion would be charmingly uniform, same as machine made wagon spokes. And it would be about as religious. Why, churches of the same denominations don't repeat the Lord's Prayer alike, they don't sing the same hymns to the same tunes or words. And I am glad they don't. I dislike uniformity. I know of but one community that makes uniformity its hobby; where all the people dress alike and act alike and look alike and eat the same things at the same time and go to bed and get up at the same time. That is the penitentiary, my son. And even there, where uniformity is the soul of the system, they don't adopt 'unity' because they like it, but because they have to. It is part of the punishment, and not the lightest part either."

CURRENT EVENTS.

PRESIDENT CLEVELAND, on the 30th ult., sent to the United States Senate the name of Melville W. Fuller, of Chicago, to be Chief Justice of the Supreme Court, in place of Morrison R. Waite, deceased. He is a lawyer of prominence, and it is presumed the nomination will be confirmed.

THE weather in this vicinity was extremely warm during the three days beginning with the 28th ult. On that day the thermometer rose above 80 degrees, while the next day it reached 92, and on the 30th, 90. On the 28th, also, temperature of 90 was reported from northern Vermont. There was much snow remaining in that region, but vast quantities were melted by the extreme heat, and all the streams were swollen in consequence. On the 29th, at St. Paul, Minnesota, it began snowing, and the snow continued late in the evening. A damp snow was reported at other points in Minnesota and Dakota.

IN Philadelphia, on the 28th inst., at a meeting of the Governors or their representatives of all the thirteen original States except Massachusetts, resolutions were adopted calling upon the National Government and the various States and Territories to make suitable appropriations to a fund to be dedicated to the building of a grand national monument, commemorative of the framing and adoption of the Constitution of the United States, to be erected in Philadelphia, the birthplace of independence and the Federal Union.

A HEAVY shock of earthquake was felt at Biggs, Butte county, California, at 8.45 p. m., on the 28th ult. The vibrations were from east to west, and lasted 75 seconds. Plastered buildings were cracked. Two distinct shocks were felt at Stockton at the same time.

WESTERN crop reports continue to be unsatisfactory. The *North Western Miller*, of Minneapolis, in its issue of 27th ult., says: "Cold, dry, and backward weather has been the order of the day for the last six weeks. Instead of a steady improvement, there has been a steady decline in general conditions of the winter wheat crop up to this time. The outlook on the Pacific slope is by no means encouraging, the future depending entirely upon rain. An unusually long dry term is at present causing much anxiety as to future results. Illinois to-day makes the poorest showing for a crop of winter wheat of any State in the belt."

THE High License Act passed the New York Legislature finally, on the 26th ult., the vote in the Senate being 17 to 15. It is not known whether the Governor will approve it, but a veto is apprehended.

NOTICES.

*** Friends desiring accommodations during the approaching New York Yearly Meeting, or the Meeting of Friends' Union for Philanthropic Labor, are requested to communicate with Joseph A. Bogardus, 177 West street, New York City.

*** An adjourned meeting of the Association for the Promotion of First-day Schools within the limits of Philadelphia Yearly Meeting will be held in Race St. meeting-house on 4th-day evening, 5th mo. 16, at 7.30 o'clock.

Friends interested are cordially invited to attend.

S. RAYMOND ROBERTS, CLARA B. MILLER, } Clerks.

*** A meeting of the Yearly Meeting's Committee on the Education of the Colored People of the South will be held at Room No. 1, 15th and Race streets meeting-house, (Philad'a), on Seventh-day, Fifth month 5th, at 10 o'clock, a. m.

GEORGE L. MARIS, AMOS HILLBORN, } Clerks.

*** The supply of Lesson Leaves for Second Quarter, 1888, both Scripture and Primary, having been exhausted, any First-day school having an extra supply, will confer a favor by sending the surplus at their earliest convenience to ROBERT M. JANNEY, 1500 Race street, Phila., Pa.

*** A general, (and public) meeting of the "Association of Friends for the Promotion of Education among the Colored People of the South" will be held on Fifth-day evening (Yearly Meeting week), Fifth month 17, 1888, at 8 o'clock. Officers for the ensuing year will be chosen.

The attendance of all interested in the work is cordially invited.

HOWARD M. JENKINS, Chairman.
SARAH J. ASH, Secretary.

*** The following donations to the Schofield Normal and Industrial School are thankfully acknowledged:

Through Amos Hillborn & Co., 4 bbls.; Sarah J. Ash, 2 bbls.; J. W. Moore, Richmond, Ind., 1 bbl.; Henrietta H. Irish, Amawalk, 1 bbl.; Henry Reese, Baltimore, 1 bbl.; C. and R. Bond, Johnsville, Pa., 1 bbl.; Friends at Huntington Valley, Pa., 1 box; Friends at Chappaqua, 2 bbls.; E. P. Hunt, North Salem, N. Y., 2 bbls.; Sarah P. Simpson, New Hope, Pa., 1 bbl.; Unknown, 2 boxes, 1 bbl.; Trinity Reformed Church, Plainfield, N. J., 1 bbl.; Elizabeth H. Coates, Phila., 1 bbl.; Rachel T. Yarnall, Phila., 1 bbl.; Box Garden seeds and tools, David Landreth & Son; Box of Medicine, Dr. Jayne & Son.

MARTHA SCHOFIELD.

*** Quarterly Meetings in Fifth month will occur as follows:

7. Nine Partners, Poughkeepsie, N. Y.
8. Philadelphia, Race street.
10. Shrewsbury and Rahway, Shrewsbury, N. J.
10. Abington, Horsham, Pa.
11. Stanford, Creek, N. Y.
12. Miami, Waynesville, O.
12. Salem, West, O.
14. *Philadelphia Yearly Meeting.*
16. Easton and Saratoga, Saratoga, N. Y.
19. Short Creek, near Mt. Pleasant, O.
21. Fairfax, Hopewell, Va.
23. Stillwater, Somerset, O.
24. Duanesburg, New Baltimore, N. Y.
26. Blue River, Blue River, Ind.
28. *New York Yearly Meeting.*
28. Warrington, Pipe Creek, Md.
29. Burlington, Crosswicks, N. J.
30. Southern, Easton, Md.
31. Bucks, Buckingham, Pa.

FRIENDS' INTELLIGENCER AND JOURNAL.

INTELLIGENCER Vol. XLV. No. 19. | PHILADELPHIA, FIFTH MONTH 12, 1888. | JOURNAL. Vol. XVI. No. 798.

WHICH IS THE WAY?

WHICH is the way, dear Lord, that I may know
The road o'er which I wearily must go?
I do not ask it, Lord, that it may be
From things which make it hard to journey free.
My feet are bruiséd, and my heart is so
Cast down with griefs of bitterness and woe
That it must need thy guidance here below,
And with deep longings it cries out to thee,
Which is the way?

As when, in autumn days, the sharp winds blow
The withered leaves, and sweep them to and fro,
So all my hopes are scattered that by me
Were held so strong and dear; yet trustingly
My heart looks up, and asks that thou wilt show
Which is the way.

—*William Bartlett Tyler, in Christian Register.*

For Friends' Intelligencer and Journal.

THE STUDY OF THE BIBLE.

FRIENDS, in common with other Christian people, have always set a high value upon the Bible, not indeed holding to its infallibility as with some, nor calling it the "Word of God," as do others, but believing it to contain the *Word of God*, as revealed to the listening ear of the devout in the ages of which it gives a record. That this is the true estimate of its place in the church, is coming to be recognized by the more liberal-minded and scholarly in all the different denominations, as evinced in the freedom of inquiry into the "Thus saith the Lord" of the Old Testament, which is increasingly manifested; and this must lead, indeed is already leading, enlightened inquirers into the same line of thought that the fathers of our faith found so safe and soul-satisfying,—the communication of the Divine Will to the individual, without the intervention of priest or ritual. To this great truth underlying all other conceptions of our relation to the Infinite Good, the Bible bears faithful and unqualified testimony in both the Old and the New Scriptures.

There has been no period in the history of the Christian Church, in which the Bible has claimed so much thought and study as the present. Theologians, teachers, and preachers were expected to be familiar with its contents, and the humble, devout worshipper found comfort and consolation and inspiring hope in the daily reading of the Psalms and the Gospels; but as a study, to get at the true meaning of what was written through a knowledge of the social usages, the conditions, and prevailing beliefs of the people, there was little effort made, many, especially among Friends, being unwilling to regard their contents in any other light than as affording comforting evidence of Divine guidance and an assurance of acceptance to the willing and obedient, when the earthly pilgrimage terminated.

The study of the Bible, as we study other ancient histories, for the knowledge we gain of the growth and development of national life, giving as it does the history of the most remarkable people as relates to their social and religious life, that the records of the race have yet developed, should rank with, if not above, that of Greece and Rome, in our institutions of learning. Doubtless, this would have been the case, had not the church in the beginning claimed exclusive control and right of interpretation of its contents.

Professor Stephens, of Yale University, in the *S. S. Times* of a recent date, has an essay on "The Study of the Bible as Literature," from which a few paragraphs have been selected bearing directly upon the subject, as it relates to our branch of the Christian Church. Professor Stephens says in the opening paragraph:

"The principal value and use of the Bible will always be found in the spiritual instruction and edification which it affords. This use is most in harmony with its origin and character as a record of God's revelations, and as a proclamation of his redeeming love. This use accords with the purpose of the Bible, which is practical and religious. Its great central thoughts relate to God and man,—the nature, love, and purposes of God, and the duty and true destiny of man. The Bible, which treats chiefly of the relations of man to God, is therefore preëminently the book of duty. It teaches men what God requires of them and makes possible for them. It opens to mankind the meaning of their own life. Disclosing God's thoughts for man, it teaches the dignity of human life, and enables men to discover and receive as their own the divine conception of what they should do and be. The Bible is the book of life. It is comparatively oblivious of all subjects except salvation, character, goodness. Its great lessons and truths relate to what God has done and is ever doing to save men to their best possible selves. Its chief emphasis, therefore, is always upon righteousness, an inner life of harmony with God, and of growing likeness in all that is God-like.

"But all these truths are set in a historic framework. They are, in the main, not in abstract, but in concrete form. They are woven into the warp and woof of history, illustrated and enforced in the lives of individuals, communities, and nations. They run

as pervading lessons through the careers of men and peoples; they are bound up in images and similitudes, in types and symbols; they are found in letters and sermons; some of their tenderest tones breathe through poems and prayers. Thus the Bible presents to the student of it all the chief types of literary form. It must, to some extent, be studied as literature, with literary appreciation, and with reference to its literary phenomena and peculiarities, if it is to be intelligently as well as devoutly studied.

"The religious use and literary study of the Bible are in no way inconsistent; each should be and may be made very helpful to the other. The religious character and value of the Bible should make its literary study more earnest and reverent, while an appreciation of the Bible as history and literature will more fully disclose its meaning and emphasize its value. As religion must be both intelligent and devout if it will produce the best results in character, so biblical study, which is so vitally related to religion, should both appreciate and reverently receive the spiritual truth of the Bible, and also seek to understand the forms in which it is presented, and the Providential conditions and circumstances under which those truths have been revealed, and the historic agencies which have been employed to this end. If these two methods of Bible study do not react helpfully upon one another, it can only be because on the one hand, reverence for the Bible is blind and superstitious, or because, on the other, the literary study of it is cold and unappreciative. . . . . .

"For the appreciation of the Bible as literature, attention must be given to the peculiarities of individual authors, and to the different types of thought and writing. It is an absolute perquisite to a just appreciation of the New Testament, not only to know in what fundamental respects Matthew differs from Luke, the three Synoptists from John, Romans from Corinthians, Thessalonians from Phillippians, etc., but to know in what respect the Pauline type of teaching and modes of thought differ from those of Peter and James. Such points cannot be determined in one's own study except by close examination. Not many have leisure or adaptation for their pursuit; they should, in such cases, be ascertained at second hand from some competent authority, and carried into the study of biblical books and passages as guiding lights. Such information would serve as a clew to guide many a reader into an intelligent understanding of books which now seem only a confused jumble. When one knows the chief aim and guiding thought of a book, together with something of the peculiarities, conditions, and character of the writer, even though he derive all this information from another, he has a key to the book which can unlock its meaning as no mere study of isolated passages could ever do. In possession of this he can test and verify by careful and continuous study—the more minute and thorough, the better—the theory of the book, or group of books, and can intelligently make his own a view of their scope and contents as a whole, and the relations of all the parts to that whole. . . . . .

"It is not unimportant to recognize and appreciate the different kinds of literature which find a place in the Bible. We have history in the forms of narrative, chronicle, and biography; we have letters addressed to churches, groups of churches, and to individuals; we have orations and sermons; we have fiction in the parables of the Old Testament and the New, and in the drama of the Book of Job; we have poetry of the loftiest character in the Psalms and some of the prophets, a dramatic poem in the Song of Songs, and a prose pastoral in Ruth: besides these we have proverbs, codes of law, ethical treatises, prayers, elegies, and narratives of visions. For the student of literature, here is abundant and various material.

"But with this variety there is combined a certain unity of spirit which imparts a unique character to the whole. It certainly is not strange that our educators are asking whether this literature should not have place in a curriculum of liberal study, and whether we have not too much overlooked the value for culture of this body of literature which is most widely known and read, but which, nevertheless, is really less studied and understood, as literature, by intelligent and well-informed people, than any other of even approximate proportions, in interest, and availibility. . . . . .

"It will be a great gain to the cause of theology and religion when the Bible is more studied and understood as literature. In this way, truer conceptions of what the Bible is will come to prevail. When the historical relations and literary forms with which its truths and teachings are inseparably connected are better appreciated, its true meaning and value will be more apparent, interpretations which defy philology and history alike will be less frequent and persistent, and the possibility of a far better agreement among Christians respecting the essentials of faith will be founded."

The most devout reader of the Bible need have no fear that in adding its study to the curriculum of our higher institutions of learning, it would become so secularized as to lose its distinctively devotional character. We place in the hands of our students of literature the religious thought of Greece and Rome with all their fanciful, coarse, and sometime s unnatural conceptions of the Divine Being in his multitudinous parts or representations. They read of gods and goddesses, whose morals would be a disgrace to our Christian civilization, and we call this classical literature, without a knowledge of which no student can claim to have received a liberal education.

The transcendent beauty of the Hebrew thought of God and of the universe created by the fiat of his word, cannot suffer when placed side by side with these Pagan ideas and the lofty ideals of character as exemplified in the men and women whose lives are portrayed as worthy to be held in remembrance for all time, offer to our young people models of noble courage and exalted purity, united with a reverence for the Divine Being and a spirituality that found its highest happiness in communion with God.

There is a wide-spread desire for a better understanding of both the letter and the spirit of the Bi-

ble. Luther did much to awaken the church to a sense of its value, but George Fox and Robert Barclay and their co-laborers did far more in that they could discern the deeper meaning,—the more spiritual interpretation of what was declared to be the word of God to his children. The two centuries that have passed since these bold expounders of that word lived and labored, have not been without results. Others, not of their and our faith, have carried on the work so worthily begun,—and the results are being seen and felt, and in no particular are they more manifest than in this advocacy of the Bible as a part of the classical course of our higher institutions of learning.

L. J. R.

BENJAMIN FERRIS'S PAMPHLET ON MUSIC.

Editors INTELLIGENCER AND JOURNAL:

SOME articles lately appearing in your paper on the subject of music indicate a want of knowledge in regard to the "Ancient Testimony of Friends" against it. As relative thereto I herewith send you an essay on the subject by our late friend, Benjamin Ferris, of Wilmington, Delaware, which, from the extracts given from accepted exponents of the principles of Friends,—and the conclusion drawn and judgment given by him,—may help to answer the question. I ask for its publication. Right here I would suggest that there is a vast amount of Quaker literature available to those who are really seeking for a knowledge of the faith of "Early Friends," and if our members were more generally familiar with those writings, it would tend more to their settlement in the *truth* as professed by us than much of the current speculation and specious reasoning on these matters is now doing.

It would also throw much light upon the question which appears to have been raised by the declaration of our venerable friend, J. G. Whittier, that "both sections have departed from the original ground of Quakerism." In this light it will be apparent that many who claim to speak for our branch of the Society to-day represent a very different form of Quakerism than was once presented to the world. It is clear to me that so far as we have departed from the original ground by so much are we weakened. And here may the cause be found for much of the decline that is apparent among us, and for which there is so much seeking a remedy.

A. HAVILAND HULL.

Forest Hill, Md.

[In response to our friend's request, finding the pamphlet entire longer than is suitable for reproduction, we have made such extracts from it as seem to bear most on the subject under consideration. The pamphlet was printed in 1851; (Philadelphia: Merrihew & Thompson.)—EDS.]

The question is sometimes asked, What harm is there in music? To which it may be replied, that the harm of music, as well as of a thousand other thing, is not in the things abstractedly, but in their tendencies, their uses, and their effects. There is no harm in a sword, a dagger, or a pistol. In themselves they are quite innocent: and yet in consideration of their tendencies, their uses and their effects, the law has made it criminal to carry them.

* * * * * * * * *

Perhaps one of the worst tendencies of music is to draw away the attention from the highest object of our creation, the "one thing needful," and to amuse the mind with vain and trifling objects. To make *outward excitements* necessary to our comfort is to inflict on us one of the greatest evils that can befall us. By them the mind becomes disqualified for calm reflection and that inner retirement of soul where the highest enjoyment of which man is capable, in this probationary world, is to be felt and enjoyed.

The great use of music is to excite the passions through the nervous system. Its advocates allege that it has power to allay them. Perhaps there is not on record a well authenticated case more favorable to this claim, than that of Saul, the disobedient and forsaken King of Israel. But if the music, in that instance, produced in the mind of the depraved and deserted monarch, a temporary calm, it did not restore him to the Divine favor, nor prevent the return of his malady with aggravated malignity. In music there is no curative virtue applicable to the soul. No animal appliances can heal its diseases!—"they are like the deaf adder, that stoppeth her ear; which will not hearken to the voice of charmers, charming never so wisely."

One of the most deplorable evils of music is its tendency to drown the *inward sense* of Divine admonition and reproof. We have an affecting instance of this kind in the Journal of Job Scott. He says: "The Lord followed me close in mercy, and often brake in powerfully upon me, turning all my mirth into mourning; yet I still got over the holy witness, did despite to the spirit of grace, and repaired again to my haunts of diversion and merriment. Sometimes when I have stood upon the floor to dance, with a partner by the hand, before all were quite ready, God has arisen in judgment and smitten me to the very heart. Oh! I still feelingly remember the majesty of his appearance within me, when none knew the agony of my soul; how he erected his tribunal in my bosom as in an instant, and in awfulness arraigned me before him. I left ready to sink under the weight of condemnation and anguish, but resolutely mustering all the stoutness I was master of, I brazened it out till the music called me to the dance, and then I soon drowned the voice of conviction, became merry, and caroused among my companions in dissipation, until time urged a dismission of our jovial assembly, and called me to return, often lonely, to my father's house."

John Gough, in his interesting "History of the people called Quakers," published more than sixty years ago, has inserted a short but excellent treatise on the discipline of Friends. In the fifth section of that treatise under the head of "Sports and Diversions," we find the following paragraph:

"A people honestly directing their researches after *pure religion*, and the first principles of Christianity, could not be long in discerning the inconsistency of

vain sports and diversions, such as theatrical exhibitions, horse-racing, dancing, *musical* entertainments, cards, dice, and other species of gaming, with the precepts and spirit of the Gospel;—to which they are *diametrically opposite* in their *root* and *origin*, *nature* and *tendency*, being not the genuine growth of Christianity, but a branch of the corrupt root of Gentilism, adapted by professed Christians to their hurt."

* * * * * * * *

That music is in its nature *sensual* needs no demonstration, for where the *sense* of hearing is wanting, there can be no music. Its pleasures are the pleasures of sense, and only differ from the pleasures of eating and drinking, as one sense, or one set of nerves differ from another. It is common to distinguish between the pleasures derived through the ear, and those derived through the palate,—between harmonious sounds and delicious viands. The former are supposed to be *refined*, the latter, *gross*. But the distinction is arbitrary, and probably arises from the characters mostly engaged in the two departments. Everybody must eat; the poor man and the laborer, as well as the rich man; but the pleasures of musical entertainment are more limited to the wealthy, and therefore, by an association of ideas are deemed more elegant or refined. It would, however, puzzle a very acute casuist to show cause, why a Christian man, or company of men, sitting down to a plentiful table, and eating for the sustenance of life, should be chargeable with more grossness than the musical voluptuary in the gratification of his ear at a concert.

Now, it is one of the laws of our being in regard to the pleasures of sense, that they are of short duration, and leave nothing behind them, to enrich the intellectual, or feed the immortal nature. The delights of music claim no exception to this rule; it leaves the soul as poor as any other sensual enjoyment. In the morning of life music often robs her votaries of an opportunity for improvement, which once lost is gone forever. The period between fifteen and twenty-five years of age may be called the seed-time of life; if it be wasted or pass unimproved, the middle part of it is seldom fruitful, and the old age which follows is generally poor, and barren, and miserable.

* * * * * * * *

. . . . He that depends upon music or any other sensual enjoyments for happiness, although the means to pursue them be inexhaustible, is doomed by the irrepealable laws of his nature to fail in the chase. By pressing onward, reckless of the consequences, he will soon arrive in that "far country" where there is always "a mighty famine," and where even "the husks that the swine did eat" will be denied him. Blessed is that man who, having left his parental home under the false hope, that happiness may be found in sensual gratifications, shall early discover that these cannot satisfy his spiritual and immortal nature. But thrice blessed shall he be, who, having made that discovery, shall, like the suffering prodigal, return to his "Father's house," where there is "bread enough and to spare;"—not that bread, which like all animal pleasures, "perishes with the using," but the *living* bread, which cometh down from heaven, "of which if a man eat, he shall never die." John VI. 50., etc.

Third mo. 20, 1851.

OUR HOMES.[1]

It has been declared by a great mind that "The home is the hub of the universe," and it certainly is the central point in the great, ever-revolving wheel of life. It is truly the primary cause of a nation's curse or blessing. If we trace virtue or vice back to its legitimate source, we will generally find its beginnings to lie here. The great river of life with its sweeping tides of good or evil, whose current we cannot stay when once the channel has been formed, had its beginning in laughing rivulets, whose direction a gentle finger could have determined.

From the deep, unseen springs underlying our homes are ever flowing these little life-rills, whose ever widening channel must tell for good or evil, and the deep responsibility upon those whose privilege or duty it becomes to direct their early course, cannot be too fully realized. Bishop Simpson said: "The voices that spoke to me when a child are now speaking through me to the world." And how many a noble life that has blessed and enriched a generation, had its first impulse kindled at the sacred home altar, and, also, how many a wreck thrown up along the shores of life can be traced back to a desolate hearth-stone, whose cold, pulseless bosom afforded no nourishment. A well-ordered home where virtue is nurtured and every good principle fostered and sustained, that is lighted and warmed by affection, yet guarded and directed by wise counsel and authority, is a sacred watch-fire on the hills, whose influence for good is far-reaching, and thrice blessed are those whose tender years have been thus guarded. The memory of such a home is the richest legacy a man can leave his children. It is an enjoyment to which the lapse of years will only add new sweetness. It is a constant inspiration for good and as constant a restraint from evil.

There is no school of true religion on the globe of greater value than a happy, God-fearing household. There stands the domestic altar. There speaks the word of truth and authority every day in the whole seven. In its tender, loving bosom is fostered a religion which acts and molds from the cradle. It is the true nursery of the Church of Christ—Christianity must begin here. If home is not a better and happier place for our living in it,—if there is not an influence going out from us day by day, silently drawing those about us in the right direction, our title to Christianity is not clear. The church must be the outgrowth of the Christian home.

These good influences perpetuate themselves. The gentle grace of the mother is reflected in the daughter long after the head is pillowed in the dust, and the fatherly kindness finds its echo in the nobility of sons who come to wear his mantle and fill his place. Abraham Lincoln, speaking of his life, said: "All that I am or all that I ever hope to be, I owe to

[1] An essay read at the meeting of Abington First-day School Union, at Gwynedd, 4th mo. 21.

my angel mother." What a noble tribute to her counsel and love; and how many instances we have along the line of biographical history, where precious lives have been kept in paths of virtue and truth by the sweet home song that never lost its melody within the soul. There is a loud call to the homes throughout our broad land to-day as an offset to the saloon. To them we are looking for that true educational reform that shall counteract the strong tide of intemperance and all associate evils. The school education will be of poor avail if the home fails in its duty. The boys and girls of this generation are the hope of the succeeding one, and the realization of this hope must be largely due to the home training. This is the true centre, — the vital point. It is seldom a boy or girl reared to habits of self-culture and correct thinking, departs very far from the path of rectitude. It is the exception and not the rule, and if he should stray he is more easily reclaimed through the tender associations of the past. I cannot but believe that the mother's prayer is ever a reclaiming whisper in the soul of her child.

Earth holds no sadder sight than a broken, sin-stained home, where virtue is never a guest—where undisciplined feet walk at random, and undirected lives drift helplessly into temptation and sin. Yet do we consider how many thousands of children are born to this heritage of vice, poverty, and crime? Left to float upon the tide of circumstance, to be chilled on the desolate moor of life, to wander amid the voids of sympathy and the solitudes of society. The children of dire misfortune, yet they are the legitimate offspring of barren homes, the gnarled and stunted outgrowth of life's wilderness, where the soul-life could not bloom. Such lives have made a strong appeal to Christian men and women, and to rescue and reclaim them a wide-spread philanthrophy has been felt and institutions of safety and protection have sprung up like green spots thoughout the land bearing the sweet name of home, (what a nestling, sheltering word it is,) but its significance lies deeper than roof and room. That wealth of mutual affection which is not of material things a part, cannot be bestowed; that is a misfortune for which there seems no compensation. I would not say aught against such homes, they are God-given refuges and worthy the good feeling that gave them birth, yet while they alleviate suffering they do not prevent it. It is the true home education we want, where the first impulses of life are properly directed.

We want the home where the heart is, where the loved ones are, all united in sympathy, fellowship, and affection. It may be humble and unpretentious, exhibiting no signs of material wealth, yet it imparts a wealth above rubies, which nothing can destroy. This is the legitimate home of childhood, the elysian of riper years, the comfort and refuge of age, the strength and repose of a nation. The home influence must be stronger than the street. Young folks must either have a home or a haunt, and the boy or girl who finds not the family circle the most charming spot on earth—the centre of the purest affections and most desirable associations and pleasures, is in the avenue that ever leads away from true safety and happiness, and it is almost shocking to the truly concerned mind to see with what indifference this door is often thrown open, especially to the boys. We should guard this avenue by striving to make the home-life beautiful, without and within, that it may be as a green spot in the desert of life, to which the children naturally return as the dove to her nest, and drink of the clear waters of a love which we know to be sincere, and always unfailing. Then may we strive, as far as in us lies, to keep its fireside cheerful and bright, its bosom nourishing and warm, its atmosphere healthful, its tone pure, its sympathies alive and active, its altar reverent, and from its sacred enclosure shall come forth glad streams of strength and healing, that shall leave God's blessing written in brightness and bloom along life's desolate borders.

GATHER THE CHILDREN INTO SILENCE AT HOME.

OVER eighteen centuries have passed away since Jesus, declared by the apostle to be God manifest in the flesh, exemplified the law governing the Christian's life, and proved the incapacity of man in himself alone, for any good thing.

Many have been, and still are, the beliefs and inspiring hopes springing from speculative understandings and which continue to be the consolation of millions. It is not what is contained in technical doctrines that is required; but a soul-inspiring, devout conception of the Christ of God, the infallible guide and leader. If the practice of these observations means that we shall all the while be growing christian disciples, developing through an increase of spiritual strength, and a better equipment for the faithful occupancy of our fields of labor, does not the query then arise, When and where shall be the beginning of the establishment in the truth, by which we are brought under the yoke of Christ, taught and led by him, and made to know experimentally what it is to follow him in the regeneration through which we not only behold the triumphs of a cross-bearing life, but feel that few or no dark shades will be found woven into the tissue of our history as a Christian people? Is it not first to be known in the little child? How wisely the proverbial seer has said, "train up a child in the way he should go, and when he is old he will not depart from it." "Oh, how much lies at the door of parents," says a departed worthy, "much may they do through divine aid for their children's good, by proper care, watchfulness, advice, reproof, restraint, and correction, all in truth's authority as occasion requires, which seldom fails to reach the witness in their minds." Seeing then, that the Alpha is with the little child, and to become engrafted into the work, for religious training, is at the cost of a great and important duty, let us re-enforce the posts of duty at home, substantially aiding the cause, and gather the children oftener than the once or twice a week into the quiet of the home, for perhaps the season of a half-hour, to listen, if may be, to a divinely directed exposè of a chapter in the Bible, or for a quiet, calm, collected listening, to know what God

the Father may say to us; the "more sure way" to impress their tender minds with the potency of God. They will early perceive the value of these silent occasions, and comprehend and appreciate their influence in a savoring of their lives, and will in time discover an intercourse between the mind of man and the divine mind, bringing them to a true knowledge of the one God and Father, and of the relation they sustain to him. It may be the essential element, the seed of Life, will remain undeveloped, quiescent, waiting patiently for the season of its unfolding, which will appear in the simplicity of its child-like structure, when the conditions favorable for its development are present. But without these silent opportunities to prepare for their divine development, "the dawn of their lives may be more resplendent than the full day,—the blossom fairer than the fruit,—the promise richer than the fulfilment;" for we are not apt to gaze upon the flower without thinking that the fruit will be worthy of the blossom. From this quiet culture of the heart, the close of our sojourn here most certainly will witness a day more resplendent than its dawn, and a fulfillment more glorious than its first promise; their lives having been so trained to enjoy the divine calm, will have, of choice, become moulded thereby.

SCRIPTURE LESSON, No. 20.

FIFTH MONTH 20TH, 1888.

JESUS IN GETHSEMANE.

TOPIC: SUBMISSION THROUGH SUFFERING.

GOLDEN TEXT: "Though he was a Son, yet learned obedience by the things which he suffered."—Heb. 5: 8

READ Matt. 26: 36-46.

THIS scene in the Garden of Gethsemane is found in Mark 14: 32, Luke 22: 39, and John 18: 1.

Our lesson to-day is one of spiritual agony and distress, too sacred to be intruded upon. Even the three chosen disciples, who on other occasions had shared with their Master whatever came to him, had now crossed with him and the others the brook Kedron, which lay between Jerusalem and the "place called Gethsemane," into which they entered; these three were left watching while he went further on to be alone with his Heavenly Father, that he might pour out his soul in the agony of his distress, and thus find strength and support for the ordeal through which he was so soon to pass. Only as we can think of him as the Sinless One, whose teachings and example were forever after to be a blessing to the human family, can we rightly estimate the deep import of this agony in the Garden of Gethsemane. Had Jesus faltered—had he not wrestled and struggled even till he had gained the mastery over his humanity, he would never have been to the world its example and its leader. Because he was tried and remained faithful to the mission upon which he was sent by his and our Heavenly Father, he made it easier for all men to be faithful. The same trust and confidence in the Heavenly Father, the same prayerful entreaty for divine help, and the same spirit that could say, "Thy will be done!" will bring to the tried and tribulated followers of the beloved Son, the same ministry of angels that were sent to strengthen and support the suppliant.—Luke 22: 43.

Jesus might here have made terms with the Sanhedrim, and spared himself the death on the cross, but it would have been at the cost of all that he came to accomplish.

Nothing in the entire history of Jesus so finely portrays his kinship with the Father, and so clearly shows his dependence upon His will, as his pathetic utterance, "O my Father, if this [cup] cannot pass away except I drink it, thy will be done."

We see, too, how keenly alive he was to our human needs in the expression, "the spirit indeed is willing, but the flesh is weak;" and his tenderness so infuses itself into the very words, that it awakens in us the sweet feeling of brotherhood, kindling the desire that we too may be found obedient to manifested duty, in order that we may become worthy to claim kinship with him and with the Father also.

Since the days of Jesus many consecrated souls have suffered and grown strong to proclaim great truths for the world's benefit, the Christ spirit within them being the motive power, while the same trust that sustained him was given them according to their measure. Many Friends can be ranked with these, indeed almost countless have been the devout ones, both in public and private life, that have passed from earth, leaving it the better for their ministrations.

We, too, are writing our own history to-day. Shall it take its keynote from the inspiring life of Jesus of Nazareth, and lift the world a little nearer to his standard? Or, modeling after a less noble pattern, shall we leave it a little short of what we might have made it, had we been more Christ-like?

THE HEBREW FEAST OF UNLEAVENED BREAD AND PASSOVER.

As helping our teachers and others interested in First-day schools to have a clearer understanding of the manner in which this feast was celebrated, the following prepared, by Jacob Mayer, Ph. D., of Philadelphia, for the *Sunday School Times*, is published:

"The Mishnah (in *Pesachim*, 10) and Maimonides's Mishneh Torah (section *Hilkhoth Chamets umatsisah*, 2) contain all the rules and regulations concerning the ceremonies connected with the preparations for and observances of this great feast in Israel, of which observances and ceremonies the majority are still strictly kept by the orthodox followers of the rabbins. Self-evidently the Passover lamb has ceased to make its appearance in the families; but its remembrance is kept up, and along with it many a ceremonial act, by the witnessing of which the present lesson can best be understood and instructively explained. Here is an abstract, "On the eve of the fourteenth day of Nisan, prior to the appearance of the stars, the leavened bread must be collected;" and on the fourteenth day in the morning it is to be consumed in a fire kindled for this purpose. This day is the day of preparation, on which, after the act of burning, no leavened bread must be eaten any more. Before sunset, the sacred feast begins in all its fullness, with divine service in the synagogue, to be followed by a

family service at home, where all the inmates of the house gather round the table, presided over by the father of the family. A plate containing three *matstsoth* (unleavened bread), bitter herbs (in remembrance of the bitterness of the Egyptian bondage), a mixture of pounded fruit of various kinds (alluding to the clay, mortar, and brick in which the Israelites had to work), a bunch of parsley (pointing to the new life coming forth in spring), a boiled egg (emblem of life from death), and a small piece of roast lamb (in remembrance of the Passover lamb), stands on the table. The father at the head of the table pours out wine for each partaker of the feast, and sets one cup of wine apart for the prophet Elijah, the forerunner of the Messiah. The service begins with a benediction over wine and over the green fruit from the earth; then one of the *matstsoth* is broken in two (one-half of it to be preserved throughout the year); the reading of the Haggadah (containing scriptural and rabbinical sentiments concerning the feast, with occasional thanksgivings) follow, then a benediction over the unleavened bread, eating of bitter herbs together with the pounded fruit, the supper follows, and after the supper the psalms 113-118 and 136 are sung, and some prayers added. It should not be forgotten that during the proceedings wine is poured out and drunk four times, to remind of the four divine promises to Israel, to wit: "I will bring you out from under the burdens of the Egyptians, and I will rid you out of their bondage, and I will redeem you with a stretched out arm, and with great judgments: and I will take you to me for a people." (Exod. 6: 6, 7).

Philadelphia.

UNCONSCIOUS TEACHING BY THE FACE.

An instrument of this unconscious tuition is the human face. There is something very affecting in the simple and solemn earnestness with which children look into their elders' faces. They know by an instinct that they shall find there an unmistakable signal of what they have to expect. It is as if the Maker had set up that open dial of muscle and fiber, color and form, eye and mouth, to mock all schemes of concealment, and decree a certain amount of mutual acquaintance between all persons, as the basis of confidence or suspicion. All the vital spirits of brain and blood are ever sending their swift demonstrations to to that public indicator. It is the unguarded rendezvous of all the imponderable couriers of the heart. It is a public playground of all the fairies or imps of passion. If you come before your pupils, after dinner, your countenance gross and stupid with animal excess, do you suppose the school will not instinctively feel the sensual oppression, and know Silenus by his looks?

A teacher has only partially comprehended the familiar powers of his place, who has left out the lessons of his own countenance. *There* is a perpetual picture which his pupils study as unconsciously as he exhibits it. His plans will miscarry, if he expects a genial and nourishing session, when he enters with a face blacker than the blackboard. And very often he may fail entirely to account for a season of rapid and sympathetic progress, which was really due to the bright interpretations and conciliatory overtures glancing unconsciously from his eyes, or subtly interwoven in the lines of frankness and good-will about his lips. The eye itself alone, in its regal power and port, is the born prince of a schoolroom. He answers a score of questions, or anticipates them, by a glance.

"The human countenance," it has been said, "is the painted stage and natural robing-room of the soul. It is no single dress, but wardrobes of costumes innumerable. Our seven ages have their liveries there, of every dye and cut, from the cradle to the bier; ruddy cheeks, merry dimples, and plump stuffing for youth; line and furrow for many-thoughted age; carnation for the bridal morning, and heavenlier paleness for the new-found mother. All the legions of desires and hopes have their uniforms and badges there at hand. It is the loom where the inner man weaves, on the instant, the garment of his mood, to dissolve again into current life when the hour is past. There it is that love puts on its celestial rosy red; there lovely shame blushes and mean shame looks earthly; there hatred contracts its wicked white; there jealousy picks from its own drawer its bodice of settled green; there anger clothed itself in black, and despair in the grayness of the dead; there hypocrisy plunders the rest, and takes all their dresses by turns; sorrow and penitence, too, have sackcloth there; and genius and inspiration, in immortal hours, encinctured there with the unsought halo, stand forth in the supremacy of light."

What then? Can a man look otherwise than nature made him to look? Can he reconstruct his features? Can he resolve his face into beauty by a purpose? I reply, nature made his countenance to reflect the spirit of his life. It is a common maxim that some faces, plainest by the rules of classic symmetry, are noble with moral dignity, and radient with spiritual light. The faces we love to look at, over and over again, must be the really beautiful faces, and these are the faces of lovely persons, no matter about your Juno or Apollo. Said Chrysostom, speaking of Bishop Flavian, who had gone to intercede with the Emperor for the rebellious citizens of Antioch, "The countenance of holy men is full of spiritual power." This kind of beauty, the only real kind, is producible. The soul such as it is, will shine through. But the completeness of that transformed expression will be seen only where the long patience of self-control, and the holiest sincerity of love, and the slow triumph of unselfish principle, have wrought their interior work, molding the inner man into a nobleness that the outward shape may honestly image.

F. D. Huntington.

What an unique and meaning expression was that of a young Irish girl, in giving testimony against an individual in a court of justice the other day. "Arrah, sir," said she, "I'm sure he never made his mother smile." There is a biography of unkindness in that short and simple sentence.

PHILADELPHIA, FIFTH MONTH 12, 1888.

OUR UNITED INTERESTS.

THE time of the gathering of our (Philidelphia) Yearly Meeting is close upon us, and we are about to witness what seems from year to year to be the same assemblage of people. But it is not so. In this world of wisely ordered changes, we are never permitted to gather again all whose interest in our religious welfare called them at this season from the various parts of our heritage. Many earnest and valued spirits have passed within the year beyond the portal that separates the mortal from the immortal, and we shall sadly miss them in our deliberations. Some were active with voice and pen, contributing greatly to the general good; others were silent burden bearers whose unexpressed sympathy was felt as a warming influence, stimulating to a spiritual growth. And there were other humble ones modestly feeling themselves to be only as "Marthas" in the household of faith. These have passed out of life to a reward not anticipated, leaving an aching void, their departure revealing the value of their services. But as a people acknowledging the wisdom and power of the Almighty, it is not for us to be cast down or discouraged, for we have only our own work to do, in our own time and generation, and that work is made easier by the faithfulness of those to whom we have looked for strength and support. We must not forget that there are freshly dedicated ones who are feeling their way toward a deeper interest, and a more perfect surrender of self. Let these be welcomed forward and encouraged to participate, for the spiritual as well as all other gifts grow in proportion to their true use.

Owing to our different temperaments, all cannot feel the same degree of interest in the various subjects claiming our attention, some one to each mind will take precedence of others, but all can unite in desiring the greatest good to the entire body.

After the concerns relative to the health of our religious organization made manifest by the answers to the queries, perhaps the greatest unity of interest will centre upon the educational question. In a broad sense it now covers a large field and can but continue to grow and embrace far-reaching possibilities for good. In the restricted sense of society schools there is an awakened interest which is still spreading, and the wise conducting of these is claiming the attention of many men and women who we doubt not, are earnestly desirous of dwelling near the place of true counsel; especially in the acceptance of the large trust fund, of which we are soon to become the guardians, it will be very needful that wisdom be sought, not from the realm of a reason that has its root in a selfish love of control, but from that source of principle that underlies the character of every true Friend recognizing in another equal access to the one fountain of right and judgment. Then will there be a harmonious working which will result in great good to the entire body.

The increasing interest in our First-day schools and the growing care exercised over them, adds to our strength, and should in no wise be allowed to falter, for lapsing time will constantly reveal "new occasions" for religious and Friendly instruction and "new duties" here will continually arise. Then, too, we have our mission work, to which we have in a very small measure "put our hand" and from which we should not "turn back." Since the days of John Woolman, Friends have ever been regarded as the friends of the colored race, and in a quiet way have no doubt been one of the agencies through which their emancipation was effected. But the race is largely yet in bondage to ignorance and superstition, and who are better fitted to aid in breaking this yoke than our own highly favored people? After looking well to the careful training of our own youth, have we not something to spare for this work?

The great cause of temperance can also be ranked with the educational, for the preventive course here will show the best results which will be largely due to early training. So in the summing up of our prospective labors for the coming week, we can see how closely all are united, and consider all subjects in that harmony which is produced by keeping under the guidance of the true spirit; and the end will be our our right advancement.

MARRIAGES.

PETERS—TYSON.—On the 30 of Fourth month, by Friends' ceremony, at the residence of the bride's parents, near Gettysburg, Pa., Zachariah J. Peters and Mary A., daughter of Charles J. Tyson, formerly of Philadelphia.

PYLE—SMITH.—In Philadelphia, on Fifth-day, Fourth month 26, 1888, in the presence of the Mayor, by Friends' ceremony, David L. Pyle, of Pylesville, Harford county, Maryland, and Martha Smith, daughter of Nathan Smith, of Linwood, Carroll county, Maryland.

DEATHS.

BONNER.—At his residence, Byberry, Pa., Fourth month 29, Benjamin C. Bonner, in his 80th year; a member of Byberry Monthly Meeting.

BROWN.—On the 28 of Fourth month, at her home, in Scott county, Kansas, Maria, wife of W. Oscar Brown; in the 37th year of her age.

She was born and raised at Maple Grove, Indiana, and was a member of Maple Grove Meeting. She came to Scott county in the autumn of 1886, and as theirs was one of the first families to settle here, she has by means of her quiet social nature, and christian character, become more generally and favorably known, and in consequence will be more sadly missed than would almost any other person in the community. For the past seven years she has been a faithful worker in First-days chools, and the last Sabbath she spent on earth, she taught a class in our new school here, which was organized in a great measure through her efforts, and for which she labored zealously.

Her family and friends have the heartfelt sympathy of her new friends here. And we believe with her little daughter Annie that "God can take better care of her" than any earthly friends, however near and dear. R. P.

GARRETT.—At Wilmington, Delaware, Fifth month 1, 1888, Virginia Jenkinson, wife of Maurice Garrett, aged 42 years; a member of Wilmington Monthly Meeting.

LIPPINCOTT.—At the residence of his son, West Phila., Fourth month 29, 1888, Benjamin B. Lippincott, in his 60th year; a member of Chester Monthly Meeting, New Jersey.

LORD.—At the residence of her son, F. C. Lord, Woodbury, N. J., on Fourth month 25, 1888, Mary C., widow of James A. Lord, aged 72 years; a member of Woodbury Monthly Meeting.

OTT.—Fifth month 3, at his residence, Byberry, Philadelphia county, Pa., Isaac Ott.

STEVENSON.—At her residence, in Moorestown, N. J., Fourth month 29, 1888, Hannah, widow of Josiah Stevenson, in her 82d year. She was a consistent member and esteemed elder for many years. Her interest in Society did not abate although she suffered several months, during which time she always manifested great fortitude and patience, as well as a thoughtful consideration for those whose duty it was to care for her. She was kind and affectionate, and always evinced a firm reliance upon the Divine Arm for support and guidance. Our loss is her eternal gain.

"Blessed are the pure in heart for they shall see God." Her remains were interred in the burial ground at Westfield, Fifth month 2.

WOOD.—Second month 7th, 1888, at his residence, in New Scotland, Albany Co., N. Y., Arnold Wood, in the 81st year of his age. He was a valued and consistent member and Elder of Albany Monthly Meeting; his aged widow and four children survive him. S. C.

YERKES.—Fifth month 3, 1888, at the residence of her brother-in-law, Justus P. Jones, at Germantown, Ann Yerkes, in her 77th year.

MARY LUNDY BARNARD.

[The notice of the decease of this Friend—which occurred Tenth month 2d, 1887,—appeared directly after in the INTELLIGENCER AND JOURNAL, but the following tribute to her worth has just been received.]

Mary Lundy Barnard was a sister of that eminent laborer on behalf of the slave, Benjamin Lundy.

A purer minded, spiritual, and prayerful woman never lived, and what a legacy to transmit to one's posterity, for upon *good* mothers (more than anything else) depends the ennobling of our land and the growth of our religious institutions.

Her constant desire was to seek Divine help in every thing, no matter how small the undertaking, and when she felt satisfied she was doing His will she had great peace. She never absented herself from any of the regular meetings for business or worship unless her health prevented her attendance. She frequently went when she suffered much pain afterward. Her health at all times was frail, but she had great perseverance and an indomitable will which carried her through a great deal. Her children can testify to her great concern to train them in all simplicity and godliness, and to always do to others as we would have them do to us. If this beautiful life will be the means of inducing others to live likewise then she did not live in vain. She said to a friend during her illness that "the sands of life were running low and it was well with her." She had made her "calling and election sure long ago and had nothing to fear." She felt from the first that she would not recover, but death had no terrors. She was very grateful for everything done for her and always thoughtful of those who waited upon her, fearing they would do too much.

"Blessed are the dead which die in the Lord from henceforth, yea, saith the Spirit that they may rest from their labors and their works do follow them."

THE LIBRARY.

THE AUTOBIOGRAPHY OF GEORGE FOX, FROM HIS JOURNAL. Edited by Henry Stanley Newman. Square 8vo. Pp. 422. London and Leominster, [England].

THIS volume, issued about two years ago, has been introduced to the attention of Friends in this country. It forms one of the considerable number of books relating to Friends which are continually appearing in England, designed to freshly assert the Truth as the founders of the Society conceived it, but also to translate and convey the message by means of the literary art of our own time. It is not, however, the complete Journal of George Fox, but an abridgment, giving, we should say, not more than half the contents of the original work as prepared by its great author, and edited by William Penn. In its original form, the Journal has passed through a number of English editions, and has at least once been reprinted in this country: most of our readers are doubtless acquainted with the complete edition of the Works of Fox, in eight octavo volumes, published in 1831, in this city and New York, by Marcus T. C. Gould and Isaac T. Hopper, in which the Journal occupies the first two volumes. There is also an English edition of the Journal, printed at London in 1852, edited by Wilson Armistead, in which some changes were made, the work being divided into chapters, and numerous biographical and historical explanatory foot-notes added,—but the narrative of Fox is given in full, without material emendation or change.

As we have said, H. S. Newman's present book is an abridgment. Many whole paragraphs and parts of paragraphs are omitted entirely, and in many other places the language is altered to a more concise form, or details are dropped. The extended preface by William Penn is almost entirely omitted. The editor gives a preface of his own, covering some twenty pages, in which he introduces and discusses the subject matter of which the journal treats. In the main, we can approve the Preface. It is fairly faithful,—though not enthusiastically so,—to the great principle of Fox's gospel message, the concep-

tion of an Immediate and Sufficient Inward Revelation. To do full justice to him, there should have been a stronger, more earnest, and more entirely sympathetic presentation of this, and a less evident disposition to increase by comparison, the degree of reliance which he placed upon the letter of Scripture. In the body of the work, we notice, the important and significant incident at Nottingham, where he interrupted the preacher in the midst of his sermon, telling him that the "more sure word of prophecy," the "light that shineth in a dark place," was not the Scriptures, but the Holy Spirit which was before them, and by which, in their purity, they were given forth,—this occurrence is much shortened, and is shorn of details which are essential to a correct understanding of the position which George Fox took. It is true that H. S. Newman, as he shows by several expressions in his preface, is evidently not in sympathy with the extreme attitude of Fox toward the clergy, and he probably preferred to omit the statement that he broke into the sermon and contradicted the preacher. But this is only doing injustice to the truth of history and to the character of George Fox: he testifies to us that he could not restrain himself, so great was his earnestness: "the Lord's power was so mighty upon me, and so strong in me, that I could not hold, but was made to cry out," he says. "Such an action needs no apology, and should not be concealed. It is part, and a most essential part, of the candid and characteristic narrative. And the whole occurrence, as we have already said, is so important as showing the manner in which George Fox apprehended his duty that it must be read and considered precisely as he relates it, or it will not be rightly understood.

While, therefore, we appreciate the present book, and think it more likely to be read by many persons than the larger and fuller original Journal, it is a grave question whether it should be strongly commended. If we want to know Fox we must read his Journal as he wrote it, or, at the least, we must read in the original language those essential passages which make it plain how and why it was that his ministry became and remains to be a moving power in the world. It was not, we may be sure, because he was of the same sort with the other religious professors of his day, but because he cried out, as in the church at Nottingham, calling the priesthood out of darkness into light. He was no smooth chip upon the stream, but a rugged challenger of the common course of things. H. M. J.

Affectionate dependence on the Creator is the spiritual health of the creature, as averseness and independence are the spiritual disease of the creature. Sin consists in the absence of the love of God from the heart as the dominant principle, and is not so much an action as a manner of existence.—*Thomas Erskine.*

O Heart, grown wild amid the heat and tumult
Of years that hasten so, be calm, be strong!
These few brief days may mock thy high endeavor,
But oh, the eternal years of God are long!

NEWS OF FRIENDS.

PURCHASE QUARTERLY MEETING.

This was held at Amawalk, N. Y., on 4th day, the 2nd of Fifth month, and both it and the public meeting held on the following day were interesting meetings, although not so largely attended as they sometimes have been. This was owing in a measure to some of the elderly people being detained on account of sickness, and to the fact that very few strangers were there, (none in the line of the ministry except John Stringham, of Long Island, whose services were very acceptable). Most of the ministerial labor seemed to devolve on Daniel H. Griffin and Charles Robinson, although some very acceptable words were handed forth by several others, who are endeavoring to be faithful to perform the duty that seems to be laid upon them, and who, if they keep near the Divine Guide, and are obedient to his requisitions may have their gift duly acknowledged.

Although the three monthly meetings which compose Purchase Quarter are not so remotely situated as are the different branches of some of the other quarters, yet it requires considerable interest, or religious zeal, to overcome the difficulties in the way of punctual attendance, when the meeting is held in the most remote situations, the distance being so great that it is about impossible to attend on both days without remaining from home over night, and were it not for the social visiting amongst Friends that is enjoyed on such occasions, many members would probably not attend on either day.

The feeling of brotherly and sisterly affection between the different branches of the quarter seems to be very great. Many of the older members will not be able to get out very much longer, but the generation that is now coming on seems to have a warm interest in society affairs, and the hope is that there will be many convincements amongst those who mingle with Friends in their meetings and First-day schools.

We noticed that in the statistical answer to the query in regard to births and deaths, that there had been but *one* born a member the past year, whilst *nine* had died, so something besides birthright membership must be looked to, to keep up the meetings.

I. E.

—Mary R. Pusey, of Wilmington, Del., (widow of Samuel N. Pusey), who died recently, left by her will charitable bequests aggregating $50,000, of which $20,000 is for the Ferris Reform School, (established by the late John Ferris, a member of our religious body), and $5,000 to Wilmington Monthly Meeting. A local paper says "these are the largest [charitable] bequests that have been made in Wilmington for many years."

—Robert Hatton, who has been living for the past two years near Merion meeting, in the suburbs of this city, has removed to Haddonfield, N. J.

—We are advised that our friends John J. Cornell and Isaac Wilson, of Genesee Yearly Meeting, expect to attend the sessions of our yearly meeting in this city, next week.

—J. Ballinger, of Accotink, Va., writes us as follows: "The property formerly belonging to Alexandria Monthly Meeting of Friends located in the city of Alexandria, Va., has been sold to a company of colored persons for a home for the aged and infirm of that race. Their means being rather limited any donation from Friends or others to aid in paying for the property and maintaining the institution would be thankfully received by them. And if sent to James W. Roberts, Alexandria, Va., will be promptly forwarded."

COMMUNICATIONS.

ANSWERS TO THE QUERIES.

Editors INTELLIGENCER AND JOURNAL:

I WAS so much gratified by reading your remarks on the Annual Queries in the last number of the INTELLIGENCER, that I write to express my satisfaction in its columns. The stereotyped form of answer, that Friends are "generally clear," or "mostly free" of any infraction of the queries, was adopted by early Friends, on account of their anxiety, their extreme caution, not to state the matter too strongly; but there surely is no other reason for our use of the form than the one for which they used it. To my personal knowledge, it has been used, when no evidence whatever had come to the meeting that any member had been chargeable with the offense implied. Is it not much better for us to tell the truth plainly, instead of saying that Friends are "generally" or "mostly," that is, a majority of them only, are free of offense. J. J. J.

Columbus, O.

SWARTHMORE NOTES.

—Under the modified rule for Commencement appointments, from the highest in scholarship in each of the four departments, Arts, Letters, Science, and Engineering, a proportionate number of each represent their departments upon the platform. The appointments have thus been made for the coming Commencement to occur on the 19th of Sixth month, and are as follows: *Arts*,—Alice M. Atkinson, Holicong, Pa.; Hetty C. Lippincott, Riverton, N. J.; *Letters*,—Esther M. Willets, Old Westbury, L. I.; *Science*,—Emma Gawthrop, Wilmington, Del.; *Engineering*,—Thomas Brown, Lincoln, Va.; Frank Cawley, Woodstown, N. J.

—A competition in public speaking, open to members of the Freshman and Sophomore classes, will be hereafter held on the Fourth-day of Fourth month, in each year, in presence of the members of the College and invited guests, To the five who do best rewards of $10 worth of books each will be given.

Only original productions will be admitted to competition. There would seem to be no good reason why success in physical exercises only should receive the encouragement of special rewards.

—In connection with the First-day school exercises, this week, Elizabeth Powell Bond, the Matron, presented an interesting paper upon the general theme of living within one's means. It will be published in full next week.

—The spring athletic exercises of the students take place on the grounds devoted to that purpose on Seventh-day of the present week.

For Friends' Intelligencer and Journal.

FRIENDS' SCHOOL AT MILLVILLE.

AMONG the good schools of our Society is that at Millville, Pa., within the limits of Fishing Creek Half-Year Meeting. The Educational Committee assisted in its reorganization about two years ago, and has continued to give it aid and encouragement. It is the only Friends' school, and is undoubtedly the best one in that part of the country, and affords an excellent opportunity for the children of Friends and others to get a good school education at moderate cost near home. There are now engaged in it four teachers, three women and one man, all Friends, with about eighty pupils, three-fourths of whom are Friends or have one parent a member. It will doubtless be interesting to our Society generally to know that this isolated body of our members is so well provided for in this way, and it is to be hoped that the school will receive the support it so well deserves and which will insure its successful continuance. *

REPORT OF FRIENDS' BOARDING HOUSE.

THE Annual Meeting of Friends' Boarding House Association, (Philadelphia), was held Fourth month 25, 1888. The annual statements were read and referred to the new Board for attention. The following officers and directors were chosen for the ensuing year: President, Abraham W. Haines; Clerk, Edmund Webster; Treasurer, Henry M. Laing.

Other Directors chosen are Letitia G. Haines, Joseph Bacon, Deborah F. Wharton, Mahlon K. Paist, Mary A. Tupman, Mary F. Saunders, George Taber, J. M. Truman, Jr., Clement A. Woodnutt, Thompson Shourds, Sarah C. Webster, Anna J. Lippincott, Martha D. Hough.

A minute in reference to the death of Rebecca N. Webster was adopted.

The Treasurer's report showed receipts for board $2,822.75; subscriptions, $245.81; balance of M. H. Newbold's legacy, $194,57; balance of Wm. Stapler's legacy, $9.40; Total, $3,272.53. Expended for house expenses $2,836.05; interest on mortgage, $250.00; taxes and water rent, $191.69; Total, $3,453.15. Balance due Treasurer, $272.53.

DIRECTORS' REPORT.

Tenth Annual Report of the Directors of Friends' Boarding House Association.

In presenting a resumé of the work for the past twelve months for the consideration of Friends, the Directors are conscious they have little to boast of, feeling that the work accomplished is not commensurate with the labor and anxiety bestowed, yet they realize that their labor has not all been lost, as the House has afforded comfort and good cheer to a number of Friends whose circumstances would not allow them to pay the usual charge for board elsewhere. There have always been some among the boarders whose age and finances are such that it is frequently difficult to provide for them in their declining years, except with strangers. The inquiry is made in

the Fifth Query, "Are Friends' children placed among Friends?" The projectors of this institution felt that the same care should be extended to the aged and dependent members of our Religious Society.

For the first time since the opening of the House, the income for board has fallen a little short of the expenses. The deficiency is small, and we feel encouraged that the coming year, (if the house is kept open), will show a different result. The taxes, interest on the mortgage, repairs, and renewal of furniture, continue to be a heavy burden which the managers are obliged to provide for from their own resources, and the contributions from a few friends. We have expressed the wish in former reports that others would manifest their interest by generous gifts sufficient to liquidate the mortgage of $5,000, of which we had reasonable hope, when the House was purchased and opened for boarders.

Our friend Deborah F. Wharton has been unable to attend any meetings of the Board during the past year, but her interest continues as at the beginning, as she has so often shown. Her presence and good council are greatly missed by the other Directors.

The House has continued nearly full, except during the hot weather, when most of the boarders left the city, many retaining their rooms until their return in the fall.

From the want of needed help and the general apathy of Friends towards our work, (which some of us think has done and is doing a great deal of good), some of the managers feel that the time is drawing near when the house will have to be closed and the property disposed of.

The Directors desire to express their sincere thanks to the Friends who have generously aided them, and wish that others, seeing the good that can be done, would be induced to lend a helping hand and encourage us to continue in the good work.

The property has been kept in general good condition, but there are some repairs wanted at the present time, a new range in the kitchen is badly needed.

ORTHODOX FRIENDS.

PHILADELPHIA Yearly Meeting of Orthodox Friends began on 4th month 16th, and adjourned on the 20th. From a report of the proceedings in *Friends' Review* we make notes as follows. The report of the Meeting for Sufferings showed the preparation and distribution of an Address on War, of which 63,000 copies had been printed, and 58,000 of them distributed, the cost being about $1,000. About 2,000 books and as many pamphlets presenting Friends' views have been sold or given away, during the year. From the South Carolina fund several hundred dollars each were sent for building or restoring meeting-houses: four in North Carolina; two in Iowa, at West Branch and Paulina; one at Plainfield, Indiana, and one at Plymouth, Ohio. [The meetings thus aided in the West belong to those "smaller bodies," which are not in unity with the larger, or "Evangelical" bodies. *Friends' Review* remarks this fact as "significant of the present abnormal position of Philadelphia Yearly Meeting.] In considering the answers to the First Query, remark was made upon the smallness and continued diminution of attendance at a number of meetings. Richard Esterbrook said that about twenty meetings are now very small. He had attended one monthly meeting where the only persons present were the clerk, assistant clerk and himself; and similar occurrences are not unusual. Samuel Emlen said that he knew of two such monthly meetings; yet one of those has sixty members belonging to it. In view of this decline of meetings, several suggestions or proposals were made: to appoint a committee to visit the smaller meetings; to adopt a minute to send down to subordinate meetings with the Extracts; to recommend to quarterly meetings to appoint committees. James Whitall remarked that these measures have been resorted to again and again, without effect. He was coming to the conviction that there is no remedy—none, at least, that this yearly meeting will accept. He hoped that if a committee is appointed, it will take into full consideration the whole subject of the decline of our meetings. The question of appointing such a Committee was deferred, but on the 18th, after discussion a committee was appointed to consider the subject, and, if way opens, to prepare an epistle to subordinate meetings, and to appoint a committee to visit them and their families, and to appoint meetings among them.

Joseph Walton and Joseph Scattergood were reappointed Clerk and Assistant Clerk of the men's meeting.

In further considering the answers to the queries, Charles Rhoads referred to the pressing competitions in business being increased by the tendency of large manufacturers and merchants to absorb more and more into single concerns, making it very difficult for others to succeed. This should be considered by Friends in large business, as to whether they might not sometimes put limits to the extent of their operations, for the sake of young men especially, of less ample opportunities. Samuel Emlen, (*Friend's Review* says) "spoke very impressively of the awful lapses from honesty that have recently occurred among our own members. All of us are liable to temptation in one way or another. Small beginnings usually start the downward movement, ending perhaps in an irrecoverable fall. Surely compassionate feeling becomes us towards those who have thus brought misery upon themselves and much suffering upon others, and the lesson of warning should be heeded, to beware of the least unwatchful deviation from integrity."

The Annual Queries were read, with their answers. Six elders and one minister have died during the past year. Two of these were between 60 and 70 years of age, and five of them between 70 and 80 years.

The report from Westtown School showed that during the last summer session the number of pupils was 166; a considerable reduction in the number of girls admitted being necessary on account of the unfinished state of the buildings. The number at the winter session, of both sexes, was 264. The new buildings are now completed, at a cost of over $300,000, and about $30,000 more money is needed to entirely discharge it. In the statement of the current affairs of the institution, it was stated that about $23,000 is the cost for salaries of teachers, including $6,000 from the fund especially subscribed to increase these salaries. The annual cost for each scholar is estimated at $239. It is proposed, on account of the much greater advantages now afforded, as well as

their cost, to add $10 per term, ($20 a school year), to the charge, making it $180 a year.

The Committee on Education reported that a considerable number of schools had received aid during the past year, in which schools were 174 pupils, mostly children of members. Less success than has been desired has been obtained in getting Friends' children entirely into these schools; but need appears for still continuing the work. An appropriation of $1,500 was made as requested. The same amount was appropriated to the use of the Indian Committee.

The Treasurer's report showed a balance on hand of about $7,000. $2,500 was appropriated for general uses, besides the amounts determined upon for the Indian and Educational Committees, making $5,500 in all.

The reports from the quarterly meetings in regard to Education were read. From the summary of these it appears that there are 776 children of school age in the yearly meeting (against 806 last year.) Of these 214 are at Westtown, 380 others at schools under care of Friends, and 168 at schools not taught by Friends.

The reports from the quarterly meetings on Intoxicating Drinks were then read. It is stated that 212 members have made some use of such beverages during the year; mostly of the milder, fermented kind, especially cider, and occasionally, very few using spirituous liquors. One quarterly meeting, and two monthly meetings in other quarters, were reported as clear. The number of those using intoxicating beverages in the previous year was 249.

Samuel Morris thought there was encouragement in the apparent diminution occurring, the number after all not being very large, considering the temptations everywhere abounding, particularly to young men. Another member remarked that, in this yearly meeting, young Friends are more generally clear of the use of alcoholic beverages than the older members; some of whom find it difficult to give up the glass of cider to which they have been accustomed. John B. Garrett observed that, remembering the whole number of the membership to be but about 5,500, of whom less than half are men of the ages likely to be subject to this practice, about one in ten of these is the proportion reported as indulging in it to some extent.

* * *

Commenting upon the yearly meeting, and recalling some details of the past, *Friends' Review*, in an editorial article, says: "We recall these familiar reminiscences at this time to emphasize the observation, that Philadelphia Yearly Meeting, as a body, is more than twenty years behind the rest of the coordinate bodies in the movement of re-animation. No wonder that many have felt like exclaiming, 'Can these bones live?' The Scriptural answer is a prophecy, in echo of prayer: 'Come from the four winds, O Breath, and breathe upon these slain, that they may live.' Philadelphia Yearly Meeting has, so far, officially discountenanced First-day schools among Friends. Two years since, it issued a document especially pronouncing against Women Friends' Missionary Associations. Both of these movements are going on, the latter especially with increasing strength, among our members; statistics showing a larger contribution to Foreign Missions from members of Philadelphia Yearly Meeting than from those of any other in this country. Corporately, as was fully shown this year, the body grows weaker and weaker; church work without, and even against, official authority, grows stronger and stronger."

THE OLD MEETING PROPERTY AT FOURTH AND ARCH STREETS.

The Philadelphia *Ledger* of a recent date contains the following: Referring to the statement in the *Ledger* of Thursday last that the body in occupancy of the Arch Street meeting-house must be in accord with the religious views of London Yearly Meeting, our esteemed townsman, George Vaux, writes to the *Ledger* that "the title deeds contain no such restriction, although there is a popular impression that such is the case." He then goes on to say: "The Arch and Fourth streets property was the gift of William Penn to Philadelphia Friends. It was confirmed to them by patent dated about 1700, although the gift was made and possession acquired several years before. This patent designates the meeting in Philadelphia to which the grant was made as the one in fellowship with London Yearly Meeting, of which William Penn was a member, and, of course, refers to the meeting as then constituted, and not as what it might be years or centuries afterwards. The phraseology of the patent was, no doubt, due to the fact that at that time the Society of Friends had just passed through a serious crisis, which had resulted in a separation of the followers of George Keith, who had set up a separate meeting, which they claimed to be a meeting of Friends. Although this meeting had declined in numbers, and may even have been almost extinct at the time the grant was made, yet the circumstances of the case were, no doubt, too fresh in the mind of William Penn to admit of anything being done which would leave any uncertainty as to his intention that the Keithites should *not* have any interest in the property.

"The writer does not intend to intimate that there is any substantial difference in doctrinal view between London and Philadelphia Yearly Meetings as bodies of Friends at the present time. What he claims is, that the doctrines held by London Yearly Meeting at the time the grant was made, about 1700, must be the test as respects the title to the Arch street property, if such a test is to be applied, and not the views which may happen to be held by that meeting at a future time."

The little I have seen of the world, and know of the history of mankind, teaches me to look upon the errors of others in sorrow, not in anger. I would fain leave the erring soul of my fellow-man with Him from whose hands it came.—*Longfellow.*

The fountain head of happiness is contentment of heart, which springs from the ascendancy of the good over the evil in us.

LIFE WORTH LIVING.

The Lord's are the gold and the silver;
His least gift by men prized the most;
They may hoard it for rust and for robbers,
They may pave with it roads for his host,
And so make earth's highways as beautiful even
As the streets trod by angels on errands of heaven.

More precious than gold is the wisdom
He grants us: all wisdom is His,
Whether breathed thro' the lowliest spirit
Or proclaimed by His prophets it is;
Oh, wisdom is better, for blessing, than wealth;
But the best that He gives is Himself; his full health—
His strength, which alone is our vigor—

The stream of his life in our veins,
A deep, inexhaustible river,
That waters the world's arid plains;
Bedewed with his freshness, all souls live and grow;
His life cannot stagnate; it must overflow.

So the best we give others is given
To us. There is nothing our own
But life—the great life of our Father's;
His love and his wisdom made known
Through these weak little efforts and doings of ours;
Infinity using humanity's powers.

Our lives—they are well worth the living,
When we lose our small selves in the whole,
And feel the strong surges of Being
Throb through us, one heart and one soul.
Eternity bears up each earnest endeavor;
The life lost for love is life saved, and forever!

—*Lucy Larcom.*

THE BLUEBIRDS.

Soft voices in the fields and woods,
The tinkle of cool rills set free,
The drip from boughs on last year's leaves,
And whispers from sod, bush, and tree;
But, oh! the sudden flash of wings
O'er spaces of the sunlit lane!
The heart leaps up at one clear song;
The bluebirds!
The bluebirds have come home again!

Their fluted carols ripple down
The breeze, a joy unto the ear!
The sparkling brooks are laughing out,
And grass-blades twinkle far and near.
From smoky uplands, steeped in sun,
And dark with winter's waste and rain,
A thrill of life now seems to say,
"The bluebirds!
The bluebirds have come home again!"

Pale willows show their misty green;
From bush and bough pink buds outpeep;
It seems as if the sky drew near
To kiss the earth from wintry sleep;
To hear that clear, exultant song
Which never knew a touch of pain,
Now that, with promises of spring,
The bluebirds!
The bluebirds have come home again!

—*George Cooper.*

A devout man is one thing, a stickler quite another.—*Wm. Penn.*

PRACTICAL EDUCATION.

A book which has just been published should be of special interest to Philadelphians. This is "Practical Education," by Charles Godfrey Leland. It will be remembered by all interested in the subject of education that Mr. Leland was, with the aid of the School Board, the founder of the system of teaching industrial art to the children of the Public Schools of Philadelphia. His method, which has been adopted by the British Home Arts Association, is simply that of teaching design with drawing and modeling, and also wood carving and metal work; in fact, of uniting into one the minor arts. This was never done by any one before Mr. Leland attempted it. Philadelphians know the history of the success of his attempt. But now it seems the teaching of industrial art forms but a part of Mr. Leland's theory of education as a whole. To explain his theory is the object of his book.

The first paragraph of the Preface is the keynote to the chapters which follow: "Education as it exists, consists of storing the memory, developing the intellect, and training the constructive faculty. I propose to go a step beyond this, and show, if possible, how memory may be created, quickness of perception be awakened, and the constructive power formed, so that the mind, when it begins to acquire knowledge, may do so with confidence and strength. I think that before learning, children should acquire the art of learning, or, to use the words of Arthur MacArthur, we should intellectualize them before attempting to improve their intellects." Years of experiment have convinced Mr. Leland that there is a practical way to awaken attention to art industry and interest in it by means of design, and that from this beginning, attention and interest may easily be kept up, carried on, and directed to all other branches of study and industry; that memory can be actually developed in any child by a year's or eighteen months' practice to an incredible extent, that quickness of perception may also be raised to a wonderful power, and that all these three mutually aid one another.

Mr. Leland devotes the first part of his book to Industrial Art Education, though logically it should be considered last. He does this, he explains, because the subject is just now being earnestly studied and is of great popular interest. He adds another consideration: "When I began, nearly thirty years ago, to seriously study education, and evolved the whole system laid down in this work and resolved that if I ever should be in a position to do so I would devote my life to practically working it out, the only part of it which caused me doubt and fear was this—whether mere children could be taught hand-work while attending school. To resolve this I learned the minor arts, and taught them till I found that they all resolved themselves into one art—design." In this first part he is practical as well as theoretical. He gives detailed directions for the formation of classes and the introduction of Industrial Art into schools. He explains the principal minor arts and the method of teaching design. In the Philadelphia School of Industrial Art Philadelphians can

see for themselves the practical realization of these directions and explanations. The second part of the volume is on developing memory. "The first thing a child should learn is the art of learning. . . . . There is no miracle or mystery in it, and there have been teachers who understood it, acted on it, and taught it. It consists simply in making the pupil learn everything *perfectly* from the beginning." For proof that this proposed perfecting of memory is no mere theorizing, we have but to look back to long centuries before the invention of printing, when memory was developed to a degree almost incredible at the present time. That this teaching of memory may not result in the pupils' learning like a parrot it is to be counterbalanced by increasing quickness of perception, and Part III. sets forth how this may be done. Again, all doubts are silenced by actual fact, for already, in the kindergarten and elsewhere, "quickness of perception has been shown to be susceptible of development in children by culture." Closely akin to it is eye-memory, which is the subject of Part IV. This chapter should be familiar to many Philadelphians, for it was delivered by Mr. Leland as a lecture before the Franklin Institute, in 1880. Houdin and Couture are notable examples of the wonderful manner in which this faculty can be developed and strengthened. Finally, and above all, as is demonstrated in Part V., the child is to be taught to take an interest. "When the habit of making the will arouse the memory shall have been induced until the scholar finds no difficulty in learning, and this faculty in turn is balanced by increased quickness of perception, it will not be difficult to awaken interest in anything. These are sure steps to the highest culture. The last and highest is that of teaching the pupil that he can will himself to take an interest in whatever he pleases." The possibility of each one of the several processes studied in "Practical Education" has been proved by experiment. It has been left to Mr. Leland to suggest their combination.—*The American.*

PLEASANT PEOPLE.

WHAT a boon to all his friends and acquaintance is a pleasant person. It may be hard to define pleasantness, but we find no difficulty in recognizing it when we meet with it. Pleasant people are not always by any means the most admirable of mankind, nor the most interesting, for it often happens that the qualities in a man which are worthiest of esteem are, for lack of other modifying elements, the very ones which make against his agreeableness as a companion, and a person who does not impress us as particularly pleasant may nevertheless interest us very much by the display of unusual mental or moral characteristics, or from a complexity of nature which seems to offer itself as an enigma we are curious to solve. Pleasant people may not even be the most truly lovable, but they are likable. We perhaps have no desire to make friends of them in the deeper sense of friendship, but we are glad when we meet them, and enjoy ourselves in their society. The tie thus formed, though slight, is a real one, and I believe that we should all do well to remember, in the interest of our closer friendships, the attractive and cohesive force of mere pleasantness. The highest virtues and offices of friendship we are not called on to exercise every day, and in familiar intercourse we have not less, but rather the more, need of making ourselves pleasant, because of the times when our friends will have to answer our drafts on their patience and sympathy.

If we question what it is that goes to constitute a man or woman pleasant, it appears to be a result of both temperament and character. It is hardly necessary to say that these are not the same thing, and yet they are not distinguished in common thought and speech as clearly as they might be. Without attempting any close analysis, we may perhaps say that temperament is a certain combination of elements given us at birth, while character is another set of powers and dispositions slowly acquired and grown in for us; for the first, nature is responsible, our parents and ourselves for the second.

It seems easiest to describe a pleasant person by negatives, although assuredly his pleasantness affects us as a most positive quality. To begin with, such a person must not be too much "shut up in his own individuality," to use the phrase of an English writer. That is, he must not be very reserved and concentrated in his emotions and affections, but have a certain expansiveness of nature and openness of manner. He must not be too fastidious, but able to take people for what they are, and what they are worth to him for the passing moment and the needs of the social hour. He must not be of too intense a nature, nor so preoccupied with the serious aspects and duties of life that he is unable to put them aside temporarily and lend himself to lighter thoughts and lighter people. One of the pleasantest men I ever met was one of the most hard-working, devoted to a dozen good causes and public interests beside his personal and professional ones. None of these were made a bore to others, and his equable and kindly disposition, his readiness to enter into other persons' ideas, his interest in literature and art, as well as weightier matters of politics and science, made him able to please and be pleased by men and women of the most divers sorts. It has sometimes struck me forcibly with respect to such a man: How pleasant he must be to himself—how comfortable to live with every day!—*Atlantic Monthly.*

"CHILDREN of men! the unseen Power whose eye
Forever doth accompany mankind,
Hath look'd on no religion scornfully
That men did ever find.

Which hath not taught weak wills how much they can?
Which has not fallen on the dry heart like rain?
Which has not cried to sunk, self-weary man,
'Thou must be born again?'

Children of men, not that your age excel
In pride of life the ages of your sires,
But that you think clear, feel deep, bear fruit well
The Friend of Man desires."

—*Matthew Arnold.*

THE AGE OF OUR CITY'S SITE.

Prof. Angelo Heilprin delivered a lecture at the Academy of Natural Sciences, on "A Chapter from the Early History of Philadelphia," in the course of which he said: "Long anterior to the advent of man the site of Philadelphia already existed. Indeed the site of at least a portion of our city is one of the earliest of which geology has any record. When the greater part of what constitutes the dry land of the earth's surface was still water, and when not unlikely the greater, or a very great part of what is now water was land, the site of Philadelphia was already clearly marked out—a strip of land facing a western ocean, with an eastern ocean at no very great distance.

How far back in time this period was cannot be satisfactorily determined. Geologists place it among the millions of years and the physicists are agreed with them. America may be a new continent, but the site of Philadelphia is far more ancient than the sites of our sister cities of the Transatlantic, such as London, Paris, Berlin, and Vienna. The hills of our Park long antedated the loftier heights of the Alps, Himalayas, or Rocky Mountains. Our streams, the Schuylkill and Wissahickon, were probably gray and old before the Thames, Seine, or Danube dreamed of occupying their present channels.

"When man first appeared upon the scene he lived in a region almost altogether like the present one, even though some of his associates were different. At that time the mastodon, the giant precursor of the elephant roamed about the region of our city, leaving its impress in the bogs and swamps that lie within a few miles of our portals; the reindeer, creature of the northern climes, found a congenial home among the New Jersey sands, where likewise the buffalo spread its herds to seaward, and even the native horse at that time appears to have but little anticipated extermination. This period is possibly not very long ago, but it has been impossible thus far to fix it accurately; thousands of years, doubtless, but how many more we cannot as yet say." He also spoke of the origin of the "cobble" stones found so plentifully associated with the clay of this region, whose structure and the fossils contained in them show that they came from the northern regions seventy or eighty miles away. He concludes that they were brought to their present location from the belt of deposits of boulders extending east and west sixty or seventy miles north of Philadelphia, which is passed through by the Delaware at Belvidere, a few miles below the Water Gap, and extends almost continuously from the ocean to the Pennsylvania border.

"Our belt of cobble stone is not, however, the narrow fringe that we see in front of the modern glacier, but extends in a more or less continuous line well nigh half across the continent. We must consequently assume that it was backed up by a sheet of ice of equal expanse. This seems like an incredible conception, but the facts are too plain to allow us to be deceived. During what is known as the great ice age or the glacial period, the whole northern half of the North American continent was shrouded in one almost continuous sheet of ice, which reached to within sixty or seventy miles of our city limits. At the same period the northern half of Europe was similarly enveloped. The special cause of this accumulation is not positively known, but it appears conclusively that the surface was buried to a depth of several thousands of feet."—*Philadelphia Ledger.*

THE ART OF READING.

In contemplating the great amount of material classed under the one broad head of reading, we are forcibly reminded of words spoken so long ago that they would seem a great way off, did not their application to our own times impress them upon us as fresh inspiration. Solomon surely uttered a modern truth when he said, "of making many books there is no end." And not only books, but current literature, such as magazines, pamphlets, newspapers, and the quantities of "reports" that so burden our tables, that even a literary gourmand is ready to groan and exclaim, "much study is a weariness to the flesh." Fortunately for human endurance these are not studied, but skimmed, and herein we have to confront what would seem to be a "dangerous" evil, that of acquiring only "a little learning." In the face of all this material, reading must become an art to be studied, and whoever can best aid the masses of "everyday people," who have neither the time nor the means to become learned, how to read to the best advantage, would be a public benefactor. Melvil Dewey, chief librarian of Columbia College, gives some hints in this direction, concerning books, and they also suggest a similar rule which could be applied to other reading, with perhaps better result than to books. He says:

"An antiquated conception about reading needs to be corrected—the idea that every book must be read through. In olden times, when there were comparatively few books, and men had more time to spare than they have now, such a conception might prevail. At the present time it would be mathematically impossible for a man to read through a thousandth part of even the books worth reading; hence, he must train himself to pick out of a book what he wants for his purpose at the time. In a hundred poems, which an author groups in a volume, there may be two or three that are specially good. Why should one read the ninety-seven poor ones in order to get at the three he values? Why should he read every article in a magazine or newspaper? It is rarely the case that a great reader—a man who knows the value of books and how to use them—ever reads a book through. A shrewd reader, trained in the valuable art of 'skipping,' will get the point of an author's argument in one-tenth of the time that it takes the man who reads through the whole book. When a man goes to a library he goes to a dictionary. He doesn't read his dictionary through; he gets what he wants; in getting what he wants he passes over much that is valuable, but is not valuable to him at that time, and so he leaves it alone. The skillful reader makes a dictionary out of his library—he gets what he wants. He handles books, not to say, 'I have read so many books,' but to get inspiration, new ideas on the subject in which he is immediately interested, and he gets it where he can find it without needless dilution."

DEATH OF DR. C. R. AGNEW.

Dr. Cornelius R. Agnew's death, which occurred at his late residence in New York on the 18th ult., is a great loss to the temperance reform, especially in the scientific department thereof. He has for many years been foremost among leading and influential American physicians in testifying, upon scientific grounds, against the beverage use of alchohol. He was especially interested in promoting the right education of the young concerning the use of intoxicants. Before any action had been taken by the Legislature of this and other States to provide for scientific temperance instruction in public schools, Dr. Agnew co-operated most heartily and effectively with the National Temperance Society to secure, with the approval of the Board of Education, the introduction of Dr. Richardson's excellent "Temperance Lesson Book" in the public schools of this city. With the general and lamentable indifference of our leading physicians to the cause of temperance it can ill afford to lose the advocacy of one so gifted and eminent as Dr. Agnew in the ranks of the medical profession. —*Independent.*

In the sixteenth century the forests had dwindled so much, and the cost of firing had risen so high, that the princes took the forests under their sovereign protection, and appointed a class of officials whose duty it was to see after the fuel supply in their provinces, and look to the protection of trees just as the police have to see to the protection of citizens. One result has been that no trees are allowed to grow longer than when they have reached maturity. After they have attained a certain age their rate of growth is so slow that their room is needed for younger plants and they are cut down. Thus a pine reaches its perfection after its thirtieth year and goes back after its eightieth. As a rule, a forest is cleared and replanted every thirty years and it is an exception anywhere to see an older pine or beech. But the Böhmer Wald has not been subject to this policement and there do remain in it magnificent pines several hundred years old.—*Cornhill Magazine,*

The condition of the world would be improved, if men were to think less of the dishonor of submitting to wrong and more of the dishonor of doing it.

NEWS AND OTHER GLEANINGS.

—The *Electrical Review* says that the lightning rod is a relic of superstition, and that the day will come when a lightning rod on a house will be regarded in the same light as a horse-shoe over a door.

—Observations in the Atlantic give from forty-four feet to forty-eight feet as the highest measured wave. But such heights are rarely reached, and, indeed, waves exceeding thirty feet are very seldom encountered.

—Lake Michigan, according to Chicago engineers, is this year a foot lower than a year ago, and one and six-tenths feet lower than in 1886. The effects of the low water are felt at almost every port on the lake, but especially at the mouth of the Chicago river, where extensive dredging will have to be done to make a proper channel.

—The Working Women's Society of New York has requested that one-half of the factory inspectors shall hereafter be women, and the Women's Prison Association has succeeded in procuring the passage by the Senate of a bill providing for police matrons in all the cities of the State. It is hoped that this bill and the bill providing for factory inspection will become laws.

—In 1886 there were seven hundred and seventy-nine female students at the Russian Universities, the majority being daughters of nobles, political, and military officials. In addition to these there are several hundred Russian ladies studying at non-Russian universities, principally in Switzerland and in Paris. The majority study medicine.

—A new industry is reported from the Maryland coast. The industry consists in the shipment of oysters in the shell by means of fastening the shells tightly together by means of a patent wire clamp. Oysters so prepared for shipment are known in the trade as "muzzled oysters." "The new business," says the Baltimore *Sun*, "is revolutionizing the oyster trade."

—A despatch from St. Paul, Minn., says: "The great tunnel through the Cascade Mountains on the Northern Pacific Road will let daylight through the rock some time today, (5th mo. 2). The crowds of workmen who have been working from both sides are now within hearing distance. The tunnel, which is 9,900 feet long, is through solid rock nearly all the way, and has been finished as the work proceeded. When the final piercing is accomplished there will be nothing left to do but to lay a track. Trains will be running through it within two weeks. The tunnel was begun early in 1886, and the contract was for about $2,000,000. When the work was begun there were no roads leading into the mountains, and all the heavy machinery had to be hauled in on wheels and then transferred to runners. In some places the pressure of the mountain is so great that clay is forced up from the bottom, and an inverted arch of stone had to be constructed to keep the clay down. The work has been carried on by electric light, power for which is supplied by a small mountain stream which flows down the mountain and falls directly over the mouth of the tunnel." A later special states: The workmen from each end met in the heart of the Cascade range, and the last borings were completed. The formal opening of this great work will be about the first of June, after which it is expected that trains will run through regularly, and the temporary road over the mountains *via* the Switchback will be forever abandoned.

—On the 3d inst. the United States Senate passed a bill "to perfect the quarantine service of the United States." It imposes a punishment of a fine of not more than $300 or imprisonment of not more than 30 days, or both, upon any person, master, pilot, or owner of vessels entering any United States port in violation of the quarantine regulations framed under the act to prevent the introduction of infectious or contagious diseases into the United States. It provides for the establishment of additional quarantine stations—at the mouth of Delawaae Bay, the entrance of Chesapeake Bay, near Cape Charles, on the Georgia coast, at or near Key West, at San Diego harbor, at San Francisco, and at the entrance to Puget Sound, near Port Townsend.

—An Illinois philanthropist has given $10,000 to establish an institute in Memphis, Tenn., for the training of colored girls as domestic servants. His idea is to have cooking taught as an art.

—J. L. Palmer writes from Arkansas to the *Union-Signal:* "Women vote freely and gladly against the continuance of the saloons, by signitures to the petitions un-

der the three-mile law, which is doing much good in many ways. Forty-eight counties are already free from the licensed saloon; twenty-seven are almost free (this makes up the seventy-five counties we have), and still the good work goes on. For many reasons, I think the woman suffrage plank should be retained in the Prohibition Party platform."

—The Michigan College of Physicians and Surgeons at Detroit has determined to admit women to its courses on the same terms as men. The Medical College of the University of Michigan was among the first American institutions to do the same thing.

—The Empress of Russia has a houseful of seamstresses, yet makes nearly all the clothing for her youngest children, and takes their new hats to pieces and trims them over to suit her own taste. She is expert with the needle, and makes beautiful embroidery.—*Woman's Journal.*

—Miss Hampton, of South Carolina, a daughter of U. S. Senator Wade Hampton, is now assistant in the surgical ward of a New York hospital. She has taken a thorough course of training as a professional nurse, and it is her plan, when her studies are completed, to open a training school for nurses in the South, and supply a new field of work for Southern women.

CURRENT EVENTS.

Two freight trains collided near Locust Gap, Pa., on the 5th inst., late at night, and the shock exploded two car-loads of gunpowder and dynamite. Twelve cars and seventeen houses standing near were destroyed, about ten persons killed or fatally hurt, and between 20 and 30 injured less seriously.

In the General Conference of the Methodist Church, now sitting in New York, there were several women claiming admission as "lay" delegates, and the question of seating them, after being debated for several days, was decided in the negative on the 7th inst., by a vote of 159 to 122 ministers, and 78 to 76 laymen. One of the women delegates was Frances E. Willard.

Despatches from India announce that Delhi and Moradabad have been visited by disastrous hailstorms, about 150 persons having been killed. The hailstones were flat and oval in shape, and some of them weighed as much as two pounds.

It is announced from Europe that the Emperor of Brazil, Don Pedro, is seriously ill at Milan, in Italy. Physicians were summoned from Rome and Naples, for consultation. His visit to this country in 1876 will be remembered.

Advices from Berlin show the Emperor of Germany to be in a declining state. He does not fully recover after each relapse, before a new one occurs.

A movement is in progress at Washington to raise a fund to procure a statue of George Washington, to be presented to the French Republic, in the name of the American people.

NOTICES.

*** The Yearly Meeting's Committee on the "Education of the Colored People in the South" will meet in the lecture room of Central School building, on Second-day, Fifth month 14th, at 2.30 p. m.

Amos Hillborn, Geo. L. Maris, } Clerks.

*** Swarthmore College. Regulations in relation to Certificates of Stock, lost or mislaid. That in all cases when the Certificates of Stock of this Corporation shall have been lost or mislaid, it shall be the duty of the treasurer and clerk to advertise the same at least twice, and that after such advertisement the said officers may issue new certificates, in lieu thereof, upon the owner giving a bond of indemnity, and paying the expense incurred in issuing the same.

M. Fisher Longstreth, Secretary.

*** A public Temperance meeting, under the direction of the Yearly Meeting's Committee on Temperance and Intoxicating Beverages, will be held at Race street Meeting-house, on the evening of Third-day, Fifth month 15th, at 7.30 o'clock. All interested are invited to attend.

*** The annual meeting of the stockholders of Friends' Book Association of Philadelphia, will be held at the Meeting-house, 15th and Race streets, Philadelphia, on Second-day evening, Fifth month 14th, at 8 o'clock.

S. Raymond Roberts, Secretary.

*** Members of the Yearly Meeting's Committee on Isolated Members are desired to meet in Room No. 4, of Race street Meeting-house, on Third-day, Fifth month 15, at 9 a. m., punctually.

Howard M. Jenkins, Clerk.

*** At the meeting of the First-day School Association, to be held at Race street Meeting-house, on Fourth-day, Fifth month 16th, 1888, the following questions will be discussed, and all interested are desired to participate:

1st.—The purpose and right use of Lesson Leaves.

2d.—The duties and responsibilities of Superintendents.

The meeting will commence at 7.30 p. m., and close at 9.30 p. m., promptly. Friends are requested to remain until it closes.

Samuel C. Lambert, Clerk of Executive Committee.

[The Executive Committee of the First-day School General Conference having advised that after this year the Lesson Leaves shall not follow the International Series, some Friends interested in the question thus raised are expecting to consider it under the first part of the programme.]

*** Friends desiring accommodations during the approaching New York Yearly Meeting, or the Meeting of Friends' Union for Philanthropic Labor, are requested to communicate with Joseph A. Bogardus, 177 West street, New York City.

*** An adjourned meeting of the Association for the Promotion of First-day Schools within the limits of Philadelphia Yearly Meeting will be held in Race St. meeting-house on 4th-day evening, 5th mo. 16, at 7.30 o'clock.

Friends interested are cordially invited to attend.

S. Raymond Roberts, Clara B. Miller, } Clerks.

*** A general, (and public) meeting of the "Association of Friends for the Promotion of Education among the Colored People of the South" will be held on Fifth-day evening (Yearly Meeting week), Fifth month 17, 1888, at 8 o'clock. Officers for the ensuing year will be chosen.

The attendance of all interested in the work is cordially invited.

Howard M. Jenkins, Chairman.
Sarah J. Ash, Secretary.

*** Quarterly Meetings in Fifth month will occur as follows:

14. *Philadelphia Yearly Meeting.*
16. Easton and Saratoga, Saratoga, N. Y.
19. Short Creek, near Mt. Pleasant, O.
21. Fairfax, Hopewell, Va.
23. Stillwater, Somerset, O.
24. Duanesburg, New Baltimore, N. Y.
26. Blue River, Blue River, Ind.
28. *New York Yearly Meeting.*
28. Warrington, Pipe Creek, Md.
29. Burlington, Crosswicks, N. J.
30. Southern, Easton, Md.
31. Bucks, Buckingham, Pa.

WM. H. JONES,

The Dealer in **Agricultural Implements, Seeds and Fertilizers.** Removed to **2043** and **2045 Market St.**, Philadelphia, Pa. Cheapest and largest variety. Every conceivable implement of farm use, harness, seeds and fertilizers. It is a curiosity, and of great interest to every utilitarian to see the establishment. If you cannot get here, write for wants. I am in communication with all the Agricultural implement builders in the U. S.

ALONE WITH THEE.

INTO my closet, facing as a dove
Doth homeward flee,
I haste away to ponder o'er thy love,
Alone with Thee.

In the dim woods, by human ear unheard,
Joyous and free,
Lord, I adore thee, feasting on Thy word,
Alone with Thee.

Amid the busy city, thronged and gay,
But one I see;
Tasting sweet peace as unobserved I pray,
Alone with Thee.

Oh! sweetest life—life hid with Christ in God,
So making me,
At home, and by the wayside and abroad
Alone with Thee.

Elizabeth Prentiss.

PHILADELPHIA YEARLY MEETING, 1888.

THE annual meeting of Ministers and Elders was held as usual, the Seventh-day preceding the sessions of the general yearly meeting. The morning session opened with quite a full attendance, most of the members being in their seats at the appointed hour, (10 a. m.) An exhortation to loving unity and a seeking to know what is our individual duty, that we may give evidence of discipleship, very tenderly handed forth by John J. Cornell, was a fitting service, as preparing the meeting for what followed.

Abigail R. Paul, the assistant clerk, read an opening minute, the decease of the Clerk, since the last meeting of the body, making this duty devolve upon her. Ellwood Michener was desired to serve the meeting as its clerk for the present session. He prepared and read a minute as follows: "Our beloved friend, Daniel Foulke, having been removed by death since our last meeting, Ellwood Michener was appointed to serve as clerk at the present session."

Robert Hatton paid a feeling tribute to the useful service of Daniel Foulke, and to his faithfulness as the clerk of this body. Elizabeth H. Plummer added a similar testimonial, with an exhortation to greater watchfulness in our social relations, and as ministers, upholding the great principle of our Society "Christ within, the hope of glory."

Reports were on the table from all the quarterly and the half-yearly meetings that compose the body, and the Friends appointed as representatives were present except twenty-two; excuses were offered for three. Several verbal criticisms followed the reading of the minutes of appointment, and attention was called to the difficulty of hearing what was being said. Minutes were read for Ministers and others in attendance from yearly meetings with which we correspond, viz.: for Abel A. Hull, John J. Cornell, Serena Minard, and her companion, Caroline B. Cutler; and for Martin Haycock and his wife Rachel.

A general expression of unity with the presence and company of all these Friends followed, and they were encouraged to be faithful to every opening of truth while with us. Excellent exhortations and admonitions were handed forth, calling upon the assembly to remember that we are here to attend to the business pertaining to the body, each separate branch thereof having its own wants and necessities. Feeling allusion was made to the decease of Sarah Hoopes and Mary S. Lippincott, and to the absence of several aged ones, who, though still living, are not able to be present with us.

A solemn covering overspread the meeting as this exercise was handed forth, which continued through the remainder of the session.

The consideration of the state of the body was entered upon by the reading of the answers to the first Query.

This called out very earnest expression in regard to taking the children with us and encouraging them to attend our meetings. It was said "We make our children members without their consent, and this lays a heavy responsibility upon us as parents, that we instruct them in all the great testimonies which are held by the Society and in the fundamental doctrine of the Divine light in the soul, that will lead and guide into the truth.

Exhortations that we forget not the importance of watchfulness over ourselves, that we be examples of what we profess before the children, and in the social circle followed.

A fervent petition for the Divine presence and help in all our deliberations, and the reading of the summary answer to the first query closed the exercises of the morning session.

The afternoon session settled into the quiet at about the time adjourned to (3 o'clock). An exercise from Joseph Horner was followed by the reading of the opening minute. The representatives reported having met and agreed to present the names of Wm. Wade Griscom and Abigail R. Paul for clerks. They were united with and appointed to the service for the ensuing year.

The answers to the second query were read with the summary. In considering this query the temptations with which the minister is assailed were referred to,

and the example of the Great Pattern cited as one tempted in all points as we are, yet without sin. It was said by another "that there is sometimes an undue waiting upon the part of the Elders, to acknowledge the gifts among them." The setting apart of fathers and mothers in the church as helpers to the ministry and the need there is that these work together for the welfare of the whole body was the concern of another. Quoting the words of the gospel concerning Jesus, "In him was life and the life was the light of men," the testimony was borne that this is the great need. If our ministry has not life it is nothing. Other testimonies to the evidence of the Divine gift within us were handed forth, and the desire expressed that each may be purified and this Divine power be over us. The ministry that begins in the life and ends in the life is the ministry we need. The soundness of ministers is a matter of degrees was the testimony of another. Another thought there was a lack of faith in the Infinite One, and instead of looking to this power there is a running out, in the desire to please the people. We have need to watch our standing. The Divine Master knows our gifts,—as we abide in him we will know the true exercise of these. One has ability to do one thing and another is called to a different service. All have their service, and as each attends thereto one will not be in the way of another.

The Third Query, with the answers and the summary answer, called forth an expression of thankfulness, that so clean a record could be made of the unity and love that exists amongst us. The exhortation "Bear ye one another's burdens and so fulfill he law of Christ, was revived, and the encouragement given to "dwell near the Fountain." There is too much conforming to the spirit of the world instead of being transformed by the renewing of the spirit.

The answers to the Fourth Query, and the summary were read, and responded to by several. John J. Cornell felt that these answers indicate a healthy condition—not a perfect one, but clear in these quries so far as they go. He wanted us not to be discouraged, though the standard bearers are passing away; remembering the observation of another, "There is no mansion in the Father's house for the discouraged," he recalled the testimony of Scripture that God is the teacher of his people; we should take up our work as the Lord shall open the way. Keep faith with him and he will keep faith with you.

The minutes of last year were read laying before the meeting the concern of Robert Hatton in relation to a visit to Friends of Great Britain and Ireland. He informed the meeting that circumstances beyond his control, chiefly that no suitable friend had offered to accompany him, had prevented the accomplishment of his purpose. He still felt the obligation resting upon him and believed the way would yet open for the service. Sympathy was expressed for him, and a hope that he might be favored to perform his mission.

The same evidence of the Divine presence that was acknowledged in the morning session, continued to the close of the meeting which was felt to have been a favored opportunity.

On First-day morning the several meetings for worship in the city were attended, as is usual at this time, by many Friends and others, especially that at Race street. John J. Cornell spoke there, also Serena Minard, of Canada; in the evening the former attended Girard Avenue. Abel Hull, Peter Smedley, Postrema R. Cole, and Robert Hatton spoke, in the morning, in the Cherry St. end of the Race St. house. At Green street, the morning meeting was somewhat larger than usual; there were communications from Perry John, John Haines, Elizabeth H. Plummer, and Elizabeth Paxson. The evening meeting was small; near the close Margaretta Walton spoke very acceptably.

In the afternoon, at 3 o'clock, the usual Children's Meeting, participated in by the First-day schools, was held at Race street. The exercises were opened by the Superintendent, Samuel C. Lambert, reading a selection from Scripture. The exercises of the schools were listened to with much satisfaction by the large audience. Isaac C. Martindale, Phœbe Griffith, and others spoke.

SECOND DAY, FIETH MONTH FOURTEENTH.

The first session of the general yearly meeting began at 10 a. m. In men's meeting the attendance was quite as large as usual, the seats down stairs being nearly all full, and some also in the gallery. The names of the representatives being called, (also at the close of the session those who did not now respond), all but ten were found to be present. Minutes for visiting men Friends, (as reported above), were read, and there were expressions of satisfaction at their presence with us. The epistles from New York, Baltimore, Ohio, Indiana, Genesee, and Illinois Yearly Meetings, the six annual bodies with which Philadelphia corresponds, were on the clerks' desk, and were all read, to the edification and comfort of the meeting, and drew forth responses of unity and approval. A committee was appointed to prepare the draft of a response to the epistles. Minutes of visiting women Friends were read. John J. Cornell referred, in a few remarks, to the mention in the Illinois epistle of the holding of "parlor meetings" among those present at the time of the yearly meeting, and expressed the view that these were often valuable religious occasions. The business of Philadelphia Yearly Meeting, it is true, is very large, but he suggested whether the session should not extend over a greater number of days in order to fully enjoy all the privileges and opportunities afforded by so large and important a gathering of Friends.

In women's meeting, after a silence of a few moments, an earnest supplication to the Author of all Good was offered by E. H. Plummer. The reports from the different quarterly meetings were taken up, and the lists of representatives called over, all being present but six.

Minutes for the ministering Friends in attendance from other yearly meetings were read, as above. Many members of this meeting expressed their feelings of welcome and sympathy both to those who came with minutes and those who came without. Frances J. Newlin said: "A new commandment give I unto you, 'that ye love one another.'" Bear ye

one another's burdens and so fulfill the law of Christ. Louisa J. Roberts, in addressing her remarks to the young women with us, said the more they attend these meetings, the greater will be the desire of taking a part in the same, and if they thus place themselves under the preparing hand, suitable work will open up for them to perform. Lavinia P. Yeatman, Serena Minard, Catherine Foulke, Abigail R. Paul and several others, made the strangers welcome. Lydia H. Price felt thankful, that though so many have passed away from our midst many still remain. Some of us having passed through great trials, have had our faith increased. A committee was appointed to audit the Treasurer's account; also bring forward the name of a person, to serve the meeting as treasurer. A committee was appointed togather up and assist the clerks in collecting the exercises of the meeting. The Epistles from New York, Genesee, Ohio, and Illinois, were read; Louisa J. Roberts said the same spirit pervaded all these epistles, that of a dependence on one another as well as of love and forbearance. Matilda Janney expressed unity with all of the Epistles, and saw in them a feeling of sweet sympathy and dependence on the Heavenly Father.

At the afternoon session, in men's meeting, John Wildman, on behalf of the representatives, reported that they had conferred during the noon recess, and were united in proposing Emmor Roberts for Clerk, and Evan T. Swayne and Alfred Moore for Assistant Clerks. These names, being separately considered, were approved. A committee was appointed to assist the Clerks in collecting the exercises of the meeting, preparing the "extracts" for publication, and transcribing and fowarding the epistles. The Recorder of the yearly meeting, Samuel S. Bunting, desiring to be relieved, on account of impaired eyesight and extended service, the subject of appointing a successor was referred to the Committee to examine the Treasurer's account. That Committee was also directed to consider the minute sent up by Burlington Quarterly Meeting, asking a reduction in the quota of Yearly Meeting stock, and it was united with that the whole subject of a revision of quotas be referred to the Committee, the members of which, four from each quarterly meeting, (except Caln), were then appointed by the meeting.

The meeting then took up the unfinished business left over from last year,—the propositions for changes in the Discipline, concerning marriage, a "hireling" ministry, etc. (These were eleven in number. They were sent up from Philadelphia Quarterly Meeting, in 1885, and were then referred to a joint committee, which held several sessions during the sitting of the yearly meeting, and made a report favoring the adoption of all but three. The yearly meeting, upon receiving this report, laid it over to next year,—1886,—for action, the several proposed changes to be meantime printed in full in the "Extracts" for general information. In 1886 the subject came up again, and was then referred to a new and large committee, to report next year. Their report, presented in 1887, approved all the changes, and this report was adopted in women's meeting, but in the men's meeting laid over for another year, —women's meeting concurring in this. We therefore come up, now, for the fourth time.)

The consideration of the subject occupied most of the afternoon session. Allen Flitcraft expressed himself as not satisfied in all respects with the precise form of the changes, but thought that after the protracted consideration they had had, and the favorable recommendation of the committee which had considered them for a year, they should now be adopted. This view met a large response of acquiescence from the body of the meeting, and was approved by many Friends who spoke upon the subject. Isaac C. Parry disapproved the changes, and a number of Friends, including Edwin L. Pierce, John J. Moore, and George Justice, strongly objected to those which relate to "a hireling ministry," taking the view that they would lower our testimony in that particular. Clement M. Biddle, Samuel Swain, James V. Watson, Joseph Wharton, William C. Parry, Edward H. Magill, Samuel S. Ash, and others, held that the changes would put this testimony on higher ground. Joseph Flowers, Howard M. Jenkins, and some others, desired that at least the changes in the Discipline on marriage, to which few objections had been made, should be adopted. The Clerk finally made a minute that sufficient unity did not appear to adopt any of the propositions, and the subject was thus disposed of.

In women's meeting representatives proposed the reappointment of Margaretta Walton for Clerk, and the pointment of Anna C. Dorland for Assistant Clerk, which being united with, they are appointed to that service. Sympathy was expressed with the retiring Assistant Clerk, who deserved to be released.

Epistles were then read from Indiana and Baltimore Yearly Meetings. All the epistles show a reaching out after truth. A committee was appointed to prepare replies to the epistles. Lydia H. Price spoke of the loss we had sustained in the death of our friend, Susan Roberts. A. R. Paul referred to the Baltimore epistle, in regard to the mothers keeping their own lives in the truth, as it is necessary for those having the care of children to teach by example as well as by precept. A Friend from Illinois Yearly Meeting, without a minute, having come in the freedom of love, was welcomed and invited to come forward.

The Committee to visit and encourage the members of *our* Yearly Meeting reported that they had extended labor over *part* of the vineyard. They were continued and encouraged to proceed with the work, as "no effort for good is ever wholly lost." It was remarked if the harvest is not visible, it may come in after years. The Committee have nothing to do with the result, they have only the seed to sow.

After the concluding minute, and an interval of solemn silence, the Clerks broke meeting.

THIRD-DAY, FIFTH MONTH 15.

IN men's meeting, it was decided to take up, at this time, the report of the special committee of five, appointed last year to confer with the Treasurer as to the reception and care of the funds left by John M. George for the establishment of a boarding-school.

This report was then read. It stated that $142,926, partial avails of the personal estate was in process of payment to the yearly meeting, $20,000 having been set aside, by order of the Court, to provide for the payment of taxes, etc., on the unsold real estate. (This real property, consisting mainly of 170 acres at Overbrook, in the suburbs of the city, forms the main part of the trust estate. There is also some personal property not converted, and some minor items of real estate.)

The meeting then, after some consideration of the subject, decided upon a minute, as follows:

After deliberation the following minute was adopted: That a committee of men and women Friends consisting of six from each quarterly and half-year meeting (three of each sex) be appointed to nominate to a future session a committee of five Friends to advise with the Treasurer and the Executor of the will of John M. George deceased, with the same power and authority given to the committee last year. Also to bring forward the names of a committee to take into consideration the whole subject of the provisions of the will of John M. George, deceased, relating to a boarding school, and report either to this yearly meeting or to that to be held next year, a plan for the organization and government of the school to be established, the manner in which the trust estate shall be held and managed, and if way opens suggest a location and plans for suitable building with estimate of the probable cost thereof, with authority to draw upon the Treasurer for necessary expenses.

The appointment of the nominating committee was then entered upon, three (men) Friends being named from each quarterly meeting; and information of the action was communicated to Women's Meeting.

The consideration of the state of the Society was then entered upon, and the First Query, with its answers, was read. The summary answer adopted was as follows:

All our religious meetings have been regularly held, exceping those at Radnor, Merion, and Maiden Creek, in Philadelphia Quarter; at Lampeter and Columbia, in Caln Quarter; and in a number of other instances in other quarterly meetings, mainly attributed to inclement weather. Those held on First-days are generally attended by most of our members. Those held near the middle of the week are generally small. Two of the reports notice an improvement in attendance. The hour is nearly observed. Some instances of sleeping; no other unbecoming behavior to notice.

The meeting was then occupied until the hour for adjournment by exercises from a number of Friends, including Ezra Fell, Martin Malony, Nathaniel Richardson, Thomas Foulke, John J. Cornell, and Joel Lare, upon the subject of the answers to the Query.

We must learn to work and wait, God perfects his works through beautiful gradation. We must have faith in duty.

I came from God, and I'm going back to God; and I won't have any gaps of death in the middle of my life.—*George MacDonald,*

God only knows what great powers he hath for creating happiness and joy.—*E. Irving.*

LIVING WITHIN OUR MEANS.[1]

It is true that the past is a great store house of the lessons of experience; its records are full of warning and suggestion;—but it is not to the far past that I would turn your thoughts to-day. Only the last week has put upon its records a history that we may profitably pause to consider. Its lessons are of deep significance, and have a practical bearing upon all our lives. It is the story of a man in the very prime of life, a man having wife and children, a man whose business ability had placed him in an important position in an important bank in the city of New York; a man who had won the implicit confidence of the managers of the bank, and was in the line of promotion to its higher offices; a man of cultivated tastes, and of fine social gifts. A week ago, we should have said that this man was one of the favored children of fortune, to whom life promised all its best gifts. And this was so. But to-day he is shipwrecked. He is published to the world as a defaulter, and he is hiding from the officers of the law. His yearly salary was $,5000. This sum proved not to be enough to meet his desires, and instead of pruning and fitting his desires to his income, he allowed his desires free scope apparently, and in a few years appropriated to his own use, the funds of the bank, to the amount of 59,000. For years he stood in his place as the trusted cashier, while he was conscious in his heart that he was a robber. We are not called upon to sit in judgment upon the *man.* We cannot measure his responsibility. We shall never know what was left out of his training that might have made him strong where he proved to be weak, or what influences went to the corrupting of his moral soundness. All these hidden things of the man's life are known only to Infinite Wisdom, and will be judged by Infinite Justice. But the outward course of the man's life, and its terrible wreck upon the rocks of extravagance, that threaten so many lives, lie open before us for our consideration. It is not a happy theme, not a pleasant picture, but I would that language might be given me to place before you an impression picture of manhood with honor gone; honor sacrificed to elegant living and costly hospitality; of a husband turning into unutterable woe the life of his wife; of a father, overshadowing the lives of his children with a cloud that no ray of comfort can shine through. To-day, in his banishment from wife and children; in his consciousness that he has betrayed the confidence reposed in him, and so has weakened the confidence of all men in all other men; when he calls himself, as he must, by the name of thief, how like dust and ashes must seem the things that have tempted him away from the straight line of honorable living. How he must look with a feeling of envy upon the hard-working day-laborer, who, lacking the elegancies and refinements of life, has yet his *honor* to which all things may be added. Five thousand dollars did not prove to be money enough to buy the clothing that his tastes required for himself and his family; to provide the elegant appointments of his house, to meet the expenses of his Club, of which he

[1] Read to the students of Swarthmore College by E. P. Bond on Fifth month 6th, 1888.

was a popular member, to furnish forth the feasts to which he loved to invite his friends. And since he had not money enough of his own to do all these things, he secretly and with great adroitness took other men's money. It is very possible that he did not say to himself that he was *stealing*, but called it *borrowing*. It would be a great deal wiser to call things by their right names. Can we doubt that now, in his hiding-place, he is crying out in his heart "Why was there not some power at hand to hold me back from ruin!"

Ah, dear young people, we need not expect at forty years of age that a miraculous arm will be stretched forth to save us from the whirlwind of our own sowing. That cannot be. Whatsoever we sow, that must we also reap. And the only power that can keep us safe in the path of integrity, is the power of *right principles of action* from our youth up. The stress of life increases as the years go by. Our relations multiply, and the demands upon us grow more and more, and to meet this stress and these demands, our training must have begun long ago. Athletes are sometimes known to postpone their training and make a great spurt of effort when they set out for a prize, and thus win the day; but life in its higher aspects does not come to success through sudden and spasmodic efforts, but only by steady obedience to the known laws of right.

This is not a metaphysical but a most practical question, to which I ask your thought, one that concerns us all from the eldest to the youngest,—this question of living within our income. Whether the income be five thousand a year, as in the case we have considered, or at the rate of five cents a day as may be the case with some of our number, the problems and perplexities are of the very same nature, and differ only in degree. I suppose there are only a few incomes so large as not to require a choice of expenditures. With these exceptions, there is always a degree of elegance, a grade of expenditures just beyond our own particular income, and always tempting us beyond our depth, and always testing the strength of character to which we have attained. If our incomes were always of the same grade as our neighbor's, one very important factor of our life problem would be omitted; but it is very apt to chance that our neighbor's income is greater than our own, and that we have constantly before our eyes, and educating our taste for greater fineness and costliness, his standards of life's necessities. There is always the possibility that our neighbor's coat or gown may make the stuff of our own garment look coarse and homely, and that our neighbor's child need not choose whether his allowance be appropriated to bananas or tennis balls. It is this inequality of income that introduces the element of moral courage into our problem, and, it may be, puts a constant strain upon our honor. For it does require moral courage to acknowledge the limitations of our income, and hold ourselves strictly to them. If we have a fixed income, whether it be five cents a day, or five thousand a year, then the issue becomes a direct one between desire and honor. We have either to fit our desires absolutely to our income, training ourselves to resist temptation to go beyond this limit, or we sacrifice our honor and become either borrowers or thieves. It seems to me of very great importance that young people do not allow themselves to become borrowers, that they train themselves steadfastly to go without the pleasures or indulgences that they can gratify only by borrowing the money for them. Because, if to-day's desire is uncontrolled, to-morrow's will be stronger; and at forty years of age, when desire is perhaps at its strongest, there will be no power of resistance against its clamorous demands.

Along with this training of controlled desire, there needs to be another training of the ideals of happiness, and education of the sense of values, if I may so express it. The college course has failed of one of its finest purposes, if it send not forth a company of young people to whom it has revealed the truth that happiness is not from without, but from within. If the college course has made more necessary, instead of less, the elegant and costly appointments of living, if it has stimulated the feeling that the tides of happiness rise and fall with the costliness of our carpets and upholstery, and the fineness of china and silver, with the richness and variety of our dress, then has it missed its noblest aim. For, to my mind, the end of college training is to put the student in possession of himself, to open the eyes of his mind and soul, to the real things of life—the imperishable joys of the intellect and heart. I do not mean to be understood as saying that there is no charm or delight in costly furnishings. I know there is, and that they appeal legitimately to our love of beauty. But I would emphasize this, that if we have not learned how to be sweet-spirited and happy upon an ingrain carpet, then the velvet carpet, while it will be softer to our feet, will in no wise beautify our lives; that if our houses be not first furnished with fine, honorable manhood, with gentle, honorable womanhood, then nothing that money can buy to put into them will make up for the poverty of their furnishing. I would emphasize this, that if the man dignify not the coat, if the woman grace not her gown, then broadcloth and satin fail to give the chiefest charm that dress of man or woman can have.

This is but another way of saying what Jesus said eighteen hundred years ago, "Seek ye first the Kingdom of God, and his righteousness; and all these things shall be added unto you." Know that the inexhaustible fountain of peace and joy is a sense of our vital personal relation to our Heavenly Father; that we can honor this relation, that we offer service to our Heavenly Father, not in the singing of psalms nor in the protestations of words, but only as we embody in our lives his revelations to our souls, of truthfulness, and faithfulness, and tenderness; know that from this same fountain springs the dearest joy of our human relations, of friend to friend, of husband to wife, of parent to child; knowing this, all things else shall be added,—that is, all things shall assume their right relative values, and we shall be placed beyond the reach of the temptations of dishonorable desire, and we shall know, too, how far it is right for us to indulge our personal taste for things costly and beautiful.

Youth delights in stories of battle and bravery, and longs for some Flodden field upon which to be tested. But believe me, young people, you need not step aside from the beaten track of your daily life here, for tests of the noblest form of courage. Life under our college-roof is an epitome of life out in the great world. Doubtless you know, far better than I can tell you, the temptations you must daily resist, to accept the low standards of morality that struggle for foothold among us. Scoffing is loud mouthed, and among the weak has power to turn all sacred things to ridicule; but calm, quiet courage that lays hold upon the strength of God, will steadfastly go its way from height to height.

SCRIPTURE LESSON, No. 21.

FIFTH MONTH 27TH, 1888.

PETER'S DENIAL.

TOPIC: MORAL COURAGE.

GOLDEN TEXT: "Wherefore let him that thinketh he standeth take heed lest he fall."—1 Cor. 10: 12.

READ Matt. 26: 69-75.

OUR last lesson gave a sad picture of the loneliness of Jesus. The three whom he had taken apart from the rest of the disciples had suffered themselves to fall asleep while he agonized in prayer, giving evidence of how little they comprehended the situation in which their Master was placed.

When Judas and the multitude came to arrest Jesus, another sad spectacle was presented, "all the disciples forsook him and fled." Peter only "followed afar off."

It is with Peter that our lesson for to-day deals: Peter, the presumptuous disciple who had thrown himself into the sea that he might go to meet his Master (Matt. 14 : 28); Peter, to whom had been opened the great doctrine of immediate revelation (Matt. 16: 16); Peter, who on the mount of transfiguration wanted to build tabernacles because it was good to be there (Matt. 17: 4); Peter, who had declared with emphasis he was ready to go with Jesus to prison and to death (Luke 22: 33). It is this Peter, one of the three chosen "to watch with his Master," who only a few hours after, "sitting without in the court," denies that he ever knew him,—more than this, when it is said, "thy speech betrayeth thee" begins to curse and swear, still denying his Master.

And straightway the cock crew. Luke adds, "and the Lord looked upon Peter." This brought to Peter's remembrance his words of confident zeal (Matt. 26: 33), and the answer of the Master; and the depth of his moral degradation overwhelmed him with grief. Jesus, in the hands of his tormentors, must have felt this cowardly denial even more keenly than he did the treachery of Judas, who, on previous occasions, had shown himself unworthy of confidence.

Thy speech betrayeth thee. Mark adds, "he was a Galilean," and in this way his speech betrayed him. The *patois* of the Galileans was not so refined as that of the people of Judea; they were mostly an agricultural people, though they had large fisheries and some manufactories. They were often ridiculed for their rusticity. It was easy to distinguish them from the more scholarly and cultured people of the South by their speech and manners. Jesus was a Galilean only by residence. When his parents returned with him from Egypt, they turned aside into parts of Galilee for fear that Herod would seek the child's life, and dwelt in Nazareth, where Jesus remained until after he had entered upon his public ministry, when he made Capernaum his home.

It is very easy for us, at this distance from the time of Peter, and having had the blessed example and precepts of Jesus to educate and influence us, to think that no one so trained could be found now who would be guilty of such cowardice as to betray the Master. But are we not guilty of the same thing when we are ashamed or afraid to do or to say what we know to be right? Our lack of courage may not lead to such a sorrowful result as was the case with poor Peter, for by reason of sacrifices for truth's sake, intolerance in religious matters is not a sin of our age. Still there are many battles yet to be fought for the truth, and we can learn from this the sinfulness of denying allegiance to any righteous cause. We are frequently tested by our Heavenly Father's inspeaking voice, asking us to adopt some unpopular cause, or revealing to us some truth that we feel would place us on the unpopular side if we uttered it. It is true bravery to have "the courage of our convictions," and while we condemn Peter, we must keep the watch lest we, too, commit the sin of denying our Master, *i. e.*, the spirit of Christ within us, pleading with us to be faithful to the right in all things.

The lesson for us all is, not to be over-confident of our own spiritual strength. The spirit may be willing but the fleshly nature weak and easily persuaded, and sometimes when least prepared to resist, a temptation overcomes us and we are left to feel the bitterness of our state. Then, like Peter, we find no peace until the pitying eye of our Master, whom we have forsaken, is turned upon us, in the forgiving love that draws us back to him in repentance, and humble acknowledgment of the sin which "so easily besets us."

Happy is it for every one who is tempted as was Peter to deny his Lord, if he find the true escape through a firm reliance upon the Arm of Strength, that is able to succor and save to the uttermost all who seek with full purpose of heart for help therefrom. "When I am weak, then am I strong," said the apostle (2 Cor. 12 : 10). Not weak through temptations, but made so through the stripes and imprisonments, the trials and buffetting that so abounded, and kept him watchful over himself, "That no man take his crown."

FALSEHOOD is in a hurry: it may be at any moment detected and punished. Truth is calm, serene, its judgment is on high: its King cometh out of the chambers of eternity.—*Dr. Joseph Parker.*

THE living Christian—pure of heart and unspotted by the world—is the best preacher of the gospel in these days.—*T. L. Cuyler.*

THE most delicate, the most sensible of all pleasures, consists in promoting the pleasures of others.—*La Bruyère.*

LIBRARY SCHOOL OF COLUMBIA COLLEGE, NEW YORK.

In a recently published article on Libraries, Melvil Dewey, chief Librarian of the Columbia College Library of New York, gives the following interesting particulars of the school recently opened there, where women have the opportunity of being trained as librarians. Speaking of the "American Library Association," he says:

"Perhaps the most significant thing connected with this new library movement is the establishment, two years ago, at Columbia College, of the School for Training Librarians. Admissions to the privileges of the school are made only with great care. Each applicant is obliged to answer thirty-two printed questions which are sent to him, and the answers to these are designed to cover quite fully his educational history and personal tastes. The education given by this school is confined strictly to its own peculiar work. Lectures are given on such topics as libraries and library economy, the foundation and extension of libraries, library buildings, government, and service, regulations for readers, the arrangement of books, cataloguing, the best methods of reading and making notes, and all the various phases of bibliography and cataloguing. The full course of instruction is two college years, with a third year's course covering the study of comparative literature, special work in languages, and advanced studies in bibliography and library economy. The fee for a student taking the full course is only $50 per year, though it is at least $150 in all the other Columbia schools. The studies being topically arranged, a person can attend the school only while it is engaged on the subject in which he is interested; *e. g.*, a private book-owner may attend the lectures on cataloguing, binding, or buying, without studying the details of the management of public or circulating libraries, in which he may have no immediate interest. Such special students are not included in the thirty-three pupils in this year's classes, all of whom are taking the regular course. They come from all parts of the country, some fifteen States being represented."

The salaries of librarians vary from $500 to $1,200 and $1,800, the latter figures being the exception. He further adds, and this is a strong plea for college training for women: "College-bred women are preferred because their culture is wider, but chiefly because their minds work with a quick precision and steady application not usually found in one who has not had this thorough college drill."

His power is the same over the perturbations of the soul, as over the boisterous elements; and he can diffuse a calm over the mind, as easily as over the tempestuous ocean.—*Margaret Woods.*

It is not always the strength we ask that is given us; but that which we need. Our asking is often greatly at fault, but our need, as determined by the Lord, is never wrong.—*United Presbyterian.*

Never marry but for love, but see that thou lovest what is lovely.—*Wm. Penn.*

"JUSTICE CONQUERS EVERMORE."

Mr. Hutton's recent account in the *Nineteenth Century* of what proceeded from the meetings of the famous Metaphysical Society instituted in London by Tennyson and some friends, in 1869, is intensely interesting from the light thrown upon the vexed question of the freedom of religious intercourse. The fact that such a body met weekly for as many as twelve years and discussed the most momentous subjects without the disagreeable friction from the standpoints not only of cardinals but of ultra scientists seems almost or completely like the promise of a new era. It is certainly a more valuable development of amity than many professed great moves of state produce, and, while its work is not noised abroad, the resolution it effected in all the silent avenues of human life is positive and priceless. The ideal such a gathering provokes has its suggestions and exhortations for every broad man, whether his faith be of Christian or Hebrew or some other complexion. It foreshadows the day when manhood will stand on its own merits, and consult with its cogeners for its own good, without having the speaker of theory constantly in mind to set sect-hate into activity.

If it has been proved possible for the great theologians and the great scientists to compare notes in so friendly a fashion as is described, it should be proved equally possible for ordinary human beings in their ordinary spheres to assemble for the common good in due time and with similar effect. "Light without heat"—Tennyson felicitously calls this happy intercourse; and certainly the world stands ready to welcome the evangel. Men no longer live in the wilderness. They do not pattern their lives from the bestial instincts due to a primal condition. In the great overshadowing mystery they seek—in ways numberless—to trace the dim direction back to the sun. Why quarrel that sight varies in strength, that brain differs in convolution, that heart beats in one with eager faith and in another with more sluggish nature? We still have the pure hopes, while "the powers that be" have their own measure of capacity. Judge man by the spirit! "Justice conquers evermore" and we must, consequently, find some way from this terror of sect-poison that spoils so many otherwish noble lives.—*Horace L. Traubel, in Unity.*

"All things have something more than barren use;
There is a secret upon the briar,
A tremulous splendor in the autumn dew,
Cold morns are fringed with fire;
The clodded earth goes up in sweet-breathed flowers,
In music dies poor human speech,
And, into beauty blow these hearts of ours,
When love is born in each."

The covetous man is like the foolish chough, which loveth to steal money only to hide it.—*Wm. Penn.*

Love of truth is the great virtue of the intellect. —*G. F. Simmons.*

RACHEL W. HILLBORN. LYDIA H. HALL.

PHILADELPHIA, FIFTH MONTH 19, 1888.

MARRIAGES.

COCK—GARRIGUES.—Fifth month 8th, 1888, at the residence of the bride's parents, Philadelphia, Pa., under the care of Green Street Monthly Meeting, George B. Cock, son of George D. and Susan W. Cock, both deceased, to Mary M. Garrigues, daughter of Humphrey and Ellen H. Garrigues.

DEATHS.

BROSIUS.—In West Philadelphia, Fifth month 13, 1888, Herbert M., aged 8 months, son of Sumner G. and Marion M. Brosius, members of the Monthly Meeting of Philadelphia.

DICKINSON.—At the residence of her son, George Dickinson, Haverford, Delaware county, Pa., Fifth month 9th, 1888, Hannah, widow of George P. Dickinson, aged 86 years.

KNIGHT.—In Philadelphia, Fifth month 7th, 1888, Jonathan Knight, Sr., aged 74. Interment at Burlington, N. J.

LEA.—On the morning of Fifth month 4th, 1888, at Sandy Springs, Md., Sally Lea, daughter of the late Thomas and Elizabeth E. Lea, formerly of Wilmington, Del., in the 71st year of her age.

MANSFIELD.—On the 30th of Fourth month, at her residence in Waterford, Va., Sarah C. Mansfield, after a short illness, passed "from works to rewards," in the 79th year of her age.

WALMESLEY.—At Tallahassee, Fla., Fourth month 22d, 1888, Susan, daughter of Charles and Tacy Walmesley, formerly of Philadelphia; a member of the Monthly Meeting of Friends held at Green street, Philadelphia.

HENRY WILLETS.

Week after week I have examined the columns of the INTELLIGENCER AND JOURNAL in the hope to find some more extended notice than the mere announcement of the death of Henry Willets, of Manhasset, Long Island.

For several years past, he has regularly attended Philadelphia Yearly Meeting, where he endeared himself to a large circle of friends who to-day miss his presence with the sense of a great personal loss, as they realize that he will meet with them on earth no more.

Friends who have visited his beautiful home, and felt his genial welcome there, will ever recall the air of refined tenderness that pervaded his household, and his loving care for the dear sisters to whom he was so devoted, one of whom passed from earth while he was himself ill in bed.

When this illness came to him he recognized it as the last, and calmly arranged all his affairs as if he were going on a journey from home. He asked his remaining sister to sit with him and try to be cheerful, saying there was no cause for sadness; it was only the "great change" coming to him; and although suffering himself, with his characteristic tenderness for others, he greatly desired, night after night, that he might live until daylight, as it would be so much better *for the rest*, if he could pass away in the sunshine; and this desire was granted.

This thought must return with a touch of healing to his bereaved family, as they feel how the heart of a great and good man spoke out in that self-abnegation, teaching in his latest words a lesson that will embalm his memory for all who knew and loved him.

Fifth month 13, 1888. J. P. G.

THE LIBRARY.

THE LIFE OF DR. ANANDABAI JOSHEE, a Kinswoman of the Pundita Ramabai. By Caroline Healey Dall. 12mo. Pp. 187. Boston: Roberts Brothers.

THIS biography of Dr. Joshee, who graduated as a physician at the Female Medical College, Philadelphia, in Third month, 1886,—being the first Hindoo woman to receive the degree of medicine in any country,—is a most interesting work. Many of our readers already have some knowledge of this remarkable person, aside from the fact of her medical studies in this city, but few of them, we presume, are at all familiar with all the circumstances of her career. Caroline H. Dall has here woven into the narrative materials derived from various sources, and has been able to give an intelligent, if not entirely complete, account of her.

Anandabai was born in Poonah, India, on the last day of the Third month, 1865, and died in the same city on the 26th of Second month, 1887, so that her span of life covered altogether but twenty-two years. Yet in that time, developing at an age marvelous to our Western observation of mental and physiological growth, she had passed through a great circle of experience and had made herself an entity at once interesting to and influential with many millions of people. Poonah, the city of her birth, is in Western India, near Bombay, in the country of the Mahratlas, a bold and vigorous member of the great group of variant peoples that occupy Hindustan. Her father is described by her cousin Ramabai as "a rich landowner of Kalyan, a town a little to the north of Bombay, where he was warmly regarded by the high caste people." His family was of much distinction; it preserved a geneological record going back two thousand years, and particularly marked its descent from an ancestor who had rendered important service as a general, five hundred years ago, to a Rajah of the Mahrattas. To this general, (who himself died at twenty-one), a palace in Poonah, with other valuable property, had been given, and in this palace, belonging in 1865 to her grandparents, Anandebai was born, —the sixth of ten children, as her biographer understood from her own account.

Her name in maidenhood was Yamuna, or (Daughter of the Sun); her name Anandabai, (Joy of my Heart), was given her at the time of her marriage,—properly a betrothal,—when she was nine years old. She received an extended education, and when she arrived in this country she spoke with facility seven languages, of which Sanscrit, English, and Mahratta were three. About 1878, after some acquaintance probably with American missionaries in India, she formed the project of coming to this country. This, however, was not carried out until 1883, when, on the

7th of Fourth month, she sailed from Calcutta, "being the first unconverted high-caste Hindoo woman to leave her country." She landed in New York two months later, and in the autumn began her studies in the Women's Medical College, in this city, where Dean Bodley, and the other members of the faculty received her, of course, with the greatest kindness and cordiality, being deeply interested in her plans for herself and her people. But these, sadly enough, she was destined never fully to accomplish: her health began to fail while she was studying, and became desperately impaired soon after her graduation; she returned to India ill, and died, about three months after reaching home, of consumption.

Of the various details of her life in India, after her marriage to Gopal Vinyak Joshee,—a distant member of her own family,— and before her coming hither, we cannot undertake a summary here; nor do we follow, particularly, the statements concerning her husband. The impression made upon the reader by C. H. Dall's references to him is not a pleasant one, and apparently she does not desire that it should be. She intimates a lack of candor and truthfulness in his conduct,—a failing which contrasted vividly with his wife's wonderful sincerity and purity of mind. C. H. Dall doubts, indeed, the utility of a visit to the United States by Hindoos of Gopal Joshee's class. She says:

"From a somewhat wide experience of male Hindus, I cannot consider their visits to the West profitable to others or themselves. With the single exception of the author of 'The Oriental Christ,' I have seen no Hindu who seemed to me prepared intellectually and morally for the freedom he would find in American society; nor are Americans prepared for the air of innocence and exaltation worn by very undeserving Orientals. . . . . It is not learning, intellect, subtlety, or imagination that is wanting in the average Hindu: it is purity, faith, and honesty."

The sale of this biography, as we understand from the Preface, is to aid the Ramabai fund, and C. H. Dall adds: "Our climate is not friendly to the Hindu. Already the cheek of Ramabai has grown pale and her voice weak. If we love her and would aid her, we must speed her on her way." H. M. J.

NEWS OF FRIENDS.

PHILADELPHIA QUARTERLY MEETING.

This meeting, held on the 8th instant, was attended about as usual, but Friends were slow in gathering, owing, perhaps, to the fact that the *time* of gathering is set at a half hour earlier than our other meetings are held.

Rachel Mather broke the silence that overspread the assembly with a fervent appeal to the Most High for strength that all might be able to bear the cross, whenever it may be required of us. This petition proved the keynote to the exercises of the meeting. Samuel S. Ash, followed, quoting the text, "The law was given by Moses, but grace and truth came by Jesus Christ." He said in substance: "We are here at this time to consider the condition of the tributaries to our larger body, and to record their condition. If we believe in the infallibility of the Church or the discipline, we are standing on a sandy foundation. It is necessary that our spirits be free from things that are traditional, and we will not fail to find some place in which we can work. We must not quench the spirit, but try to be able to say, "God speed," to every good work. We must attend to every duty, and be ready to shed the dead leaves, and encourage the fresh green life in its springing forth, but let us be careful not to be hurried. The work of the law is never finished.

Robert Hatton took up the same line of thought, dwelling upon the promise to Abraham, "In thy seed shall all the nations of the earth be blessed," and its remarkable fulfillment, in the spread of his descendants to every part of the world. This, he said, will also be fulfilled in the spiritual life. Abraham's works were those of faith. He withheld not his son Isaac. Of Jesus it is written, "He came to his own and his own received him not." His was a life of purity and unselfish devotion, best expressed in the words, "Foxes have holes and the birds of the air have nests, but the Son of man hath not where to lay his head!" The Lord rewardeth them that trust in him,—who are willing to be anything or nothing, that they may serve him. The tribulations of life,—the taking away of friends are often the means by which we are made willing to do our Father's work. While all things go well, many rise in the morning and go their way, pursuing the avocations of the day with no thought of the needs of the spiritual life. While no man can save a soul or give a ransom for his friend, we can help our children as the Lord helps us. George Fox would say with the apostle, "follow Christ." Then indeed are we Abraham's children.

Louisa J. Roberts expressed the feeling that had arisen under the deep and weighty exercises to which we had listened. She recalled the scene at the last supper which Jesus partook of with his disciples. When they had finished he laid aside his outer garment, took a towel and girded himself therewith, and water, and performed the lowly office of washing the disciples' feet. It was not the humility of the service, but the preparation for it, that had impressed her on this occasion. And this preparation we all must be willing to undergo, laying aside everything that offers an obstacle or stands in the way of useful service in his church and in the world.

A few words of testimony, calling to the transforming power of the Holy Spirit, were handed forth by Robert Evans, which closed the exercises of the meeting for worship.

In the business meeting the answering of the Queries, especially the one relating to the family,—the training of our children, etc., called forth much earnest expression in women's branch. Mothers were feelingly exhorted to be themselves examples of what the discipline of the Society enjoins them to encourage in their children.

The summary answers in most matters showed a favorable condition. In the annual Queries, the one relating to schools embraced also the First-day schools in part, Green street Committee on these schools, having failed to send up a statement of the number in that meeting.

The reports of nominating committees, and the appointing of representatives to the approaching Yearly Meeting were attended to. The session was long, but full of interest. There was some unnecessary waiting in women's branch, that need not occur, if the business claiming the attention of both meetings is first considered. The solemnity that covers a meeting can hardly be maintained when the session has been protracted, and many, for various reasons, have to leave. C. A. K.

FRIENDS' BOOK ASSOCIATION.

The Annual Meeting of the Stockholders of Friends' Book Association was held in Race St. meeting-house on the evening of the 14th inst. Henry Bentley occupied the chair, and S. Raymond Roberts acted as secretary. The following annual report of the Board of Directors was read, accepted, and referred to the incoming board:

REPORT OF THE BOARD OF DIRECTORS.

In presenting the Fifteenth Annual Report of the work of Friends' Book Association, the Board of Directors has little to add to what has been said in former years. The Association is not on a financial basis that enables it to do much more than pay expenses, though a large trade in school and kindergarten supplies is carried on.

There needs a liberality extended towards the concern, by Friends of ample means, who are interested in the promulgation of the principles and testimonies of the Society, that tracts, pamphlets, and doctrinal treatises may be issued for free distribution. There are very many sound and helpful essays, offered from time to time, and many that are published in Friends' Intelligencer and Journal, which if printed in tracts or on slips, might be scattered broadcast through personal correspondence.

Our English Friends understand the value of this method of disseminating the faith of the Society, and the means at their command enables them to spread far and wide a knowledge of its doctrines as held by them.

A statement of the year's business ending Fourth mo. 1, 1888, shows a net gain of $1,204.36, which has been carried to the credit of the Guarantee Fund, except $500, placed to stock account.

On behalf of the Board,

Henry Bentley, *President*,
Louisa J. Roberts, *Secretary*.

The following persons were elected to serve as Directors the coming year: Henry Bentley, Amos Hillborn, Clement M. Biddle, Lavinia P. Yeatman, Samuel E. Griscom, M. Fisher Longstreth, Louisa J. Roberts, Lydia H. Hall, Sam'l B. Chapman, S. Raymond Roberts, Wm. P. Sharpless, and Robert M. Jauney.

At a meeting of the new board for organization the following officers were chosen:

President, M. Fisher Longstreth.
Vice-Pres., Robert M. Janney.
Secretary, Sam'l B. Chapman.
Treasurer, Amos Hillborn.

SWARTHMORE NOTES.

—More than $5,000 have been added to the conditional subscription toward the Endowed Professorship during the past week. The whole amount must be subscribed before the 15th of next month. Subscribers will be promptly notified when the amount is reached.

—The Athletic sports on Seventh-day last were unusually successful, and were largely attended by former students and other friends of the college.

—As usual, the students who are members, (more than one-half), were permitted to attend the sessions of the Yearly Meeting on Fourth-day. A number of the Professors and Instructors also attended some of the sessions during the week.

—The trees have made a good growth the past year, the lawn is in fine condition, and Swarthmore will be a delightful place to visit on the occasion of the coming Commencement, on the 19th of next month, when she sends out the largest graduating class in her history.

—President Magill spoke to the students on First-day morning on our testimony against war. We shall probably find room for this address, in full.

A PLEA FOR MUSIC.

Editors Intelligencer and Journal:

In two of your recent issues have appeared articles upon music written by persons either greatly prejudiced, or conscientiously opposed to knowing all there is to know on the subject, being in either case unfitted for a fair statement of facts. Hence two or three things seem to demand correction. One assertion was that the study of music is absolutely valueless as a training for the mind. This is an open error. If properly taught, it develops first the faculty of close, concentrated attention, then of observation or perception, since the "notes" must be read; comparison also, for every mark on the paper must be translated into certain motions with the fingers upon certain spots on the keyboard; precision is an absolute necessity to its right learning, for the laws which govern true music are as exact and wonderful as the laws which govern any other natural science. Appreciation or taste is also educated in the pupil during his study; and the faculty of reasoning or causation, since the "scales" are constructed upon strictly scientific principles. Imagination, if the pursuit be carried so far, and creation or composition, one of the highest and noblest developments of the mind, are also brought into use. Now it seems to me not only unwise, but inconsistent with our professed love of truth to close our eyes deliberately to this. No one who knew the facts could have said that its study does nothing for the mind, for here have been enumerated eight different mental qualities which it distinctly aids when well taught.

Again, it is said to be a merely sensuous enjoyment, and so unworthy of our notice,—possibly degrading. But what of the pleasure a flower gives us? It is purely sensuous, appealing to us only through the eye, or nostril, or fingertip. What about pretty and attractive homes? We do not need Brus-

sels carpet, if rag carpet is as warm. And the clouds at sunrise and sunset? Utterly useless except for the gratification of the artistic voluptuary. The song of birds? If it were not for the sense of hearing we should know nothing of them.

The error lies in the idea that the pleasures of sense must be degrading. On the contrary, they are, within limits, measured for each of us by the indwelling Light, as pure as the free air of heaven. Nothing is so good but that it can be misused.

Music ranks consistently with all the refinements of life. We can live just lives without them, and perhaps they do not feed directly the spiritual nature. They all begin to be wrong for us exactly at that point where they begin to interfere with duty. Within this limit they are healthful and sustaining, and very possibly supply the actual needs of some temperaments. When they steal our means, time, health, or inclination to obey the Spirit, then are they wrong. All education is inert for good or ill unless guided by the will; we should not, therefore, shun it, but be careful that by us it is put only to its God-intended use. Music is one of the lower forms of worship, such as kneeling, bowing the head, etc. Even so it is only wrong for those who can appreciate the higher worship of beautiful silence in which there are no distractions. Our Society does itself a positive injury by yielding to unreasonable prejudices and thoughtless inconsistencies. Music is consistently wrong to him only who feels that it is wrong to have his home less bare than the meeting house or the abodes of the poor.

A. L. D.

COMMUNICATIONS.

RAILROAD RATES TO GENESEE YEARLY MEETING.

Editors INTELLIGENCER AND JOURNAL:

WILL some Friend please give notice through the INTELLIGENCER AND JOURNAL the particulars in regard to going to Genesee Yearly Meeting, and the railroad rates from Rochester, (there being *reduced* rates usually I believe). I ask this for the benefit of those wishing to go, and feeling as though they could not afford it, when if they knew the low rates I think they would feel differently.

A FRIEND.

DUBLIN YEARLY MEETING.

A CORRESPONDENT writes us from Dublin, (Ireland), Fifth mo. 2d: Dublin Yearly Meeting opened to-day. There is quite an invasion from your continent. Two men Friends from Canada, one (man) from Indiana, one woman Friend from Illinois,—Western Yearly Meeting,—and a man and his wife from New England. There are besides these, I. I. Neuve, Sidney; and Wm. Pollard, of Manchester, the author of certain recently published lectures entitled "Old-Fashioned Quakerism." How Irish Friends will be able to utilize all these laborers with advantage remains to be seen. From the Reports presented to the meeting of Ministers and Elders yesterday, there appears to be considerable activity among Friends in Ireland, and numerically at least, an increase in the strength of those recognized as laborers.

For Friends' Intelligencer and Journal.

NOT TO OURSELVES ALONE.

I PLANTED a vine by my neighbor's fence,—
A fence that doth our yards divide,
And the creeper tossed its leaves to me
But hung its bells on my neighbor's side.

I sang a song one eventide
To a sleepy child upon my knee,
When a stranger paused in the street, outside,
And stored the lay in his memory.

I wrote a line for a friend to read,
A simple word of homely cheer,
But it chanced to meet a nation's need,
And found its way to the public ear.

Thus ever and always I find it so:
"Man may not live to himself alone,"
For whom we are building we never know,
Nor who shall reap what our hands have sown.

We cannot tell when we plant a seed
For whose adorning its buds may blow;
We never know when we pluck a weed
Whose precious plants will the safer grow.

Each life is a part of a wondrous whole;
Each act but a link in an endless chain;
Humanity's mass has a single soul,
And life is a balance of loss and gain.

No, life's an equation of give and take,
For *gain* is often disguised as *loss*,
And we only find when the cloudlets break
'Twas a veiled blessing we called "our cross."

But we cannot tell, for we never know,
How much we take or how much we give.
We're charity's children our life time through,
Dependent on each for the life we live.

Not to ourselves each act or word,
Or act undone, or word unsaid;
The faintest whisper a world hath stirred—
For a deed neglected the world hath bled.

What man can measure his influence? None
Of all the many in earth's broad fields.
We sow from Life's morn till its setting sun,
And not to ourselves the harvest yields.

Newtown, Pa. L. W. W.

TO CARRY with us the thought of God in every employment and entertainment of the day,—this is to walk with God. In reading, in study, in working with the hands, in walks and drives, to keep fresh the thought and presence of God, is to bring the divine into our lives.—*J. D.*

HE who is godly is both a diamond and a loadstone—a diamond for the sparkling of his grace, and a loadstone for his attractive virtue in drawing others to the love of God's precepts. A good man benefits others more than himself.—*Watson.*

No endeavor is in vain;
Its reward is in the doing,
And the rapture of pursuing
Is the prize the vanquished gain.
—*Longfellow.*

From the (London) Christian.

BESSBROOK, IRELAND.

Let us take a peep at Bessbrook, an Ulster town of nearly 4,000 inhabitants. It was founded as a temperance colony, some forty years ago, by Mr. J. G. Richardson. He has now attained an almost patriarchal age, having been born in 1813; for many years he has been a leading member in the Society of Friends, consistently carrying out their principles of a humble walk with God, and earnest labor for the good of others. Like his immediate ancestor, his worldly calling is that of a linen manufacturer, and his firm has a reputation for genuine, honest work in that branch of industry as high as that enjoyed by "the house of Morley" in another branch. The Bessbrook damasks are unexcelled, we believe, in the markets of the world. It has been said of the goods that come from Mr. Richardson's looms: "You may purchase them in the dark." If we covered reams of paper we could formulate no higher praise than that. But our object in drawing attention to Bessbrook is mainly to gather from its history the light it throws on the only satisfactory solution of the ever-present and ever-pressing drink problem.

Mr. Richardson and his partners chose a spot in county Armagh, near which Mr. Richardson owns an estate of 6,000 acres, and there erected a great linen factory, and established the colony, as we have said, on strictly temperance lines. The motto was "No public house." The natural corollary is, that there is and has been no prison, no police, no paupers, and no pawn shop. Only think of London being without each of the five items in that small peck of p's! If our faith were strong enough, and our works did but correspond, we suppose it ought to be done. The hand of the Lord is not shortened; therefore the preventing cause must lie in our unbelief, because of which he cannot do his mighty work.

It is true, no doubt, that in Bessbrook they began well, and that is half the battle. The entire works, we are told, employ about four thousand men, women, and children. Though the accursed drink is not to be bought in the township for love or money, it can be had in Newry, which is not three miles distant. There is no sumptuary law in Bessbrook compelling the people to abstain. Some *do* walk to the neighboring town to procure liquor, but the moral education of the temperance system has been such that the householders of the place have endorsed the prohibitory arrangement by a vote of six to one. And so Bessbrook, to quote the expressive words of an impartial correspondent of *Land and Water*, "stands out like a gem in this sombre and commonplace world, and like a star in the black sky of crime and intemperance."

There do not seem to be any workless workers in Bessbrook. From morn to eve the whirr of the wheels and the click of the spindles are heard; and the beautiful, well-compacted material is unceasingly turned out, to find acceptance with housewives, the wide world over, as the product of clear heads and supple, steady hands. Some £70,000 per annum are distributed as wages, but it does not go to enrich the brewer and the publican, at the expense of the health and morals of the people. Mr. Richardson has erected pretty and suitable homes for his workers, and no court is needed to reduce rack rents. There they live in comfort and independence. Every house has its garden, so that there is plenty for the men to do during the leisure hours. For winter evenings there is a Library Institute, with its reading, lecture, and recreation rooms. There is a dispensary, supported by a common sick fund, to which all contribute their quota. There are excellent schools, supported also by a small general tax, in proportion to the size of the family. There is a savings bank, the depositors in which receive four per cent. interest; some of these have placed there goodly sums to meet the calls of the inevitable rainy day. No sort of favoritism is shown in matters of religious creed; for there are five places of worship—Episcopal, Presbyterian, Wesleyan, Society of Friends, and Roman Catholic. All these are supported by their congregations without the aid of any crutch from the State. Like an enlightened and benevolent autocrat, Mr. Richardson is no slave to modern notions of political and social economy;[1] for he restricts competition in the trades of the town so that all may have a fair chance of a decent livelihood. A fine grey granite quarry on the estate gives employment to many men who cannot work in the mills.

The place, in short, has been well-described as "a model town," and they seem to be a model population. We do not suppose they have succeeded in excluding original sin with the beer cask and the whiskey bottle; but "the devil in solution" always brings with him seven other devils as bad as himself; and the one being kept out, the others have not the congenial soil in which to take root.

All this, and more, has been accomplished by Mr. Richardson, aided by his like-minded, earnest, and devoted wife. We are delighted to know that Mr. Richardson, Jun., follows in his father's footsteps, and for some years represented the temperance interest in Parliament as senior member for county Armagh. Mr. Richardson believes that many of the ills that afflict his native land would vanish if the drink were expelled. In a letter addressed to Mr. Gladstone some five years ago, when that gentleman was in office, he said:—

"I am firmly convinced that if the Ministry had done their first work, and had braved the opposition of the spirit trade, they would have had a greater blessing on their labors for Ireland as well as England. It is a well-known fact that not a meeting for rapine and murder takes place in Ireland at which whiskey does not play a prominent part, and that our poor countrymen would be incapable of committing the outrages which have taken place without the stimulus of whiskey. It is well-known, too, that the amount drunk in whiskey and beer at least equalled the rental paid during the last three years, and we have proof that where least rent was paid most whiskey was sold. God only knows how many murders were hatched in public-houses, or how many publicans,

[1The allusion here is to the English school of political economy, in which Competition and Free Trade are vital factors.—Eds. Intelligencer and Journal.]

licensed by the government, have taken part in the disturbances! *Apropos* of licensed spirit dealers, how is it that no effort has been made even to prevent the increase of a class which, in case of temperance legislation, you and others have stated would be fairly entitled to compensation? The effect of this constant increase must surely be a corresponding increase in the liabilities of the nation, not to speak of all the acknowledged evils of which the trade is a fruitful source."

Mr. Richardson's manly and Christian appeal does not seem to have met with any favorable response, and the "Irish question" is as far off from solution, apparently, as ever. Most heartily do we re-echo the desire expressed by Mr. Richardson in a letter to Sir Wilfrid Lawson, written about the same time: "How one longs for men in the spirit of Wilberforce, to arise on either side of the House and shake it to the centre, as he did on the slave question." All honor to our Bessbrook friends that they have given to the country, and to the world, an object lesson of such pregnant meaning and importance. We believe it is largely in the line of such industrial colonies, where our people will have honest work, fair wages, and wholesome dwellings, without the temptations of the drink, and aided by religious influence, that a way will be found out of the labyrinth of evils clustering around the alchohol that bids fair to lure us on to social and national ruin.

WEDDING CUSTOMS IN THE EAST.

The house rests not on the earth, but on the wife.—*Oriental Proverb.*

Among Oriental nations of unmixed blood, marriage ceremonies are almost the same as in patriarchal days. Negotiations are begun by parents or near relatives of the bridegroom and the bride, who have no voice in the matter. Settlements, all preliminaries, are conducted by guardians of those we call the high contracting parties; and love must come, if it come at all, after marriage. Compensation to the parents, for the loss of a daughter, is made. Still do Uncle Labans drive sharp bargains with those who must work for a wife, and practice deceits disappointing as that one revealed in the sorry morning when Jacob awoke and behold it was Leah. After betrothal there is an exchange of presents; from the beginning a sign of loyalty. The reader remembers how Abraham's servant sought a wife for Isaac, and not content with giving her a golden earring of half a shekel weight, and bracelets of ten shekels' weight of gold, he enriched her family with jewels of silver and jewels of gold, raiment, and precious things.

Sometimes a bride's whole fortune is in her trinkets,—an inalienable dowry. One Sunday, while returning to Jerusalem from the Mount of Olives by way of the King's Dale, we followed the dry bed of the Kedron to where the waters of Siloa go softly, now, as in the age of miracles, an intermittent fountain. A Syrian woman was drawing water in an earthen jar. Dressed in the poor cotton gown of the peasant of Judea, it was surprising to see a chain of valuable coin pendant across her forehead, and white metal bracelets, heavy almost as horseshoes, and not unlike them in appearance, on her wrists. Thinking to secure a souvenir of the day (O happy day!) the interpreter asked the price of her jewelries. She named a sum ridiculously high, at which I shook my head, and inquired if nothing less would do. She smiled, showing teeth like hailstones, and said in Arabic, "They are my marriage portion; the Frankish lady has not money enough to buy them."

In districts remote from cities, where ancient customs rule, the Jewish ceremonies are lengthened with a disregard of time not known to the restless sons of Japhet. The festival may last seven, ten, fifteen days, and in comparison, any merry-making in our domestic life is tame and dull. Distant friends come with their families, the ox and the fatling are killed, hundreds are bidden to a mighty feast, and the rich man distributes wedding garments to those not able to buy.

Before the happy hour when the bridal pair may sing "I am my beloved's and he is mine," there are protracted shows, games, jugglery, rope-walking, and strange pastimes unknown to us. The last day, the bride, with her attendants, goes to the bath. Her nails are stained "like branches of coral" with henna, a powder made of leaves of camphire dried and pounded. Her eyelids are blackened with a fine line of antimony; and, while her maidens lay on thick cosmetics, red and white, she surveys herself in a small round mirror. She uses a perfume of ambergris and musk paste called seraglio pastilles, and chews a white gum named mastic, to sweeten her breath. Her dress is rose-pink, embroidered with gold thread, and over the many-plaited dark hair is thrown a gauzy veil which makes the air balmy with heavy odors. Then come plaintive songs, farewells full of tears, and the final benediction given to Rebekah," Be thou the mother of millions."

Meanwhile the bridegroom, with his comrades, has spent the morning in the bath, where he is anointed with oil, scented with myrrh, and robed in vestments, purple and scarlet, costly as his purse will bear. Says the Oriental lover, "In the night, the jealous night which drops a veil over all else, we lift the bridal veil." When the midnight stars arise, he marches away in gay and noisy procession to a swell of drums and sounding pipes and cornets. There are flaring torches, waving scarfs, flowery garlands on horse and rider, dances, songs; and the rabble of the street—always a ready concourse—are free to join the wedding march and add wild shouts to the revelry.

Virgin's lamps are little terra-cotta things made to hold about a half-pint of oil, and are found in profusion about ruined cities of Judea. They should be trimmed and ready for use when the procession comes; but after two weeks of continuous festivity it is not strange that some of the bride-maidens forget to fill their lamps. In fact, the wedding-guests are pretty well worn out at the last hour, and drop to sleep,—the children on the floor, the bride in her appointed corner, the visitors on divans and cushions. Finally, the watcher on duty—usually an elderly matron—hears the sound of advancing music, lute, cor-

net, and cymbal. She rouses the sleepers. The bride adjusts her dress, (can the maid forget her ornaments or the bride her attire?) and, at midnight, the joyful shout resounds: "Behold, the bridegroom cometh, go ye out to meet him." There is a sudden start for lights and ranging in line to receive him. When he passes in with his train, the door is bolted against the throng of the street, eager to crowd the house, and rob, if possible. In the parable (Matt. 25), mixed with the mob were foolish virgins who started at the last minute to buy oil, finding they could not beg of the wise. Too late for explanation. Naturally, the bridegroom supposed their loud knocking was the clamor of the multitude, and called out, "Verily I say unto you, I know you not."

It is told that the janissaries of the Turkish army once broke into a house, and, not satisfied with stealing the wedding presents, carried off the bride herself, and held her, in honor and safety, till a heavy ransom was paid for her release.

Autre pays, autres mœurs. The Turkish wedding is on Monday, and among the poor the ceremony is merely the sentence, spoken by the woman, "I give myself up to thee," and there need be no witnesses. The ceremonials of the well-to-do are so long and elaborate, space forbids a description here. Divorce is equally easy. The Mohammedan can put away his wife at pleasure, and without cause, by simply saying, "I divorce thee;" but he must pay her dowry, —which law is the check on the husband's caprice and tyranny.

With Circassians and tribes of the Caucasus we call heathen, after a bargain is made with the parents, the bridegroom carries off the daughter, a willing captive; and the bride is at home in a wretched hut, soon as a few incantations against evil spirits are practiced.

The prettiest wedding procession I have seen was in Constantinople,—a stately and rejoicing march, though without music. Fancy a narrow street of high stone houses with projecting balconies, latticed with slats so close together that persons within can see without being seen. A long line of sedan chairs, cushioned and curtained with satin, each borne by two men holding poles, and keeping step together like trained horses; their uniform braided jackets, baggy trousers, and scarlet fez made festal by a bunch of lilacs on the bosom,—for it was rejoicing spring, and the gardens of the Bosphorus were radiant with color and bloom.

At the head of the column, an armed attendant, in gorgeous costume, with whip in hand, cleared away dogs and gaping idlers. They were *en route* for the Greek Church outside Pera, and the beauty of the beautiful race was on the bride. The shining face at the window was like some lovely human flower, too tender for exposure, blossoming under glass. On the classic head a wreath of orange-flowers, to be laid away on the morrow, and carefully kept for her burial.

As they near the church door, a bridal chorus rules the slow steps of the carriers; and when the bride, lovely all in her white, steps from the silken seat, bonbons are showered on her by waiting friends. The bridegroom, also crowned with a wreath, joins her, and they stand with clasped hands at the altar while the long ritual is read by the priest. Three times the wreaths are interchanged by the priest, in the name of the Father, Son, and Holy Ghost. Three times the pair are led by him round the altar; a glass of consecrated wine is offered first to the bridegroom, then to the bride, afterward to the best man and first bridesmaid, whose duty it is to be godfather and godmother to the children. The ceremony ends with kisses, congratulations, and leave takings, much the same as in our own country.—*Susan E. Wallace, in S. S. Times.*

INDUSTRIAL EXHIBITION BY THE PUBLIC SCHOOLS.

An important exhibition was held during last week, at Horticultural Hall, in this city, of industrial artwork, and the processes of manual training, as now pursued in the public schools of Philadelphia. It was largely visited, and presented to educators some very interesting features. At the opening, on the 8th instant, Edward T. Steele, President of the Board of Public Education, delivered an address, in the course of which he said that with the exception of the Centennial Exposition, this was probably the most important ever presented in Philadelphia. It was desired that the public might more fully understand the character of the manual training in the schools, how far it has been introduced, and its essential necessity as a part of the training of youth.

"It is hoped that people of the city will make a most careful examination of the exhibition, and give deliberate consideration to the subject, in order that we, as a community, may unite at once in extending this instruction to every child in the schools. Without question exclusive mental instruction has a misleading influence upon youth, creates an erroneous impression of labor, and does not prepare them to enter the general industries of the present time; in fact, leaves them in a most undeveloped state at the period at which they are expected to choose an occupation. This result has for a long time been observed, and strong and vigorous protests have been made against general education upon the claim that it educated too much, and in that way unfitted youth for the duties which lie before them. The fact thus expressed of the inadequate preparation of youth for the duties of life is justified, but the reason ascribing it to over-education is an error. There can be no such thing as over-education; but the education of one faculty may be carried to such an extent as to lead to a deficiency in other faculties and to an entire misapprehension of the relative importance of our various powers, and to a distaste for their honorable and natural employment.

"Briefly stated, our aim in education may be said to be the development of character and the preparation of the individual for the duties of life. Now let me ask you what kind of a preparation for the duties of life a system of instruction furnishes, which, in this nineteenth century, ignores the education of the hands, which gives the individual no knowledge of his adaptability to the thousand industries with

which modern civilization has surrounded him? How can such a restricted training fit youth to make a wise choice of an occupation? Do you believe that if the ten years now given solely to books were shared with tools and hand-training there would not be an entirely different outcome of life to American youth? Is there any knowledge of more value to the young than an acquaintance with their own powers? Think you that if they are made aware of the skill of their hands, and the happiness that comes from forming and creating useful and beautiful things, that the barrier of soiled hands which lies before many of the great industries, would not be crossed? Books alone are entirely inadequate to develop the amount of self knowledge that is necessary to youth to make a prudent entry into life."

Governor Beaver, who was present, said that no doubt many of the large audience were surprised by the wonderful display they saw about them, but he was not as he had devoted considerable study to the subject of manual education, and was glad that such an exhibition had been held to familiarize the people of this city with the efforts that were being made in their midst for the better education of their youth. He did not consider that manual education was for the training of the hand and eye alone, but that the training in sewing, cooking, and other branches, being given in the manner that it is, is as much a pure mental discipline as the exercises in geography, arithmetic, algebra, or any of the exact sciences.

The annexed summary of the exhibits is taken from the *Public Ledger:* The central part of the hall is occupied by a platform divided into three parts. That nearest the stage is occupied by the cooking class of the Girls' Normal School. It is fitted up with tables, small gas stoves, cooking utensils and supplies. Here a class of ten girls under the direction of Miss Helen N. Spring, teacher of cooking, made egg vermacilli, and when it was done gave small portions of it to the interested spectators. The central division of the platform was furnished with small tables and low chairs, and here a class of kindergarten children from the school at Twenty-second and Locust streets, under the supervision of the Misses MacKenzie, went through the attractive exercises and sang the pretty songs of the kindergarten. That part of the platform nearest the door is supplied with school desks for the sewing pupils. A class of girls, taught by Miss Thompson, teacher of sewing in the Eleventh and Twelfth Sections, gave an exhibition of darning stockings.

Surrounding the platform an inclined table contained displays of writing, drawing and map work of the various sections, and a collection of mechanical drawings by students in the Towne Scientific School of the University of Pennsylvania.

At the eastern end of the hall there is a collection of handsome models made by students in the Towne School, and the exhibit of the architectural department of the Board of Education. The latter includes photographs of some of the leading school buildings and a full set of working plans for the new building to be erected at Sixteenth and Moore streets.

On the front of the east gallery is an interesting collection of paintings and specimens of textile work executed by pupils from the public schools in the School of Design for Women. Large drawings and designs by pupils of schools in the various sections occupy the front of the north and south galleries. The Boys' High School, the Girls' Normal School and the public school pupils in the Pennsylvania Museum and School of Industrial Art are represented by drawings.

Along the north and south sides of the hall are booths, one of which is appropriated to each section. In these are shown the sewing done by the pupils of the secondary and grammar schools, besides specimens of modeling in clay, drawings, maps, articles made by kindergarten children, specimens of penmanship, and other articles. The pieces of sewing, darning, and patching are numbered by hundreds, and the work is pronounced by those competent to judge to be remarkable, considering the age of the pupils and the length of their terms of instruction. Among the individual pieces shown were a fine shirt made by pupils of the Lincoln School, of the Fifteenth Section, for Superintendent MacAlister, which that gentleman showed to his friends with considerable pride.

The *foyer* is given up entirely to the Manual Training School. The walls are covered with the drawings executed by the boys, and with charts of a literary character, showing that this side of their education is not subordinated to the manual training. On tables are shown great numbers of specimens of work in wood and metals, models, patterns, etc.

In the central part of the room are arranged work benches, forges, anvils, turning lathes, etc., at which boys in the first, second, and third years of the course, respectively, were engaged in joinery, chipping, filing, and fitting; in pattern making, wood turning, forging, moulding, soldering, and in mechanical construction, vise work and metal turning. A display of electrical work, such as modes of "wiring," winding of armatures, construction of batteries, etc., with a collection of chemical apparatus, occupies the southern end of the apartment.

In connection with President Eliot's reference to French schools as economising time better than American ones, and giving better results, it is interesting to notice that the members of the French Academy of Medicine have been discussing intellectual overwork and sedentarity in their schools. The different views presented give a fair specimen of how doctors disagree. Several speak of the present system as "encyclopedic"—overcharging the memory without calling into exercise the other faculties. One says that programmes of study seem to be made with a view mainly to the gifted. Another, comparing the weight of the brain at different ages, and finding that at sixteen to eighteen years of age that organ has nearly full development, concludes that it is right to demand of it the putting to use of all its aptitudes. By those who were of opinion that the school-hours were too crowded, a lessening of the variety of studies was proposed, leaving out of academic instructions nearly all the science-teaching. More manual exercises, to relieve the intellectual, were recommended also.—*The Student.*

From *Harper's Bazar.* (By T. W. Higginson.)

WHY IS LIVING EXPENSIVE IN AMERICA?

It is a curious fact that while our foreign visitors, especially those who are English lecturers, are always complaining of the higher prices of living in America, the lecturing portion of them never seem to remember that but for these high prices we never should have had the pleasure of their company. In other words, they are unwilling that high prices should be paid to anybody but themselves. It seemed to Mr. Matthew Arnold, for instance, perfectly proper that he should come here and be paid three times as much for a lecture as he could possibly have received at home; but when he was called upon to pay out, in far less serious disproportion, a part of that increased compensation for board and lodging and fees, it struck him that there was something very imperfect in a civilization that would tolerate such a state of things. But, as a matter of fact, the main reason of higher prices in America is one so simple that it ought to reconcile to those prices every one who wishes to see the race advance. I knew two sisters who kept house many years since, the one in London, the other in Boston; and on comparing notes one day, they found with surprise that they had spent about the same sum within the past year for servants' wages, the difference being that the English family kept just twice as many servants as the American. No doubt this was a great advantage to the London employers, if seen from the English traveller point of view; but how was it for the servants?

That is precisely the aspect of the case with which our well-meaning cousins never seem to concern themselves, and they never can understand why it is that the English emigrants prefer to come to "the States," rather than to Canada; the simple reason being that here the laborer is not only thought "worthy of his hire," but actually gets it. Setting aside all questions of tariff and free trade, the fact remains that, without reference to these, the conveniences and luxuries of life cost more in this country because those who actually produce them get a larger share than in Europe of that which they produce. Clothes cost more, because the journeyman tailor is better paid; travel costs more, because conductor and engineer earn higher wages; food costs more, because the people who cook it insist on better compensation. Not that these are the only considerations that enter into the increased prices, but these considerations alone, were there no others, would create most of the difference now observable.

In the only American State where such statistics have been thoroughly collected and comparison made, Colonel C. D. Wright has placed side by side the average weekly earnings of all those employed on fourteen leading industries in Massachusetts and Great Britain, and this at four successive periods (1872, 1877-8, 1880, 1883). He has shown that in three of these industries there is an excess of earnings in Massachusetts of over 100 per cent., as compared with that of Great Britain; in six industries from 60 to 100 per cent.; in four from 50 to 60; and in one only of less than 50 per cent. (Massachusetts Report on Statistics of Labor, 1885, p. 138). The general average weekly wage in all industries compared, including many beside these fourteen, was more than 77 cent. greater in Massachusetts than in Great Britain. (Report, p. 144.) And as it might justly be urged that this is only one-half the story, and that the comparative cost of living is the other half, Colonel Wright enters on an equally exhaustive comparison on this point, and shows conclusively that, allowing for the effect of these cheaper prices upon the cost of living in Great Britain, the standard of the Massachusetts working classes as to real comforts, food, lodging, and the like, is nearly half as high again as in Great Britain; or, to speak accurately, is to the British standard as 1.42 is to 1. In other words, there is in the United States, or at least in Massachusetts, a more equitable distribution to this extent; the person who actually performs the labor is better paid for what he does. To object to this is simply to maintain that the English social structure is in this respect an ideal system, and that Mr. Arnold's brave protests against it in times past were all a mistake.

Nobody ever doubted that an aristocratic social organization of society afforded a larger share of comforts to the privileged classes; the contention of the American has always been that this disproportionate share was in itself a calamity, and that one should be content to forego some of the luxuries of a rich English nobleman for the profounder luxury of knowing that the average comfort was increased nearly fifty per cent. The present writer remembers well an object lesson that he received on this very matter soon after his first arrival in London, many years ago. Having occasion to employ a shoe-black, he felt in his pocket for a six-pence; but could muster only a three-penny piece, which, with some shame and contrition, he tendered to the boy. The price of street shoe-blacking in the United States being then ten cents, it seemed a bit of meanness to come down to six cents in London; but the boy received it with the most effusive gratitude, and the traveller found later on that the recognized British price for the service was a penny. It soon appeared that a similar disparity existed everywhere, and that the greater part of the alleged economy of living in England was secured in just this way. It is all very comfortable, no doubt, for the well-to-do Englishman and for the American traveller; but what the shoe-black thinks of it is to be seen, now and then, in the riots of Trafalgar Square.

T. W. H.

NEWS AND OTHER GLEANINGS.

—Peat is now used in the manufacture of paper. It is dried, and the fibre separated and converted into pulp.

—The introduction of American watches into England, it is said, has reduced the number of gold cases marked at the London assay office from 34,844 in 1876 to 20,416 in 1886, and of silver cases from 119,394 in 1874 to 95,708 in 1886.

—During last month the Children's Aid Society placed 20 children in private families on trial, and suitable boarding accommodations were provided for 10 children. Visits to the number of 124 were made to children during the month, and service places were found for 46 women, each taking one child with her.

—Regulations have been established in the coffee districts in Guatemala by which farmers are required to build furnaces on their lands, and whenever a signal is given to indicate the approach of frost, to light in them fires of tar, pitch,or other substance likely to make a great smoke, and so keep off Master "Jack."

—The excavations on the Acropolis, at Athens, at the southeast angle of the Parthenon,have brought to light the bearded head of a man carved in stone, well preserved and retaining a covering of rich coloring. The hair and beard are painted blue and the face red. The pupils of the eyes are not only painted in, but also delineated with a chisel. The London *Athenæum* emphasizes the importance of this discovery, adding that the head, which is one of the most ancient sculptures ever found upon the Acropolis, will attract general attention both from the style of workmanship and the material. It appears to be the head of a Triton. The rest of a body, in the form of a serpent ending in the tail of a fish, was found near by a few days before.

—In a German chart, published in 1870 by Dr. Gleuns, a line dividing places keeping Sunday and Monday, respectively, passes through Behring Straits, leaving the Aleutian Isles on the east, curves sharply in between the Phillippines on the west and the Carolines on the east, then curves again sharply, sweeping north of New Guinea, and leaving the Chatham Isles on the west. At all places west of the line, it is Monday, while it is Sunday on the east.—*Exchange.*

CURRENT EVENTS.

LONDON, May 11.—Advices from Rio Janeiro state that the Brazilian Chamber of Deputies has passed a bill for the immediate abolition of slavery.

EXPLOSIONS of natural gas occurred in Buffalo, at several places, on the 10th inst. The most serious was in St. Paul's Cathedral, where the furnace in the basement was supplied with the gas. The entire interior of the church was burned out, and the roof also, the stone walls and the spire only remaining. The church was valued at about $250,000.

THE President has approved the joint resolution appropriating $30,000 for the International Exposition at Brussels, Belgium.

THERE has been much damage in portions of the Western country from the overflow of rivers. A despatch from St. Louis says advices from the Red river country report that damage done to the inhabitants of the Red River Valley during the past ten days is almost beyond comprehension. The overflow is the largest since 1843. Most of the plantations near the river have been covered with water from four to six feet deep. Many of the people have lost their household furniture, provisions, and corn. In several places the river water extended from the hills of Arkansas to the hills of Texas, a distance of ten to fourteen miles. Quite a number of deaths from drowning are reported.

MILAN, May 13.—The lung trouble from which the Emperor of Brazil has suffered has abated, but the symptoms of paralysis and diabetes remain, and the patient is racked with pain. Several times to-day he has suffered from exhaustion, from which he was revived with strong coffee.

BERLIN, May 13.—The Emperor arose at ten o'clock this morning and was dressed for the first time since the last crisis. He then walked to his study unassisted. His strength is increasing. He passed a better night than ordinary.

21. Fairfax, Hopewell, Va.
23. Stillwater, Somerset, O.
24. Duanesburg, New Baltimore, N. Y.
26. Blue River, Blue River, Ind.
28. *New York Yearly Meeting.*
28. Warrington, Pipe Creek, Md.
29. Burlington, Crosswicks, N. J.
30. Southern, Easton, Md.
31. Bucks, Buckingham, Pa.

PUBLISHERS' NOTICES.

***As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

***Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

ROYAL

BAKING POWDER

Absolutely Pure.

This powder never varies, A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans* ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

THE COMMON OFFERING.

It is not the deed we do,
Though the deed be never so fair,
But the love that the dear Lord looketh for,
Hidden with lowly care
In the heart of the deed so fair.

The love is the priceless thing,
The treasure our treasures must hold;
Or ever the Lord will take the gift,
Or tell the worth of the gold
By the love that cannot be told.

Behold us, the rich and the poor,
Dear Lord, in thy service draw near;
One consecrateth a precious coin,
One droppeth only a tear;
Look, Master, the love is here!

—*Christina G. Rossetti.*

PHILADELPHIA YEARLY MEETING, 1888.

[Our report in last week's issue closed at noon of Third-day, with Men's proceedings, and at the evening of Second-day with Women's. We therefore, begin, below, with Women's meeting on Third-day morning.—EDS.]

THE proposed changes of Discipline, laid over from last Yearly Meeting, were again introduced from men's meeting, with the information that they had not been able to unite upon the changes. Expressions of regret were made, but the meeting was encouraged to submit, in the hope that at no distant day a revision of the Discipline would be made. Lydia H. Price hoped that we would be sustained by the Everlasting Arm, and endeavor to hold on to our faith, in this disappointment; and remember "the fields are white unto the harvest, but the laborers are few." S. H. Peirce thought she would like the minute of last year to remain, so that the young people would not be discouraged. Catherine Foulke said: "They who trust the Lord shall renew their strength."

Much regret was expressed that the word "hireling" must still be retained in connection with the ministry of other denominations; that as it is a word of reproach, it ought not to be used. Louisa J. Roberts said that in other denominations those who feel called to the ministry give themselves entirely to the work. In the earliest history of the Church, the Apostles, feeling the necessity of an entire dedication, proposed the appointment of men from among the disciples, whose duty it should be to attend to the secular affairs of the church, and this led to the selection of deacons. It is a degradation of the service to say that all of those who live by the contributions of the church, are "hirelings." There might be hirelings among them, "those who see the wolf coming and flee," leaving the flock. So there may be among ourselves, and we do well to have that charity for all that thinketh no evil.

A message was received relative to the George bequest, (stating the action taken in men's meeting). This meeting concurred, and the appointment of members of a nominating committee was now entered upon and completed.

At the afternoon session, in men's meeting, the consideration of the Queries was resumed. The following summary answer to the Second Query was adopted:

Love and unity have been generally maintained amongst us; tale-bearing and detraction mostly discouraged; and when difficulties have arisen and become known, endeavors have been used to end them.

Remarks were made upon the subject by David Newport, Joseph B. Livezey, John J. Cornell, William Way, Abel A. Hull, and others.

The Third Query, and its answers, were then considered, and the following summary united with:

Friends have been mostly careful to bring up those under their direction in plainness of speech, behavior, and apparel; in frequent reading the Holy Scriptures; to restrain them from reading pernicious books, and from the corrupt conversation of the world; but more care in these respects is needed.

The consideration of this Query drew forth exercises from John Parrish, Ellison Newport, Joseph Horner, Robert Hatton, and others. The Fourth Query was then taken up, and the following summary of the answers approved:

Friends have been clear of the manufacture and sale of intoxicating beverages, with slight abatement in two of the reports. A few instances are reported of Friends having signed applications for license to sell the same. With two exceptions they have been clear of renting their property for such purposes. They have been generally careful to discourage their use as a drink, and cautious in their use as a medicine, mostly careful to discourage attending places of diversion, and the unnecessary frequenting of taverns; and to observe moderation on account of marriages, burials, and other occasions.

After considerable remark by various Friends, the report of the Committee on Temperance and Intoxicating Beverages was read, and in connection with it a memorial brought forward by the Committee, proposed to be sent to Congress, asking the proposition by that body to the States of a Prohibitory Amendment to the National Constitution. Without action upon these the meeting closed.

In women's meeting, the state of the Society was entered upon, with the consideration of the First Query. This drew forth exercises from a number of members. Catherine Foulke expressed a feeling of encouragement. Mary M. Thomas had been discouraged, but in the quiet it had come to her heart that among the young there are some whose hearts have been touched with the love of the Father, and have heard the words: "This is the way; walk thou in it." Margaretta Walton said we are all striving after the same result,—the best good of our Society. Let us not forget the Divine Master said, "If ye ask in my name ye shall receive." Matilda E. Janney appealed to young mothers to take their little children with them, "for as the years go by, they will be scattered, and then it will be a comfort to remember that you led them along."

The Second Query was considered, and a summary approved. Frances J. Newlin said: We are told that, "Offenses will come, but woe to them through whom they come". If we dwell in the love of God, will we want to receive the condemnation? Let us remember this in the coming year, and if we have aught against a brother or sister, let us go and be reconciled that the woe may not be pronounced against us. Brief concurring testimonies were handed forth, all bearing upon the query under consideration.

Upon the replies to the Third Query, Rachel N. Mather spoke of the necessity of a wise treatment of children, according to their characters. Lydia H. Price was exercised in regard to the manner of apparel. It seems so much easier to drift along with the current, and we know what slavery there is to those who cannot resist the temptation. Will not our young women take this home, and try to reform the matter of dress, and standing in the dignity of true womanhood we shall not be slaves to fashion, but by true living in all the essentials of comfort, and purity, help our brothers in their struggles to resist emptation?

FOURTH-DAY, FIFTH MONTH. 16

In men's meeting, John J. Cornell expressed a concern to visit women's meeting, and upon word being sent, that meeting replied that they would receive him at this time. They also sent word that Hannah W. Linton had expressed her concern to pay a visit, in gospel love, to men's meeting, and it was decided that the opening of the afternoon session would be a convenient time.

The report of the Temperance Committee being re-read, its consideration, with that of the proposed memorial to Congress occupied nearly the whole of the morning session. At the close a minute was adopted accepting the report, continuing the committee, and exhorting them to continue their labors as way may open, according to the light of Divine Truth in their minds. The memorial, being a matter new to the meeting, occasioned a divergence of expression, and there was not a sufficient unity for its adoption at this time.

In women's meeting, early in the session, the visit of John J. Cornell was received, to great satisfaction, and the tendering of all hearts. As he opened up the several states and conditions of those present, none could feel themselves excluded in the close and searching inquiry. "We are sometimes taken down into the depths of sorrow," he said, but "Be of good cheer," we shall yet be enabled to "sing to the Lord on the banks of deliverance." At the close of his exercise many expressions of thankfulness for the messages of the Father's love and continued care over his trusting children, he had brought us, were given forth.

Some further consideration of the third summary answer followed, which was participated in by H. E. Kirk, C. Foulke, and others. The fourth summary answer was considered, and in connection with it the report of the Temperance Committee was read, also the proposed memorial to Congress. The latter called forth much expression. Elizabeth Lloyd made an earnest plea in its behalf, as also did Lavinia P. Yeatman. The preponderance of approval appearing sufficent, the Clerk made a minute to that effect, and also of the unity of the meeting with the general report.

In the afternoon, in men's meeting, Hannah W. Linton, accompanied by two other women Friends, entered and addressed the meeting very feelingly, the burden of her message being especially to the younger Friends, exhorting them to faithfully attend to the monitions of the Divine Spirit within them.

The report of the committee to bring forward the the names of persons to serve on the two committees on the George bequest, was then read, and the names proposed were united with. They are as follows:

Committee of Five, (to advise with the Treasurer, etc., in regard to the care of funds): John Saunders, Isaac C. Parry, Joseph C. Turnpenny, Emmor Roberts, William Wade Griscom.

General Committee, (to consider and report upon a plan for the school, location, etc.): John Saunders, Emmor Roberts, Joseph C. Turnpenny, Isaac C. Parry, Wm. Wade Griscom, Annie Cooper, Jane J. Haines, Clement M. Biddle, Hugh B. Eastburn, Wm. L. Jackson, Susan W. Lippincott, Wm. T. Hilliard, Deborah F. Stubbs, Milton Jackson, Edward Hoopes, Howard M. Cooper, Howard White, Clayton Conrow, Nathaniel Richardson, George Watson, Wm. B. Webb, Havard Walker, Samuel Wilkinson, Spencer Chandler, James V. Watson, Rebecca B. Comly, Martha G. McIlvain, Edmund Webster, Mary Satterthwaite, Howard M. Jenkins, Hannah C. Davis, John J. Hallowell, Susan G. Justice, Pierson Mitchell, Emma D. Eyre, Isaac Eyre, George L. Maris, Wm. P. Bancroft, Lucy Smyth, Matilda Garrigues, Sarah L. Walters, Susan Emma Maule, Benjamin Martin, Nathan Maule, Sarah Ann Conard, Robert L. Pyle, Samuel C. Kent, Mary H. Barnard, Matilda J. Bartlett, Richard T. Turner, Jr., Robert B. Dixon, Rachel Satterthwaite, Henry R. Fell, Benjamin R. Lamb, Jane D. Satterthwaite, Elizabeth Ann Rogers, George T. Haines, John M. Lippincott, Martha C. Decou, Martha A. Rogers, Benjamin Heritage, Woodnutt Pettit, Elizabeth J. Acton, Amy Davis, John Eves, Sarah T. Eves, Joseph W. Eves, Frances M. Eves. (Whole number of the Committee, 68.)

The consideration of the Queries was then resumed. The 5th, 6th, 7th, 8th, and 9th were all passed upon, the following summary answers being adopted without very extended remark. This occupied the whole of the session.

(5.) The necessities of the poor have been inspected and relieved; their children have partaken of learning to fit them for business. No Friend's child placed from among Friends.

(6.) Friends have been generally careful to bear a faithful testimony against oaths, an hireling ministry, bearing arms, training, and other military services, being concerned in fraudulent or clandestine trade, and against encouraging lotteries of any kind. (*One* of the reports mentions that many Friends do not maintain our testimony against a hireling ministry.)

(7.) Friends have been mostly careful to live within the bounds of their circumstances and to keep to moderation in trade or business; generally punctual to promises, and just in the payment of debts. Two of the reports state that where grounds for fear have been felt on these accounts, care has been extended.

(8.) Care has been taken to deal with offenders in the spirit of meekness and without partiality, in order for their help, though delays occur; when such labor has proved ineffectual, judgment has been placed, we believe in the authority of Truth,—*except* that one quarterly meeting reports that in one of its monthly meetings offenders have not been dealt with, owing to the smallness of their meetings, and want of proper strength.

(9.) Care has been taken to keep a regular record of births and deaths.

In women's meeting, at the opening of the session, Abigail R. Paul offered a fervent prayer. Messengers from men's meeting brought information that the Report of the Committee on Temperance and Intoxicating Beverages had been accepted, and the committee continued and authorized to draw upon the Treasurer of the Yearly Meeting for funds, but they had not united with sending the proposed memorial to Congress. Disappointment and discouragement was expressed at this information, but it was said we could go no further until we can move in the unity; our fathers, husbands, and sons must be with us in every such effort. Let us submit, in the hopefulness that we will embrace every right opportunity to labor in the work.

The consideration of the answers to the Queries was resumed, and summary answers to the 5th, 6th, 7th, 8th, and 9th, were approved. They do not differ in any material particular from those of men's branch given above. During their consideration a number of Friends spoke. The example of Job was cited. "The cause that I knew not I sought out." This was the spirit in which, it was felt, we should strive to be helpful to those less fortunate then ourselves. Catherine Foulke called to the Rock, Christ Jesus, upon which the church is built, as our only preservation. As your children are trained to depend upon Christ, they will know this for themselves; they will rise up and call you blessed. Harriet E. Kirk thought Friends should live within the limit of their circumstances, that the surplus might overflow into less fortunate households. We should not think of ourselves only.

FIFTH-DAY, FIFTH MONTH 17.

In the morning, meetings for worship were held as usual in the different meeting-houses. At Race street, John J. Cornell, Thomas Foulke, and Serena Minard were among the speakers; in the Cherry street end, Abel A. Hull and others. The attendance was large.

Resuming the business sessions, in the afternoon, in men's meeting, the minutes of the Representative Committee, showing its action in behalf of the Yearly Meeting, were read and approved. They referred mainly to routine matters, the payment of bills, the care of the books and pamphlets for distribution among Friends, etc. The report of the Committee to examine the Treasurer's account, etc., was then taken up. It showed a balance in the Treasurer's hands of $3,785. It recommended that $4,000 should be raised, this year, for the Yearly Meeting's use, (the same as last year). In the suggested revision of quotas, Burlington Quarter was fixed at 5 per cent., and Haddonfield at 6, the others remaining unchanged. For Treasurer of the Yearly Meeting, Thomas J. Husband was proposed; for Correspondents, Joseph C. Turnpenny and Alfred Moore; for Recorder, William B. Webb. All these names were approved by the meeting, and subsequently women's branch notified this that they concurred in the appointment of Thos. J. Husband as Treasurer.

The annual queries were then taken up and all disposed of. The answers to the Query on Schools showed that there were 38 such schools, in charge of committees appointed either in the preparative or monthly meetings. These are taught by 146 teachers, of which 105 are members of our Society, and 13 professor with it. There are 3,082 pupils, of whom 707 are members, and 356 have one parent a member.

In connection with their answers concerning schools, several quarterly meetings, beginning with Philadelphia, sent complete or partial reports concerning their First-day schools, and this fact was noted on the minutes by the Clerk. The returns being imperfect however, they could not be tabulated and a summary given. Regret was expressed that this should be the case, and it was urged that hereafter those returns should be sent by monthly meetings to the quarterly meetings, in a complete and orderly manner.

In connection with this Query the report of the Educational Committee was read. The report was approved and the Committee continued.

In women's meeting, the second and third annual queries were disposed of. The draft of an epistle to be sent to the yearly meetings with which we correspond was read. It was favorably considered, and united with.

The Educational Report followed. It was listened to, with interest and fully united with. It was remarked that great labor had been given to this important work. Referring again to the Queries, Frances J. Newlin, addressing the younger part of the meeting, exhorted them to look at the substance of the queries and answers, and see if they were truly "stereotyped," as was sometimes said. Take them one

by one, and see, if you carry them out and use your influence on others, what the result will be in another year. Margaretta Walton said: "A feeling of sorrow has been expressed that our attention continues to be drawn to a particular form of dress, rather than to that simplicity which gives evidence of Christian concern. Our sister's earnest desire was that this matter should be looked at. If only my people would be strong enough to come forth from the changing fashion of the time, adopting a simple apparel, how it would add to the strength of the physical, and increase their influence and usefulness."

The meeting united with the men's meeting in the appointment of Thomas J. Husband as treasurer of Philadelphia Yearly Meeting. Mary F. Saunders was continued as treasurer of the women's branch of the meeting. Her report showed a balance on hand of $980.46. The report of the Representative Committee was read and united with. The meeting then took up the report of the committee on the condition of the colored people of the South, and it was read. Louisa J. Roberts believed that as a body we would not be blessed, unless we continue this work, although we may not have unity in the yearly meeting at this time to do so. We, as a Society, do so little missionary work, and it takes so little to carry on our own, that we can scarcely know the difference between this and the expense of carrying on other religious organizations. One of the schools fits its advanced pupils for teachers, who go from one school to another; in this way at a small cost, we are helping to spread intelligence. Those who have visited these schools have been much pleased with their management. One was started at the close of the war, the other by a member of this meeting; generous aid should be afforded.

The further consideration of the report was referred to the next sitting.

Sixth-day, Fifth Month 18.

In men's meeting, before the opening minute was read, Allen Flitcraft spoke briefly, exhorting members to patience and harmony in the procedure of business. The report of the Committee on Education of the Colored People was read, accepted, and they encouraged to continue their labors. In regard to the appropriation of five hundred dollars, suggested in the report, there was much expression, many favoring it, and others disapproving. The minute adopted does not approve the recommendation. The committee, however, were authorized to draw upon the treasurer for necessary expenses, a privilege not heretofore accorded them. Henry M. Laing was added to the committee.

The report of the Visiting Committee was read and approved, and the committee continued. Several Friends expressed their appreciation of the labors of the members.

The report of the Committee on Isolated Friends, (in the Western States and Territories chiefly), was read, and called out warm expressions of interest. The committee was continued. This occupied the time of the morning session.

In women's meeting, after the opening minute, Serena Minard spoke. The secret aspiration of some hearts here is, O Lord, create within me a new heart. Prayer is the drawing near to our Father in spirit. May we all have courage to come forward, and partake of the good things that he has promised to those who love him. Every emotional feeling should quicken the desire for good. Despise not the day of small beginnings, but go on to that perfection, and to an experience of God so as to be preserved from evil. He knoweth his sheep and calleth them by name.

Brief communications were made by Rebecca Satterthwaite, Postrema R. Cole, and others. The subject left over at the close of the last session was now taken up. Frances J. Newlin suggested that in order to aid the colored schools a special collection be made next year. Lydia H. Hall recommended this yearly meeting joining the Philanthropic Union, to which five yearly meetings belong, and place the care of the education of the colored race and other concerns in charge of the Union. Cynthia S. Holcomb thought that this contribution would not be as a drop in the bucket of what is needed. A Congressional appropriation is necessary. Elizabeth Lloyd suggested that if government did what they ought to do it would not be necessary for organizations to carry on work of national importance. Friends should do more to help the poor and down-trodden. Jane P. Grahame spoke of the earnest missionary spirit shown by the teachers in the two schools proposed to be aided, (Aiken and Mt. Pleasant), and said that this spirit was lacking in some other schools, including one which she named,—the teachers not having a real faith in the capacity of the colored children to rise. For the Southern work she saw a channel for the energies and money of our young women.

Sarah Carver spoke of the limited opportunities colored men had to obtain profitable employments. Lydia H. Price said that though what we could do in the South might be small,—"only a drop in the bucket,"—yet let us do what we can. Sarah T. Rogers and Sarah H. Peirce spoke, the latter favoring the proposed appropriation, as, also, did many others who gave expression. The Clerk's minute was made uniting with the report, inclusive of the proposed appropriation.

A general epistle to the other yearly meetings was read and united with by the meeting, and a copy of it was directed sent to each yearly meeting with which Philadelphia corresponds.

Word being received from men's meeting that they had approved the report of the Southern Committee, excepting the appropriation, Harriet E. Kirk proposed that $250 be given from the special fund of women's yearly meeting, which was united with. She also suggested that individual subscriptions be invited to make up the other $250, and it was announced that Sarah H. Peirce would receive, in a committee room, any sums which Friends felt desirous to give. (The amount thus received is: women's meeting $232.25; men's meeting $17.75; total, $250.)

The report of the joint Committee on Indians was read and approved, and the names of Elizabeth M. Cooper and Louisa J. Roberts were added to fill vacancies on the committee.

A letter from Edith W. Atlee, directed to the Yearly Meeting, was read; sympathy and love were freely expressed, and it was united with to send a message to her expressing the same.

In the afternoon, at the opening of business in the men's meeting, an amended minute for the continuance of the Committee on Isolated Friends was read and approved. The committee is authorized to correspond with committees of other Yearly Meetings, and to aid and encourage isolated Friends to establish meetings when way may seem to open for such steps.

The report of the Indian Committee was approved and the committee continued. They report little work done during the past year. Thomas J. Husband was appointed trustee, in the place of Dillwyn Parrish, deceased, for the legacy of $500, left by the late Benjamin R. Coates, (an Orthodox Friend), to aid the Indian work of this Yearly Meeting. In connection with the report Edward H. Magill made an interesting statement concerning the plan to appoint a matron at the Santee Agency, in Nebraska, which plan has, so far, failed to be carried out.

The memorial of Sarah T. Betts was read, to the satisfaction of the meeting, and ordered to be printed in the Extracts. Testimonies concerning the deceased were borne by Ellison Newport and others.

The committee appointed last year with reference to the proposed visit of Robert Hatton to Great Britain made a brief report. Way has not opened for the accomplishment of the prospect. The committee was continued; Clement M. Biddle and Thomas Garrigues were excused from further service on it.

The draft of the epistle to other Yearly Meetings was read and approved. Business being then substantially completed, there were brief exercises from various Friends, including David Newport, John J. Cornell, Franklin T. Haines, and William Wood, of Baltimore, and prayer was offered by Ezra Fell. Meeting concluded at 4.55 p.m.,amid much solemnity of feeling.

In women's meeting, in the afternoon, Robert Hatton made a visit, and a brief exhortation. He spoke of the organization of our Society for God's purposes and of the necessity of our proceeding in order and harmony to accomplish the objects of our Society. Lydia H. Hall gave an invitation from the New York Meeting for Philadelphia Friends to attend the gathering of the Philanthropic Union, on the second and third of Sixth month, in New York. The report of the committee on Isolated Friends was read and approved.

The memorial sent up from Abington Quarterly Meeting concerning Sarah T. Betts was read, and a number of Friends expressed their sympathy with it.

The business of the meeting being now substantially concluded, exercises were offered by many. Lydia H. Price expressed her belief that our meeting together and faithfully trying to be honest and upright in carrying on the business of the meeting will bring us close in the cementing bond of love. She urged young women to live so that brothers coming under their influence will feel the refining power of it, and to so order their conversation with others that there shall be nothing to regret.

Serena Minard said that as we are about to separate, some of us never to look in each other's faces again, I want you to be of good cheer,—walking in the path He appoints for you.

The committee to collect the exercises of the meeting offered a tribute to the memory of Susan Roberts, which was entered in the minutes of the meeting.

Margaretta Walton, clerk of the meeting, spoke gratefully of the sympathy and support by which she had felt herself surrounded in the discharge of her duties during the sessions of the meeting.

The closing words of the clerk, after a season of solemn silence, were: "I feel that we met in prayer and closed in praise."

WAR VERSUS CHRISTIANITY.[1]

Our testimony against war, in all of its forms, is one of the leading testimonies of the Religious Society of Friends. The form of words upon this subject, found in the Discipline of our Philadelphia Yearly Meeting, is clear and explicit, and is as follows:

"Friends are exhorted faithfully to adhere to our ancient testimony against wars and fightings, and in no way to unite with any in warlike measures either offensive or defensive; that, by the inoffensiveness of our conduct, we may convincingly demonstrate ourselves to be real subjects of the Messiah's peaceful reign, and be instrumental in the promotion thereof, toward its desired completion, when, according to ancient prophecy, 'the earth shall be full of the knowledge of the Lord, as the waters cover the sea,' and its inhabitants 'shall learn war no more.'"

In furtherance of this testimony it is enjoined upon Friends not to engage in any military services, preparing for war, to be connected with no business in which such services are involved, to hire no substitutes to take their places when drafted for war, and to pay no military taxes or fines which may be imposed upon them. In carrying these principles into practice many Friends have brought themselves under cruel sufferings and persecutions in the past, at the hands of governments calling themselves *Christian.*

To my mind it has always seemed an unaccountable thing, that in this nineteenth century of our Christian Era, it should still be necessary to bring forth arguments to convince Christians of the entire inconsistency of the principles of war with the doctrines which they profess, and which might reasonably be supposed to influence the conduct of their lives. Am I, or am I not, correct in the assumption that it is the leading object of the *Christian religion,* (and in using this term I make no distinction between the varying sects which profess Christianity) am I, or am I not, I say, correct in the assumption that it is the *leading object* of this religion to cause us to follow, in the ordering of our daily lives and conduct, the sublime lessons which our Saviour taught, and the perfect example which he has left us? And if this be so, if his oft repeated words, and his life,

[1] An Address to the students of Swarthmore College, by President Edward H. Magill.

most emphatically proclaim him to be the Prince of Peace, how can his followers take up the sword to avenge real or supposed injuries?

It is not needful for me to-day to search the scriptures, and to point out the particular passages which prove that it was a leading mission of Jesus Christ to promote Peace on earth, and good will among men. For, whatever interpretation may be given, in new versions, or old versions, to particular passages, it will not be, for one moment, denied that the whole spirit of the New Testament makes for *Peace*, and is utterly condemnatory of *War*. And in this respect there is no difference made between offensive and defensive wars. Either and both alike are wholly subversive of the great principles of Christianity. How then can we still continue the practices of war, and claim the name of Christian? How can Christian ministers serve as chaplains in the army, and pray for the victory of their own armies, and the rout and destruction of those of the enemy? Can we possibly imagine such a thing as Jesus Christ, in his day, serving as a chaplain in the army? And if not, how can his professed ministers to-day occupy such a position. Is it not because we do not consider that the example which Jesus has left us is one which humanity, in its imperfect state, can safely follow? We fear the consequences of a state of passive non-resistance. We have not faith, a real, living, and abiding faith, in the principles of peace which our Saviour taught.

We do not sufficiently realize that the precepts: "If any man sue thee at the law and take away thy coat, forbid him not to take thy cloak also;" "whosoever shall compel thee to go a mile, go with him twain;" "If any man smite thee on the right cheek, turn to him the other also;" "Return good for evil." We do not, I say, sufficiently realize that these sublime precepts, the *words* of which are so familiar to our ears, have any practical application in our own case. We do not have real faith in the efficacy of peace principles for self-protection. The natural, animal man gains the victory over the spiritual. This is indeed by no means surprising. But the truly surprising, and the almost inexplicable thing seems to be, how men who profess to be the faithful followers of him, who when he was reviled, reviled not again; who, in his hour of trial said of his cruel persecutors "Father, forgive them, for they know not what they do," whose whole career was one constant exemplification of the principles of Peace, should not only, in their actual practice violate those principles, but should *defend* such violation, and maintain that wars and fightings can, under any circumstances, be *right*.

There is one thought which may help explain this great apparent inconsistency of professing Christians. It is one which it seems proper to introduce in this connection; but it is a thought which I present with hesitation here, among those of varying religious beliefs; for I would not, knowingly, wound the feelings of any one, and would especially avoid saying what might give pain to any true and earnest believer, whatever may be the form of faith which he has adopted. But I believe it right for me to present here this thought, aiding, as it does in my judgment, in the explanation of what would otherwise seems an insoluble problem.

I refer to the efficacy of the example of Jesus of Nazareth as a pattern for us, and the reason why, even among earnest professing Christians, he is so frequently accepted only in *words*, as a real pattern, after all. Why, I say, should this be so? May it not be that, in *deifying* him, in removing him so far away from our own *humanity*, we unconsciously reject his example as applicable to our own case? If we looked upon him more as a *man*, as one affected by like feelings and passions as ourselves; only sent as a pattern for us, ever obedient to his Father's and our Father's divine will; and hence without sin; if, I say, we could look thus upon him, I believe that we should feel his life and example as touching us more closely; and as being not only worthy of our constant imitation, but as not at all beyond the reach of our humanity, with all of its imperfections and limitations.

If we could but realize the differences between "*Jesus*, the *man*, approved of God by miracles and wonders, and signs, which God did by him," and "*Christ*, the Power of God and the wisdom of God;" "The only begotten Son of God"—if, I say, we could only realize the difference between the *man* Jesus and Christ, the *Spirit*, we should not still be groping, in this nineteenth century of the Christian Era, for light upon the question whether consistent Christians could ever, under any circumstances, take up arms and fight. But I do not press this point to-day, lest I may unconsciously wound some tender and earnest soul, who may fear that I am denying the Divinity of Christ; which, I must say in passing, is the very farthest from my intention, for I am a firm believer in the Divinity of Christ—and in the Divine nature of Jesus Christ, through implicit obedience to his Father's will.

How shall correct views upon the subject of Peace, and the settlement of international disputes by arbitration, be most effectually inculcated? The obvious answer is: by giving the proper instruction and training to the rising generation. They should be taught early the beauty and the perfect efficacy of the principles of peace—of non-resistance—and the necessarily brutal and demoralizing nature of all force, whether employed by the individual, in righting his own wrongs, or by the state, in what is called self-defense. But in this teaching we must beware of text-books on morals and on International Law that are generally placed in the hands of the young. Paul Janet, a recent writer on morals, and one whose views upon most points are sound, and most clearly and forcibly expressed, when coming to speak of the subject of war, uses these words, "War is the most serious and the most solemn exception to the law which forbids homicide. Not only does it permit homicide, but it commands it. The means thereto are prepared in public. The art of practicing them is a branch of education, and it is glorious to destroy as many enemies as possible." It would almost seem that these words must be intended as sarcasm, and not the expression of his own views, as a moralist. The whole course of his argument, however, forbids

this interpretation. And this doctrine is set forth in a volume prepared for the instruction of the young in the laws of morality! And the *rightfulness* or *wrongfulness* of war is summarily dismissed in these words: "The problem of war, in itself, belongs rather to the law of nations, than to *morality*, properly so called." And our writers upon International Law, (as well as moralists), accept the rightfulness of war and self-defense, and merely treat of the proper methods of conducting it, as it actually exists. In our works on International Law nearly one-half of their pages are taken up by the question of war. But without one word of condemnation they assume it as a necessary condition of things in our present imperfect state; and the student is merely taught under what conditions wars are proclaimed, how they are conducted, and how terminated; and sometimes how they may be so conducted as to be consistent with the principles of justice, mercy, and humanity! In his volume on International Law, of a little more than 400 pages, President Woolsey devotes more than 200 of these to "The Rights of Self-Defense," "The Redress of Injuries," "The Relations between Belligerents and Neutrals."

What wonder that with such instruction to the young, for generation after generation, the present low standard of morality in this respect should so generally prevail.

In introducing a new order of things in our instruction, it is exceedingly important, then, to take especial pains in the selection of the proper text-books, and where these are not to be found, to see that they are speedily supplied. In this connection I must refer to an excellent work on International Law by Leone Levi, who thus speaks in his Preface, of the leading cause for the preparation of the book:

"I have undertaken this work under the conviction that it would be of great advantage to reduce into the form of a code, the leading principles of the Laws of Nations; that the greater diffusion of knowledge of such law would often prevent disputes; and that, on the occurrence of differences between States, a collection of the well established rules of the same would facilitate a resort to international arbitration, as the best method for securing just and equitable decisions, consistent with the rights and dignity of States." I most earnestly commend this excellent work to all students of International Law; where war is treated not merely as an existing condition of things to be defined and explained, and brought under proper regulations, but as a great national crime to be averted by all the means in our power.

If our literary institutions, of all grades, and especially those for the higher education, including our colleges, universities, and professional schools, will turn their attention to this important subject, and give the proper instruction and training to the young, the time is not far distant when it will be regarded quite as barbarous and unchristian to settle national disputes by force, as it is now so generally admitted to be to resort to such methods for the settlement of individual disputes.

May we all unite our efforts to hasten the coming of the time when men shall no longer "teach their hands to war, and their fingers to fight,"—when all "swords shall be beaten into ploughshares and spears into pruning hooks"—when the sublime lesson of non-resistance, in public and private affairs alike, shall be thoroughly learned; when great standing armies shall be no longer festering sores in the body politic; when practical Christianity shall everywhere prevail; and when it shall be universally acknowledged by all peoples that not armies and navies, and well manned forts, nor the prowess and physical endurance of a well trained soldiery, but "only righteousness exalteth a nation."

The women of the Woman's Home Missionary Society of the Methodist Church have taken hold of the problem of immigration. They regret the increasing inroads of the immigrants, but see that their duty is to do the best they can for them as they arrive, and they also see that the especial work of women must be for women. They propose, therefore, to establish a "Christian Protectory and Training School for Domestic Service" in the neighborhood of Castle Garden, to furnish a place of refuge and help to the thousands of helpless women and modest young girls who are often compelled to wait amid bad surroundings and in dangerous idleness for days and even weeks for word from friends or for employment in the city. The Catholics have already a home for the young women of their own faith, and it is proposed that the new protectory shall not be denominational, but shall be for all immigrants of Protestant faith or who may wish to receive help from Protestants. A large sum has already been contributed to secure a site for the projected institution, and a still larger sum will be needed. Hon. George J. Ferry, of New York City, will serve as the treasurer of the fund for the projected Christian and industrial institution.—*Christian Union.*

It is a cheering fact that human beings themselves are not conscious of the heroism of which they are capable, but some day the distress of a friend puts them to a test to which they respond nobly. Such a case came recently within our experience, and one moved to tears by the unlooked for heroism of a brother, said with glad sadness, "I never knew him. Ah, humanity is divine, but we do not guess it." What a sermon was throbbing in those earnest words. Fortunately, we do not understand our own powers of self-sacrifice. Alas! that we should so underestimate those of others.—*Unity.*

Lie not; but let thy heart be true to God,
Thy mouth to it, thy actions to them both:
Cowards tell lies, and those that fear the rod;
The stormy working soul spits lies and froth.
Dare to be true: nothing can need a lie;
A fault, which needs it most, grows two thereby.
—*George Herbert, in "The Church Porch."*

If you would be strong, you must learn to obey. Self-will is weakness; but to find the nature and will of everything that is higher than you are, and bend yourself to it with complete docility, that makes the richest treasure it possesses yours. Oh, learn to obey, learn to obey! Obedience is the only mastery and strength.—*Phillips Brooks.*

PHILADELPHIA, FIFTH MONTH 26, 1888.

RETROSPECTIVE.

IN the short time that has elapsed since the occurrence of our Philadelphia Annual Assembly, there has been an opportunity, ere the pressure of other duties takes full possession of our thoughts, to consider as to the result of our deliberations whether we can, or cannot, count it as gain. In the large attendance and interest manifested by all from the first to the last session, there can be no doubt as to the gain over some years of the past, and this increase in interest has been of a steady growth which is very encouraging evidence that our Society continues to have a strong hold on its members.

Of the devotional service, the quiet reverential attitude at all times observed when the current of thought was turned inward, or when the spirit gave vocal utterance in obedience to the moving power of the Divine mind, there was also manifested a feeling evidence of continued faith in our great fundamental principle, so that in this we feel assured there is no cause for discouragement. In the various concerns that claim attention relative to the improvement of our regulations governing us as a body, or the active measures discussed as to the advancement of those causes affecting the welfare of others, it might seem as if there had been no gain. Yet what seems a loss is sometimes found to be the reverse, and if our convictions of truth are deepened by some opposition, and we can see more clearly how to amend our ways, even that which seems to retard, may strengthen us to press forward in clearer paths.

It is greatly wise in any religious body to know just where to lay hold of the awakening interest of the young, and turn it to a good account. We are marvellously fitted for service in different fields, all tending to the deepening of our characters, and it is the duty of those who have had years of religious experience to see the tendered hearts that are reaching out towards work for the Father, and aid them in the direction towards which *their* lights are pointing. It is not to be expected that there will be no mistakes, but the loving parent will keep close to the child taking its first steps, but will not forbid a trial to move forward.

In some such sense as this of being forbidden to advance, there has been a feeling of disappointment and perhaps of injustice, particularly after the years of labor and attention in the matter of the proposed changes of Discipline, especially in the women's branch of our meeting, for it has been said, "it is not what we have, or what we want, that constitutes our happiness or misery, but the feeling of injustice that is insupportable to all men."

But herein is the evidence that love is a governing power stronger than aught beside, for the love that is cherished for the body, that it be preserved whole, leads the disappointed ones to endure what is felt to be a wrong. And this enables them to hope and cheerfully pursue the right, in the faith that sometime the right will prevail. And so with other matters that claimed attention, with little gain in results: the very slowness of the advance may make it the more sure, and the summing up must be that our gathering was one of much interest, some growth, and an abounding of love and good will.

MARRIAGES.

JEFFERIS—MOSHER.—Fifth month 1st, 1888, at the residence of Samuel C. Kent, West Grove, Pa., under the care of New Garden Monthly Meeting, Ishmael C. Jefferis, son of the late Ishmael C. and Hannah B. Jefferis, and Frances C. Mosher, daughter of Emma C. Kent and the late Andrew C. Mosher, all of Chester county, Pa.

DEATHS.

COOK.—Died in peace, Fourth month 21st, 1888, at the residence of his son-in-law, Wm. Petre, near Bendersville, Samuel E. Cook, in the 91st year of his age; for many years an esteemed member of Monallen Monthly Meeting.

DARLINGTON.—In Pocopson, Pa., Fifth month 15th, 1888, George Darlington, in the 84th year of his age; an elder of Birmingham Monthly Meeting.

DARNELL.—Fifth month 18th, 1888, near Mount Laurel, N. J., Edith S., wife of John E. Darnell, in her 47th year.

HOOPES.—On Fifth month 18th, 1888, Letitia Hoopes, in the 80th year of her age; an esteemed member of Birmingham Monthly Meeting.

HOOPES.—In Avondale, Chester county, Pa., on Fourth month 27th, 1888, Marion V., daughter of Henry and Rebecca R. Hoopes, aged nearly 19 months.

LEGGETT.—Fifth month 17th, 1888, at her residence, Cheltenham, Pa., Rosanna F., widow of Walter F. Leggett, aged 69; a member of the Monthly Meeting of Friends of Philadelphia held at Spruce street.

UPDEGROVE.—In Philadelphia, Fifth month 11th, 1888, of typhoid fever, John P. Updegrove, in his 69th year.

CORRECTIONS.—Please print the following corrected death notices, and oblige:

BLAKER.—On the 3d of Fourth month, 1888, at Gurdon T. Smith's, Macedon Centre, N. Y., Elizabeth C. Blaker, daughter of Patrocles and Maria Blaker, aged 52 years; a member of Rochester Monthly Meeting.

On 4th of Fourth month, 1888, at Gurdon T. Smith's, Macedon Centre, N. Y., Maria Blaker, widow of Patrocles Blaker, aged 82; a member of Rochester Monthly Meeting.

SCRIPTURE LESSON, No. 22.

SIXTH MONTH 3D, 1888.

JESUS CRUCIFIED.

TOPIC: MARTYRDOM.

GOLDEN TEXT.—"Being found in fashion as a man, he humbled himself, becoming obedient even unto death, yea the death of the cross."—Phil. 2: 8.

READ Matt. 27: 33-50.

MATT., Mark 15: 21, and Luke 23: 26, all agree in the statement that the cross upon which Jesus was to be nailed was laid upon a man named Simon; John 19: 17, says, "he went out bearing the cross for himself." There need be no conflict in these statements. It was usual to lay the cross upon the shoulders of the criminal and only when he became too faint to carry it longer, was another allowed to relieve him. The cruel scourging which had been inflicted upon Jesus, must have exhausted him, and when he was fainting under the burden this man, elsewhere spoken of as the father of Alexander and Rufus, who were associated with the disciples, was made to bear the cross with him.

Golgotha, a skull, so called, probably, because it was the place of execution. It was outside the city. Capital punishments were not allowed within the walls of Jerusalem.

We must remember that he who toiled up the hill of Calvary, bearing this cross upon which he was to be nailed, was the pure and holy Jesus, who, for three years had been preaching and teaching in the cities of his nation, and had ministered to the wants of the people in every condition of sorrow and distress showing by many proofs that he was the Messiah foretold by the prophets, whose day they had longed to see.

So far as it was possible Jesus had accomplished the work which he came to do, and in the doing he had claimed divine authority, claimed to be doing the work of his Heavenly Father, and in this relation to the divine Being he ever spoke of it as shared by all who were willing to work the works. He was charged with assuming the prerogatives of God, and making himself equal with God. (John 5: 18, 19.) Yet all these charges he refuted, declaring again and again that of himself he could do nothing.

The story of the cross is a story of cruel and blood-thirsty wrong, inflicted upon an innocent being. The Christian world is divided as to its significance and perhaps always will be, until the spirit of the Master so imbues his followers with the love that never faileth, that they will be agreed to know him no longer after the flesh. (2 Cor. 5: 16.) There can be no want of unity as to the spiritual meaning of the cross of Christ, and it is for this unity that Friends are laboring. Jesus's own words before Pilate declare most emphatically, "To this end have I been born, and to this end am I come into the world, that I should bear witness of the truth. Every one that is of the truth heareth my voice."

Let us be willing to accept his own statement, and endeavor to find in his words of instruction, and in his life of obedience to the divine will, what that truth was, and is, for which he was made willing to yield up his earthly life as a felon upon the cross.

THE GEORGE SCHOOL.

THE proceedings of the Yearly Meeting in reference to the boarding school proposed to be established under the provisions of the will of John M. George, will be found stated elsewhere. They consisted, in brief, of the following: (1) a report by the special committee of five, appointed by the Yearly Meeting, last year, to consult with the Treasurer as to the care of funds from the Estate, etc.; (2) the appointment in the Yearly Meeting of a nominating committee, which proposed the names of members of a standing committee on the general subject of the School, (68 in number), and of a committee of five with the same authority as last year; (3) the approval by the Yearly Meeting of the names thus brought forward.

The general committee of 68 held two meetings last week, nearly all the members being present. (Its members are named in the Yearly Meeting proceedings.) At the first meeting, on Fifth-day, a sub-committee was appointed to report a plan of organizing the work of the general committee. At the second meeting, on Sixth-day, this sub-commiteee made its report. It proposed, first, the names of Wm. Wade Griscom, for Clerk, and Matilda Garrigues, Assistant Clerk, of the general committee. These propositions were approved, and those Friends appointed. The remainder of the sub-committee's report was also adopted, the following details being the only ones of importance:

1. To appoint three standing sub-committees: One of five members to consider and report upon "the manner in which the Trust Estate shall be held;" one of thirty members, to consider and report upon the scope and character of the proposed school; one of fifteen members, to consider and report upon a location.

2. To appoint a nominating committee to bring forward to a future meeting the names of members of the foregoing three sub-committees.

3. To appoint a Finance Committee of three persons, at least two of whom shall join in the signature, (or counter-signature), of orders drawn upon the Treasurer of the Yearly Meeting.

4. That in payment of the expenses which may be incurred by the Committee, they being on account of the carrying out of the George Trust, the amounts are to be drawn from the George funds, (in the hands of the Yearly Meeting's Treasurer).

The general committee adjourned on Sixth-day, to meet again on Sixth-day, the 8th of Sixth month. In the meantime it is expected that the nominating committee will confer as to the names of members to form the several sub-committees named above.

There is a full appreciation, apparently, in the minds of the members of the Committee, of the importance of the duty laid upon them, of the need for careful and deliberate consideration, and of a thorough and cordial unity in whatever they may finally find it right to propose to the Yearly Meeting. It is not likely that there will be any conclusive action taken on any vital point for months to come. The minute of the Yearly Meeting does not give the Committee authority to purchase property.

YEARLY MEETING COMMITTEE REPORTS.

We give below the several reports presented to the Yearly Meeting by Committees which had been in existence during the preceding year:

Report of the Committee on George Bequest.

The committee appointed at the last Yearly Meeting to confer with its Treasurer and the executors of the will of John M. George, deceased, report: That they have given such attention to the object of their appointment as they deemed necessary and appeared to be proper.

They received a communication from the Treasurer of the Yearly Meeting in the Eleventh month last, stating that in the event of any money being paid to him by the executors of the will of John M. George, he proposed, with the approval of the committee, to deposit it with the Pennsylvania Company for Insurances on Lives and Granting Annuities, No. 431 Chestnut street, Philadelphia, and also to procure, in the vaults of that company, a fire-proof closet, and place therein all papers relating to the trust. At a meeting of the committee held Twelfth month 16 1887, these propositions of the Treasurer were approved.

It being thought proper that the committee should engage counsel to attend to any legal requirements in connection with the bequest, they retained Alfred Moore for that purpose.

The executors have filed their first account, which has been adjudicated by the Orphans' Court. After providing for debts, legacies, and expenses, there remained $163,439.61.

Of this amount there was set apart by the Court, as a contingent fund, to provide for taxes and expenses, incidental to the care and management of the real estate of decedent, pending a sale thereof, securities amounting to $20,513.00. The balance, $142,926.61, consisting of bonds and mortgages, $122,000.00, and cash, $20,926.61, was awarded to the Yearly Meeting and directed to be paid to Thomas J. Husband, as Treasurer.

The cash above mentioned is ready to be paid and the transfer of the securities to him are now being prepared. The contingent fund above mentioned, and some additional personal estate, consisting principally of accrued income, will be the subject of a future account. The account heretofore filed embraced most of the personal estate of the decedent. The remainder of the estate is composed of valuable real estate, the proceeds of which will be received when a favorable opportunity for disposing of the same is presented to the executors.

Daniel Foulke, one of the committee, departed this life Second month, 18, 1888. He was a valued and deeply interested member of the committee. In closing their report the committee desire to acknowledge the courtesy shown them by the executors and the disposition they have manifested on various occasions to consult freely in reference to the interests of the Yearly Meeting.

Report of the Visiting Committee.

To the Yearly Meeting:

The Committee appointed "to visit the branches of our Yearly Meeting and encourage Friends in the more faithful attentions to the requirements of our Discipline and upholding and sustaining the testimonies of our Religious Society," report that they have several times met and thoughtfully considered the weighty subject committed to them; way seemed to open for the appointment of sub-committees to labor in most of the quarterly meetings; these were appointed and have very generally attended to the duties assigned them.

In Southern Quarterly Meeting three of the quarterly meetings, with several of the particular meetings and a number of the families were visited.

In the Sixth month a portion of the Committee visited nearly all the families belonging to Fishing Creek Half-Year's Meeting, and held some appointed meetings, also attended the Half-Year's Meeting and the Youths' Meeting. There was much tenderness of feeling manifested by these isolated Friends, and a cordial greeting extended to those visiting them. In the Seventh month nearly all of the families composing Caln Quarter were visited, and afterward meetings at Sadsbury, Bart, and Bradford were attended. The Quarterly Meetings of Burlington, Salem, Haddonfield, and Bucks were reported as visited by members of the Committee at different times, and in some of the meetings composing them extended labor was given.

Our expenses for the year have been $61.42, for which orders have been drawn on the Treasurer of the Yearly Meeting.

On behalf of the Committee,

Isaac Eyre,
Jane D. Satterthwait.

Fifth month 14, 1888.

Report of the Committee on Isolated Members.

To the Yearly Meeting:

The Committee appointed to "take into consideration the state and condition of our absent members in their isolated homes, especially those in the States and Territories west of Illinois," report that they have given attention to that service. They have held five meetings, which have been attended by most of the members. They have addressed their efforts mainly to procuring information through the monthly meetings, as to the names and post office addresses of those members who are situated in distant and isolated localities. Circulars sent out, asking this information, have been replied to by forty-two out of the forty-nine monthly meetings, and the names of 369 persons have been furnished us, mostly with their post office addresses. An analysis of the reports has been prepared, and is at the disposal of the Yearly Meeting, in connection with this report. Of the 334 members whose probable address is given, most are in the States and Territories between the Mississippi River and the Rocky Mountains, but some are in still more distant localities, including California, Oregon, Washington Territory, and Texas. The addresses of these Friends are at 182 different places.

There are, however, twenty-one places in which four or more members are reported, several of them having eight, nine, ten, and even twelve, each.

The labor of obtaining these names and addresses has been considerable, but the Committee deemed it the first appropriate step, in order to secure a proper understanding of the extent and nature of the work. It is evident, however, that this Yearly Meeting, proceeding alone, cannot make a complete list; it is impossible to learn how many isolated Friends there are in localities beyond the reach of meetings, without coöperative effort by all the yearly meetings. The other yearly meetings have, of course, some members in the same places reported to this committee, as well as elsewhere, and a complete list of the isolated membership of our body can only be secured by a joint effort and a tabulation of all the returns procured from all the yearly meetings. If this were obtained it would no doubt appear that in many places there are several members situated, sometimes unknown to each other, some of whom might feel encouraged to revive in meetings, indulged or otherwise, the public profession of the Truth as held by our religious body.

The Committee are conscious that the work of caring for absent members depends primarily upon the monthly meetings, and it is hoped they will feel encouraged to correspond with them, and to extend such care as may be practicable. We believe, however, that the collection of facts as to their numbers, their circumstances, their inclination concerning membership, etc., in addition to their names and post office addresses, may materially aid the monthly meeting work, and be an encouragement to its due performance.

So far as this Yearly Meeting is concerned, the preliminary labor of procuring the list of members is substantially completed. Whether the yearly meeting will desire to take steps to encourage and sustain as members these scattered and isolated ones, and to encourage, or even to assist, as way may open, concern for the establishment of new meetings, at places where life may be manifested, is now submitted to the consideration of the meeting, such labor as was placed upon the present Committee, under their minute of appointment, having been, we believe, about concluded.

The Committee have experienced throughout their labors a deep feeling of concern for the preservation to the Society of those who are placed in situations where they have not the company and support of other members, and whose religious principles are exposed to sharp trials. Communications have reached us, in some cases, expressing the anxiety of the writers to maintain their positions as Friends, and lamenting the hardships of their distant and isolated situation. For all these, and for the many from whom no word has reached us, our sympathy has been strongly aroused, and the hope is entertained that a way may open to extend them a helping hand.

On behalf of the Committee,

HOWARD M. JENKINS, Clerk.

REPORT OF THE COMMITTEE ON EDUCATION.

To the Yearly Meeting:

THE Committee on Education and Schools have endeavored during the year to give careful attention to the wants of the schools, and to the needs of Friends' children. The main features of the work have not much varied from that of former years, excepting that in place of having several persons giving a portion of their time in delivering lectures to the schools, as last year, it was thought best to employ an experienced teacher to devote all of his time to the interest of Friends' schools, and not only to deliver lectures, but to visit the schools, listen to the recitations and confer and counsel with the teachers and school committees, having in view the substantial improvement of all the schools.

For these duties, in Sixth month last, the Committee employed Henry R. Russell, for many years Principal of Deptford School, Woodbury, N. J. He at once entered upon the work, and we think has given efficient service, and has labored acceptably in the line of his appointment. Nearly all of the schools have been visited many times by him, and illustrated talks to the number of nearly two hundred, have been given to the children; a portion of the school committees and other Friends often being present. It is believed that these illustrations of scientific truths by simple experiments may be made invaluable to the pupils, by increasing their interest in their studies to which they relate, by inciting in them a desire for investigation, and by enlivening the ordinary routine of school work. Owing to the isolated position of many of our schools, the teachers have little, if any, opportunity for observing the work of others, and where the teachers are young and inexperienced the advice and sympathetic help of a visiting teacher, should strengthen and encourage them.

The sub-committees appointed from the General Committee to visit schools have very generally attended to their appointments. This practice is helpful, in affording an opportunity for the members of our committee to become acquainted with the schools and school committees of different neighborhoods, and observing and comparing the different methods of management.

The conferences of teachers, school committees and others, for a number of years held during the winter season, at Fifteenth and Race streets, Philadelphia, seem to be an important part of our educational work, and have the encouragement of a large attendance at each meeting. The essays read and the views expressed at these times by thoughtful and concerned teachers and friends, are doubtless, often as seed sown on good soil and exert a quiet, though potent influence for good. Three were held during the past winter.

There are thirty-seven schools within the limits of this Yearly Meeting under the care of monthly or preparative meetings. These have been attended during the past year by 3,062 pupils, 679 of whom are members, and 386 having one parent a member; of these schools, eleven are not graded, and have but one teacher each, with an average of 23 pupils. Eight of

the graded schools have an average attendance of 50 pupils with each two teachers. The other 18 have three or more teachers.

Visits to the schools show that whilst the average of the teaching is good, the best results are not always obtained, and that greater efforts should be made to provide competent teachers for all of our schools, and especially for the younger children.

It is a matter of concern with many that something should be done, looking to the establishment among Friends of a Training School for those of our members who contemplate teaching, in order that they may understand the science and art of education, the nature of mental and moral development, and what constitutes a guarded, religious education as contemplated by our discipline. As a recent writer says, "Good buildings, good furniture, and good books, go for next to nothing, if there is not good instruction and training."

A want is also seen in the lack of an organized associated effort on the part of our teachers to secure the benefit of cöoperation, in an endeavor to improve themselves and their schools. It is believed that measures should be taken to supply the want.

Whilst it has not been our custom to notice individual schools, we feel like making an exception in the case of the one at Millville, Pa., which was reorganized under the care of this committee about two years ago. It has now an attendance of 81 pupils, 21 of whom are members, and 39 having one parent a member. There is no other Friends' school within the limits of Fishing Creek Half-Year Meeting, and it affords the only opportunity for the children of Friends to secure a good common school education near their homes. It is under the care of competent teachers and we are satisfied it is well worthy the support of Friends and of the fostering care of the Yearly Meeting.

In visiting the schools and in mingling with Friends we are more and more impressed with the advantages that must accrue to our children, from their mingling together in their places of learning under the care of intelligent and concerned teachers in sympathy with us, and with this feeling we should be incited to greater efforts to make our schools in all respects, equal to what may reasonably be expected of them.

We have drawn orders on the Treasurer of the Yearly Meeting to the amount of $2,271.06, in the payment of expenses and aid to schools.

On behalf of the Committee,

WM. WADE GRISCOM, Clerk.

Fifth month 14, 1888.

REPORT OF THE TEMPERANCE COMMITTEE.

To the Yearly Meeting:

SEVENTH Annual Report of the Joint Committee on Temperance and Intoxicating Beverages.

Our stated meetings have been regularly held with a generally good attendance. There has been a free interchange of sentiment regarding the various methods we have used to bring this important subject fully to the notice of our members.

Conferences continue to be an important feature of our work, and during the past year seventy-six have been held throughout the Yearly Meeting. These have been instrumental in interesting our younger members, who have participated by furnishing essays, readings, etc. They have also been of great benefit in presenting to the people the evils that attend the use of intoxicants, as well as enlightening the minds of those present regarding the baneful effects of the use of wines, cider, and all other alcoholics in the preparation of food, for in this way the habit of drink is not infrequently formed.

While we have not accomplished all that we desired, we can share in the hopeful signs of the times and acknowledge that the Spirit of Truth is operating on the minds of many in authority, leading them to exercise a care and a restriction in the granting of licenses quite unprecedented.

A new and important branch of the work as reported by two quarters, has been the formation of societies of Young Temperance Workers. Six of these have been formed, with a membership of about four hundred. This new field of labor promises much good fruit, and the coöperation of parents is needed to encourage their children to continue in the work.

Many thousand pages of literature have been purchased and circulated, and in addition to these the "Address to Druggists," prepared last year, has been printed and distributed, also an address delivered by Aaron M. Powell, an earnest worker in the cause.

Superintendents and committees of schools have been appealed to in regard to the proper carrying out of the law requiring instruction upon the effects of alcohol and narcotics on the human system. Of the 154 superintendents addressed, 117 have replied, and we learn from them that an effort is made to carry out the spirit of the law, though many difficulties are met with in the opposition or luke-warmness of the directors and lack of qualification in teachers. The superintendents themselves are in unity with the law, and appreciate any help that is given them.

If children receive this knowledge in their tender years, they will be fortified against the temptations so liable to assail them in after life. And if all the members of our Religious Society would set the example of total abstinence from the sale and use of all intoxicants and narcotics, they would have a much greater influence on this important work.

Our Legislative Committee, believing that strength might be given to the enacting of a Local Option law in New Jersey, presented a memorial to the Legislature of that State. The subject of memorializing Congress in regard to an amendment to the Constitution in relation to prohibiting the manufacture, importation, and sale of alcoholic liquors as a beverage was considered, and a memorial was prepared, approved, and directed to be forwarded with our report to the Yearly Meeting for its action.

Since our last annual report it has been our duty to record the death of three earnest, faithful laborers, Aaron Borton, Ezer Lamborn, and John W. Scarborough, whose efficient services and devotion to duty have left an example worthy of imitation.

Orders have been drawn upon the Treasurer for $212.51.

Signed in and on behalf of the Committee,

JAMES H. ATKINSON,
ANNIE CALEY DORLAND, } Clerks.

Philadelphia, Fourth month 14, 1888.

REPORT OF THE COMMITTEE ON EDUCATION OF THE COLORED PEOPLE.

To the Yearly Meeting:

THE Committee to consider and report upon the condition of the Colored People in the Southern States have held four meetings during the year, and have endeavored to give due attention to the duties indicated by the minute of their appointment, with especial reference to the encouragement and aid of Education among those people. The Women's Branch of the Yearly Meeting having appropriated to the use of the Committee, last year, the sum of $500, it was divided proportionately between the schools at Aiken and Mt. Pleasant, South Carolina. These schools,—the former being in charge of Martha Schofield, a member of this Yearly Meeting, and the latter having been established originally by members of our Society in this city and vicinity,—have appeared to the Committee as worthy of such help as we might be able to afford in the general direction of our appointment.

Besides the sum received from the Women's Yearly Meeting treasury, members of the Committee, acting as individuals, have exerted themselves to secure and forward private subscriptions for the aid of the two schools; and there has also been maintained in operation during the year, the voluntary organization, the "Association of Friends to Promote the Education of the Colored People of the South," composed of Friends interested in the work, including most if not all the members of this Committee, and which was formed in consequence of the fact that this Committee did not have at its disposal, (except in the case of the appropriation already named), any funds with which to aid schools.

Without entering into details, the Committee desire to convey to the Yearly Meeting their strong apprehension of the continued need for help, from those able to bestow it, to the work of educating and training the colored people in the South. This work is still very far behind its need. The public schools for the colored people are in all respects inadequate. They are too few, they are too distant from many children, they are kept open but a small part of the year, and they have comparatively few competent teachers. But even if these defect were remedied, there would still exist that great work, now so evidently demanded, of moral and industrial training, which must, for years to come, be specially encouraged by those who desire to see the colored people increase in the virtues of order, sobriety, industry, and truth.

The Committee have not entailed any charge whatever upon the Yearly Meeting. They feel it right to state that the annual cost of maintaining the schools named above, in excess of their own income from pupils, and which has been borne by private subscriptions from persons interested in them, is something over $4,000. Of this sum it is probable that nearly one-half might be expected to be collected within the limits of this Yearly Meeting.

We recommend, therefore, that as a measure of assistance in the raising of this amount, and also as an evidence of the interest of Friends as a body in this field of practical Christian labor, there be appropriated from the general fund of the Yearly Meeting the sum of $500.

If Friends shall feel it right to afford help, there would seem to be a particular fitness in doing so. From the days of George Fox they have been among those who felt drawn to aid the unfortunate Africans, and now that their shackles have fallen, and the help they require is that which we can render so naturally, so freely, and so consistently with the Truth we profess, it would seem to be indicated to us to be firm in maintaining an active and earnest relation to the work. If the Yearly Meeting should take this view, and should feel concerned to continue a committee on this subject, it would be desirable that the minute on the subject should express the concern somewhat more at large than that under which we have been acting,—indicating the purpose of extending suitable aid and encouragement to the education and industrial and moral training of the Colored People in the Southern States.

AMOS HILLBORN,
GEO. L. MARIS, } Clerks.

REPORT OF THE INDIAN COMMITTEE.

The Joint Committee on Indian Affairs Reports:

THAT Benjamin Coates, by his last will and testament, bequeathed the sum of five hundred dollars to Dillwyn Parrish, in trust for the Christian civilization of the Indians under the care of that branch of the Society of Friends with which he is connected.

That owing to the decease of our friend Dillwyn Parrish, the trust has become vacant, and we recommend that the Meeting suggest to the Orphans' Court of Philadelphia county the appointment of Thomas J. Husband as trustee of the said fund, to fill the vacancy. Also that when the same is received it be held by him, subject to the orders of this committee. Little has been found for the committee to do during the past year, but we suggest the appointment of a committee to continue in charge of the subject.

On behalf of the Committee,

ALFRED MOORE, Clerk.

Philadelphia, Fifth mo. 17, 1888.

ONE element is wanting in the composition of the moral forces of to-day. One could estimate better the advance of the new year, could one only count upon any approaching decline of woman's attachment to mere fashions and upon her espousing the world of perpetual morals and perpetual good and perpetual happiness. It is a deep injury of our country that thousands of women of wealth and education are leaders in perishable fashion, and not in any of those things which make nations great and which lead millions along an ascending path.—*Prof. Swing.*

NEWS OF FRIENDS.

MIAMI QUARTERLY MEETING.

Miami Quarterly Meeting was held at Waynesville, O., on the 12th inst., and was about its usual size, although some regular attenders were absent from sickness and other causes. Our aged friene, Ann Packer, has been quite unwell for some time. At the meeting on Seventh-day Rebecca S. Fravel, (now of Philadelphia), Elizabeth Davis and Davis Furnas ministered, and the usual quarterly meeting business was transacted. It was a source of regret that a number did not remain to the First-day meeting but there were many present who are not members, and the silence was broken by a prayer from Franklin Packer, and communications by Rhoda Hackett, D. Furnas, R. S. Fravel, and Matilda J. Underwood, and R. S. Furnas in supplication. It was a very quiet meeting throughout, although it held more than an hour and a half, and the remark was made by one not in membership, "I could have sat for an hour longer without tiring." It was felt to be a favored opportunity.

CENTRE QUARTERLY MEETING.

Centre Quarterly Meeting will be held at Dunning's Creek, Bedford County, Pa., on the 4th of the 6th month. Our Friend, Isaac Wilson, of Bloomfield, Canada, expects to be with us, and all Friends expecting to be with us, will be met in Bedford on Sixth-day, the 1st of the 6th month, if notice is sent to either of the undersigned.

E. H. Blackburn,
Hiram Blackburn.

RATES TO GENESEE YEARLY MEETING.

Editors Intelligencer and Journal:

In your last issue "A Friend" requests that the rates of railroad fare from Rochester to attend Genesee Yearly Meeting be published in the Intelligencer and Journal.

Arrangements have just been perfected with Captain Dunlap of the Steamer *Norseman* to take Friends from Charlotte to Cobourg, thence by rail to Trenton Junction, and return, for $5 for round trip, *provided* there are 25 persons; (20 persons or less for $5.25 each). Meals and berths extra. Tickets to be obtained on board of the boat.

Fare from Rochester to Charlotte 20 cents each way.

I am not aware that any arrangements have yet been made with the Central Ontario R. R., from Trenton Junction to Bloomfield, distant about 30 miles, but the round trip will be about $1.50 each.

Cars leave New York Central Depot, Rochester, at 7.35 p. m., on Fifth-day, the 7th inst., for Charlotte, to connect with the boat.

J. D. Noxon.

Mendon, Fifth mo. 21st, 1888.

As the hart panteth, fainting, and forward looks,
Urged over the desert wilds and sultry lea;
As the hart panteth after the water-brooks,
So panteth my soul after Thee.

—*Holy Songs.*

SWARTHMORE NOTES.

—The final examinations of the seniors begin on Second-day next, the 28th, and continue through the week.

—Several Friends from Baltimore and Canada visited the college on Seventh-day, after the close of the Philadelphia Yearly Meeting.

—The President and several of the professors will spend the coming vacation at their homes, on and near the college grounds. They will find the excellent working library, that has been collected since the fire, a most valuable aid in making preparation for next year, in their various departments.

—Prof. Holcomb will present a paper upon "The Place of History in a College Course" in the State College Association, which meets at the University of Pennsylvania on the 5th and 6th of the Seventh month. At this meeting representatives are expected from the colleges of all the Middle States and Maryland,—and it is proposed to extend the State Association of Pennsylvania to include these five States.

ORTHODOX FRIENDS.

The Richmond Conference "Declaration of Faith" has not been adopted by Dublin Yearly Meeting. A communication in the London *Daily News*, of the 11th inst., says:

Like some other religious bodies, the Society of Friends, on both sides of the Atlantic, has recently been much exercised in reference to the adoption, or otherwise, of a formal creed. Last autumn, at a conference of most, but not all, of the "Yearly Meetings" or "Provinces" of the Society, held at Richmond, Indiana, U. S. A., and attended by 100 delegates from various European and American sections of the denomination, a very long and detailed "Declaration of Faith" was hastily drawn up and issued, in the hope that it would be subsequently adopted as an authoritative and binding document by the "Yearly Meetings" collectively. But the ancient "Yearly Meeting" of Philadelphia, the leading representative of Quaker "orthodoxy" beyond the Atlantic, which has been held in usual course this month, does not in any way recognize the above "Declaration." This week the Irish Yearly Meeting, held at Dublin, has also distinctly refused to accept the same document, at least in any authoritative sense. After a whole day's discussion on the subject, the Irish Friends have finally adopted the following minute: "We feel it right to receive the Declaration as a valuable outcome of the Conference; and while this meeting does not see its way formally to adopt it, we commend it to the notice of Friends." After this decided refusal on the part of all the Irish Friends to be committed to a creed, it is most probable that the ensuing Yearly Meeting of London, at the end of this month, will adopt a similar course. For there is a very strong and general feeling amongst the English Friends, in opposition to any recognition of the "Declaration" as possessing any authoritative claim upon the official acceptance of the Society.

CARCASSONNE.

I'm growing old; I've sixty years.
I've labored all my life in vain:
In all that time of hopes and fears
I've failed my dearest wish to gain.
I see full well that here below
Bliss unalloyed there is for none,
My prayer will ne'er fulfillment know—
I never have seen Carcassonne,
I never have seen Carcassonne!

You see the city from the hill;
It lies beyond the mountains blue,
And yet to reach it one must still
Five long and weary leagues pursue,
And, to return, as many more!
Ah! had the vintage plenteous grown!
The grape withheld its yellow store:
I shall not look on Carcassonne,
I shall not look on Carcassonne!

They tell me every day is there
Not more nor less than Sunday gay;
In shining robes and garments fair
The people walk upon their way.
One gazes there on castle walls
As grand as those of Babylon,
A bishop and two generals!
I do not know fair Carcassonne,
I do not know fair Carcassonne!

The vicar's right: he says that we
Are ever wayward, weak, and blind;
He tells us in his homily
Ambition ruins all mankind:
Yet could I there two days have spent,
While still the autumn sweetly shone,
Ah me! I might have died content
When I had looked on Carcassonne,
When I had looked on Carcassonne!

Thy pardon, father, I beseech
In this my prayer if I offend;
One something sees beyond his reach
From childhood to his journey's end.
My wife, our little boy Aignan,
Have traveled even to Narbonne;
My grandchild has seen Perpignan,
And I have not seen Carcassonne.
And I have not seen Carcassonne!

So crooned, one day, close by Limoux,
A peasant, double-bent with age.
"Rise up, my friend," said I; "with you
I'll go upon this pilgrimage."
We left next morning his abode,
But (Heaven forgive him!) half-way on
The old man died upon the road:
He never gazed on Carcassonne.
Each mortal has his Carcassonne!

—*From the French of Gustave Nadaud.*

Greatness and goodness are not means, but ends!
Hath he not always treasures, always friends,
The good great man? Three treasures,—love and light,
And calm thoughts, regular as infants' breath;
And three firm friends, more sure than day and night,—
Himself, his Maker, and the angel Death.

—*Coleridge.*

Prosperity doth best discover vice, but adversity doth best discover virtue.—*Bacon.*

DECEASED AMERICAN NATURALISTS.

In recently received sheets of the "Proceedings of the Academy of Natural Sciences" of our city, we notice the resolutions adopted by that body in relation to the death of two prominent and widely known American scientists, Professor Asa Gray, of Cambridge, Mass., a correspondent of the Academy, and our own townsman, George W. Tryon, Jr., one of its most faithful and useful workers. Of the latter it was said: "He was one whose devotion to the interests of the institution has been proven during nearly thirty years in varied and responsible positions of trust, by repeated and generous gifts, and above all, by untiring labor for its advancement; and whose earnestness and assiduity in his chosen field of study have been rewarded with a well-earned celebrity which will forever connect his name with the history and progress of conchological science."

The death of Dr. Asa Gray, having been previously announced, the following minute, adopted by the Academy was read:

"The Academy of Natural Sciences of Philadelphia has learned with deep sorrow of the death of Professor Asa Gray of Cambridge, Massachusetts, who was elected a correspondent in 1836. In placing this record in our Proceedings we are unable to give adequate expression to our sense of the great loss which we, in common with the whole world of science, have sustained. A life extending to nearly four score years has been wholly devoted to scientific investigation, mainly in his chosen department of Botany, in which his labors and philosophic insight have been attended with results that do honor to him and to his country. In entering upon the study of the flora of his native land, he early realized the imperfect character of its existing literature, and turned his attention to the examination of the original types of various authors as found in the herbaria of North America and Europe. His ultimate object seems to have been the production of a complete flora of North America, which, though he lived to see far advanced, he was not permitted to entirely finish.

"In the course of his studies his far-reaching mind found deep interest in the difficult questions pertaining to the geographical distribution of plants, and he was led to the discovery of the remarkable analogies between the flora of the Eastern United States and that of Eastern Asia. His reasoning upon this and kindred subjects prepared his mind to give respectful attention to the deductions made by Darwin, when they were first published, and though never a blind follower, he was one of the earliest scientists of our land to uphold the idea of progressive development, always maintaining its perfect harmony with theistic belief. Thus his labors in the botanical field have been utilized for the entire scientific world.

"His interest in this Academy never abated; our library bears abundant evidence of his researches: our herbarium has been greatly enhanced in value by his studies of its types, and by his generous contributions; whilst his kind, genial and attractive presence at many of our meetings has endeared him to all."

Of Dr. Gray's early difficulties in the prosecution of his favorite study, as a life-work, Wm. M. Canby, of Wilmington, Del., said:

"One of the most remarkable men of our country and, as a scientist, the best known and most esteemed abroad of any American of our day, has passed from among us. The early advantages of Asa Gray were not many. He was not a college-bred man in the ordinary acceptation of the term and his rise was due to his own genius and energy. It falls to me to-night to speak of him as a systematic botanist. It is difficult for our younger botanists to comprehend the low state of the science when Dr. Gray first became interested in it. Nothing of any moment had as yet been done in systematic botany. True there had been good workers in this department, and the labors of Bartram and Marshall, of Walter and Michaux, of Muhlenberg and Elliott, of Schweinitz, Pursh, Nuttall and others, have always been highly esteemed. Many foreign botanists, from the time of Linnæus onward, had described American species. The labors of these had laid a *foundation* for North American botany. But many of the descriptions were in diverse and scattered publications and were often incomplete or faulty. The synonymy had become much confused. Vast regions now well known, were then *terræ incognitæ*. Even the flora of so near a district as the pine lands of New Jersey was almost unknown.

"Nothing daunted, the young botanist, encouraged by the late Dr. Beck of Albany, and yet more by his life-long friend and associate, Dr. Torrey, gave up the practice of medicine and devoted his whole time to his favorite science. So far as I know he was the first American to fully do this. Almost at once the effect of his careful and excellent labor began to appear and much preliminary work was soon done. Dr. Torrey had seen the manifest need of a new and better 'Flora of North America.' Here was one who could not only assist him but take the main burden of the work; and soon the new classic "Torrey and Gray's Flora" began to appear. Any one familiar with this work must have noticed how rapidly the descriptions improved as the work went on, and what a vast amount of new material the collections of Nuttall, Fremont, James, and other explorers of our Western territories brought into it. While the species were thus well studied and the new ones admirably described, the fullest and most generous credit was always given to the discoveries and labors of others. But collections of the plants of the great western regions, from public and private sources, began to come, in most embarrassing richness. It became evident that the further publishing of the 'Flora' must be delayed until the floral wealth of the great interior could be better known. It was also necessary that the synonymy of the earlier described species should be settled. So, for a brief period, Dr. Gray studied these in European herbaria and gardens. Twice afterward he made similar studies with most important results. Soon after his return from his first visit abroad, came the call to Cambridge and his settlement at the Botanic Garden there. From this time onward he stood in the very front rank as a botanist. His energy and industry were unceasing, and his work, by no means confined to systematic botany or to the plants of our own country, went forward rapidly and well. Less than a year ago I was told by the Governor of the Fiji Islands that Dr. Gray's work upon the flora of those distant lands was still the foundation of their systematic botany. His researches into the flora of Japan and China are well known. Soon the 'Manual of Botany' appeared with its excellent arrangement and its clear and accurate descriptions. Who can measure the influence of that work upon the botany of our country or the effect it has had to create and increase an interest in the science? At last, after an amount of well directed labor and research which could have been applied by no other man, and after very many 'contributions' of new species and 'monographs' of difficult and little known genera had come from his pen, the time seemed ripe for a real and comparatively complete "Flora of North America" to appear. We all know how two volumes of this were issued and, in a second edition, extended and improved; and how fondly we had hoped, knowing how unimpaired was his mental and physical vigor, that the whole might have been finished before death claimed him. This was not to be; but we can never be sufficiently thankful that so much which he alone could give was made free to all."

Charles Eliot Norton says that, as compared with a century ago, "there is proportionately less solid learning, less zeal and ardor for the best attainable culture, less earnest striving for the real bread of life. What is called popular education is perhaps sufficient for the mere business of life, for the practice of the arts of livelihood, but not broad enough to discipline and enlarge the mind, cultivate the taste, quicken the imagination, and ennoble the character. There is in the public schools almost no training of the judgment or of the faculties of observation and reason, no inculcation of a sense of responsibility for self-government."

These changes, so far as they have occurred, are owing to the increase of luxurious habits, which have invaded even some of our colleges and schools, and a lower, one-sided conception of the teacher's office, in which intellectual qualifications are sometimes considered sufficient, in the absence of strong moral and religious influence and of the power to exert a manly discipline. But there are hopeful signs that a reaction in public sentiment is beginning to develop itself, bringing to teachers and pupils a strong sense of their responsibility and true interests.—*The Student.*

How precious in the sight of God those qualities are which we think of almost meanly,—plodding habits, meekness of heart, sense of dependence; and how almost of the nature of curses what we call "gifts" are,—beauty, brilliancy, sensitiveness, feeling; things, by the way, which are almost always connected with selfishness in some way or another, and therefore sown with the seeds of misery and failure.—*F. W. Robertson.*

VERNACULAR IN INDIAN SCHOOLS.

The order of the Indian Bureau regarding the use of the vernacular in Indian schools has been promulgated in so many different forms and subjected to such a variety of interpretations, that it is interesting to know what the final form is. A document just printed at the Government Printing Office, for the instruction of Indian Agents, contains the order in these terms:

1. No text-books in the vernacular will be allowed in any school where children are placed under contract, or where the Government contributes, in any manner whatever, to the support of the school; no oral instruction in the vernacular will be allowed at such schools. The entire curriculum must be in the English language.

2. The vernacular may be used in missionary schools, only for oral instruction in morals and religion, where it is deemed to be an auxiliary to the English language in conveying such instruction; and only native Indian teachers will be permitted to otherwise teach in any Indian vernacular; and these native teachers will only be allowed so to teach in schools not supported in whole or in part by the Government, and at remote points, where there are no Government or contract schools where the English language is taught. These native teachers are only allowed to teach in the vernacular with a view of reaching those Indians who cannot have the advantages of instruction in English, and such instruction must give way to the English-teaching schools as soon as they are established where the Indians can have access to them.

3. A limited theological class of Indian young men may be trained in the vernacular at any purely missionary school, supported exclusively by missionary societies, the object being to prepare them for the ministry, whose subsequent work shall be confined to preaching, unless they are employed as teachers in remote settlements, where English schools are inaccessible.

4. These rules are not intended to prevent the possession or use by any Indian of the Bible published in the vernacular, but such possession or use shall not interfere with the teaching of the English language to the extent and in the manner herein before directed.

ALCOHOL.

Among the curious side issues of the current temperance discussion is the question whether alcohol is a natural product. This is, I believe, vigorously denied in some quarters. Alcohol, like bread, is manufactured artificially from a natural product. In each case fermentation, a natural process, is made use of. But while bread is known only as a product of manufacture, alchohol appears to be very widely distributed in nature, though in extremely minute quantities. Nor is this at all surprising. If grapes or apples, or their juice, be exposed to the air, fermentation sets in, and the sugar and other carbohydrates are changed to alchohol. The ferments which cause the change are afloat in the air all about, and might not unnaturally attack similar compounds in other vegetable substances. Professor Müntz, of the National Aegronomic Institute in Paris, has, by refined chemical tests, discovered evidences of alcohol in cultivated soils, in rain water, in sea and river water, and in the atmosphere. He finds that vegetable molds may contain consid erable quantities, and it appears probable that the alcohol "originates in the soil, from the fermentation of the organic matters in it, and is thence diffused as vapor in the atmosphere."

Another side issue of our temperance discussion is the so-called "Bible wine" theory, which maintains that the wine used in Palestine in the time of Christ was not alcoholic. I have been unable to find evidence that the composition of the juice of the grape, the laws of fermenta tion, or the practice in the making and using of wine, were different in that country at that time from those in other countries, or in that country at other times; and believe it safe to say that the theory that Bible wine was different from other wine, that it had not the alcohol which other wines contain, is without any basis to support it, in the opinion of the student of science.

Of the inexpressibly baneful effects of alcohol, that have made its excessive use one of the worst of the evils of our modern civilization, this is not the place to speak. But there is one matter in this connection about which, I trust, a word may not be out of place. It is that, great as is the physical evil of alcohol, the moral evil is incomparably greater; that true temperance reform is moral reform; and that, like every other moral reform, it will be best furthered by the closest alliance with the truth.

The moral argument against alcohol seems to me invincitle. Is it not certainly strong enough when the facts are adhered to, without the exaggerations into which earnest reformers, in the intensity of their convictions, are sometimes led?—*Professor Atwater in the Century.*

NEWS AND OTHER GLEANINGS.

—The Royal Geographical Society has decided to admit women to fellowship.

—Parchment paper is now being made in Switzerland on a large scale, to be used for packing butter, cheese, etc As a covering for cheese, tinfoil is being superseded by it altogether, the disagreeable decomposition of the cheese being said to be thereby avoided.

—Experiments upon the substitution of iron or glass ties for those of wood have been for some time in progress on a number of European railways. Although the first cost of the artificial ties is greater, their "life," technically speaking, is much longer; and a comparative waste of valuable timber is prevented.

—It is stated that since the sunflower has been cultivated on certain swamps of the Potomac malarial fever has decreased. At the mouth of the Scheldt, in Holland, it is stated that similar results have been obtained. The sunflower emits large volumes of water in the form of vapor; and its aromatic odor, as well as the oxygen it exhales, may have to do with the sanitary influence in question.

—American scholarship has suffered a loss in the death of Michael Heilprin. Mr. Heilprin was born in Hungary

in 1823, the son of Phineas Mendel Heilprin, a distinguished Hebrew scholar and author. Michael Heilprin ardently espoused the cause of the Hungarian Revolution and was for a short time attached to the Kossuth administration. On coming to this country he first taught in Philadelphia, but afterwards removed to New York, where he became first a valued contributor to, and later associate editor of, the *American Encyclopædia.* A selection of his articles was reprinted. Mr. Heilprin was also a frequent contributor to critical literature, and author of a work published by the Appletons entitled "Historical Poetry of the Ancient Hebrews," of which two volumes have appeared, leaving one still to come.—*The American.*

CURRENT EVENTS.

THE health of the Emperor of Germany shows some improvement. A despatch from Berlin, on the 21st, says: "Emperor Frederick passed a very good day. His pulse was better than it had been at any time since the operation was performed on his throat. In the afternoon he drove in an open carriage toward the Schloss Bellevue, in the Thiergarten, returning in a closed carriage. He met with enthusiastic greetings along the route."

THE General Conference of the Methodist Episcopal Church has been in session in New York city for two weeks or more. On the 19th inst. it was decided, in regard to the status of William Taylor, who is engaged in mission work in Africa, that a missionary bishop has the same standing as other bishops, but that his authority is confined to his special field.

THE General Assembly of the Presbyterian Church is in session at Philadelphia. The corresponding body of the Presbyterian Church of the South, (which split off in the slavery agitation), is in session at Baltimore. The latter, on the 19th, appointed a committee, with instructions to report at the meeting of the General Assembly in 1889, the best means to put a stop to the use of intoxicating liquors.

A DISPATCH on the 21st inst., says: The great flood in the Mississippi is slowly abating. Hundreds of families have been rendered homeless and thousands of acres of growing crops ruined. Dwellings have been demolished and fences washed away. From the northern end of Adams county to the southern end of Pike county the land on the Illinois side of the river is now a vast lake, from six to ten feet in depth. The damage to railroad property is very great, and it is said that it will be three weeks after the water subsides before trains can be running on time. Quincy is cut off from railroad communication North, West, and South. It is estimated that the loss from crops alone will reach $3,000.000, and that the damage to levees, houses, and railroads will appropriate $600,000.

NOTICES.

*** The Visiting Committee of Abington First-day School Union will visit Norristown school on First-day, the 27th inst., at 9 o'clock a. m., and Byberry at the close of their morning meeting, on First-day, the 10th of the Sixth month. Friends of the Committee and all others interested are invited to attend.

CHAS: BOND, Clerk of Com.

*** Henry T. Child expects to attend Friends' Meeting at Quakertown, Bucks county, on First-day, the 27th inst., and to give an illustrated lecture on Temperance, in the afternoon of the same day, at that place.

*** The First Session of the First-day School Association of New York Yearly Meeting will be held at the Fifteenth Street Meeting-house, New York, on Seventh-day evening, Fifth month 26, at 8 o'clock. All Friends interested in First-day School work are invited to attend.

JOSEPH A. BOGARDUS,
CAROLINE J. TITUS, } Clerks.

*** The First-day School Quarterly Association of Whitewater Quarterly Meeting of Friends will meet at Richmond, Indiana, on Seventh-day evening, 2d of Sixth month, at 7.30 o'clock.

*** A public meeting under the care of the Temperance Committee of New York Yearly Meeting will be held at the Fifteenth street meeting-house, New York City, on Third-day evening, Fifth month 29th, at 8 o'clock.

All interested in the cause are invited to attend.

JOS. A. BOGARDUS, Clerk.

*** Home for Destitute Colored Children, Berks street and Old Lancaster Road. Annual Meeting, Fifth month 28th, at 3 p. m. Reading of Annual Report, Election of Officers, Managers, etc.

Opening of New Home, 4 p. m. Addresses by Judge Ashman, Mary Grew, S. P. Godwin, Fanny M. Coppin, Frances E. W. Harper, and others. Exercises by children. Public respectfully invited.

Trains from Broad Street to Park Station, 2.20 and 3.36 o'clock p. m., or Arch street cars to Fffty-second street, (four squares distant).

*** A meeting for the general consideration of the best methods of First-day school teaching, (and designed especially for the benefit of teachers), will be held at the Fifteenth street meeting-house, New York City, on First-day evening, Fifth month 27th, at 8 o'clock. All Friends who are interested in First-day school work are invited to attend.

*** There will be a *Memorial Meeting* held at Richmond, Indiana, on First-day following Quarterly Meeting in the Sixth Month, at 3 o'clock, p. m., under the charge of the First-day School, in memory of our valued friend, Sarah A. E. Hutton, who was one of the early workers in, and earnest supporter of, First-day schools to the close of her life.

B. S.

*** Martha Schofield acknowledges the following donation to the Aiken School:

Mission Band, West Chester High School, 1 box; Thomas H. Jackson, West Chester, 2 bbls.; K. M. Phillips, Philadelphia, 1 bbl.; Isaac Roberts, for F. D. S., Norristown, Pa., 2 bbls.; Friendly Sewing Society, Philadelphia, 1 bbl.; A. G. Thomas, Sandy Spring, Md., 1 bbl.; through Amos Hillborn, 3 bbls.; Phebe A. Baker, 1 bbl,; Ladies' Christian Work Society, Plainfield, N. J., 1 bbl.

*** Quarterly Meetings in Fifth month will occur as follows:

28. *New York Yearly Meeting.*
28. Warrington, Pipe Creek, Md.
29. Burlington, Crosswicks, N. J.
30. Southern, Easton, Md.
31. Bucks, Buckingham, Pa.

PUBLISHERS' NOTICES.

***As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

WM. H. JONES,

The Dealer in **Agricultural Implements, Seeds and Fertilizers.** Removed to **2043** and **2045 Market St.**, Philadelphia, Pa. Cheapest and largest variety. Every conceivable implement of farm use, harness, seeds and fertilizers. It is a curiosity, and of great interest to every utilitarian to see the establishment. If you cannot get here, write for wants. I am in communication with all the Agricultural implement builders in the U. S.

FRIENDS' UNION FOR PHILANTHROPIC LABOR

Will assemble in the Meeting-house at Fifteenth Street and Rutherford Place, New York City, Sixth-day, 6th month 1st, at 10.30 a. m.

The Committees on Philanthropic Labor of the several yearly meetings are requested to forward their reports as soon as possible to the Chairman of the Union.

Reports and information upon special subjects will be forwarded, if possible, by the 20th of 5th month, as follows:

On Arbitration, to J. W. Hutchinson, 353 W. 123d St., New York.
" Temperance, to Jos. W. Bogardus, 177 West St., "
" Prison Reform, to Jno. W Plummer, 52 E. Lake St., Chicago, Illinois.
" Corrupt Literature, Mercy J. Griffith, Emerson, Jefferson county, Ohio.
" Social Purity, Aaron M. Powell, 58 Revale St., New York.
" Education of Colored People, Wm. M. Jackson, 335 W. 18th St., New York.
" Compulsory Education, Allen J. Flitcraft, 205 Le Salle St., Chicago, Illinois.
" Indian affairs, Wm. C. Starr, Richmond, Indiana.

The Special Committee appointed for that purpose, have arranged the following order of business, subject to such changes as the Union may make.

FIRST SESSION, SIXTH MONTH FIRST, 10.30 *A. M.*

1. Calling the names of Representatives.
2. Reports of Yearly Meeting Committees.
3. Report of the Executive Committee.
4. Appointment of Committee to Audit Treasurer's accounts.
5. Paper on "Duties of Friends," by Wm. M. Jackson.

SECOND SESSION, SIXTH MONTH FIRST, 3 *P. M.*

1. Report of Representatives nominating officers of the Union.
2. Report of the Auditing Committee.
3. Report of the Treasurer.
4. Report of the Committee on Arbitration.
5. Paper on Arbitration by Edward Stabler, Jr.

THIRD SESSION, SIXTH MONTH FIRST, 7.30 *P. M.*

1. Report of the Committee on Temperance.
2. Paper on Temperance by John J. Cornell.

FOURTH SESSION, SIXTH MONTH SECOND, 10 30 *A. M.*

1. Report of the Committee on Corrupt Literature.
2. Paper on Corrupt Literature by Elizabeth Powell Bond.
3. Report of the Committee on Social Purity.
4. Paper on Social Purity by Anna R Powell.

FIFTH SESSION, SIXTH MONTH SECOND, 3 *P. M.*

1. Report of the Committee on Prison Reform.
2. Paper on Prison Reform by
3. Report of the Committee on the Education Colored People in the South.
4. Paper on the Education of Colored People in the South by Howard M. Jenkins.

SIXTH SESSION, SIXTH MONTH SECOND, 7.30 *P. M.*

1. Report of the Committee on Compulsory Education.
2. Paper on Dependent Children by Elizabeth. B Passmore.
3. Report of the Committee on Indian Affairs
4. Paper on Indian Affairs by Edward H. Magill.

JOHN WM. HUTCHINSON, *Chairman.*
MERCY J. GRIFFITH, EMILY P YEO, *Secretaries.*

THE RIVER OF LIFE.

THE more we live, more brief appear
Our life's succeeding stages;
A day to childhood seems a year,
And years like passing ages.

The gladsome current of our youth,
Ere passion yet disorders,
Steals lingering like a river smooth
Along its grassy borders.

But as the careworn cheek grown wan,
And sorrow's shafts fly thicker,
Ye stars that measure life to man,
Why seem your courses quicker?

When joys have lost their bloom and breath
And life itself is rapid,
Why as we near the falls of Death
Find we its tide more rapid?

It may be strange, yet who would change
Time's course to slower speeding,
When, one by one, our friends have gone
And left our bosoms bleeding?

Heaven gives our years of fading strength
Indemnifying fleetness;
And those of youth a seeming length
Proportioned to their sweetness.

—*Thomas Campbell.*

SERMON BY JOHN J. CORNELL.[1]

THE religion of Jesus Christ, from my standpoint, is strictly practical; it does not appeal to the mere credulity of the human family, but more to their reason, their judgment, their common sense. It recognizes a God as the Creator of all things, both material and spiritual. It recognizes in him a Father, a care-taker, a protector, and a counsellor for all his children. It recognizes a Christ as the Son and sent of the Father, as a Savior and restorer of men; a Savior from the commission of sin, and a restorer from the consequences thereof. It is therefore adapted especially to the needs of man in this present life; it looks towards aiding and directing him so that he may live this life rightly, as a proper preparation to receive the joys of a life to come. Its first office and work is that which we call regeneration. Jesus testified to Nicodemus, "except a man be born again he cannot see the kingdom of God." This was a stumbling block to those whom he addressed, and particularly to Nicodemus, who thought that Jesus referred to a natural birth, and hence he queried, "how can a man be born when he is old?"

This work is simple, and yet it is needful that all men, (I speak of mankind generally), shall pass through it in order to understand, appreciate and experience the joys of heaven. There is nothing mysterious in it; it is capable of being understood by our reasoning powers, when these are enlightened by the divine Spirit, and is not inconsistent with common sense. When we are first brought into the world we are ignorant and helpless creatures,—helpless as to the physical, ignorant as to the intellectual and spiritual, ignorant of what is right and wrong, as we are ignorant as to the laws governing the physical life. We receive our first impressions of right and wrong from the environments by which we are surrounded. In this period of our lives our knowledge of right and wrong is an acquired one, whether it comes from our parents, our guardians, or teachers.

But this condition is not that which we were designed to remain in. Our knowledge of right and wrong is to come from a different source from this. We may continue in this condition and yet not know any of the joys of heaven. That is, we may continue to be obedient to what we know to be right, and not do anything wrong, and yet not come to a perfect knowledge of the kingdom of Heaven. Jesus illustrated this in the beautiful parable of the Virgins. He represented that five of them were wise, and five of them were foolish. The wise were those who had oil in their lamps; they were trimmed and ready, and when they heard the call, "behold the bridegroom cometh" they were ready and entered in.

This has been regarded by many as simply to be ready when death comes. I have a different understanding of this, because death is not the bridegroom of the soul. These virgins to me represent this condition of which I have been speaking, the natural condition in which we acquire a knowledge of right and wrong from our environments. Those who do right as they are, are the wise virgins, represented by a pure condition. Those who are not faithful to the knowledge of these conditions are the unwise virgins. Those who are wise and have done the best they knew from the knowledge they have received and the circumstances by which they were and are surrounded, who restrain the indulgence of their appetites and passions, because they have been taught that this was necessary for them to do, who have been obedient to the teachings of father and mother, and have learned something of self-control;—these

[1] At Friends' Meeting-house, 15th and Race streets, Philadelphia, Fifth mo. 20, 1888. Phonographic report by Henry T. Child.

receive the Divine Spirit. When it comes directly and immediately, they are ready to receive the call to enter into the chamber with the bridegroom of souls, which is Christ. To enter into the chamber with the bridegroom is typical of the union between the bride and the bridegroom, and there is from this union a birth known; a child is born, a son is given, and the condition which is the result of this union wherein he becomes a new creature, born again of the spirit, and from that condition he receives a knowledge of right and wrong, directly as a revelation of the Father to him. He then becomes obedient to what he knows is right, and refuses to do wrong, not because of the education he may have received, but because of the knowledge of that which is right.

The unwise virgins have neglected those things which they were taught were right, and they are not permitted to enter into the chamber with the bridegroom. And although they may ask the wise virgins for oil, yet they have none to give. It is only as they have received this oil, which represents faithfulness to known duty, for themselves that they can be fitted to meet the bridegroom of souls.

This is the work of regeneration. The performance of the moral law does not bring all the happiness that we desire. Doing things because our parents, our teachers, or our guardians have told us that they were right does not satisfy the longings of the soul; we must come to understand from the immediate revelation of the Divine Spirit that these things are right. This is simply the work of regeneration. It is the first work in the reception of the Christian religion. Previous to this we are not fitted for the work and service of the Father: now we are.

Its next work is to preserve us in this condition and to save us from the commission of sin, which is the transgression of the divine law. When we have thus entered into this union with the Divine Spirit we are in a condition to realize that which was spoken of by the prophet: "Unto us a child is born, unto us a son is given, and the government shall be upon his shoulders, and his name shall be called Wonderful Counsellor, the Mighty God, the Everlasting Father, the Prince of Peace,"—representing in these terms the working of the Divine Spirit in the spirit of man. The holy Spirit, the Christ of God, reveals to man that which appears to be wonderful in its character. It is a counsellor: it brings all the powers of man under its control and into a state of rest: in this it becomes man's preserver, man's Savior, for its office is emphatically that of a Savior.

But when man is not thus obedient, when he allows his passions, appetites, and propensities, to obtain control over him, he is not then saved, he is not then preserved, and he enters into the commission of sin. The office of the Divine Spirit then becomes that of a restorer to bring man back to the Father's house. It meets with him while in a condition of disobedience; it disturbs the quiet which he had sought to enjoy, and its mission is to lead him back to the Father's house. This is very fully exemplified in that beautiful parable of the Prodigal Son. He takes the son who had entered into the Father's house, being born again. Yet this son goes away from this with all that the Father can give him, he wants to go out for himself,—away from the Father's house. This represents the state of one who strays away from that condition in which the Divine Spirit has been over him. He goes away and spends his portion among harlots and in riotous living, in a life of dissipation and immorality, in which he is committing various criminal acts. Yet in this low condition he remembers that there is "bread enough and to spare" in his Father's house, and he says, "I perish with hunger,"—but he is not yet ready to return for "he fain would have filled himself with the husks that the swine did eat, and no man gave unto him."

I understand by this he would have filled himself with a profession of religion, but this did not satisfy him. Finding this to be the case he resolves to return, and he declares "I will arise, and go to my Father." He feels the necessity of getting up higher, but he feels that he is unworthy to be called a son; "make me as an hired servant," let me do anything, however mean, if I only can find bread to satisfy my soul. When he comes into this condition the Father saw him when he was a great way off, and had compassion on him, and ran and fell on his neck and kissed him, and said this my son was dead and is alive again, bring the fatted calf and kill it; bring forth the best robe and put it on him. Here is a lesson that there was no mediator required, for the mediation had been effected when he had resolved to arise and return. That work had been brought about through the grace of God which bringeth salvation and which had been working in his soul, and when he put this desire into operation by being obedient, there was nothing between his soul and the Father, who was so near to him; and by the performance of this act of true repentance, and the desire to return to the Father's house he found salvation. He had not been redeemed by anything outside of him; there had been no price paid for him by another; but by his own choice to turn from the evil of his ways, by "ceasing to do evil and learning to do well."

The world does not seem to have understood these teachings of Jesus, and the Church has run out into doctrines and creeds, as being necessary for man to believe in order for his salvation, which are not sanctioned by the teachings of Jesus. We need to come to a more practical understanding of the religion of Jesus. In one of his testimonies he says, "If any man will come after me let him deny himself, and take up his cross and follow me." He never asked any man to believe any specialities, he did not form any creed, but we were to first deny ourselves. What does this mean? It does not mean that we should deny our identity as man, but simply the denial, as I understand it, of everything that would lead to a violation of any of the commandments God has given us,—the denial of everything that could control us, or claim our time and attention, and so warp our judgments that we can not attend to all the divine commands. To do this a constant watch is demanded. Jesus meant this when he commanded his disciples to watch and pray continually. We should pray for

protection and exercise continued watchfulness, and in this we are taking up the cross. But we shall find it is not a hard cross as it is often represented, so that we are often inclined to put off this work. The work of the cross is only that of keeping our feelings under the control of the Divine power. To exemplify this let me call your attention to your relation as children and parents. You have loving parents who care for you. You know that when these parents demand of you a service, even if you are employed in something which you desire to complete,—it may be some plan of pleasure or amusement; you may be engaged in reading or anything else; but when the command is made by the parent to do a service, in that love which you bear for them, you take up your cross and lay down your plans willingly, and do the mother's or father's bidding. This is taking up the cross. The work is not hard, then, the hardness and bitterness are only imaginary. Just as soon as we come to the conclusion that the work is one which God has called us to do, it will be easy and light. This has been found to be the experience of every child of God as we go forth on the errand which he has laid upon us.

The only thing which can make the cross hard is to be out of harmony with God. Then we have to undergo a humiliation, because we have gone away from the Father's house like the Prodigal Son. But in the case to which I have adverted, of those who have led a life of self-denial, whatever seems to be hard will be removed. The lions which appeared in our pathway will be found to be chained so that they can do us no harm.

There is one point in connection with this, that I feel to call your attention to. We have been told that we must not move until the woe is pronounced. I think this is wrong. We should always move when we hear the word of command clearly, and that soul who waits until they hear the woe pronounced will not receive the same reward of peace. The Lord loves a cheerful giver. In this I might use the same illustration of the relation of parents and children, so that you may turn to your own experience and see whether you have been promptly obedient to your parents. If you have not and they have felt it necessary to require you to do it, even by the use of some punishment, you have not had the same reward of peace.

I do not want to lay before the young mind, when I ask them to embrace the principles of Christianty. that the work is very hard, that there is anything gloomy in it, for it is far more easy to do the work of our heavenly Father than it is to indulge in sin. When the soul has come to a condition in which its strongest desire is to do the will of God that soul has, no longer any fear. There will be a care lest we may not have seen clearly the work which we have to do, but this will be removed and strength given to perform the service to which the Lord has called us. Then comes the work of "following Me,"—not following Jesus up and down Judea; not that we must do just as he did in all things when in that outward manhood that appeared among the Jews, for this is impossible. Following him means implicitly obeying every requirement that the Father makes. The first taking up the cross daily is the work which belongs to our spirits and in which we will receive al the help that is needed. We shall have a preparation like that which Jesus experienced when he passed through the temptation in the wilderness, where everything in him was brought under the control of the Divine Spirit. Jesus passed through all this, and when he had done so he entered upon the ministry, and so it will be with each one of us. Not that we shall all be called to the vocal ministry, but each one of us must pass through this experience before we are prepared to minister. This work of the ministry belongs to all of us; it may be only in the private walks of life, by our personal influence over our fellowmen, or it may be to proclaim the gospel to these.

An important lesson which Jesus gave is contained in the interview with the young man who said unto him, "Good Master what good thing shall I do that I may have eternal life?" His reply was, "Why callest thou me good? There is none good but one, that is God: but if thou wilt enter into life, keep the commandments." If there ever lived on earth a being to whom the title of good could be applied, that was Jesus. But he said there is none good. He saw in the young man just that disposition that is often prevalent in the minds of men everywhere, a disposition to reverence the instrument who had uttered the beautiful and divine truths which fell from his lips. The young man recognized that there was something more to be done, and he came with the inquiry, "What good thing shall I do that I may have eternal life?"

Whenever there comes one among the people who is qualified to present the truths of the gospel, there is a disposition to reverence the instrument, and Jesus wanted to turn the attention of that young man away from himself to the Father, who had qualified him for his work, and whom he represented before men. He therefore turned to him and called to mind the various commandments given to the Israelites as the moral law. The young man answered him, "All those things have I kept from my youth up. What lack I yet?" And Jesus looked upon him with love,—just as every disciple looks upon every moral man.

But morality is not sufficient, although it is impossible to divorce morality from Christianity. No one can be a Christian without being a moral man, but a man may be a moral man and not be a Christian. A man may be moral because there are no opportunities to commit immorality, as for instance a man may be incarcerated in a prison cell, where he cannot commit any violence to others, but this is a forced morality. A man who is truly moral because he is a Christian, is so because he finds it right for him to be so; he needs no outward restraint; he is a moral man everywhere, and under all conditions, and so the true Christian, the disciple, like his Master, respects those who are moral men, even though they may be only in the condition of the first work which is under the moral law. This is a preparation for the reception of the Divine Spirit after the new birth is experienced. As I said of the virgins, it is the pre-

paratory state for the reception of the bridegroom of souls.

The question was "what lack I yet?" Jesus said unto him, "If thou wilt be perfect, go and sell that thou hast, and give to the poor." This does not mean for us to sell our outward possessions. If a man has a farm he is not called to sell it and give all the proceeds to the poor. He would only make himself poor and do no good. It will not do to take these things in a literal sense. The Scriptures are not designed always to teach literal truths, but in many cases their meaning is spiritual. They were given by inspiration, and we must understand that they are intended to convey spiritual truths.

In this lesson, as I understand it, we are to sell everything that stands between us and the reception of the Divine Spirit, the Christ within us, by which we will be directed. Whatever tends to take us away from the Divine Being, we are to part with.

Whom are we to sell these things to? Not to our fellow-men; we are to part with them to our heavenly Father; it only requires that we lay down our possessions of self-righteousness, love of the worldly, love of self in various forms. It is just another way of asking us to deny ourselves. We are to bring everything to the altar of God within ourselves, and we receive for them the love of God, the pearl of great price. He takes them all away from us and gives us in their place his matchless love. We find that we have something then to give to the poor, something more than dollars and cents, something better than these. We must go to those who have not come under the control and guidance of the Father, and who are *the poor* to whom we are to give that which has been given to us. There is a reaching out the hand to restore and to uplift the erring and go to those who are depressed and under affliction, and to speak words of encouragement, and to give the cup of cold water in the name of a disciple, to visit souls who are sick and in prison. When we have thus parted with all that has been in the way of our highest work, we shall know what it is to "have treasure in heaven," and all the longing desires for earthly treasures and great possessions will be taken away, and in their place we shall have love to impart to our fellow-men. Then we are entirely ready to "come and follow me." Then there comes an outreaching to those who are in bonds, and have not received the rich blessings of joy and peace in the Holy Spirit, and we have desires in our hearts that they may be enabled to reach this same condition. But the work is not all done; unfortunately men very often stop in this condition, but this is not the end. There comes the further taking up of thy cross daily and following him. We are in a condition now to work, we are fitted to do the work that the Father has for us. It still remains to be our duty to watch over every feeling of our hearts, and see that love governs all these. We no longer assume to sit in judgment over our fellow-beings,for judgment belongs alone to God and not to man. There is an outreaching feeling in the soul, when it is born again, which would build up and restore our fellow men and lead them to a condition in which they would love God, and not fear him, to love him as a kind and tender parent,—and when this feeling covers our hearts we shall be able to exercise an influence over our brothers and sisters for good. This, I understand, is the practical work of the gospel which Christ came to bring to the world, and it is beautifully adapted to the wants of this present life.

We need something to guard us from the temptations by which we are surrounded. We need something to assist us that we may not be overcome and become victims to those things which destroy our peace.

When we come to live lives like this, it brings to us a revelation of the immortality of the soul. With all our experiences we are not satisfied. There is something more that we desire; nothing short of immortality will satisfy the longings of the soul, and when we reach a conviction that there is a state beyond the confines of time, where the soul may rest with God, we are satisfied.

One of the difficulties that lies in the way of the acceptance of this simple form of religion is that the attention of the children of men has been called too much to the conditions which are to be experienced in the after life.

We are living for something beyond the confines of time. We do not do this with regard to the things of time. We do not put off our efforts to obtain earthly treasures, for if we did we should never reach the enjoyment of these.

God designed that we should live the present life in the enjoyment that belongs to it.

Jesus declared the kingdom of Heaven lies within you; it is not a condition to be known only beyond the confines of time. But when man, through obedience to what is unfolded to him by our heavenly Father, comes to realize that God is over all and that he reigns in his soul, he is in heaven, for where God reigns there is the kingdom of Heaven.

It is for this purpose that he sends his Christ into our hearts, and gives us that which will show us what is our duty, and by the fulfillment of this we shall be prepared for happiness here and for the higher conditions of eternal life.

In presenting these thoughts to you I desire to call your attention to that Christ within you, which is the hope of glory, the witness for God that will make manifest to every one of you what is your individual duty, that will enable you to perform that duty, and in this way to realize the highest happiness that you can enjoy here, and know a preparation for the joys of the higher life. It is not necessary that we should all believe exactly alike,—all walk in one path. He has endowed us with different talents, some one, some two, some three, and others five. As we know there are different degrees of experience in natural things, so also are there in the spiritual. Some are so faithful with the one talent that they experience a high degree of enjoyment. Some are babes in Christ, and some are strong men, —there are many conditions. Now it is not reasonable to expect that those with one talent shall see all that the strong man sees, and it is unreasonable to expect the strong man to go no farther than the babe in Christ.

We must recognize that there are diversities of gifts, but the same Lord, over all and in all, who worketh all things after the counsel of his own will. When we come to realize this rational religion, there will be a broad charity for each other, so that we shall be willing to leave others to perform their own work in their own way. No one sect or society has ever had all the truth unfolded to them. Therefore as each individual walks in his own allotted path, there will be a unity of feeling. We shall know then why Jesus said "other sheep I have which are not of this fold; these also must I bring and they shall hear my voice."

There is need of this feeling spreading over the church of Christ, we having been too willing to regard the sect to which we belong as only having the right way. We need to come away from this self-righteous condition and to learn that God unfolds to every child that which is necessary for them to know.

If we are more favored than others and have greater light we ought to be thankful to the Divine Father for this. If we have a clearer appreciation we should manifest it by our love, for it remains to be a truth that "by this shall all men know that ye are my disciples if ye love one another."

If we have this love in our hearts and keep close to the divine principle, then we may experience a being gathered among that "innumerable company which John saw who surrounded the throne of God, who were gathered out of every nation, kindred, tongue, and people." I do not understand it to be only those who have departed this life, for there are those in this life who have come up through great afflictions, and have known their robes "washed and made white in the blood of the Lamb." I believe there are those now living who have realized the condition in which they can say it is our "meat and our drink to do the will of our Father who art in Heaven," and these may be said to surround the throne of God.

I feel to commend you all with my own soul to this religion of Jesus Christ, the first work of which is regeneration, or the new birth, then salvation from sin, and lastly restoration to the Kingdom of Heaven, wherein God reigns over all, in all, blessed forever.

MEMORIAL OF SARAH T. BETTS.

A Testimony of Abington Monthly Meeting concerning Sarah T. Betts, who was born 7th of Eighth month, 1807, *Died 3d of Third month,* 1885.

We, who were the recipients of the wise counsel and loving interest of this dear friend and mother in Israel so many years, feel it is due our children and those who may succeed us, to hold up her memory as a living proof of the sufficiency of that divine principle which was the strength of her life in the early morning, at noonday, and no less conspicuously manifest as she neared the close of her earthly existence.

She felt, in her youth, that life was given for a noble purpose; that the gratification of the unsanctified appetites and passions did not yield that which her spirit hungered for. Some of us have been instructed in listening to her as she portrayed the earnestness with which she sought the God of her life, and a willingness was wrought to surrender all that she had that she might purchase that Peace, without which life seemed vain. As the gentle manifestations of Truth dawned upon her mind, she was led to see a path of meekness and self-denial open before her. While yet a child she became convinced it was her duty to assemble with her friends for public worship in the middle of the week; having felt the consolations of the heavenly principle within, she longed to commune with it.

During her childhood, or a part of it which she has spoken of, there was no Friend in the ministry attending the Meeting, and as she grew up to womanhood her heart was drawn forth in loving exercise for her young associates, that they too might become acquainted with that which had comforted her; she felt it her duty to call them especially, as well as her elder brethren and sisters, to partake of spiritual bread. Her sympathetic heart turned to her suffering fellow-creatures, and when opportunity offered she was ready to share the good gifts lent her with those less favored, and was not afraid to speak on behalf of the oppressed slave, when the subject was unpopular and met with disfavor, strong in the faith that right must triumph over oppression and wrong. Ever concerned for the welfare of her beloved Society, she felt that suitable literature should be within the reach of all its members, and was instrumental in the establishment of a free library. We, who knew and loved her, felt it a privilege to be with her; the quietness of her spirit was such that trivial things in her daily life had little power to ruffle or disturb; emphatically, she lived above them, and therefore was, we believe, the better qualified to hand forth that of which she had partaken.

Her ministry was seldom doctrinal, often called her hearers to faithfulness, and many times expressing her concern that none should quench the spirit nor do despite to the work of grace in the soul, and thereby lose the blessing. As the closing period of her existence drew nigh, and the bodily powers weakened and memory became impaired, her communications among us still retained their wonted clearness. Gentle and loving, she awaited the final summons, often expressing herself in this language, "Now lettest thou thy servant depart in peace," and the last audible words that fell from her lips were those of prayer and praise.

The epicure, the drunkard, and the man of loose morals are equally contemptible; though the brutes obey instinct, they seldom exceed the bounds of moderation; and besides, it is beneath the dignity of man to place felicity in the service of his senses.

NEW YORK YEARLY MEETING, 1888.

The Meeting of Ministers and Elders, held Fifth month 26th, was rather larger than usual. Samuel B. Haines and Robert S. Haviland were reappointed to the positions of clerk and assistant clerk. The minutes of Friends in attendance from other yearly meetings were read. The Queries addressed to this meeting and their answers were presented and considered. A concern was expressed in regard to the welfare of those meetings in which there is no vocal ministry. In quite a large number of the meetings composing this body there are no acknowledged ministers. The subject of the decrease in the number of ministers claimed serious attention, and the elders were especially exhorted to be faithful to encourage the public expression of rightly-concerned Friends, and thus do their part in developing a ministry.

On First-day the usual meetings for public worship were held. In the morning meeting, John J. Cornell spoke at length on the subject, "God is Love." He said in part: "The tendency of theologians is to represent God as an austere being whom we are to hold in reverence and fear. Men have been induced to make a profession of religion for fear that God will inflict upon them a severe penalty. Jesus teaches us to love God for the joys that will flow in to us, and not for fear of the dread punishment that will follow. In the earliest stage of his ministry, he said; Repent, for the kingdom of Heaven is at hand. We cannot come into harmony with God unless we cease to do evil and learn to do well. This motive is a higher one, and the incentive nobler than that of the current theology."

At the afternoon meeting, Serena A. Minard, Catharine P. Foulke, and Abel A. Hull appeared in the ministry. At the Brooklyn meetings, Frances J. Newlin, Margaretta Walton, and Abel A. Hull spoke.

Second-day, Fifth Month, 28.

The men's meeting was opened with a brief exhortation from John J. Cornell, that brotherly love may continue, and that the differences of sentiment that naturally arise may not mar the harmony of the body.

The names of the representatives were read, and all were found to be present except six.

Minutes for Friends in attendance from meetings without our limits were read as follows: For John J. Cornell, a minister, and Eliza H. Cornell, from Rochester (N. Y.), Executive Meeting, endorsed by Farmington Quarterly Meeting; for Abel A. Hull, minister from Little Falls Monthly Meeting, endorsed by Baltimore Quarterly Meeting; for Serena A. Minard, a minister, and Caroline B. Cutler, from Norwich Monthly Meeting, (Ontario); for Catharine P. Foulke, a minister, from Richland Monthly Meeting, (Penna.); and from Margaretta Walton, a minister, from Fallowfield Monthly Meeting (Penna.) The meeting expressed satisfaction at the presence of these Friends.

The reports from the quarterly meetings were read. That from Nine Partners stated that the meeting was united in proposing a change of Discipline, and also contained the information that hereafter that meeting will be held half-yearly in the Fifth and the Eleventh months.

Epistles were presented from all the yearly meetings, and four of them were read at this session. Several of the subjects mentioned in them elicited responsive testimonies from our own members. A committee was appointed to prepare an epistle to send to the other yearly meetings. To the same committee was assigned the duty of assisting the clerks in preparing a minute embodying the exercises of the meeting.

In women's meeting, the calling of the list of representatives showed that all were present except four. The presentation of minutes of Friends in attendance from other yearly meetings called forth a general expression of warm welcome to those that have come among us in gospel love.

The reports from the quarterly meetings and those from the First-day schools were read.

Epistles were produced from all the yearly meetings, several of them were read, and a committee was appointed to draft a response to these welcome communications.

In the afternoon, in men's meeting, Robert S. Haviland and William H. Willetts were re-appointed clerk and assistant clerk.

Two propositions were presented to the meeting for a change in the First Query. One of them was contained in the report from Nine Partners Quarterly Meeting; the other originated in the Yearly Meeting. A committee was appointed to join one from the women's meeting in considering these two propositions and directed to report to a future session.

In connection with these propositions several Friends expressed the desire that the time might soon come when the Yearly Meeting would be ready to have a general revision of the Discipline. This expression was disunited with by some Friends, one of whom remarked that as the Discipline was revised sixteen years ago, there surely was no occasion to make any further change in it after so brief an interval.

The two remaining epistles from other yearly meetings were read, and the information presented by them and by the ones read in the morning session was commented on by a number of Friends. Aaron M. Powell said that while we have not been distinguished and probably shall not be distinguished by a rigid adherence to a technical theology, we are known for practical philanthropic work. Our epistles show that we never have been more active in such useful labor than at the present time. He alluded somewhat in detail to the work of Friends in the promotion of arbitration, of temperance reform, and of the education of the Freedmen. There is especial need of earnest work among the last named, to eradicate the evils that are a consequence of the condition of slavery from which they have emerged, intemperance, immorality, and a prevalent disregard of the obligations of the marriage contract. If we do the duty lying nearest to us, we shall not fail to find opportunity for great usefulness.

The subject of our duty towards isolated Friends, introduced to our attention in the epistle from Philadelphia Yearly Meeting, claimed our attention. It was the sense of the meeting that we should cöoperate with the Philadelphia committee and with others if they shall be appointed, and a committee was appointed to act with similar bodies in extending care and encouragement to Friends who are remote from association with established meetings.

In the women's meeting, Amanda K. Miller was reappointed clerk, and Jane W. Carpenter was chosen as assistant clerk. The remaining epistles from other yearly meetings were read, and the testimonies therein contained were spoken to by a number of Friends.

A committee was appointed to join the one from men's meeting in considering the two propositions to change the Discipline.

After some judicious advice from a visiting Friend in regard to the demeanor of Friends while considering the subjects that claimed attention, the session concluded.

EXERCISES IN PHILADELPHIA YEARLY MEETING.

The reading of the epistles from our brethren of the other yearly meetings brought the meeting under solemn feelings of thankfulness that there is one Lord, one faith, and one baptism, and that in all parts of the vineyard this is felt to be over all those who are sincerely seeking after the truth and endeavoring to do the Master's work.

The subject of holding parlor meetings was felt to be important. Bringing as they do the young and old together into silent communion with the Father, if there be inspired words spoken, impressions may be received that will be lasting and profitable.

The feeling was expressed that there were some who were in a condition like that of the prophet when he said, "My people have forsaken the Lord, and thrown down his altars." Judging from the feelings of their own minds in regard to Society they have allowed discouragements to enter, and a feeling that many had left the ancient landmarks. The command to these is to retire to the cave and cover their faces with a mantle, and wait till they hear the still small voice, which will say as it did to the prophet, "There are yet seven thousand who have not bowed the knee to Baal nor kissed his image." Under this influence we may find ourselves uplifted from morbid conditions, and come to realize that the same Almighty arm that called out our early Friends is just as powerful to-day to call forth instruments in his service.

In the consideration of the state of Society we were reminded of the exhortation of George Fox: "Brethren hold all your meetings in the power of God." It is as important now as it was then to be engaged in the exercise and travel for the promotion of truth and righteousness in the earth by the regular and faithful attendance of all our religious meetings. The value and importance of our Religious Society is as great now as ever. The blessed and glorious testimonies which have been given to us, are the very cardinal and essential doctrines of true Christianity.

Holding our meetings in the "power of God" is not in gathering together merely to listen to the words that may be spoken. We must come to know the fundamental principle of our Society, that God reveals himself to every soul. We acknowledge by our continuance in membership that we believe in the principle that every duty, every obligation that is required of man, will be opened and revealed to him if he will come into the proper condition to receive it. We were urged to bring all our gifts down into the valley, for it remains to be true as it was with the Jews,—when they offered their gifts on the high places—they were not accepted.

The only means by which love and unity can be maintained is by each one being led by the spirit of truth. There is but one true foundation, which is laid by Jesus Christ through the influence of the Father.

We were reminded that we are fellow-travelers seeking a perfect life and finding it not in the contention and tumult of the world, but in waiting upon God in that spirit which will enable us to lay down our lives at his command.

The perfect life commanded by Jesus is undoubtedly a spiritual life, because God is a spiritual being. When Jesus said: "Be ye perfect" he had reference to to the life of God in man, that life which is the light of men,—the life revealed to Peter as the Christ the son of God. This life comes to us in unexpected ways, and in unexpected seasons. It ceases not with time, it knows no death, it walks over the dreaded chasm which divides time from eternity by that way which the vulture's eye hath not seen, and that way is Christ. It is pleasant and comforting to sit in our silent meetings with those who give evidence of the baptising influence of the grace of God, and it is still more encouraging to hear the voices of our brethren when we can feel that their hearts are in their voices and that God is in their hearts.

As there is but one true church, so there is but one true foundation upon which that church can be built. Other foundation hath no man laid than Jesus Christ.

We are commanded by Jesus to watch continually lest ye enter into temptation. There is no state attainable in which there is not need to observe this injunction.

The object of our Religious Society is for the nourishment and culture of the spiritual growth.

We were counselled to the early impressions that were made on our soul, and if we have gone away from these to seek to return. The Father is always calling us to come home, and if we listen to his voice in our souls and are willing to follow it brings us out of the bondage of sin into the liberty of the children of God.

We were exhorted to seek the restoration of offenders. As we deal tenderly with those in our families who are sick, so should we seek to bring about sretoration by tender and loving care. The qualification for this can only be attained by yielding to the influence of Divine love in our own souls.

I believe the promises of God enough to venture on eternity upon them.—*Watts.*

PHILADELPHIA, SIXTH MONTH 2, 1888.

FRIENDS IN THE FAR WEST.

AMONG the subjects that strongly engaged the attention of our recent yearly meeting in this city was the proposition to extend the work of encouraging and sustaining our members in localities beyond the reach of meetings, in the Far West. The report of the Committee, (already printed in full in our columns), drew out general and earnest expression, and the minute continuing the committee materially enlarged the scope of its appointment,—authorizing it to correspond with similar committees of other yearly meetings, in order to make up a complete list of isolated members; and also to extend aid and encouragement, as way may open, to the scattered ones, with the view of helping them to hold their ground as Friends, and to establish meetings where this may be right and practicable.

The prospect thus opened is one which will involve serious consideration on the part of all concerned. The first step, that of completing the list of distant members, involves the action of the other yearly meetings, and in the epistle sent out from Philadelphia the subject was presented as clearly and plainly as possible. The collection of names, however, takes time, and meanwhile it will perhaps be practicable for the committee to open some communication with Friends in the West, and to pursue the prospect indicated by the second clause of the yearly meeting's minute.

Friends in localities where there are known to be several families of their faith should weightily consider whether way does not open for them to organize themselves in meetings. There has been a beginning made in this work by the establishment of the meeting at Genoa, Nebraska, which we trust will prove to be a stake well planted. There are other places in that State, and in Kansas, where it would seem that enough Friends are located to make it practicable to begin. At Lincoln it is ascertained that there are a number of members, and the same is true of Omaha, and other cities and towns.

Our Western Friends may feel assured of the deep interest taken in this subject in the East as well as in the yearly meetings of the Interior, and they may rely, we think, on the extension from here of a friendly aid to any rightly directed move in the direction of building up the Society, according to a sound pattern. At the same time they must not expect too much from the Eastern yearly meetings, which find themselves occupied with many concerns relating to their membership at home, and are each day seriously conscious how necessary it is for them to watch over their own borders.

WE state, freshly,—since the question is continually asked us,—that we make no charge for the insertion of notices of marriages and deaths, nor for the more extended "obituary" notices, published in connection with some names of those departed. Assuming that they all relate to Friends or Friendly people, in whom our readers are interested, we give them place in the paper as part of the material suitable for its contents. In regard to the obituaries, however, we reserve an editorial discretion, and any sent us must be subject to abridgment and revision. Sympathising with the feelings of friends and relatives who have passed through affliction, we are yet compelled to take into consideration the fitness of things, as well as the limitations of space, and the rule of Friends not to run into excessive expressions of praise or commendation.

DEATHS.

BRADWAY.—Fifth month 26th, 1888, at the residence of his son-in-law, Levi D. Jarrett, Fairview, N. J., Isaac Bradway, of Philadelphia, aged 75 years; an Overseer of the Monthly Meeting of Friends of Philadelphia.

Of a retiring disposition, his worth was only fully known to his intimate friends. He was strongly attached to our Religious Society and ever ready to aid with his means that which was for its benefit or for the relief of suffering. He was charitable in his feelings, and kind and loving towards those with whom he came in contact.

* *

HAINES.—At the residence of her son-in-law, Joseph B. Livezey, Berkely, Gloucester county, N. J., Fifth month 7th, 1888, Rachel Haines, widow of William Haines, aged 78 years; a minister of Woodbury Monthly Meeting, N. J.

She was a woman who was beloved by all who knew her, being of a meek and quiet spirit, ever ready to lend a helping hand in time of need, always careful not to say or do anything to hurt any one's feelings, being willing to submit all to her Heavenly Father's will, saying suffer it to be so now. She was a tender, loving mother, desiring to bring her children up in the way in which they should live to bring peace and happiness to their own souls, not making any difference between her own and their companions. I can fully say that she was ever true, always ready to do any kind act for us, desiring our best welfare.

Blessed are they that die in the Lord; yea, saith the Spirit she has gone to rest from her labors, and her works will follow her. Quiet, unassuming, self-sacrificing, her life was a beautiful sermon more eloquent than words.

In her gift in the ministry she was very careful to preserve a meek and quiet spirit, not using many words, so as to be heard for her much speaking.

She had often desired that she might not be sick long to be a trouble to her children, which her Heavenly

Father granted, being stricken down with paralysis in the morning, and she was released from her sufferings at the close of day; as it went out calm and serene, so passed away her gentle spirit. E. B. H.

To this can be added: Careful in life and conversation, full of kindness and Christian motherly love, this dear friend has shown by precept and example, the sweetness and beauty of a life under the influence of the Divine Spirit. J. B. L.

HALLOCK.—On Sixth-day, Fifth month 4th, 1888, at her residence in Plainfield, N. J., Mary W. Hallock, widow of the late George Hallock, in her 82d year; an elder of Rahway and Plainfield Monthly Meeting. Interment at Chappaqua, N. Y.

LONGSHORE.—Fifth month 24th, 1888, at Woodbury, N. J., Isaac S. Longshore, in his 73d year; a member of Woodbury Monthly Meeting.

LONGSHORE.—In Middletown (Langhorne), Bucks county, Pa., Fifth month 24th, 1888, Cary Longshore, in his 74th year; and in Woodbury, N. J., at the same hour of the same day, his brother, Isaac S. Longshore, in his 73d year.

Both were born members of Middletown Monthly Meeting, and both were interred at Middletown Friends' graveyard, at the same time, on the 28th ultimo. They were brothers of T. Ellwood Longshore and the late Dr. Joseph S. Longshore, of Philadelphia.

MARSH.—In West Chester, on Fifth month 25th, 1888 Dinah T. Marsh, widow of Bennett Marsh, in the 76th year of her age.

MERRITT.—At the residence of her brother, Walter Corlies, Poughkeepsie, N. Y., Fifth month 4th, 1888, Eliza L. Merritt, in her 90th year; a member of Oswego Monthly Meeting, and although unable to attend for many years, her interest in Society did not abate, and she always evinced a firm reliance on the Divine Arm for support.

STYER.—In Philadelphia, Fifth month 24th, 1888, Lizzie La Rue, daughter of Dr. Charles and Mary L. Styer, in her 14th year.

THOMAS.—At his residence, in Henry Co., Iowa, Tenth month 2d, 1887, after a short and severe illness, of apoplexy, Nathan Thomas, in the 75th year of his age.

Being in early life convinced of the necessity of a preparation of heart, in order to enjoy the blessings of a heavenly home, he yielded to the impressions of duty, and about the 24th year of his age joined himself in membership with the Society of Friends. With these he labored as a minister for nearly thirty years, performing many arduous journeys in the service of his blessed Master.

In the year 1863 he moved West with his family and settled in Iowa. The meeting of which he then became a member sanctioning some practices which he believed to be inconsistent with the principles of Friends, and this exercise continuing for some years, he at length felt it right to withdraw from fellowship with them, and so bear testimony against that which he believed to be wrong, but did not in the least relax his concern and labors for the spiritual welfare of his fellow-beings.

He gave much evidence to his family and friends that he knew his work was done, and that he was calmly waiting the summons, saying to his companion a few days before his death, "Oh, that my Good Master may see fit to come and take me home."

VALENTINE.—On the morning of Fifth month 8th, 1888, at the home of her daughter, Phebe A. Valentine, in Brant, N. Y., Susan D. Akeley, of Buffalo, in the 84th year of her age; a member of Hamburg Monthly Meeting. Funeral from Friends' meeting-house, North Collins, N. Y.

WEBSTER.—At Conshohocken, Pa., of scarlet fever, Fifth month 26th, 1888, Evan D. J., youngest child of Samuel F. and Lydia C. Webster, and grandchild of Isaac and Sallie A. Conard, aged 2 years, 7 months. Interment at Plymouth meeting.

WILLARD.—In Newtown, Bucks county, Pa., on the 18th of Fifth month, 1888, Nicholas Willard, aged nearly 86 years.

Although not a member, he was for many years an attender of Newtown Meeting, where Friends were always glad to see him and feel the unity of his meek and quiet spirit.

SCRIPTURE LESSON, No. 23.

SIXTH MONTH 10, 1888.

JESUS RISEN.

TOPIC: RESURRECTION.

GOLDEN TEXT: "I am the resurrection, and the life: he that believeth on me, though he die, yet shall he live: and whosoever liveth and believeth on me shall never die."—John 11: 25, 26.

READ Matt. 28: 1-15.

ALL the gospels agree essentially in the account of Jesus rising from the tomb in which his body was laid. Luke, who was not one of his disciples at that time, and John, the one who outran Peter and came first to the sepulchre, give many details that are not found in Matthew nor Mark. Luke was a friend and companion of Paul, and a physician; he is represented as intellectual and a man of education, and being a Greek, is believed to have compiled his gospel from the many then in existence for the Gentile converts.

All the gospels describe the resurrection in language that is generally understood to mean he actually came forth in the body from the place where he was laid. Paul, in explaining this part of the gospel (1. Cor. 15: 6), says he was seen by about five hundred brethren at once, of whom the greater part were then living, and he added, "last of all he appeared unto me also." Let us inquire how this appearance took place, and it may give us a key to the whole interpretation. Paul was journeying to Damascus, full of zeal for the defense of Judaism, and intent on persecuting those who had embraced the religion of Jesus, when he saw the great light, and heard a voice, "but he saw no one."

That the resurrection of Jesus was affirmed by the apostles in all their preaching and teaching is abundantly proved, and, however it may have been understood in those early times, it satisfied the longing of the human heart for some definite evidence of immortality and a future existence. Because Jesus had risen and still lived, they would live also. It was the risen Jesus who promised to be with his apostles and brethren, even to the end of the world.

How has this been fulfilled? In his bodily presence? Not at all. Said Paul again, "Now know we him no more after the flesh, but after the spirit."

It is a trait in human character, universal almost as the race of mankind, that there is a longing desire for a life to follow this life on earth, in which the imperfections and failures of mortal existence shall be eliminated, and the soul shall be permitted to

enter into a higher, purer, and better state. The belief in a personal existence after death seems to be thus a natural endowment, an original instinct in man, not a sentiment that has been acquired by intellectual training, nor through religious teaching.

Regarding the transition from earthly life to immortality, the so-styled evangelical Christian belief is, that in some remote period "there will be a final resurrection of the dead, which will come to pass at the end of the world, and which will be followed by an immortality either of happiness or misery." (See John 5 : 28, 29.) This includes a belief in a resurrection of the bodies of men, and a reunion of the souls with the bodies in which they dwelt whilst on earth. The view of Friends is that immortality follows immediately upon the close of this life, that, as is expressed by the poet, "There is no death! What seems so is transition,"—or simply a passing of the *soul*, not the body, from its earthly tenement to its immortal home. The words of Jesus to the repentant thief on the cross: "*To-day* shalt thou be with me in Paradise," confirm this view.

The golden text refers to a spiritual resurrection, not at the death of the body but during the earthly career of men. Christ, the revealed will, or the Spirit of God, in man, is the resurrection and the life, that, if believed on and obeyed, will raise the soul to a realization of immortal life here in the body, so that he that believeth shall never be out of the presence of God. Under this influence we commune with our Divine Father, and "rise with him into that sphere of thought and feeling over which death has no power, and where the fear of death is conquered."

For Friends' Intelligencer and Journal.

NOTES ON PHILADELPHIA YEARLY MEETING.

Looking over the meeting, (on the women's side), on Fourth-day morning, one was impressed with the large attendance at the very beginning, which has increased from session to session, until scarcely an available seat is left empty on this side of the house, while the number of men who find it possible to leave their business to attend to the affairs of the church, has been at no previous time larger than at the present.

Then there was an order and decorum maintained about the premises that is truly gratifying, and the desire so apparent to be in at the reading of the opening minute tends greatly to the early settlement of the meeting. There appeared to be an earnestness among the young people, which gives promise of "better things" in the near future, and there was a larger number of these than we remember to have seen in attendance in past years.

Then it may be said of the business that came before the meeting, especially the reading the epistles from other yearly meetings with which we are in correspondence, there has been a breadth of thought presented, and an acknowledgment of inter-dependence which makes common cause with every attempt to increase the usefulness of the Society in all practical efforts for our own advancement as a part of the Christian church, and for useful service to the greater brotherhood outside our borders. We heard the exhortation "Bear ye one another's burdens," as it came to us from the distant fields of labor, where our brethren and sisters, widely separated from the common centres of denominational influence, have learned the value of this injunction, and are reaching forth the outstretched hand of fellowship to all of our household of faith wherever scattered.

In nothing, perhaps, has there been so displayed the spirit of Christian forbearance that characterizes the gathering as in the submission of nearly the entire meeting to those few who could not see "eye to eye" with them on the subject of the changes in the book of Discipline. These have been held over for consideration from year to year, hoping there might yet be a concurrence in them. While this action seemed to be laying up a heavy burden on the many, it may yet prove to be the best course at the present time. The need for a revision is becoming more and more pressing, and the non-adoption of these changes will doubtless hasten this desirable work. In the meantime let us all make ourselves more familiar with this excellent code of laws, that we may find the higher spiritual significance they may have, and so be prepared intelligently to take our part in their revision.

The great trust committed to our yearly meeting in the "George" bequest, is beginning to be more weightily felt as the necessity of taking action thereon develops. The plan adopted by the nominating committee, to bring forward the names of Friends to serve as a general committee seems fair and equitable, and indicates a sense of responsibility to the yearly meeting in its several parts, that must enable the Committee to work together intelligently, and in the interests of the whole body.

The ministers and others in attendance from the yearly meetings with which we correspond, have done good and acceptable service, and we thankfully acknowledge the favor of their presence and ministrations.

In the spirit of condescension and forbearance, we were enabled to labor together in harmony, and this we feel to be an earnest of the future advancement of Philadelphia Yearly Meeting in all helpful service for the church and for the world. *

DEATH OF DR. SUSAN P. STACKHOUSE.

The announcement of the death of Dr. Susan P. Stackhouse, which occurred at her home, Fallsington, Bucks county, Pa., on the 21st ult., after a brief illness, was a severe shock to a wide circle of those who knew and esteemed her. She was a graduate of the Women's Medical College of Philadelphia, in the Class of 1883, and during the last year had been one of the demonstrators of surgery in that institution. She had also, for some years, lectured at Swarthmore College, to the young women, on hygiene. Her early death is attributed to overwork. On the 24th ultimo, in accordance with her expressed wish, her remains were cremated, in the Crematory at Germantown, this city, after which the ashes were removed for interment.

THE EVENING MEETINGS DURING YEARLY MEETING WEEK.

In the great interest felt in the sessions of Philadelphia Yearly Meeting, and the concerns that are considered therein, very many Friends lose sight of, or cannot attend, the evening gatherings at Race street, which seem a part, and yet are not a fully recognized part, of the annual assembly. Yet these are too important and exercise too great an influence on the affairs of Society to be lightly regarded, and should therefore be more generally noticed.

These meetings are held under the direction of the various associations that have been formed from time to time to supply the needs of our religious body, not supplied by the body itself. First: On Second-day evening was held the annual meeting of Friends' Book Association, which occupies an important place in our midst, in having a store and a central place for Friends in which, or through which, much Friendly work is accomplished. The yearly report was read and discussed, and has been published in a recent number of Intelligencer and Journal. But the meeting was small, and the managers often feel discouraged, that what they deem of much importance, does not claim the greater attention of Friends. With a small amount of capital their concern struggles along, keeping within the lines of self-support, not accomplishing much in the way of the original design, which was not only to keep a store of supply for Friends in the shape of Friendly literature, but to publish from time to time such books, tracts, pamphlets, etc., as might enable our principles and testimonies to be more widely circulated. As Friends, we should be more active in spreading our views. It was stated in the meeting that at church doors could be found tracts and sermons free to all to take and read in order that others than their members should be enlightened in the direction of the church; but for strangers to obtain a knowledge of the views of Friends was indeed an arduous task. The zeal of early Friends is yet needed. They shook the world around them and fought moral battles that gained not only for us, but for others, priceless freedom in many things. And is there no more for us to do? To mention just one thing. They gained for Friends exemption from oaths. Should we not go further, and have government exempt all men from the taking of that which is forbidden to all men? But we are idlers to-day in that we publish so little. Our Friends of the other branch excel us here. If the Book Association were recognized by the Society itself in some shape it might be encouraged and stimulated to greater activity in this direction.

On Third-day evening a Temperance meeting was held which was more largely attended than any other evening meeting, it being directly under the care of a committee appointed by the Yearly Meeting, which of itself shows the value of what is termed "outside" work being recognized and provided for. The meeting was presided over by Elizabeth Darlington, an earnest and valuable temperance worker, who opened it with a short but excellent address. Well spoken and appropriate recitations, and one good essay on "Environment," were much appreciated from seven "Bands of Young Temperance Workers" in various parts of our yearly meeting. It is a well established fact that if a child is designed to be a worker with his hands, the training of the hand in the direction of the work expected must begin early in life, also if the brain is to be used it must have a similar training, so if the young are to be fitted for usefulness in our religious organizations some work for our Society should early be found for them to do, and the Temperance Committee have acted with wisdom to enlist the young.

The main feature of the evening was an interesting discourse by John J. Cornell, and though he was very unexpectedly there and could present no new features in a cause so universally and persistently kept before the people, yet his devotion to it was very apparent and his earnest words commanded the close attention of his hearers. The meeting was felt to be a very satisfactory one.

On Fourth-day evening was held a large and animated adjourned meeting of the Philadelphia First-day School Association.

Epistles were received from several associations within the limits of other yearly meetings, and earnestly responded to by an epistle well prepared by a committee previously set aside for the purpose. The regret was expressed that so little time could be given to the consideration of these kindly greetings. Delegates were appointed to attend the general Conference of all F. D. Schools, to be held at Yarmouth, Canada, in Eighth month next. One subject for discussion for the evening was "The purpose and right use of Lesson Leaves." It was well presented by Robert M. Janney, who was followed by George L. Maris on how not to use "Lesson Helps in schools" by teachers preparing themselves thoroughly before entering their classes. General discussion followed, and Isaac Roberts spoke somewhat at length on the present plan of preparing our lessons, that of following the "International" system used in all Sabbath schools, giving the Friendly interpretation of the Scriptural passages used. He gave it his earnest sanction, which view was held by the entire meeting, judging by the expression that followed.

The next subject was the "Duties and responsibilities of superintendents," which was presented in a paper by Howard M. Jenkins, arousing the attention of the workers in different localities to more earnest thought regarding their relations to their work. The recognition given to First-day Schools by the society should take a more positive form, and care similar to that exercised over our monthly and preparative meeting schools, should be extended, for here, more directly than elsewhere is taught the doctrine and discipline of Friends, and when we consider how largely these schools are made up of members and non-members coming directly for religious teaching, it becomes evident that they should have careful oversight. The need for their existence has been proved by their almost universal establishment. They are with us to stay, and as Friends it is our duty to give them our close attention.

Finally, on Fifth-day evening was held the meet-

ing "for the Promotion of Education among the colored people of the South." This was not so largely attended as were those of the two previous evenings, yet very many were present who have in their hearts the true spirit of the missionary, a spirit which must reach out to do good somewhere, and they ask for a field of labor protected and encouraged by their own religious body. Interesting accounts were given of the work done and influence exerted by the two schools at Aiken and Mount Pleasant, South Carolina, and a stirring address was made by Frances Jackson Coppin, the well-known Principal of the Institute for Colored Youth, in this city (Bainbridge street above Ninth), and an earnest worker in behalf of her race. Her eloquent words as she pleaded that her people be permitted to learn trades, and elevate themselves as laborers, were listened to with close attention and sympathy. We were reminded that on that very evening 50 years ago in our own city of Philadelphia was burned Pennsylvania Hall by a mob that would not then tolerate words being spoken in behalf of freedom for the slave. The change in public sentiment during this fifty years was feelingly alluded to, and the entire meeting was one of deep interest. Some feeling of discouragement prevailed, lest our Yearly Meeting would not practically encourage this work, and the words of a leading man of this age, whose extensive knowledge and close observation give them weight, came again and again to mind, that "a religious Society to long exist as a body must be largely missionary." Or in the recently uttered words of one of our gifted ministers, "the Messiah will not come to such as refuse to obey the call of the Spirit that commands us 'to preach good tidings to the poor, release the captives, recovering of sight to the blind, to set at liberty them that are bruised, to proclaim the acceptable year of the Lord.'"

The action of our Yearly Meeting has been anxiously watched, as will be noticed by the following extract from a private letter of a concerned Friend in a neighboring yearly meeting. He writes:

"The published reports of the work of the men in your Yearly Meeting bear no hope of such fruits of the Spirit as the world so sorely needs;—for the Indians, for Prison Reform, for Arbitration, for work among the Colored people, for Temperance, for all good works in which formerly our Society stood in the vanguard, where are we to-day? Not a Religious Society in existence, perhaps, does so little among the people as do we.

"But why should we desire that the Divine plan should rest on us for its fulfillment? Why narrow down the glory of his work to a favored few? Glory be to his infinite goodness that his Spirit works equally in the hearts of all; let us rejoice that it is so, while our hearts grieve that our noble history has been overshadowed by a cloud that has dimmed its brightness. We have had a glorious record; would that it might inspire us to do our work as well."

If we seek aright, not closing our eyes to our duty as a Society, way will yet open to move forward in all good works.

NEWS OF FRIENDS.

FAIRFAX QUARTERLY MEETING.

This meeting was held at Hopewell, Va., from the 19th to 21st of Fifth month. A select Friend kindly furnished the following account of Seventh-day's meeting:

"The meeting of ministers and elders convened on Seventh-day. After a season of silence a Friend quoted the expression of Paul, 'To be carnally minded is death, but to be spiritually minded is life and peace,' and desired that we might be made free from the law of sin and death by obedience to the law of the spirit of life in Christ Jesus. After which another Friend spoke of the great responsibility resting upon this branch of the church and the necessity of living out our profession. Our friend Darlington Hoopes, from Baltimore Quarterly Meeting, being with us, spoke words of encouragement, having felt a concern before leaving his home to sit with us in our quarter at this time. After going through the regular business of the meeting, we adjourned under a feeling of thankfulness that the Divine Spirit had been manifested in our midst."

The meeting on First-day was as usual, quite large. Much the larger portion of the gathering were not members. Generally, at this season of the year, if the weather is favorable, the yard and surroundings are well filled, with vehicles and the ancient stone meeting-house that has been the place of worship of Friends for nearly a century and a half, and has a seating capacity of several hundred persons, was only partially filled many remaining outside, which is to be greatly regretted, but it seems unavoidable as very many come with no intention of entering the house, but more to see their friends and have a good time talking, etc. Of course, such are not our members, but are those who go to Friends' meeting probably once the in year and view it more in the light of a "camp-meeting." Much effort was made by Friends to get the outsiders to fill the house, but to no purpose. Several Friends from other quarterly meetings were present. After a session of comparative quiet, Jesse Hoge spoke to us of the necessity of turning inward to find God. He spoke of the feeling of discouragement that often comes over the mind, but we should turn inward to find divine strength. We can do nothing of ourselves, but must rely on divine power, quoting the words of the Blessed Master: "Of myself I can do nothing, but the Father that worketh in me." The world with all its beauty and riches, will not satisfy the hungering and thirsting of an immortal spirit. His desire was that we should not place too much affection upon earthly things, as they will surely be removed from us; that all our words and actions may be in the truth that we may know Christ to be our Saviour and Redeemer. We may have the outward history of Jesus, but if we do not know Christ in the heart we are none of his.

The next speaker was Darlington Hoopes who carried further the same line of thought. He then spoke of the experience of a young man who had engaged in war, and of the impressions that were made upon his mind upon entering a field of battle. It

was an evidence of the visitations of God's spirit. He desired greater watchfulness that we may trust more implicitly in Him. He spoke feelingly of the love of God and the power through which he operates upon the children of men, showing us clearly how we should walk in this life. The undying, unchanging love of God was manifested through Jesus as a blessed example to the world. As God is love, so is the Son of God love. Christ the great Eternal Substance was the only power by which we may inherit eternal life; he will come in a living power to our souls.

The speaker appealed feelingly to the young that they should listen to the visitations of the Heavenly Father, that there may be a recognition of his appearing in the soul. He will open to the understanding his requirements of us as accountable beings, that we may resort to the power of God for Salvation, that we may examine our own hearts by the light that is given us, that we may heed the invitation to come in and sup with him and he with us. His discourse was clear and acceptable, as evidenced by the quiet that overspread the meeting whilst he was speaking, but near the close of his remarks there would have been some disturbance by persons passing out, had not a Friend requested the meeting to remain quiet until its close.

Elizabeth Brown then spoke a few words. D. H. again spoke a few moments of the benefits he had derived from being with religious people, also in reading the Scriptures as they should be read in a prayerful spirit. The meeting then closed.

The public meeting on Second-day was much more select and quiet. Most of those assembled were Friends and those who are in the habit of meeting with us. A solemn, impressive silence covered the meeting for nearly a half hour, when Jesse Hoge delivered a short but excellent discourse. He was followed by Wm. William, who spoke for several minutes, desiring that we should be encouraged to greater faithfulness and watchfulness to avoid violating the law of the spirit of life in Christ Jesus, that we may not realize a spiritual death. Darlington Hoopes again addressed the meeting for nearly an hour in his usual clear, impressive manner; the solemn quiet that covered the assembly gave evidence of the overshadowing presence of our Heavenly Father.

The business portion of the meeting was then entered into, men and women Friends transacting their business separately. The state of society as elicited by the answers to the three queries read at this time showing that our condition as a body was reasonably healthy as regards the attendance of meetings, love to each other, etc., and in dealing with offenders a true Christian spirit is generally maintained in the meekness and love enjoined by our Discipline.

Hopewell, Va., Fifth month 24. J. W. B.

DUANESBURGH QUARTERLY MEETING.

This was held in New Baltimore, the 24th of Fifth month, 1888. This meeting, although not quite as large as upon some former occasions, was one of much interest. Thomas Foulke, of New York, and Charles Cocks, of the Yearly Meeting's Committee, were very acceptably with us. The meeting of ministers and elders was held on Third-day afternoon, and it was truly a favored season. Testimony was borne to us showing clearly the necessity of keeping a close watch over our lives, lest that while making the high profession of being spiritually led and guided, our conduct and conversation do not bear the test; and that only out of pure love and unselfish devotion to God, is begotten a universal love to all mankind. On Fifth-day morning, at 11 o'clock, Thomas Foulke bore feeling testimony to the value of true spiritual worship, and the new and close relationship existing between the souls of all true disciples of the blessed Master and the strong drawing of all these to eternal goodness itself. There was earnest entreaty to more faithfulness in the attendance of meetings, and in all reasonable service required at our hands, closing with a touching and tender appeal to all hearts to come with all human powers under the sanctifying influence of divine love. The business of the meeting followed in joint session, showing a fair condition in the state of soci- at present, and was concluded in much harmony and good feeling.

On Sixth-day morning we again met for public worship with a larger attendance than at the previous meetings. Our friend T. F. again spoke, from the words "Ye are my Friends, if ye do whatsoever I command you," testifying to the faith as held by Friends, claiming that our tenets are in the exact line of those taught by Jesus himself, therefore none can call us unsound in doctrine. In clear and forcible language he spoke at some length to the satisfaction and enlightenment of some minds present. We took leave of each other with thankful hearts for the privilege of these precious opportunities, and for the free and loving hospitalities of the dear Friends in this vicinity, and the delightful social intercourse enjoyed at this time.

M. J. H.

—Our friend and editorial associate, Louisa J. Roberts, left Philadelphia on Sixth-day last, the 25th instant, for a visit to her son, at Creighton, Nebraska, and to Friends and Friends' meetings in the far West. Green street Monthly Meeting, in this city, adopted the following minute for her, on the 24th:

"At a monthly meeting of Friends held at Green street, Philadelphia, Fifth month 25th, 1888:

"Louisa J. Roberts opened in this meeting a concern she has felt for a long time to visit in Gospel love Genoa Monthly Meeting, Nebraska, and the families composing it; also to visit the families of isolated Friends as way opens; also to visit Pelham Half-year Meeting, Ontario. Unity and sympathy was expressed with her concern, and she was left at liberty to pursue her prospects as best wisdom may direct, she being a minister in unity with us."

Louisa expects to be absent for nearly three months, and desires to include among her visits the Indians at the Santee Agency, in northern Nebraska, and perhaps others. Her interest in the work among the isolated Friends is very strong, and we trust she will be able to meet with many.

—At the monthly meeting held at Race street, on Fourth-day, the committee on order, refreshments, etc., reported that during the recent yearly meeting 4,171 meals were furnished to Friends, at a cost of less than 13 cents each, the expense being borne by the three monthly meetings of this city. At the same meeting, a new committee to have oversight of the First-day schools was appointed and the Collecting Committee reported $4,379 as paid into the Treasury for the use of the meeting.

—By the will of our late venerable friend, Sarah Hoopes, of West Chester, Pa., $1,000 is left to West Chester Preparative Meeting, the income of which is to be applied, first, to the care of the old burying-ground adjoining the meeting-house.

—Among those in attendance at New York Yearly Meeting, on First-day, at the religious meeting at 15th street and Rutherford Place, were Aaron Sutton, who is nearly 95 years of age, and Avis Porter, who has passed her 95th year. The former is of Dutchess county, N. Y.

THE LIBRARY.

ANIMAL LIFE ON SEA AND LAND.[1]

Comprehensive zoölogical treatises or manuals in the English language are a rarity, and such as we possess are barely worthy of the name. This deficiency, which is equally well marked on both sides of the Atlantic, will be fully appreciated when we remember for how many years the works of Tenney and Nicholson have been called to do service, and how inadequately they minister to the wants of the general student. Excellent works on geology are plentiful, and scarcely less so works on botany, and it is the more incomprehensible why just zoölogy, a branch of science which has had associated with it a host of names eminent in all its departments of investigation and exposition, should have been so neglected. Britain and America may well comfort one another in their isolation, and look with jealous eyes upon Germany and France, where the scientific press is busy throwing out works of this kind, one might almost say every month.

From the time of the appearance of Clark's translation of Van der Hœven's Hand-book of Zoölogy, thirty years ago, until the publication some two years since of Claus's Manual, edited and translated by Prof. Sedgwick, of Cambridge, there has appeared scarcely a single systematic work that could lay claim to being a student's *vade mecum*, or that could in any way be adapted to advanced classes. In other words, at intervals of thirty years, we find translations from foreign works brought to do service in a market which could readily have been filled from home supplies. Why this should be so it is difficult to understand, unless it is that publishers are least willing to embark in zoölogical ventures, and hence give but little encouragement to authors for original work. That the English mind is easily capable of undertaking the task there can be no question, seeing what very important and much higher work in this department it has accomplished, but for some not readily accountable reason it seems to shrink from it. It is, however, a singular commentary on the character of work that might be accomplished in this direction, that the very useful, and much-praised translation of Claus, above mentioned—the product of one of England's most rising naturalists of the younger school—is a badly mangled adaptation from the German, embodying many important and unimportant, as well as harmful deviations from the original, and clearly proving by some very remarkable statements that the editor and translator was not only largely wanting in a necessary knowledge of subjects kindred to "recent" zoölogy, but that he was also singularly deficient in his understanding of the German language. Through some peculiar combination of unfortunate circumstances, moreover, he seems to have overlooked the fact that an edition of the German work appeared several years later than the one which is actually translated.

If the English language is deficient in original zoölogical works calculated to assist the advanced student, it is equally deficient in works of a like character suited to the infantile mind.

Mrs. Fisher's (Arabella Buckley's) pleasant volumes are a thing of recent date, and they fill a place which had long been left vacant, and which might well be considered to be alongside that so fully occupied by Hooker's charming and inimitable "Child's Book of Nature." Bert's "First Steps in Science," which could readily be made doubly attractive through some slight pecuniary sacrifice on the part of the publishers, is another modern acquisition to the department of needed juvenile literature, to which we can now also add Miss Cooper's handsome volume. It is with real pleasure that we hail this work, since it cannot but rouse the enthusiasm and kindly feeling of the little ones for nature's beautiful objects about them. Miss Cooper's plan has been to cultivate, or better yet, to instill a taste for natural history and natural objects in the youthful mind, rather than to weary it with discriptions of an endless variety of forms, and in her methods we believe she has been eminently successful. Representative of the primary animal groups that might be most readily met with, or such as teach something beyond what they merely seem and look like, are "talked" about and in such a manner as to awaken reflection and a spirit for further enquiry. The style is colloquial, and if perhaps a little too much so in some instances, it has yet its advantages, which will be readily appreciated by its followers.

Nearly one-half of the work is devoted to the Invertebrata, of which the marine forms receive special attention. Manifestly, the author has on more than one occasion experienced the delight of first capture on the oceanic surface. The descriptions of the forms are clear, succinct, and to the point, not overburdened with detail, nor laden with the anecdotal facts which are so luring with most children. A marked feature of the work is the direction given to compar-

[1] Animal Life in the Sea and on the Land. A Zoölogy for Young People. By Sarah Cooper. New York: Harper and Brothers. 1887. [This work was noticed in the Intelligencer and Journal of Tenth month 8, 1887, but only briefly. The review here given in part is by Prof. Angelo Heilprin, and appeared in *The American*, Tenth month 29, 1887.—Eds.]

ative study—to an examination of the inner workings or economy of animal forms, rather than to a mere description of species, and their habits. Structure, physiology, mechanism of movement, protective resemblances, color adaptation, geological succession, and other subjects of a kindred nature, are more or less frequently considered, thereby training the child's mind in the more modern method of nature investigation.

The illustrations supplementing the text are far ahead in quality of the illustrations seen in most works of natural history. Although many of them are reproductions from standard cuts already in use, being borrowed largely from Orton's "Comparative Zoology" and less extensively from Hooker's "Child's Book of Nature," a fair proportion, and many of these the finest, will be recognized for the first time by probably the greater number of readers. The art work of Wolf and Giacomelli is readily recognizable in some of the figures, of which a few can be traced to the practiced hand of a sister of the author, Miss Elizabeth Cooper. Such gems of execution as the "North Wind," on (p. 244), "Building the Nest" (p. 255), and "Frolic in the Snow" (p. 305), are a wonderful advance on the time-honored cuts of the "old-masters."

In conclusion, we can heartily commend this little work to the striving ones to whom it is dedicated; indeed, no parents who appreciate the keen pleasures which may be derived from a study of nature, and who are mindful of the advantages which an early training of the mind brings with it, can afford to let their children be without a copy of the book. But grown persons can readily profit from it as well.

ANGELO HEILPRIN.

BUILDING.

SOULS are built as temples are—,
Sunken deep, unseen, unknown,
Lies the sure foundation-stone.
Then the courses framed to bear
Lift the cloisters pillared fair.
Last of all the airy spire,
Soaring heavenward, higher and higher,
Nearest sun and nearest star.

Souls are built as temples are,—
Inch by inch in gradual rise
Mount the layered masonries.
Warring questions have their day,
Kings arise and pass away,
Laborers vanish one by one,
Still the temple is not done,
Still completion seems afar.

Souls are built as temples are,—
Here a carving rich and quaint,
There the image of a saint;
Here a deep-hued pane to tell
Sacred truth or miracle;
Every little helps the much
Every careful, careless, touch
Adds a charm or leaves a scar.

Souls are built as temples are,—
Based on truth's eternal law
Sure and steadfast, without flaw,
Through the sunshine, through the snows,
Up and on the building goes;
Every fair thing finds its place,
Every hard thing lends a grace,
Every hand may make or mar.

—Susan Coolidge, in S. S. Times.

A SUMMER BREEZE.

A PLAYFUL thing was that summer breeze:
It frolicked across the ocean,
It teased into fun the idle waves
And set them all into motion,
And then it passed to the sleepy earth,
And, merrily touching and glancing,
It hurried the blades of corn into strife
And set the green leaves dancing.

A tender thing was that summer breeze:
It stole into darkened places,
It gave its kisses to heated brows
And pale and wistful faces.
Into the room of the sad it came,
The weary hours beguiling,
And whispered softly such pleasant words
That it left the sorrowful smiling.

A healing thing was that summer breeze
As it came by the hill and river;
It brought a gift of new life with it
And of health was the generous giver.
It gave a hope instead of a fear
To some who were full of regretting;
It stole some thoughts that were hard to keep,
And taught the art of forgetting.

A happy thing was that summer breeze,
For it found its welcome duly;
The old men laughed as it greeted them
And the children loved it truly.
And if only we could as useful be
As the breeze in its summer sweetness,
We might be happy the whole day long
With joy that is full of completeness.

A learned thing was that summer breeze
To the world in its faintness given,
For it told to many things good to hear,
Of our Father who is in heaven.
His love, so sure and so strong and kind,
All beautiful things are showing.
And the people more trustful and loving grew
When the summer breeze was blowing.

—Marianne Farningham in Christian World.

THE great Teacher tell us that "this is the condemnation, that light has come into the world, and men loved darkness rather than light, because their deeds are evil." This is true alike in heathen and Christian lands. Men in all lands have *some* degree of light, and by that light they are to be judged. Men do not naturally cherish that which condemns them. That is a bad state in which evil deeds lead one to love darkness rather than light.

HATH any wronged thee? Be bravely avenged; slight it, and the work is begun; forgive, and it's finished. He is below himself who is not above an injury.

PAUPERISM IN HOLLAND.

We have received from our friend and occasional correspondent, William Tallack, of London, Secretary of the Howard Association, an interesting tract, giving the fruits of his observation concerning Pauperism and the methods of dealing with it, in Holland.

After speaking of the fact that, by the law, the different religious bodies are made administrators of relief to the poor, and that the police also are employed for the purpose, Wm. Tallack says:

The general principle kept in view in the extension of assistance to the poor, both by the churches and by the police, is to furnish a staff and not a crutch, or, in other words, to give as little as possible of continuous support, and, while obviating absolute starvation, to allow the needy to be still surrounded by strong but wholesome inducements to personal exertion. Most of the Dutch relief may be characterized by the Scriptural expression, "Here a little and there a little." It is a series of gentle pushings and pullings, studiously designed to tide over temporary necessities only; though, of course, the absolutely helpless, such as the blind and the very aged, have to be maintained in hospitals, almshouses, or other refuges. The destitute are in general aided by a variety of gifts in kind rather than in money, such as grants of food for so many weeks, supplies of clothing or fuel, provision of free medical attendance, or the rent of a small allotment for cultivation, or the payment of the burial expenses in the case of the decease of some member of an indigent family. In these and similar ways applicants for relief are just kept going, but not much more, so far as material aid is concerned.

But the Dutch also devote considerable practical regard to that very efficacious form of assistance which the eminent French philanthropist, M. Frederick Ozanam, designated "*l'aumône de la direction*," or the alms of wise counsel and personal influence. By means of the church committees or of the police, much useful information and aid are afforded to many who apply for employment, and in other instances, by means of judicious advice and encouragement, the destitute are induced to turn over a new leaf in regard to some of those habits or actions which may have chiefly brought them into trouble. And where such efforts are insufficient without collateral assistance, there are provided, in various parts of the country, bonâ-fide workhouses, where money may be earned by the performance of certain labor tasks, and in no other way. Of course, it is essential that the wages offered shall be lower than the average local rates of payment. Otherwise injustice would be done to independent workers, and further, the object in view would be defeated by an influx of more applicants than employment could be found for. But by careful sifting of the candidates and by a judicious administration of discipline, many persons are thus provided for longer or shorter periods with occupation without pauperizing them. For instance, I observed in a workhouse in Amsterdam scores of men and women who did not reside on the premises, earning from 4s. to 12s. a week each, by weaving or other labor.

The Dutch are by no means unmindful of the essential feature of every wise Poor Law system—namely, that the object of relief at the cost of the rate-payers shall be the certain prevention of starvation, but only under such conditions as not to render the lot of the pauper enviable by the honest worker. This is also the main justification for the English "House test," instituted by the Poor Law of 1834, which was devised by the ablest and wisest of political economists, and the efficacy of which has been abundantly proved by the experience of more than half a century.

While the "house test" decidedly tends to diminish the total amount of pauperism, it has, however, this disadvantage, that it is least deterrent to the worse class of paupers—namely, the shameless and reckless. Many of these willingly become life-inmates of union houses. The Dutch mode has the advantage of extending a very comprehensive but carefully limited relief to the more respectable poor. It is thus more sympathetic than the English plan. In both countries the Divine declaration still holds, "The poor ye have always with you; and whensoever ye will, ye may do them good." But in both countries it also remains a difficulty to relieve paupers without doing harm to them or to the rate-payers.

The necessary element of non-attractiveness is secured in Dutch help to the poor, not only by associating the police with church functionaries as relieving officers, but also by a general penal policy towards mendicants and vagrants, who are committed for periods of not less than one year to the "beggar colonies" in East Holland. But inasmuch as even there the treatment is found to be insufficiently deterrent, in many instances the committal of this class to cellular prisons is now being increasingly resorted to, and with good effect.

In connection with certain aspects of the great principle, that in regard to pauperism, as to other evils, prevention is better than cure, the Dutch encourage thrifty and provident habits by their numerous insurance offices and savings banks, also by their increasing attention to popular education and to the technical training of children, either while at school or afterwards. But they are much behind the English people in a practical disregard of the preventive efficacy of definite religious instruction, and in their comparative indifference to the discouragement of intemperance—that especial root and feeder both of pauperism and crime. In these two primary matters the Dutch may almost be termed a foolish nation. And herein they are holding back their country from much progress and happiness that could be otherwise attained.

That which creates a people is domestic life. The loss of it degrades a people to a horde. The authority and obedience, the duties and the affections, the charities and the chastities of home, are the mightiest and purest influences in the formation of human life. A good home is the highest and best school. It forms and perpetuates the character of a nation.—*Cardinal Manning.*

PRACTICAL EDUCATION.

One of the cruelest things that can be done to a child is to let it grow up without a knowledge of practical matters by which it can earn a living. I am moved to write this by a case that has just occurred in Erie, Pa., where a young girl has committed suicide because the one thing she tried to do failed. The Philadelphia *Ledger* notes the case, and says:

"A more healthy view of work, opportunities and position might have kept a young poetess of Erie, in this State, from rushing out of life in a recent season of disappointment. She was a pretty girl named Rose Smith, refined and educated as she was handsome. The child was only twenty, and had some little cleverness at turning verses, enough to give her the ambition to live by her pen. They could not have been great poems, or even brilliant ones, as the world knows that, large or small, all such are welcome to the publishers as diamonds are to the South African overseer at Kimberly. They were probably of the mediocre sort that a great name will sometimes float into temporary distinction, but never impose upon the reading public as worth reading for the second time. The poems came back to her as steadily as they had gone out to the various magazine editors and newspaper editors. So the young girl, utterly broken down with disappointment, took some morphine and ended her life. She was not able to support herself by the means and in the way her ambitious hopes had promised, and so she concluded life was not worth the struggle. Yet all around her, and certainly among hundreds of farmer's wives in that part of the State, as everywhere through Pennsylvania, there were homes that would have gladly received her, where she could have had plentiful living and not over hard work; where at this very season, the fruit trees are blossoming and pictures are making worth any poet's eye That any woman with a pair of hands and ordinary good sense should conclude there was only one way open to her for maintenance, is something that reflects imbecility and inefficiency upon the schools where the girl was taught. She had not learned the strength that comes of using various facilities and talents, but concluded too hastily that all of dignity was bound up for her in only one."

There is always room in somebody's house, and especially at this time of the year in the country, for a pair of willing hands as helper in the house to overburdened mothers and housewives. And the recklessness that flung a young life away, because poor poetry did not pay, shows that the worst of all training had been given that young girl.

No wise business man invests all his property in one place, so that failure in one is failure in all. It should be the same with parents whose children must confront life. They should be equipped with more than one resource, and taught ro respect work with the hands, and to feel that all honest work is honorable.—*Lucy Stone in Woman's Journal.*

"So to the calmly gathered thought,
The innermost of life is taught,
That to be saved is only this
Salvation from our selfishness."

Our capacity is our power of receiving and containing; our capability is our power of out-putting. In the root both words are one, as in the source both powers are one. Our capabilities are proporti oned to our capacity; for what we do not hold in store we cannot draw upon for out-giving. But while our capabilities are proportioned to our capacity, it does not follow that our producing will show itself in the direction of our receiving. What we have most capacity for, we may be least capable of; what we are most capable of, we may have least capacity for. The scientist sometimes gathers his best strength from reading poetry, the poet from reading science. To one who has a work to do, a most serious mistake is in confusing his capacity with his capabilities. To be fond of poetry is no sign of a mission to write poetry. One may be poetical in his tastes without being a poet, scientific without being a scientist, scholarly without being a scholar, artistic without being an artist. But he who fills his heart with the truths of the poets may work them out in heroic deeds; he who fills his mind with the laws of science may work them out in the mechanic arts; he who familiarizes himself with the achievements of scholarship may work out the application of the scholar's methods to the every-day business of life—to exactness and thoroughness. So, too, if you have a capacity for suffering, your capability is not to make others suffer, but to sympathise, and to mitigate the sufferings of others. —*Exchange.*

The Jews may not be Christians; but the Industrial School for poor girls in Chicago which the ladies of the Sinai Temple have conducted with great success for six years, seems animated with the spirit of Him who came to seek and save the lost. Recently the school has received a donation of $20,000 from Mr. Leon Mandel, and it is proposed to enlarge it so as to include boys, and call it "The Kindergarten and Trade School for Jewish Boys and Girls." Study is to be graded so that, beginning with the kindergarten, girls shall be trained not only in sewing, but to be teachers and housekeepers, and boys shall be taught some trade. Instruction is to be entirely free, and a suitable building is to be at once erected in a thickly populated portion of the city.—*Exchange.*

Receive every inward and outward trouble, every disappointment, pain, uneasiness, temptation, darkness, and desolation, with both thy hands, as a true opportunity and blessed occasion of dying to self, and entering into a fuller fellowship with thy self-denying, suffering Savior. Look at no inward or outward trouble in any other view; reject every other thought about it; and then every kind of trial and distress will become the blessed day of thy prosperity. That state is best which exercises the highest faith in, and fullest resignation to God.—*William Law.*

As the earth after the strong spring rains appears washed clean and ready for her fresh garments of green, so the soul, cleansed pure by pain is ready for the apparel of beauty in which it is to be clothed.

NEWS AND OTHER GLEANINGS.

—There are at least 250,000 women in Massachusetts alone who are earning a living by industrial occupations.

—The Massachusetts legislature has passed a bill for the appointment of one or more police matrons in each of the nine large cities of the State.

—Insurance returns continue to give a low rate of mortality among teetotal policy holders as compared with non-abstainers. An accident insurance society has now been formed in England which insures teetotalers at ten per cent. less than the usual rates.

—At the Five Points Mission, New York, potatoes form one of the chief articles of diet, and, as the supply ran short last winter, an appeal was made to the Sunday-school children of Richmond Hill, Long Island. The children gathered together all the available potatoes of the neighborhood and sent them to the mission in big sacks. Then they resolved themselves into the "Richmond Hill Potato Patch," with the object of raising, hereafter, their own mission potatoes. One day last week was planting day, and the children turned out in force. They propose to do the hoeing and cultivating themselves, and to gather the crop.—*Exchange*

—The Albany *Journal* says: "Twenty years ago women could not vote anywhere. To-day they have full suffrage in Washington and Wyoming Territories; municipal suffrage in Kansas; municipal suffrage (single women and widows) in England, Scotland, Ontario, and Nova Scotia; and school suffrage in these fourteen of the United States: New Hampshire, Vermont, Massachusetts, New York, New Jersey, Kansas, Colorado, Nebraska, Minnesota, Kentucky, Indiana, Michigan, Oregon, and Wisconsin."

—In the trial of an ordinary lottery policy case last week Judge Biddle took occasion to mention the violations of law by church organizations that get up games of chance from which to obtain money for worthy purposes. It should require only the remarks of Judge Biddle and a hint from Director Stokley to induce religious people to abandon such demoralizing enterprises. They are, no doubt, innocently taken up, but when attention has been called to the fact that they are direct violations of law, those whose pleasure it is to try to make men better will surely abandon methods of raising money that do not differ in any essential respect from the lotteries so effectively used to rob and demoralize the poor.—*Public Ledger.*

—The organization known as the Ladies' Health Protection Association, (New York City), recommends that women inspectors be appointed in each ward, whose duty it shall be to visit the schools and carefully investigate all matters pertaining to school hygiene. They not only personally make inspection of the cleanliness of streets and of business quarters, but now propose to send the street cleaning Commissioner to Europe for three months, paying all his expenses, so that he may examine into the systems that make other city streets, especially London's, so abnormally clean.

—An official report of the International Council of Women recently held at Washington, giving part of the papers and addresses in full, and extracts of others, is to be published, copies of which may be obtained by sending to Rachel G. Foster, 748 N. 19th street, Philadelphia, Pa. Price in paper 50 cents, cloth 75 cents, with an addition of ten cents for postage.

—A Deadwood, Dak., correspondent writes (Fifth month 20th,) to the Minneapolis *Tribune*: "For twenty-four hours past snow has been falling in different places in the Hills, the fall being quite heavy in the vicinity of Rapid City, where it reached the depth of ten inches.

CURRENT EVENTS.

General Philip H. Sheridan, senior officer in the military service of the United States, was lying at the point of death, of heart failure, in Washington City, on the 28th ult., but has improved, and is expected to recover.

The New York *Tribune* published, on the 30th ult., a letter from James G. Blaine, dated Paris, May 17th, positively declining to be a candidate for the Presidency.

Five new bishops have been elected by the Methodist Episcopal General Conference, sitting in New York. One of these is Dr. J. P. Newman, of Washington, D. C., known as an intimate personal friend of General Grant.

Milan, May 29.—The condition of the Emperor of Brazil is unchanged. He is greatly prostrated and his departure from Milan has again been postponed.

The General Assembly of the Presbyterian Church, (Northern body), which has been sitting in Philadelphia for ten days, adjourned on the 29th ult. The overtures for a reunion between it and the Southern body were favorably considered, but no definite result was reached.

Great damage was done by the storm which swept over Eastern Ohio, Western Virginia, and Western Pennsylvania on the afternoon of the 28th ult. Several lives were lost by lightning and drowning.

Destructive hail storms are reported from the West, in portions of Iowa, Kansas, and Nebraska. They seem to have been part of a general disturbance of the weather, the night of the 27th ult.

A telegram from St. Paul, Minnesota, says, though the rains throughout the Nortwest lately have been severe, culminating on the 28th in a very general downpour, advices indicate that the crops have not been in the least injured. Throughout the Red River Valley, in Northern Dakota and Minnesota, rains were needed. It is estimated that the wheat output in that region will be largely increased and will reach 50,000,000 bushels.

John Bright has been extremely ill, of fever, and his life despaired of, but a despatch from London, on the 29th, reports him improved.

NOTICES.

*** The Burlington First-day School Union will meet at Mansfield, Sixth month 9th, at 10.30 A. M. All interested in the work cordially invited. Carriages will meet morning train at Columbus.

Wm. Walton,
Margaret D. Rogers, } Clerks.

*** Philadelphia First-day School Union will meet at Green street Meeting-house on Sixth-day evening, Sixth month 8th, at 7.30 o'clock. Schools that have closed for the season will please send their annual reports.

Jos. M. Truman, Jr.,
Sarah M. Holcomb, } Clerks.

*** There will be a *Memorial Meeting* held at Richmond, Indiana, on First-day following Quarterly Meeting in the Sixth Month, at 3 o'clock, p. m., under the charge of the First-day School, in memory of our valued friend, Sarah A. E. Hutton, who was one of the early workers in, and earnest supporter of, First-day schools to the close of her life.

B. S.

PUBLISHERS' NOTICES.

***As a definite number of copies of the Intelligencer and Journal is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

FOR DRY GOODS

—THE BEST PLACE IS—

STRAWBRIDGE & CLOTHIER'S,

MARKET
EIGHTH
FILBERT } STREETS.

One of the largest buildings in the city, and the largest Establishment in America devoted exclusively to

DRY GOODS.

The stock includes Silks, Dress Goods, Trimmings, Millinery, Hosiery, and Underwear, Gloves, House-Furnishing Goods, Carpets, Ready-Made Dresses and Wraps, and everything that may be needed either for dress or house-furnishing purposes. It is believed that unusual inducements are offered, as the stock is among the largest to be found in the American market, and the prices are guaranteed to be uniformly as low as elsewhere on similar qualities of goods.

FRIENDS' UNION FOR PHILANTHROPIC LABOR

Will assemble in the Meeting-house at Fifteenth Street and Rutherford Place, New York City, Sixth-day, 6th onth 1st, at 10.30 a. m.

The Committees on Philanthropic Labor of the several yearly meetings are requested to forward their reports as soon as possible to the Chairman of the Union.

Reports and information upon special subjects will be forwarded, if possible, by the 20th of 5th month, as follows:

On Arbitration, to J. W. Hutchinson, 353 W. 123d St., New York.
" Temperance, to Jos. W. Bogardus, 177 West St., "
" Prison Reform, to Jno. W Plummer, 52 E. Lake St., Chicago, Illinois
" Corrupt Literature, Mercy J. Griffith, Emerson, Jefferson county, Ohio.
" Social Purity, Aaron M. Powell, 58 Revale St., New York.
" Education of Colored People, Wm. M Jackson, 335 W. 18th St., New York.
" Compulsory Education, Allen J. Flitcraft, 205 Le Salle St., Chicago, Illinois.
" Indian affairs, Wm. C. Starr, Richmond, Indiana.

The Special Committee appointed for that purpose, have arranged the following order of business, subject to such changes as the Union may make.

FIRST SESSION, SIXTH MONTH FIRST, 10.30 *A. M.*

1. Calling the names of Representatives.
2. Reports of Yearly Meeting Committees.
3. Report of the Executive Committee.
4. Appointment of Committee to Audit Treasurer's accounts.
5. Paper on "Duties of Friends," by Wm. M. Jackson.

SECOND SESSION, SIXTH MONTH FIRST, 3 *P. M.*

1. Report of Representatives nominating officers of the Union.
2. Report of the Auditing Committee.
3. Report of the Treasurer.
4. Report of the Committee on Arbitration.
5. Paper on Arbitration by Edward Stabler, Jr.

THIRD SESSION, SIXTH MONTH FIRST, 7.30 *P M.*

1. Report of the Committee on Temperance.
2. Paper on Temperance by John J. Cornell.

FOURTH SESSION, SIXTH MONTH SECOND, 10 30 *A. M.*

1. Report of the Committee on Corrupt Literature
2. Paper on Corrupt Literature by Elizabeth Powell Bond.
3. Report of the Committee on Social Purity.
4. Paper on Social Purity by Anna R. Powell.

FIFTH SESSION, SIXTH MONTH SECOND, 3 *P. M.*

1. Report of the Committee on Prison Reform.
2. Paper on Prison Reform by
3. Report of the Committee on the Education Colored People in the South.
4. Paper on the Education of Colored People in the South by Howard M. Jenkins.

SIXTH SESSION, SIXTH MONTH SECOND, 7.30 *P. M.*

1. Report of the Committee on Compulsory Education.
2. Paper on Dependent Children by Elizabeth. B Passmore.
3. Report of the Committee on Indian Affairs
4. Paper on Indian Affairs by Edward H. Magill.

JOHN WM. HUTCHINSON, *Chairman.*
MERCY J. GRIFFITH, } *Secretaries.*
EMILY P YEO, }

MILK CREAM, AND BUTTER ALWAYS ON HAND.

LUKENS WEBSTER,

120 S. FIFTEENTH ST.

Butter delivered twice a week to all parts of the city and surrounding country. We are dealing with the most reliable dairies Orders by mail solicited and promptly filled.

LARD OF THE VERY BEST QUALITY A SPECIALTY.

ABINGTON FRIENDS' BOARDING AND DAY SCHOOL,

Near Jenkintown, Pa., North Penn and Bound Brook R. R Ten miles from Philadelphia.

Next school year begins Ninth month 10th, 1888. Courses of study arranged to furnish a thorough English education and to prepare for college.

Board and tuition $145 to $175 per school year. Tuition alone $25 to $55. For further information address,

ARTHUR H. TOMLINSON, Principal, Jenkintown, Pa.
Or CYNTHIA G. BOSLER, Sec., Shoemakertown, Pa.

SWARTHMORE COLLEGE

OPENS NINTH MONTH THIRTEENTH.

Thirty minutes from Broad Street Station, Philadelphia.
Under the care of Friends, but all others admitted.
Full college course for both sexes; Classical, Scientific, and Literary.
Also a Manual Training and a Preparatory School.
Healthful location, large grounds, new and extensive buildings and apparatus.
For Catalogue and full particulars, address
EDWARD H. MAGILL, A. M., President,
Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.

NEWTOWN SQUARE, PA.

Terms, $150 to $175 per year.

Apply to HANNA R. CALEY, Principal, address, during vacation), Media, Pa.
Or to
THOMAS P. BARTRAM, Newtown Square, Pa.,
CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,

A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 13th, 1887. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,

FREDERICK E. WILLITS, Sec.,
Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—

A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hou from New York city. For catalogue and particulars, address,

SAMUEL C. COLLINS, A. M., Prin.,
Chappaqua Institute, N. Y.

FRIENDS' CALENDAR FOR 1888
NOW READY.

A handsome lithographed card bearing a tablet, giving a carefully selected quotation from Friends' writings for each day of the year. Price, 50 cents. By mail, 55 cents.

FRIENDS' ALMANAC FOR 1888.

Containing an account of the times and places of holding the meetings of Friends on the continent of America. Price, 10 cents each. $1.00 per dozen.

FRIENDS' POCKET ALMANAC FOR 1888.

Price, 10 cents each. $1.00 per dozen.

FOR SALE BY

S. W. Cor. 15th and Race Sts., Philadelphia.

FRIENDS' INTELLIGENCER AND JOURNAL.

INTELLIGENCER Vol. XLV. No. 23. | PHILADELPHIA, SIXTH MONTH 9, 1888. | JOURNAL. Vol. XVI No. 802

THE MORN WITH LIGHT IS BREAKING.

THE morn with light is breaking
And wakes the earth from sleep;
And sunbeams o'er the mountains
And through the valleys creep.

The air with fragrance ladened
And flowers gemmed with dew,
And song-birds sweetly calling,
The world of life renew.

Awake, my soul, from slumber,
Like earth with morning wake;
For o'er God's holy mountains
The beams of glory break.

High in the mountain's bosom,
Where hidden fountains gleam,
The silent waters gather
And pour their silvery stream.

And flower and beast and birdling
Drink where the waters flow,
And on the good All-giver
Their generous thanks bestow.

So let my soul drink deeply
From that diviner store
That flows from God's own fountains,
And, drinking, thirst no more.

—*T. P. Wilson, in Christian Register.*

NEW YORK YEARLY MEETING, 1888.

[Our report, last week, gave the proceedings, in both branches, up to Second-day evening.]

THIRD-DAY, FIFTH MONTH 28.

IN both meetings this session was devoted to the consideration of the state of Society as shown by the answers to the Queries. As these answers closely concur they have been combined as follows:

To the First the answer is made in both summaries that with some exceptions, mainly due to unusual winter storms, our meetings for worship and discipline have been held. Those on First-day mornings have been pretty well attended while those at other times were small. The hour has been nearly observed, Friends are mostly clear of sleeping, and no other unbecoming behavior has been noticed.

Second Query: Love and unity appear to be very generally maintained, but two exceptions being noted in the reports to women's meeting, and one in men's reports. Care has been taken to end differences when they arise. Tale-bearing and detraction have been avoided and discouraged, except that one report to each meeting makes a slight abatement in the last particular.

Third Query: While many fall short of the excellent standard enjoined by our Discipline, a large proportion of Friends are concerned to train their children and those under their care in a life and conversation consistent with our Christian profession, and are careful to maintain and impress on the minds of the young the importance of our testimonies in regard to moderation, simplicity, and plainness of speech, behavior, and apparel.

Fourth Query: Women's meeting reports that they are clear of the unnecessary use of spirituous liquors; men's meeting is clear with a very few exceptions mentioned in three reports. Friends are generally clear of attending places of amusement of a hurtful tendency.

Fifth Query: Assistance has been given to all requiring aid, and the facilities for a business education are extended to all children under our care.

Sixth Query: Our testimony in regard to a free gospel ministry has been generally maintained. Each meeting reports three instances of marriage contrary to discipline, and three of attendance of a marriage so accomplished.

Seventh Query: Friends are clear of bearing arms, of complying with military requisitions, or of paying a tax in lieu thereof.

Eighth Query: With one exception, noted in the report of men's meeting, and the qualification of a subordinate meeting reporting to women's meeting that they are *generally* careful, Friends exercise care to conduct their business in a manner becoming our religious profession, and to avoid extending it beyond their ability to manage. They are faithful to promises and careful in the payment of just debts.

Ninth Query: A good degree of care is exercised to deal with offenders in the spirit of meekness and agreeably to our discipline.

Tenth Query: Schools are reported as follows: one boarding school under the care of a quarterly meeting, three day schools under the care of monthly meetings, and one under the care of a preparative meeting.

Eleventh Query: The answers to queries forwarded to superior meetings are the substance of the answers from the preparative meetings.

In women's meeting the consideration of the queries brought forth numerous testimonies in regard to the subjects embraced in them. A committee was appointed to act with the committee of men's meeting, and in coöperation with those of other yearly meetings in extending care to isolated Friends.

In men's meeting during the consideration of the First Query, Daniel H. Griffin said: "If deficiencies

are reported each one should ask himself 'How far am I contributing to the weaknesses that are shown?' Is there not an influence that should go out from us to those who are deficient. Let us take them by the hand and show them what our faith is by our works. There is a feeling of peace and satisfaction attending me when I go to meeting from a sense of duty that is wanting when I stay away. There is afforded to me the clear evidence of the truth of the promise that 'where two or three are gathered together in my name there am I in the midst of them.'"

John J. Cornell said: "There is no better way to maintain our testimony in favor of a free gospel ministry than the steady attendance of our religious meetings, whether there is a vocal ministry or not. If we are pervaded by the proper spirit when we go to our meetings there is but little need of a vocal ministry. If when we are gathered in meeting we are looking only to the Divine Father, and are not anxious to listen to words, but willing to receive that which would be revealed in the heart, we should aid the testimony to a free gospel ministry. One difficulty under which we labor is that we do not realize the object of worship, we want a place to go where we shall be entertained. We should be prepared to impart as well as to receive. I do not mean that there should be vocal utterance for all, but a silent travail of spirit. When no word is spoken the sense that those are present who are silent burden-bearers is a help and strength to those entrusted with the gift of the ministry. I cannot recall a meeting where my lot has been cast that I have not felt strengthened by this silent travail."

At the afternoon session, the conclusion of the consideration of the Queries and their answers elicited a number of earnest communications in both meetings.

John J. Cornell said: In the proper exercise of care in dealing with offenders lies the true interest of our Society. In looking over my experience I have thought that we sometimes did not take proper care to bear in mind the underlying principle. I have seen instances wherein the idea seemed to be that the purpose of our labor was to get a pure Society. At times we have not been guided as we should have been by the spirit of patience and long-suffering. When one who is near and dear to us is subject to a disease involving pain and suffering, we watch over him with much greater solicitude than when he is in health. We minister to his wants day after day and night after night with the most ardent desire to alleviate his sufferings. The nearer the dread messenger of death approaches, the more solicitous we become. In the work of dealing with those who have violated the law we should have the same solicitude. Had we uniformly exercised such a care, many would have been restored who were disowned. We have too often interpreted the direction to deal seasonably to mean that we must do it promptly. Were we to watch for the right time even if we waited months or years, our labor would seldom prove ineffectual.

Elias H. Underhill said that he had recently had occasion to examine the records of his own monthly and quarterly meeting for a period of one hundred and fifty years, and he was satisfied that one of the most serious mistakes that we have made has been to use our discipline as a sword to cut off. It seemed at sometimes that when a name came before the meeting, a disownment almost necessarily followed. Now it is very rare that any one is separated from us.

Mary Jane Hoag expressed in the women's meeting her pleasure in hearing a report from Shrewsbury, showing an increased interest in promoting peace principles.

Elizabeth Thistlethwaite expressed her satisfaction in hearing an answer to the Eighth Query showing clearness of violating the testimonies therein set forth. All the pleasures of the world cannot gratify the immortal mind when it feels that it is not walking in honesty before God and man.

Frances J. Newlin asked that all may bear in mind that as members they stood on an equal footing and were responsible for its deficiencies. Let each one endeavor to do all in her power to maintain our testimonies, and there would be fewer occasions to offer excuses for shortcomings.

In men's meeting the Committee on Education presented their report at this session. They realize the importance and value of a guarded education under the care of our own body. They have visited a number of localities where schools do not exist, with a view of impressing upon the minds of Friends the advantages of establishing them. The school at Easton, that had been closed for several years, was reopened and very successfully conducted during the past year. The committee had extended aid to it and to Chappaqua Mountain Institute in the direction of the part payment of the tuition of children of Friends who otherwise would not have been able to avail themselves of the schooling thus obtained. The report was received with numerous expressions of approval, and the committee was continued and encouraged to prosecute their labors. An appropriation was made to meet their expenditures. The Committee on Philanthropic Labor presented a report outlining their labors for the year. By a representative they attended the meeting of the Indian Committee of the Union for Philanthropic Labor. They found that at the Santee Agency, Nebraska, while the men had made substantial progress in civilization, the women had learned but little in regard to the work of the home. As it appeared that no means was provided by the Government to supply needed instruction in this direction, it was planned to appoint a matron for one year at the expense of the several yearly meetings. The declination of one yearly meeting [Philadelphia] to concur in this expenditure has up to this time prevented the appointment as proposed. The sub-committee on Prison Reform reported that it had presented a memorial to the New York Legislature protesting against the passage of a law that in their judgment was prejudicial to the interests of the prisons and their inmates. The Executive Committee memorialized Congress and the President in favor of coöperating with the proposals

made by representatives of the British House of Commons that a system of arbitration be adopted to settle differences between the United States and Great Britain, and that a permanent international court be established for that purpose. They also presented a memorial to the United States Senate in favor of the passage of a bill designed to better protect young girls in the District of Columbia. The sub-committee on Temperance reported that they had held two Conferences in Friends' meeting-houses, one at Westbury, and one at New York. The sub-committee on the Education of Colored People in the South reported that their services had been aided by a large number of volunteers from all parts of the yearly meeting. Considerable contributions of money and supplies had been received and forwarded to the aid of the schools established by Friends at Aiken and Mt. Pleasant, South Carolina.

After a brief comment, the further consideration of the report was deferred until the next session.

At the request of the First-day School Association the Yearly Meeting adjourned until Fifth-day, to afford the members an opportunity to attend the meeting of the former body.

FIFTH-DAY, 5TH MONTH. 31.

In men's meeting the consideration of the report of the Philanthropic Labor Committee was continued and their labors very generally approved. The service was continued for another year in the hands of the same committee and an appropriation from the funds of the Yearly Meeting was placed at their disposal.

A minute was adopted expressing our commendation of the Measure now pending in Congress to establish a Court of International Arbitration, and our wish that it may become a law. A memorial was also approved directing attention to the traffic of some citizens of our country in intoxicating liquors with the native tribes of Africa and the Western Pacific Islands, which threatens the extermination of those tribes; and asking Congress to pass a suitable and judicious measure, in accordance with its power to regulate Commerce, that shall as far as may be, restrain that iniquitous traffic.

The Clerks were directed to prepare and sign copies of the two Minutes, and a committee was appointed to present them to Congress. We were afterwards informed that women's meeting heartily concurred in this action, and made an appointment of two Friends to accompany the men Friends in the presentation of these communications.

The Committee to visit subordinate meetings reported that they had visited all the meetings except one, and that many Friends visited have expressed the desire that the service be continued. A new joint committee was appointed for this service.

In women's meeting during the consideration of the report of the Visiting Committee, a Friend suggested that if this service were discontinued for one year, an advantage might result in allowing the little meetings to work by themselves. This suggestion was disapproved by the meeting generally, a number of Friends testifying their hearty approval of the services of the Committee. Almira Sherwood did not wish to have the service discontinued. She said that while it was a great pleasure and encouragement to receive the visits of members of the committee, they did not in any wise depend on the Committee to maintain their meeting.

Catharine Foulke said: This little coming together, and inviting those who live around us to meet with us in worship, may be the means of bringing back those Friends who have no interest in the meeting or no meeting to attend. I feel to encourage the members of this committee to continue their service and I think that ofttimes they will be unconsciously benefited themselves. In visiting this meeting I feel that I have experienced a growth. I would therefore encourage all to keep the eye single to that light which cannot mislead.

The meeting appointed a new Committee to act in conjunction with that from men's meeting.

The joint Committee to whom had been referred the two propositions in regard to a change in the first Query presented a report in favor of some verbal alterations in the last sentence of the Query. After some consideration it was decided not to sanction any change at this time.

In connection with the report on Education some information was furnished in regard to Marshall Seminary, at Easton. Announcement was made of the prospect of establishing a summer school in it.

Epistles to the other yearly meetings were presented, and after additions had been made to them in the meeting they were approved and directed to be forwarded.

The session concluded with reading and the consideration of the report of the Committee on Philanthropic Labor. Their work was approved and the meeting united with men's meeting in continuing the Committee.

At the afternoon session, after the conclusion in the women's meeting of some unfinished business, a visit in gospel love was received from Isaac Wilson. This, the final session, concluded by an impressive message of farewell from Catharine Foulke.

In men's meeting, the Committee to consider the proposed changes of discipline presented their report, and the meeting agreed with the women's meeting that it was not desirable to make any change at this time.

The minutes of the Representative Committee were read. They have prepared a directory of the Yearly Meeting and distributed it to the members. They joined a delegation of the Representative Committee of Genesee Yearly Meeting in memorializing the legislature of New York in favor of the abolition of the death penalty.

John J. Cornell, one of the Friends who presented this memorial to the Legislature, expressed himself as encouraged to further labor. While it would be too much to expect that the Committee should now prevail, they had been received with the greatest courtesy and strict attention has been paid to what they had to communicate. Eminent jurists had expressed themselves to him as uniting with him in judgment on this subject.

Information as to records and statistics of membership were presented the meeting.

An essay of an epistle to be addressed to the other yearly meetings was read and approved.

Touching messages of farewell were delivered by Abel A. Hull and John J. Cornell, after which, under a feeling of great solemnity, the meeting concluded.

FRIENDS' UNION FOR PHILANTHROPIC LABOR.

The fifth Conference of the Union was held at Friends' meeting-house, New York, on the 1st and 2d insts.

The meeting on Sixth-day morning was opened by an address by J. William Hutchinson, giving a history of the Union. In Ninth month, 1875, a new yearly meeting was established in Illinois. This became at once a vigorous and enterprising body, and early exerted an influence infusing a new degree of life and vigor into the older meetings. Three years after their organization they addressed to the other yearly meetings an appeal to renew the earlier labors of Friends, and proposed the establishment of a conference to be attended by representatives from each monthly and yearly meeting, and that they give attention to philanthropic labors in accordance with our testimonies as a Religious Society. Ohio Yearly Meeting was the first to send a favorable response to this invitation. Baltimore Yearly Meeting next directed its Representative Committee to join with the other meetings, and delegates from the three meetings met in a first conference in 1881. In the following year Indiana Yearly Meeting joined the Union, and in 1886 New York followed, thus making it a body representing all the yearly meetings except two—those of Philadelphia and Genesee. This movement originated mainly through the inspired effort of one Friend, Jonathan W. Plummer, of Chicago.

Upon the conclusion of the opening address, the names of representatives were called, and most of them answered. For the absence of two, reasons were assigned.

Reports were offered from the different yearly meetings except Illinois. These furnished information as to the manner in which they had organized for the accomplishment of the service to which they had been appointed.

The chairman presented the minutes of the meetings of the Executive Committee that have been held since the last conference. They have presented or addressed memorials to Congress and the President in favor of the movement towards international arbitration inaugurated by the Representatives of the British House of Commons; have also memorialized Congress in behalf of pending measures of reform in the management of Indian affairs, and at another time in behalf of a bill for the protection of young girls in the District of Columbia. They have also sought to have a matron appointed for the Santee Indian Agency. (Many other features of their labor will be presented in the detailed reports on the special subjects of philanthropic labor.)

The report of their labors was greeted with expressions of hearty approval from many Friends.

Jesse H. Griffin said that attention had been called to the decline in the Society of Friends. If we desire that it shall continue to be a power in the world, it must minister to human need. This committee affords the best opportunity to labor. It is gratifying that with its organization only partially accomplished, it has done so much. It is my hope that we may not only make a profession of faith in Jesus but follow the example of his life. His religion was applicable to the practical duties of life. It consisted in acting and doing. We regard religion as a life and not a profession. There are those who speak of divorcing moral subjects from religion. Anything that attempts to do this degrades both. It is gratifying to find that Friends are awakening to a realization of duty, so that it may be said of us we are going about doing good.

A paper was then read by William M. Jackson on the Duty of Friends. The following brief outline will give some of the prominent points. Considering that it would be presumptuous to attempt to point out the line of duty to such a body as Friends, the essayist began with a brief retrospect of their history. The prominent traits of their character were the purity of their lives, the steadfastness of their purpose, and the enthusiasm of their work. The Quaker of 200 years ago was a persistent agitator, an untiring reformer. Was there a wrong practiced, no matter how strongly entrenched it was in the customs of the time, the Quaker uttered a rebuke to its promoters. Courageous and devoted, he went where duty called. He spoke openly and freely of the sinfulness of war, when to utter such a sentiment was regarded as treason; he declared the hollowness of the sacraments of the Church, when such an utterance subjected him to the severest persecution. The nobility of his day used the plural pronoun when speaking to each other, or to those of higher rank, the singular pronoun, thou, when speaking to an inferior. The Quaker regarded all men as equal and therefore insisted in using the singular pronoun to all. When called upon to recognize human authority by removing his hat, he refused to uncover in presence of man, but bared his head in supplication to God alone. This last testimony was so especially exasperating that, we are informed, Admiral Penn offered to forgive his son William everything else if only he would remove his hat in the presence of his father, the King, or the Duke of York.

In bearing their testimonies the women of those day were as devoted as the men. Cast into dungeons and punished in all ways that the ingenuity of their persecutors could devise, as soon as they were released they devoted their lives again to duty. Although their meeting-houses were torn down and they imprisoned and fined they grew rapidly in numbers, drawing from all ranks of society. They were not mere followers of one great leader, although George Fox was the first. Every one that was convinced of the doctrines he taught was in turn expected to become a teacher. It was essential Christianity.

The Society of Friends to-day differs most from its early founders in its failure to coöperate steadily

in moral reform. They decline in numbers and influence because they fail to labor against moral and social evils outside of their own body. The public work of an organization gauges its value. Early Friends effected reforms in government and law. The system of law established in Pennsylvania by William Penn attests the thoroughness and excellence of their labor in this direction. During the past two hundred years reformatory movements of many sorts have wrought their changes in the customs of the public. Friends have been the pioneers in every branch of philanthropic work. It was work not for themselves, but for oppressed and suffering humanity. It is of no avail for us to boast of our ancestors if we do not follow their example. It is not for me to point out to any one wherein lies his duty. It is to point to the example of those who have spent their lives in doing good.

In the discussion of the paper, William C. Starr, of Indiana, said that he had wished to add one point to those brought forth by the essayist. When the Declaration of Independence was being drafted, Jefferson was not able to make an introductory paragraph that was satisfactory to the committee of which he was a member. One of his associates on the committee who was familiar with the earlier history of Pennsylvania paraphrased the sentiment expressed by William Penn, "All men are equal and of right ought to be free." This sentiment was accepted and incorporated, so that at the outset of that first declaration of the principles of our government the primary idea was one that had been before enunciated and used by Friends.

At the opening of the afternoon session the officers of the Union were appointed. They are John William Hutchinson, Chairman; Elizabeth B. Passmore, Secretary; Fannie A. Willets, Assistant Secretary; Edward Stabler, Jr., Treasurer; and an Executive Committee composed of members from each yearly meetings' committee.

The Committee on Arbitration reported that three yearly meeting's committees had memorialized Congress and the President in behalf of the mission of the Deputation of the British House of Commons to promote the establishment of arbitration between Great Britain and the United States. The New York Committee had coöperated with a number of prominent citizens in holding a public meeting in Chickering Hall, New York City, to the deputation from the British Parliament. A committee appointed at that meeting prepared an argument and resolutions in favor of arbitration.

A paper on Arbitration was then read by Edward Stabler, Jr. In it he said that the Society of Friends is the only religious organization that forbids litigation between its members. It has been a testimony from the foundation of the Society. George Fox advocated it in one of his early epistles, and the earliest discipline of London Yearly Meeting directed that arbitration should be used and not litigation. Thomas Clarkson, who was not a Friend but a philanthropist, recommended the adoption of arbitration in mercantile and maritime affairs. In New Castle the results of litigation were unsatisfactory, especially in cases involving sea-faring interests, because the law officers were ignorant of such affairs. A Court of Arbitration was therefore established, upon the suggestion of some members of the Society of Friends, and the results were very satisfactory to all concerned. It is a matter of general experience that juries and police justices are very untrustworthy and uncertain. The law's delay and expense make another way of settling difficulties very desirable. Laws do not and cannot cover all cases, and judgment to be satisfactory must be given in accordance with common sense and justice rather than by a statute that is only partially applicable to the circumstances of the case.

Jonathan K. Taylor, after some allusion to the number of lives and the amount of money that had been lost in war, said: Is it strange that men and nations professing Christianity should seek some other way of settling difficulties? If parents and teachers use the rod the war spirit is engendered. Any method that depends on force is a mistaken one. The peace method must begin in the family and continue in the school.

John L. Griffin said that a powerful opposition to the spread of Peace principles came from the popular systems of theology which are so largely built on error. They teach that God sacrificed his only child in order that he might be reconciled to humanity. We have presented to us the spectacle of ministers of the Gospel praying for success in battle Our testimony is for peace on earth and good-will to men.

Aaron M. Powell called attention to the fact that the French Chamber of Deputies had pronounced in favor of arbitration. What a beneficent revolution would be produced if the countries of the Old World could dispense with the gigantic armaments that they now maintain in times of peace. If we ride through the country districts of France or Germany, we see occasionally a man engaged in the occupation of agriculture, but far the greater portion of farm-work, even the severest, is done by women. The men have been drawn into the armaments. A very grave and portentous evil that results is that the home and family are broken up and abnormal social relations are established that produce grave social evils.

Charles M. Stabler asked that the Union give information to the public in regard to facilities that exist in law for arbitration. He expressed the belief that if these were known, many would avail themselves of such provisions instead of having recourse to litigation.

[Our report this week must close with the above. Details of the four remaining sessions will be given next week.]

Integrity by market standards only is integrity by halves, and of course without the principle that makes it a real integer in duty. Real integrity begins with the principle, meaning to give every one his due, to be right with God as with men, right against popularity as with it, right everywhere, wholly and eternally right.—*Horace Bushnell.*

SCRIPTURE LESSON, No. 24.

SIXTH MONTH 17, 1888.

TOPIC: THE GREAT COMMISSION.

GOLDEN TEXT: "Go ye therefore, and make disciples of all the nations, baptizing them into the name of the Father and of the Son and of the Holy Ghost."—Matt. 28: 19.

READ Matt. 28: 16-20

THERE is no mistaking the meaning of this great commission. It is the very soul and essence of the Gospel as taught by Jesus.

As the light and life it testifies to is received into the souls of men, it illuminates the understanding and purifies the affections, making all who come under its influence nobler, truer, kinder, and more God-like.

The great commission emphasizes the feeling awakened in the soul, made sensible of the Divine in-dwelling. There is an immediate desire to call others to the same blessed experience, so that he, who believing, is baptized or brought under this over-shadowing power of the Divine Spirit, is ready to spread abroad the glorious tidings to all who will hear and accept the message.

They who are truly born from above cannot keep the secret of this birth to themselves; it shines out in the face; it exhales a holy fragrance in the words; it carries conviction in the little details of daily life, that "they have been with Jesus and learned of him,"—been with Jesus to the same source of life and immortality, and drank with him of the waters of life flowing freely from the eternal fountain.

Do we carry about us the sign and seal of this great commission? Are we making such an impress wherever our lot is cast that it shall be counted genuine? That it shall be accepted as the signature of Him who commissions? Let us see that all the marks and gravings will stand the microscopic examination of the highest power.

It is this liberty which it proclaims that makes the gospel of Jesus such a message of glad tidings to the fearful and disobedient when they are prepared to receive it into honest hearts.

To be assured of the love of the Eternal One, to have a place in his favor, and, above all, to know without a shadow of unbelief that this within us which longs for God and will not be satisfied until it "awakes in his likeness, is a breath of his own divine life,"—this is indeed the crown and diadem of all, and to be forever with the Lord is its highest aspiration.

The command still goes forth with as much force as it did nearly nineteen hundred years ago, to "teach all nations, baptizing them into the name of the Father and of the Son and of the Holy Ghost."

Just as the eleven disciples of old were endued with power from on high, to impress upon the minds of the people of that day the truths which had been preached by their elder brother, Jesus of Nazareth, so are the faithful, earnest souls of to-day enabled to become instruments for good in leading others out of the darkness and error into the light of everlasting truth. A broad field for labor lies all around us. In every land and among all people laborers are needed to uproot the prejudices and superstitions which cloud the mind, and retard the upward growth of the moral and spiritual nature of man.

Samuel M. Janney says, "It is true that no man can preach the Gospel without Divine assistance; but when the Gospel is preached in the demonstration of the spirit and of power, it has, on those who are willing to receive it, a baptizing effect; it brings them under the influence of that Holy and Divine power which is signified by the name of the Father and of the Son and the Holy Ghost."

NOTE.—As usual the fourth First-day of the month ending the quarter is left for review on some special lesson, no Scripture lesson having been prepared. The lessons for the third quarter will be a study of the Old Testament, and will be published as heretofore.

NEWS OF FRIENDS.

SOUTHERN QUARTERLY MEETING.

THIS meeting was held at Easton, Md., from the 29th to 31st of Fifth month. It was the privilege of the writer and others to meet with Friends of this locality at their Quarterly Meeting, and their Christian sympathy and kind hospitality will long be remembered. The meeting of ministers and elders convened on Third-day afternoon, where words of encouragement and counsel were given forth from ministering Friends, one of whom said, for many years she had felt drawn to attend this meeting; another exhorted the members to greater faithfulness and obedience.

The meeting on Fourth-day was smaller than usual, owing to the rainy weather. After a precious season of silence a Friend spoke of the historical account of the Saviour, noting the wonderful teachings of him who dwelt among men many years ago, and alluding to the useful instructions imparted th rough him whilst personally among men; but he desired to impress the minds of his hearers that a belief in the outward and written record merely would not affect the hearts of the people of the present day; it was of great importance that we should experience a saving power in our souls which was mighty to redeem and save from all sin; and further said, let us reject no instrumentality offered, but be willing to appreciate them all. Another Friend was burdened for several conditions present and spoke feelingly for their encouragement, pleading with them to be faithful to impressions from the divine source. After prayer was offered the meeting closed for the business session, men Friends withdrawing to an upper room. But little business claimed their attention: report of representatives to the Yearly Meeting, appointment of committee on Clerks, etc. Usually the Extracts are read but they had not not come to hand.

Minutes for visiting Friends were read as follows: Martha S. Townsend, and Christianna S. Wood, from Baltimore Monthly Meeting; Allen and Sarah B. Flitcraft from Chester Monthly Meeting, Pa.

Fifth-day morning the Youths' Meeting assembled in greater numbers than the previous ones, a large company of young people being present, many of them not members. After a petition was offered, William Wood referred to the Inward Teacher and

Guide, in a gentle and forcible manner, reminding us that the great fundamental principle of "Mind the Light" should always be kept in view. A. F. spoke from the text: "My peace I leave with you, my peace I give unto you; not as the world giveth give I unto you," saying to the young if they would seek and possess this peace it would take nothing from their innocent pleasures.

This Quarter is one of the remote ones of Philadelphia Yearly Meeting and held alternately at Camden, Del., and Third Haven, as this is called, about a mile south of the town of Easton, on the Tredavon.

Here they built a new meeting-house a few years since and the old one is standing as a venerable relic amid large and noble trees on grounds made memorable and historical as one of the oldest established meeting places. We were informed it was erected in 1604, and here Lord and Lady Baltimore came to see the Quakers. She remarked to William Penn she knew he could preach the Gospel, being a learned man, but she had come there to meeting to hear the uneducated hold forth. Not far off is what is termed Betty's Cove, where, tradition says, George Fox could stand and see the rivers white with sails as the Friends came to meeting. When the time came to take leave of these precious Friends, we had to acknowledge the gratitude which sprang up in our hearts, that the Lord had permitted us to enjoy this opportunity with them. S. B. F.

BLUE RIVER QUARTERLY MEETING.

Blue River Quarterly Meeting was held at Highland Creek, Washington county, Ind., 26th of Fifth month. Representatives from four monthly and one executive meeting were present. Two executive meetings failed to send any. Joel Birdsall, a minister with a minute from Camden Monthly Meeting, endorsed by Whitewater Quarterly Meeting, Ind., was acceptably with us, and was exercised in the ministry, as was also Abel Mills. There were no queries to answer at this time, and the business part of the meeting was not so much exercised. Different views were expressed in regard to appointing persons as representatives, as is sometimes done, who, it is evident at the time, cannot attend, and also the propriety of having a fund to help such as were not able to fill such appointments, but this met with opposition and the matter was dropped.

A memorial from Blue River Monthly Meeting for Charles Brooks was read and directed to be forwarded to the Representative Committee. A house meeting was held at James Brooks', in the evening.

The select meeting on Sixth-day, the 25th, was small, but felt to be owned by the Master.

The First-day School Quarterly Conference, held on the evening of the 25th, was large, and in a good degree satisfactory. On First-day morning rain threatened, doubtless keeping many at home who were expecting to attend to-day, but as the day advanced the outlook became more favorable, and by the time First-day school was over, it became apparent that the house would not hold the people, so we repaired to the shade of the forest trees in the yard, and the large and mixed multitude were remarkably still and attentive. Joel and Abel both appeared in the ministry and their testimony seemed to be well received, judging from the undivided attention. One was led to explain Friends' views in reference to the "Atonement,"—Baptism, and the blood of Christ. In regard to water baptism, he said that, notwithstanding Friends regard it as non-essential, and only typical of the one saving baptism, yet were any fully persuaded in his own mind that this outward ceremony was required of him, it would be in accordance with the doctrine of Friends—that each one should follow the dictates of his own conscience. At the close of the morning meeting, it was found that an ample store of provision had been brought by the good neighbors to feed all and many baskets full of fragments remained over. At 1.30 the meeting again convened which proved to be equally favored with the overshadowing of the Father's love. In the evening, a house meeting, at Beeson Baynes's, we trust was a profitable season.

Second-day morning was spent in religious opportunities with some aged Friends, which proved to be precious seasons. At 2 p. m. Joel Birdsall had an appointed meeting at Old Blue River, to which came some of the other branch of the Society, and all were welcomed. In the evening a public meeting was held in Salem, in the Presbyterian church, which owing to other gatherings of various kinds, was small, though a good meeting. This finished up the meetings held in connection with the Quarter, and the concern of our friend in that line. He held a temperance meeting in Canton, on 4th-day evening. T.H.T.

—Owing to rainy weather and muddy roads, Bucks Quarterly Meeting, held at Buckingham, on the 31st of Fifth month, was not as largely attended as it usually has been when held there. Very few strangers were present from neighboring quarters,—none in the line of the ministry except David Newport, and Samuel S. Ash, both of whom had very acceptable service, which appeared to be listened to with marked attention by all who were present. If other ministers had any concern to minister on the occasion they refrained from doing so, believing enough had been said. The first meeting closed about 12 o'clock, when the usual business was taken up by both men and women Friends. Two copies of the proof sheets of the extracts from the minutes of the late yearly meeting had been received. They were read and listened to with interest, not only by those who had not attended the yearly meeting, but by those who had. Near the close of the meeting John Wildman gave some excellent advice in regard to punctuality to the hour of gathering, which was much needed. I.E.

—E. H. Hillborn, Uxbridge, Canada, desires us to publish the following statement concerning tickets to Genesee Yearly Meeting: "Friends attending Genesee Yearly Meeting who will present the usual certificate to the ticket agent at the starting point, to be signed by him, at any station on the Grand Trunk Railway, will by presenting this certificate, properly signed by Isaac Wilson, showing that they have paid full fare in going, be returned at *one-third fare*. Blank certificates will be sent to Friends at the different meetings in Canada."

—Allen and Sarah B. Flitcraft have a minute from Chester Monthly Meeting, (Penna.), and expect to attend Fishing Creek Half-year Meeting at its approaching session.

SIGNS OF ENCOURAGEMENT.

IT is with a feeling of gratitude that we have noticed, in the assembling of our two recent yearly meetings, those of Philadelphia and New York, and the various meetings connected therewith, that which to us gives evidence of an increased interest in, and attachment to the Society of Friends by those whose privilege it is to be joined in religious fellowship therewith. And this not alone from the actual presence of large numbers of members, or the outspoken words that manifest life, but an evidence that is felt when reports come up from various sources of the faithful work performed in the many avenues now opened for labor amongst us. The fruition of our hopes from our Society work in the direction of schools of all kinds is beginning to be apparent. Not perhaps as we had hoped, in such earnest convincement as leads to much accession to our membership as yet, or marked increase in attendance of meetings, nor noticeably in the adoption of what is termed "plainness;" but in devotion to duty wherever that duty lies; by faithful work in schools, in missions, and by carrying out our testimonies in many ways. Self-denial is often exercised in the absenting of such laborers from meetings, when it is felt to be "a cross" not to be present, as these long to commingle with Friends and commune together for spiritual good. And the preparation thus going on in the heart will ripen and prepare for greater usefulness when the freedom comes to exercise it, and will we firmly believe gradually bring to Society a renewal of life. We see, too, as the world advances and its written history is more correctly read, greater appreciation of the value of the work performed by Friends 200 years ago, in the breaking of the bonds that held the people fast to creeds, traditions, and usages that so crippled their growth both morally and spiritually.

All these are encouraging signs and should not only stimulate us to hold on to what has been gained for us, but to strive to "keep the eye single" to discover the fresh revealings that Infinite wisdom holds in store for such as are prepared to receive them.

These revelations may not come to us as they did to Fox, in retirement from the haunts of men; but in the busy marts of trade, in the training of the young, in the leisure hours devoted to recreation, the desire may be born to so live and to so work that heaven can be gained for every one; and as the belief grows that it is simply a state of being saved from sin, daily and hourly, here as well as hereafter, the problem grows so simple that, as of old, the "wayfaring" need not err in understanding it. The practical solution of it is, however, where the difficulties lie, and here is where the work of Friends has ever been and will ever be.

Let us then take fresh courage and not repine if the reawakening comes in a channel to which we had not looked, but nurture and sustain and welcome even the little signs of life, for they may develop into a rich spiritual heritage.

DEATHS.

LIPPINCOTT.—At Wilmington, Del., on the evening of Sixth month 2d, at the residence of Joseph A. Bond, Esther Jane Trimble, widow of Isaac H. Lippincott, aged 50 years; a member of the Monthly Meeting of Friends of Philadelphia. Interment at Merion, Pa.

NEWBOLD.—Very suddenly, of apoplexy, on his farm in Middletown, Bucks county, Pa., on the 29th of Fifth month, James W. Newbold, of Langhorne, aged 65 years, 4 months, and 23 days; a member of Middletown Monthly Meeting.

His funeral took place at the meeting-house on the 2d of Sixth month, and was very largely attended, not only by the many relatives and family connections, but by a very large circle of personal friends. Public testimony was borne on the occasion by Robert M. Croasdale, Watson Tomlinson, and Elizabeth H. Plummer, all of whom seemed to speak of the importance of being always prepared to meet the summons of death.

TWINING.—Fifth month 30th, Margaret Hallowell, widow of Watson Twining, an esteemed member of the Monthly Meeting held at Green street, Phila.

THE LIBRARY.

THE PURITAN AGE AND RULE IN THE COLONY OF MASSACHUSETTS BAY, 1629–1685. By George E. Ellis. Boston: Houghton, Mifflin & Co.

WHEN John G. Whittier, in his poem "The King's Missive," contrasted the toleration and humanity of Charles II. with the want of these qualities in the Puritan rulers of Massachusetts, Dr. George E. Ellis, a Boston minister of the Unitarian body, challenged the accuracy of Whittier's authorities. He claimed that already before the interference of the royal government on behalf of the Friends imprisoned at Boston, there had been a popular reaction against the intolerant laws and equally intolerant magistrates and clergy, which practically had put a stop to the persecution. Dr. Ellis now gives the American public a connected and valuable account of the whole of the earlier period of Massachusetts history, in which his account of the persecution of the early Friends forms the most interesting chapter. In his view the false premise which the Puritan theocracy started on its career of intolerance was its theory of the Bible. As they used to say, they held it to be "a God among

books." Indeed they professed to find in this written word the sole disclosure God makes of himself to his children. They seemed to doubt if He had either the right or the power to speak farther to mankind, although the Bible itself spoke of revelation as continuous and progressive. They took the whole book as the product of an equally authoritative inspiration, all that it said being not only true but equally binding upon the consciences and the life of men. They saw no historical development, no degrees, no limitations in the book. A text quoted from any part of it was good enough to settle any question.

Out of this view came the hard, dogmatic, intolerant and often inhuman church-and-state system of Massachusetts. It was the attempt to realize the letter of the Bible, and especially of the Old Testament, in a society of Calvinistic saints. The experiment had its noble side. It called for self-denial, earnestness, courage, and devotion to an ideal,—qualities with which society never can afford to dispense. But it was not a Christian society in the truest sense. The mildness and gentleness of Christ, the unbounded charity of the Sermon on the Mount, were far less visible than the spirit of Elijah and of Jehu. And it came to naught because human nature would not stand the superhuman strain of its enthusiasm, and revolted justly against its legality and inhumanity.

Dr. Ellis thinks the Puritans had legal power under the charter of the colony to banish from their bounds those to whose presence they objected, and to punish them otherwise if they returned. And he shows in successive chapters how this power was exercised in the case of Roger Williams, of Anne Hutchinson, and the other Antinomians, of the Roman Catholics, of the Baptists, and of the Quakers. He declares his hearty sympathy with the persecuted Friends, and his admiration of the patience under suffering which at last forced their persecutors to abandon the policy of intolerance. But he is not surprised that the Puritans treated them as they did. For ten full years before the arrival of the first Quakers in Boston harbor, the air had been full of stories to their discredit. Nothing was known of them except what was alarming and shocking to Puritan sensibilities. They claimed inward illumination by the Spirit, thus setting aside the Puritan principle of an exclusive and final revelation in the Scriptures. They not only rendered no such honor to the clergy as was the custom of the times, but they called them "hirelings," "blind guides," and denied their right to public support. They refused to magistrates the hat-honor and lip-service which were considered by the Puritans the signs of loyal deference on the part of all good citizens. They refused to take oaths, although on the oath the Puritans based their whole judicial system. The memory of the extravagances of the Anabaptists, who just about a century before this had based on the claim to inner illumination the attempt to set up "the reign of the saints" at Munster, in Germany, and other places, was still fresh in men's minds. That the Friends were dangerous, revolutionary, and anarchic fanatics was the general opinion.

In describing the cruelties which grew out of these notions and the principles of intolerance, Dr. Ellis has drawn freely upon the published accounts on both sides, and also on documents he copied years ago from the archives of the State, and which never have been employed before. This gives his narrative an original and independent value. And he evidently seeks to be fair to all parties. Naturally he lays all the stress he can upon the existence of a class which opposed persecution, and upon "the crotchets and oddities" which he thinks he discovers among the early Friends. And no doubt there is much in the phraseology of the Friends of that day, and some things in the conduct of some of them, which modern Friends would hesitate to pronounce a fruit of the Spirit. But men and women who had upon their spirits such a sense of the darkness and bondage which the religious world of that day declared to be light and freedom, were not likely to abstain from strong language in their utterance of their sense of what a curse blind guides are to any people. Jesus of Nazareth also has used words on that subject which some have found it hard to reconcile with his injunctions to meekness and charity, but which in truth were in close keeping with those injunctions. George Fox and the early Friends were men at whose hands "the Kingdom of Heaven suffered violence," and if they had not been such they would have had no hearing. Others before them bore the same testimony to the need of the Inward Enlightener, and got none because they were free from those "crotchets and oddities," and violence in speech, to which Dr. Ellis objects.

* * *

EDUCATIONAL.

METHODS IN THE KINDERGARTEN.[1]

We have for consideration the educational value to be derived from the games played in the Kindergarten, for these are often misunderstood and misinterpreted, and looked upon merely as a recreation,—only by those, however, who have given the subject merely a passing thought. I confess I was too obtuse to see wherein children were benefitted, after witnessing the manner in which some of the games were rendered by the little ones in the Philadelphia schools, but a new revelation flashed upon me as I saw them played by the children under Mrs. Kraus-Boelte's supervision. We all know that the child's mind and body are developed through play. By this means she gives expression to his inner nature and by such exercise strengthens, J. Paul says, his talents and powers. "Play is the first poetry of the child."

By noting the child's inclinations, and by attaching the proper importance thereto, we may ofttimes make them subservient to some purpose which would be of benefit in its future life.

We have many instances where the child foreshadowed the sphere it was eventually to fill.

Mary A. Livermore affords a striking example of this truth. She probably never would have become a gifted writer and lecturer, had she been denied in

[1] An essay read at a meeting of the Board of Teachers of Friends' Elementary and High School, Baltimore.

child-play to exercise her talents upon her playmates. Not always finding these available, she would collect sticks of wood and stand them up, speaking to them just as earnestly as though addressing an animated audience, and very likely with less interruption. Harriet Hosmer loved to play with clay, which was obtainable near her home, and undoubtedly the free access to, and pleasure derived from it decided her life purpose. I frequently wonder when I hear of parents denying their little ones some harmless pleasure, if they are conscious to what an extent they may be hindering the purposes for which they were created. As far as practicable, permit a child to dictate to you, by observing, where or in what his taste asserts itself. I think the neglect of this in undoubtedly the reason why there are so many unhappy people in the world,—because their inclinations were unheeded and their talents perverted.

We are fully aware of the fact that children are great imitators, yet how often we lose sight of this truth; parents and elders are guilty of doing and saying those things which they would not care to see enacted or repeated. How careful we should be to throw about them those influences which are good, since we know that example is better than precept. Knowing they are powerless to resist either the good or evil influences brought to bear upon them at this tender age, we should endeavor to give only such impressions as we would wish to remain, making their lives harmonious by instilling in them lessons of nobility of character, purity of thought, and kind acts. Seeds of this nature dropped in such soil cannot help yielding fruit.

Children delight to have you paint pictures teeming with good deeds. If the contrasting one is drawn and you question them as to which they prefer they will unanimously declare for the former. It is perfectly natural for children to dramatize. Watch a little girl impersonate her mother; many tales of the management of domestic life are depicted most faithfully; they are the mirrors that reflect our actions. Look at a group playing school and you can judge to an extent the scenes that transpire in this connection. Froebel's wisdom enabled him to utilize this truth for enjoyment and profit, observing that nothing seemed impossible for a child to imagine that he could be converted into. Upon this fact he based his games, going to the animal world and taking some of the most familiar ones. Besides these, he takes such trades and occupations as he thinks the child will be interested in. Others are selected with a view of training the ears, eyes, and fingers.

Before we introduce a new game, it is well to weave the substance into a story; after which the words can be repeated in unison, then the pupils be called upon individually. By adopting this plan the children are familiarized with the facts in detail.

Having the children repeat in concert gives mental training individually, allows the correction of mispronounced words, good expression, and offers a chance for those not so quick in memorizing to hear the story oftener. It makes them attentive also, for they are on the alert to correct or assist the one who is repeating the lines. Thus memory, strict attention, proper expression, and clear articulation are gained, making it far less difficult for the child when he begins his primary course. After these preliminaries, the game is ready to be played in due season.

It is really very entertaining to note the characteristics of the different ones while rendering the play; for instance we will take the "frogs." Here you will see all phases portrayed,—those having an amount of energy and vim will give the most prodigious leaps; others having no surplus amount of animal life very strikingly remind you of the frog that hops about without any apparent aim; and still others that you have to infuse and stimulate, recalling scenes probably witnessed by all, where the reptile is urged to do its best by having the little boy tickle it with a stick when it settles itself after each exertion. These games should never be played where the weaker animals are made to suffer by being overpowered by the stronger ones.

Any cruelty toward creatures and fellow-beings should not be countenanced even in play. Through this medium the children are taught to be considerate, polite, and deferential.

I recall a circumstance a few days ago where this kindly thoughtfulness for others was exhibited. One of the circle had met with a slight accident sufficient to warrant him shedding a few tears; the little boy whose privilege it was to select the game to be played, so sweetly and unselfishly inquired of the pianist in a very confidential manner what was the favorite one of the little boy that had just been hurt. Love and tenderness are fostered, the timid and shy are induced to participate, and all have equal opportunity of giving vent to the activity which characterizes youthful life.

Other strongly marked characteristics are brought to light,—daring, vigilance, cowardice, and justice, for none are so quick as children to notice any departure from the last named. If one of them is detected not doing the straightforward act, he is at once taken to task and the right thing required.

J. B. S.

SCHOOL CHANGES AT MEDIA.

The committee of Providence Preparative Meeting, in charge of the Friends' School at Media, propose to materially enlarge and develop the scope of that school, believing the location to be such as gives encouragement to the larger plan. The Principal for the coming year will be Elizabeth E. Hart, now of Friends' Central School, Philadelphia, and she will have the assistance of Hanna R. Caley, of the Newtown Square School, and Hannah B. Price, of West Philadelphia School, with other teachers of experience. Aaron B. Ivins will have the direction of the work in mathematics. A special feature will be a training class for teachers, intended by the committee to take up the line of work carried on for some time at 15th and Race Sts., in this city. Correspondence is invited with committees desiring teachers, with teachers desiring positions, and with pupils

who wish to enter the training class. The immediate supervision of Elizabeth E. Hart will be given to this special work, and she may be addressed, during vacation, at Doylestown, Pa., or after school opens, at Media.

In their announcement of these plans, the Committee state: Arrangements have been made for giving pupil-teachers facilities for practice work which will be found very valuable. "As soon as they are qualified to fill positions, teachers will be recommended or placed in schools, and assisted in their school work by the personal supervision of our corps of experienced instructors. As the opportunity to see teachers engaged in the practical work of the school-room is of far greater value to the school committee than is a letter of recommendation, we will arrange to furnish teachers on trial, with the privilege of exchange, should they prove unsatisfactory. This plan has been tried, and it has worked to the advantage of schools and teachers."

It certainly will relieve school committees of a large responsibility and of having to keep incompetent teachers to the end of the school year.

For Friends' Intelligencer and Journal.

A GLIMPSE OF CALIFORNIA.

Were it not for the fact that the spectacles through which we look are as variable as the things we see, I would not attempt a description of the scenes along a route traveled by thousands of tourists and sight-seers who, in these days of excursions, make one long stretch from the rock-bound coast of Maine and neighboring seaboards of the Atlantic, to where the Pacific laves the sandy shores of Southern California.

It has been my privilege, with but a brief notice, to seize a convenient "grip-sack" and follow one whose artistic taste and legitimate work leads ever into fields where nature is most lavish in her wealth of beauty. Now our footsteps, so accustomed to turn toward the rising sun in all our wanderings have been reversed, and with glowing anticipations of the (to us) unrevealed glories of the Occident, we leave our midway city, and join one of the Raymond excursion parties referred to, at the little town of La Junta, (La Hunta) half a day's ride south of us.

On a bright morning, the 14th of Third month, we found ourselves aboard the "Special," freighted with representatives of the wealth and culture of the New England States. Already they were travel-stained by their two thousand miles on the road, but just as jolly and enthusiastic as at the starting.

Here they caught the first glimpse of Pike's Peak away to the north, and of the pointed cones of the Spanish Peaks, rising out of the Culebra range, white with newly fallen snow; and farther on, great hoary-headed Sierra Blanca, and Sangre de Cristo.

From La Junta we follow the Purgatoire, an insignificant stream taking its rise in the Culebra Mountains. At high noon we reach Las Vegas. The country through which we have passed lacks variety and the eye finds but little relief from the dull gray of the plains sparsely covered with the ever present sage-brush and rank grass, amongst which half famished apologies for Western beef are seeking for a few spires of succulent grass. The presence of adobe houses reminds us that we are on the confines of New Mexico; and the swarthy inmates gaze at us, leaning across the backs of the faithful little *burro*.

Las Vegas is an ancient town of about one thousand inhabitants, having increased in population in latter years by an influx of Americans, after the discovery of the potent curative powers of the hot springs, a few miles up in the foothills.

Our train ran up to the springs, and halted two or three hours, while we inspected the little villa so easily nestled on the side of the bluffs, enclosed by a park finely laid out, and so well sheltered that already the young grass was up and ready to refresh our eyes. Ascending the winding concrete road and broad steps, we reached the new hotel, an immense, imposing building with a wide gallery about it, and the capacious interior finished in a tasteful and elaborate style; from this exalted position a fine view is commanded of the surrounding country, and the picturesque cottages farther down, some of which we entered, and found them filled with curios of Indian and Mexican workmanship. Many articles were eagerly purchased by the tourists.

Next morning we reached the quaint old town of Santa Fé, where we spent half a day wandering through the narrow streets, bordered by the typical Mexican adobe, low, white-washed buildings, with a rude porch sheltering the unpaved sidewalk. These are interspersed by American houses and a decidedly American style of traffic.

Our party scattered in every direction, visiting the most noted places, and invariably raiding the shops where Mexican pottery, and bric-à-brac of every conceivable shape and form awaited the ready purchaser.

Two or three young New Englanders amused themselves by mounting the weak looking *burros*, who stood their burden with far greater ease than the huge cords of wood stuffed around their emaciated bodies. We visited the ancient Catholic Church, built in 1582, but which is partially robbed of its apparent antiquity by being modernized with a new tin roof, water pipes, etc. Inside, a member of the Brotherhood was at his devotions, seemingly unconscious of our presence. The interior of the Church was ornamented with cheap chromos of Christ and the attendant retinue of Saints. Close by the Church stands the oldest adobe house in Santa Fé, still inhabited, and we peeped through the low door and saw a Mexican woman replastering the walls, by dipping up a handful of the white mixture and smearing it on the surface.

At another door stood a young swarthy girl with an infant in her arms, refusing to allow us a glimpse into her abode without a small fee, evidently with an eye to business.

Before the train started we spied a procession approaching, which proved to be a Mexican funeral. It was headed by several small choir boys, the first one carrying a long pole with a cross at the tip, another swinging a censor and followed by two priests, chanting as they strode along. One of them looked up smiling and politely lifted his mitre as he passed

by, closely followed by a long line of men walking two by two. This finished the strange cortege, which wound over the hills and was soon lost to sight.

Santa Fé is enclosed by bluffs, covered by a sandy stony soil, out of which protrude scrubby pines and cedars, looking as half-starved as the sheep and *burros*, browsing amongst them. No more desolate, indeed, could be the hill country of the far off Holy Land. From there the dreary aspect continues, and is only relieved, now and then, by adobe houses and Indian Pueblos.

Near Wallace are the Pueblos San Domingo, and San Felipe. They differ materially from the Mexican houses in being built more compactly and close together, and with tall ladders leaning against the sides, up which the inmates climb for a perch upon the flat roof. Thence they pass through an opening to the rooms below.

The Pueblo Indians are of a very low order, somewhat like the Digger Indians of California. They are almost nude, and daub their faces with paint. They are possessed, however, of sufficient intelligence to importune the passengers to buy their rude pottery and specimens, and a good many "bits" were left in their bony hands.

Late in the afternoon we reached Alberquerque, a flourishing little town of Americans, Mexicans, Indians and negroes, with a seasoning of Celestials. The apparent briskness of the place gave evidence of having recently been struck by a "boom" which is often as transient as a cyclone.

Next morning, when we peeped from our berths, the character of the country had varied; but we were greeted by even greater desolation, for we had passed all habitations, save the necessary stations at long intervals.

One can scarcely realize the immense waste of arid and untillable land, extending hundreds of miles, a dark blot upon the face of our fair and beautiful country. About noon we came in sight of the Peaks in the San Francisco Mountain, Humboldt, Humphrey, and Agassiz, standing in a friendly group, all clad in their mantles of snow. All day we ran through clumps of dwarf cedars, gray tufts of rank grass, and sage-brush. Nothing cheering or attractive outside, the attention of the inmates of the car was turned to social entertainment, visiting and exchanging calls in our separate apartments, with a very family-like feeling.

At day-break next day, we began going up grade, until upon the summit of the San Francisco Mountains we were at an altitude of six thousand feet. Here the melting snows feed the small streams until they become wild dashing torrents of muddy water, carrying down great quantities of debris to the plains below. We also go rapidly down the steep grade through forests of tall pines.

At some of the little stations, representatives of the Huelpa tribe of Indians were seen about their rude tepés. They were very repulsive in appearance, having none of the upright bearing and eagle features of some of the better class of Indians; but they are a great curiosity to the passengers and many of them leave the train for a closer inspection.

In the evening we all congregated in the dining car to listen to songs and hymns sung by the dusky attendants on the train, but they did not sound to my ears like the rich melodious voices of the colored people of the South.

Next morning we awoke in California, but to my disappointment it did not look like a land of "milk and honey." We had left the gray sage-brush, and up from the vast stretch of sad and lonely sand-dunes sprang great clumps of "greese-wood" of a dark green color. But it was a beautiful sight when the sun came up to gladden the sombre earth, and the soft golden rays rested on the slopes of the undulating foothills, making innumerable dimples, by the lights and shadows. The long range of these dumpy mountains border the plains in every direction and enclose us in a vast amphitheatre.

After a hearty breakfast all were ready for any diversion, and when, on either side of us we discovered lovely flowers of a great variety of delicate tints—the first to relieve our eyes from the dull arid plains—a great cry of delight echoed through the long train, and when it halted it was soon emptied of its restless contents, and men, women and children hurriedly gathered their treasures, and when the "all aboard" was sounded each returned laden with bright bouquets.

Crawling like a monstrous worm through an immense stretch of plains dotted with green, we gradually go down toward the valley of the Mojave.

Extensive beds of black lava lay for miles north and south of us—comparatively recent upheavals from volcanic eruptions—upon the surface of which are no visible signs of vegetation. Through this forsaken country we ran for about one hundred and fifty miles, when we came to the little village of Dagget, and about noon pulled into Barstow, where we were cheered by signs of spring, for the cotton-wood trees were in full leaf and the grass tender and green.

Barstow is a railroad junction on the Mojave river. Here the sun beats down with almost torrid fervor and every thing is parched and dry. Out along the slopes of the foothills are several mining camps, and farther on, through an intervening gap, the San Bernardino mountains rise up grand and imposing. After running some eighty miles through the Mojave valley, we ascend another high range, and through Cajon (Kahoon) Pass begin our descent into the fertile and beautiful valley of San Bernardino. Down through picturesque groups of infant mountains, with their hoary headed parents overlooking them from above, we fly past an everchanging panorama, over which the "Down Easters" go wild with enthusiasm, but I remember the grandeur of the Rockies, in comparison to which these are insignificant indeed.

But we are leaving behind us the high arid land upon which Mother Nature has so darkly frowned, and are coming into the atmosphere of glad, young spring, which has smiled into bloom the peach trees and clothed the earth in its rich velvety mantle. In the gloaming we come down from the heights into the low lying valley with its pretty, cozy homes almost hidden by thick foliage and climbing vines.

We next stop at the town of San Bernardino for several hours, and go out a for promenade, and purchase some of the delicious California oranges.

The rest of our journey was made in the darkness of night, and under its gloomy cover we reach the depot at Pasadena. Entering the huge "buss" we were conveyed to the "Raymond," travel-stained and weary from our long journey.

EMILIE P. JACKSON.

[*Conclusion next week.*]

For Friends' Intelligencer and Journal.

OBITUARY NOTES.

AT our last yearly meeting there were absent two Friends who were with us the year before. Both had passed away, having reached the fourscore years which the Scripture assigns to the strong. Both were neighbors and intimate acquaintances of Joseph Gibbons, late editor of THE JOURNAL. Both were born Friends, and both died in membership with the Society. The one was Ezer Lamborn, of Caln Quarterly Meeting, Lancaster county; the other was Jeremiah Whitson, late of Langhorne, Bucks county.

The father of the former was Jonathan Lamborn, a minister among Friends. For forty years he had charge of Londongrove meeting-house, Chester county, but he lived afterwards at Kennet Square. One of his daughters married Thomas Worrell, now of Wilmington, Delaware. Another daughter (by his second wife), is the wife of Dr. Franklin Taylor, cousin and companion of Bayard Taylor, and lately Principal of the Boys' High School, of Philadelphia.

Ezer Lamborn was especially known as a teacher. During about forty years he made his home in Lancaster county, engaged for most of the time in teaching. He loved to teach, and one has said nearly thus: "His pupils, how they revered him. It was worth something to have so lived as to erect in the hearts of so many the enduring monuments that can be found in the hearts of Ezer Lamborn's pupils." For about thirty-six years he had a home in a house adjoining Lampeter meeting and grave-yard, near the birthplace and home of Dr. Gibbons, whom he assisted in THE JOURNAL as an active contributor and correspondent. His reports of meetings will be recalled, no doubt, by many readers. He was also the author of an educational work, "The Practical Teacher." He was very punctual in attending the meetings of the Yearly Meeting's Temperance Committee, although his home was distant over fifty miles. His wife survives him, and was present at our last yearly meeting.

Jeremiah Whitson was also long a member of Caln Quarterly Meeting, and was among the earnest anti-slavery men of that strong anti-slavery quarter. He was also greatly in favor of education; and perhaps all his children, as well as those of Dr. Gibbons, were pupils of Ezer Lamborn. One of his distinguishing traits was his native courtesy, the gentleness and deference of his manners.

A very noteworthy circumstance in the lives of these three whom I have mentioned, was the interest which they felt in forming and sustaining a country Lyceum, which met for some years, and principally in E. Lamborn's school room. It became known in the county just before the war, through the reports of its debates. None of its members will perhaps ever forget it.

Jeremiah Whitson was a brother and warm admirer of the late Thomas Whitson, of whom Whittier spoke in some verses lately quoted in the INTELLIGENCER AND JOURNAL, where he ironically advises that those in search of treason should

> "Storm Lindley Coates's poultry-yard—
> Beleaguer Thomas Whitson's home."

Jeremiah's first wife was Ann Owen; his second was a genial Orthodox Friend, Elizabeth Newbold, with whom the last years of his life were spent, in Bucks county.

P. E. GIBBONS.

A QUIET POWER FOR GOOD.

THERE is a work being quietly carried on by many persons in various ways, the importance and dignity of which are seldom recognized. It is not that of doing great or brilliant or illustrious things, but of making it possible that others shall do them. When men see one who surprises them by some exceptionally fine achievement; the author of some brilliant discovery or grand invention; some strong statesman who becomes a power for good to his country; some wise reformer or philanthropist who brings light and help to the ignorant and unfortunate, they are content to admire and honor the man without inquiring into the sources which may have fed his genius or inspired his enthusiasm.

Yet there are none of the truly great men of the world, who do not owe much of their greatness to the influence of persons of whom the world has never heard. Most of them are conscious of this, and gladly and gratefully recall the inspiration, encouragement, or wisdom gained from an honored parent, a respected teacher, a thoughtful friend. Much, however, of such influence has been unconsciously given, and as unconsciously received. Noble lives are continually being nourished by other noble lives, and none can tell how largely they may be contributing to the world's welfare and joy, by simply making it possible for others to develop faculties and produce results which for themselves would have been impossible.

To those who are not vain and selfish the possibility of this quiet but effective work will appeal with much force. Only a few can distinguish themselves in any department of life; but all can in some way enrich the lives and forward the labors of those few. Take the home, for instance, that shelters the infancy and trains the childhood of one born with a large capacity in some given direction. How much of what he may be to the world depends upon the influences which shape his earliest years! The father and the mother, with perceptions sharpened by love, can stimulate and encourage whatever is best within him, can fortify his resolution, direct his education, open up to him opportunities, and thus prepare him for a life of great value, in which they also will truly live and rejoice. Then there is the faithful, intelligent and wise teacher, living a quiet, perhaps an obscure life, but so shaping the minds and stimulat-

ing the powers of her pupils that some of them perhaps attain to heights which she herself could never reach. She accompanies them only a little way, and they leave her, but she has furnished them with some of the conditions on which their future careers of usefulness and prominence are founded.

Another, with similar desires of doing good, has pecuniary means at his command, and uses it for this purpose. He will, perhaps, establish a bright and ingenious youth in business, who presently becomes one of the most honored of merchant princes; or he assists a struggling artist, who, in the future, delights the world with his creations; or he enables the scientist to proceed with his researches, until he makes some remarkable contribution to the knowledge of the world; or he helps a young man to pursue the education he craves, who finally rises to benefit the whole world with his talent and usefulness. Though he never could have lived any of these lives himself, he has, by timely and judicious aid, fostered them in others, and he rightly enjoys a large share in all the beneficent results which follow.

Even less manifest and direct efforts in this direction are not lost. Very often gifted men and women have some deficiency, some fault, or some folly, which interferes with their usefulness and injures their influence. Sometimes we see a sister, a wife, or a friend, carefully guarding this weak point, supplying the vacuum or skillfully turning aside the evil consequences that would otherwise follow. Or the home will be specially adapted to minister to such needs, leisure will be afforded, the petty cares of life will be withdrawn, and all the conditions favorable to the utmost success will be intelligently secured. Few know the degree to which such efforts and care contribute to the power of gifted men, and, through them, to the benefit of the world. Few realize the large debt of gratitude which is due to those, who, themselves obscure and unknown, have, through such humble and quiet ministry, made possible the greatness and value of other lives. And no one will ever know how much has been lost to the world by the neglect of these little efforts of obscure individuals to cherish and protect the lives and powers of those whose gifts have been wasted for the lack of favorable conditions.

All those who really desire to *do* good, more than to be *known* to do it, may take comfort in this opportunity. Many persons complain that their powers are so small, their education so limited, their means so circumscribed, that they cannot hope to be of any use in the world. Let such take courage. No one is so powerless that he cannot, in some way, strengthen the hands of another; no one is so dull that he cannot help another to shine; no one's life is so small that he cannot make some other life greater. And in those other lives, which the humble and earnest man has aided to build up, he will find his own life grow richer and fuller. Everything done for others, with the sincere desire of doing good to them and to the world, will react upon the doer, bringing to him its own satisfaction and the reward of a good conscience.—*Public Ledger.*

WITHOUT AND WITHIN.

In the dim, sweet stillness of forest nooks,
With the songs of birds and the ripple of brooks,
Where the shy, wild wood-things have worked and played,
And the moss grown rank in the heavy shade,
We sit, by the greenness guarded about,
The noisy world for a space shut out.

In the dear, familiar presence of books,
Following us with their grave, kind looks,
With wise and beautiful thoughts to keep
Their tryst with us while the thoughtless sleep,
The thoughtful silence walls us about
From the moonlight or starlight or storm without.

In the blessed quiet and comfort of home,
With our dearest about us and they alone,
Though the world is wide and the world is full,
The heart of home has compassed the whole.
Without are its evil, its strife, and its din,
And its dearest joys are with us shut in.

In the narrow space where our duty lies,
With only the light of the broad, glad skies,
The fire of faith, and the warmth of thought
To cheer the soul and brighten the lot,
We walk, and whatever allures us without,
While duty calls us, shall be shut out.

In the long and lingering stillness of pain
We wait in weakness of heart and brain;
To the strength of God the weak soul turns,
His love as never before it learns,
His tender presence guards it about;
Peace is within and the world without.

Little we heed what without may betide
If the heart within us be satisfied;
Always the circumstance, shapen of God,
Refuge becomes from the clamor abroad,
And the barriers that hedge us around
As sheltering walls to guard us are found.

—*Olive E. Dana, in Illustrated Christian Weekly.*

TRIFLES.

Only a cluster of daisies,
And dear little daisies were they;
They won a smile for the giver—
A sunbeam to brighten the day.

Only a smile at the crossing;
But it beamed from the smiler's face,
And shone on my shadowy pathway,
And lent to the day a grace

That marks it a day worth recalling
In reverie's dream-country sweet,
Where Fancy with Fancy keeps trysting
In the soul's solitary retreat.

Only a hand-clasp at parting—
A moment with palm to palm pressed—
A moment's celestial communing
Ere the spirit relinquished her quest.

Ah me! that beautiful fraction
Of time hurried into the past,
Fleet-winged, but its sweet benediction
Will linger with me till the last.

Only a bird-song at twilight—
A love-lay half-lost in a plaint;

But its measures were hauntingly lovely,
Though its melodies rippled so faint

That I scarce knew when the song ended
And when the silence begun,
Or whether I heard it or dreamed it,
The song and my dreaming were one.

For the song had awakened an idyl,
A bit of romance sweeter still
Than ever was wrought in a story
Or wreathed by a poet's sweet skill.

'Tis the trivial things are our masters—
The little sweet things that beguile
The days of their tedium, the trifles,
A song, or a daisy, or smile.

—*Rosaline E. Jones, in Boston Transcript.*

THE METLAKAHTLAN INDIANS.

Among the Indians now located in Alaska is a tribe commonly known by the name given above. They have recently come across the border, from British Columbia, and have begun to build a place for themselves, called New Metlakahtla. The previous history of these Indians is very remarkable, but involves too long a statement of facts to be reproduced here in full. They were situated, as stated, in the Canadian territory, and were there, for many years, labored with by a missionary, William Duncan, who succeeded in getting them to adopt Christianity, and to make a great advance toward civilized life. It seems, however, that his teachings and methods did not meet the approval of the authorities of the Established Church of England, as represented in Canada by the Bishops, and W. Duncan's labors were interfered with, and the property of the Indians confiscated, so that they were practically driven away. In the *Friend*, (London), for Fifth month, there is an interesting communication from Sarah M. Fryer, of Wilmslow, Cheshire, (England), who has interested herself to help these Indians. She says:

"In response to the appeal in a previous number of *The Friend* to assist the colony of Indians in their migration to New Metlakahtla, Alaska, £93 10s. has been entrusted to me, mostly by Friends, and has been duly remitted from time to time to *The New York World*. The names of the contributors have been published in its columns. It is intended to furnish a complete list to each subscriber. Some delay has arisen in the transmission forward to Alaska, but there is little doubt that the earlier remittances have reached their destination.

"The following letter, slightly abridged, evidently written about the middle of March (it is without date) has been received from William Duncan:

'Your two very kind letters of 13th December and 6th February are before me. The latter came to hand this week. The former would not have remained so long unanswered if I could have carried out my wishes, but pressure of work and anxiety together have caused me to be sadly in arrears with my correspondence.

'First let me thank you, and those kind friends associated with you, very sincerely for the sympathy and generous help you have tendered us, in this our day of trial. For though the money you have kindly contributed has not yet reached us, your words of sympathy have done us good. The money that has reached us, with the exception of £5, which came direct, is about £600, contributed by Friends in America.

'On the arrival of our monthly mail, the Indians rush around me, impatient to learn what their friends say. In the evening a general meeting is called, at which I attend to read over the letters. I wish our friends could see the joy their letters give on these occasions. Your two letters called forth especial interest—being from England, and because they afforded testimony that Christian love is superior to national ties as a bond of union—a grand lesson for these people to learn in their early acquaintance with the Christian faith.

'The troubles to which your letter so feelingly alludes I am sorry to say are not over yet. Last autumn, when our migration from British Columbia became a fact before the eyes of the authorities, they sent an agent to intercept if possible our movement, by forbidding us to remove our property. Just then stormy weather set in, and stopped our intercourse with British Columbia for the winter—and so, many dwelling-houses and all our public buildings, with a large quantity of private property, yet remain. Just now the weather is becoming favorable for our crossing over the seventy miles of sea, and so we are commencing correspondence with old Metlakahtla. A canoe left a few days ago with letters to the Indian agent to demand the reasons for our property being confiscated. As soon as we are in possession of all the facts we propose laying our grievances before the U. S. Government at Washington, and beg for their intervention. Of course, our great aim must be to preserve the peace. Although the object seems to be to drive the people to violence, I am thankful to say efforts to this end have so far proved abortive. Our people have controlled themselves, and are determined to use only lawful means to defend their rights. While we are being called upon to suffer thus from a British Government, I am delighted to tell you we are being very kindly cared for by the U. S. authorities.

'The Hon. Mr. Dawson, Commissioner of Education from Washington, alludes to his visit here in his report. Though he saw but a handful of our people, yet he was pleased. Had he remained a few days longer, he would have seen fleet after fleet of canoes arrive here, which would have delighted him much more. Thus God has raised up for us new friends, and given us many tokens of his favor to cheer us forward.

'Having only had winter months to work in, we have not made much progress in building. Our sawmill, however, is up, and running successfully. We have a large building up for church and school purposes. Our scholars number on the books 170, but many being away we have only now about 100 in daily attendance. I manage the school with four native assistants. Kind Dr. Bluett, my colleague, attends to the sick. I should mention, too, that we have a large store, 100 by 34 feet, and a guest house for strange Indians to reside in during their stay with us, 40 feet square.

'On Monday next, we meet to discuss plans for clearing the forest for dwellings and gardens (at present we are living in shanties near the beach), but, owing to reduced finances and losses, we shall not be able to find much employment yet for the people at home, so many will have to scatter abroad in search of work.

'Pray excuse this brief and unsatisfactory scribble. I will try and do better, I hope, as soon as I am a little ahead with my work.

'Yours very gratefully,

'W. DUNCAN.'

"The Indians of New Metlakahtla are a brave and independent people, and in their direst need they have made no direct appeal for help. They are industrious, and will become self-supporting in the new settlement as they were in the old one. So far from being a burden to others, they formerly supported native missionaries to other Indians. But their present needs continue to be pressing. Deprived of the land which had been theirs by descent from remote times, their property also withheld, they had to start the world afresh with nearly all their capital, the fruits of past industry, taken from them. They are not exclusively a body of able men, but they are burdened with their proportion of sick and aged, of women and children."

THE CHRISTIAN RELIGION.

THE Christian type is the product and the property of the Christian scheme. No, says the objector, the improvements which we witness are the offspring of civilization. It might be a sufficient answer to point out that the civilization before and around us is a Christian civilization. What civilization could do without Christianity for the greatest races of mankind, we know already. Philosophy and art, creative genius and practical energy had their turn before the Advent, and we can register the results. I do not say that the Greek and Roman ages lost—perhaps, even, they improved—the ethics of *meum* and *tuum*, in the interests of the leisured and favored classes of society, as compared with what those ethics had been in archaic times. But they lost the hold which some earlier races within their sphere had had of the future life. They degraded, and that immeasurably, the position of woman. They effaced from the world the law of purity. They even carried indulgence to a worse than bestial type; and they gloried in the achievement. Duty and religion, in the governing classes and the governing places, were absolutely torn asunder; and self-will and self-worship were established as the unquestioned rule of life. It is yet more important to observe that the very qualities which are commended in the Beatitudes, and elsewhere in the Sermon on the Mount, and which form the base of the character specifically Christian, were for the Greek and the Roman mind the objects of contempt. . . While the older religions made free use of prodigy and portent, they employed these instruments for political rather than moral purposes; and it may be doubted whether the sum total of such action tended to raise the standard of life and thought. The general upshot was that the individual soul felt itself very far from God. Our bedimmed eye could not perceive his purity; and our puny reach could not find touch of his vastness.—*W. E. Gladstone in Nineteenth Century.*

AMERICAN AND ENGLISH LOCOMOTIVES.

THE key to the evolution of the American railway is the contempt for authority displayed by our engineers, and the untrammeled way in which they invented and applied whatever they thought would answer the best purpose, regardless of precedent. When we began to build our railways, in 1831, we followed English patterns for a short time. Our engineers soon saw that unless vital changes were made our money would not hold out, and our railway system would be very short. Necessity truly became the mother of invention. The first, and most far-reaching invention, was that of the swivelling truck, which, placed under the front end of an engine, enables it to run around curves of almost any radius. This enabled us to build much less expensive lines than those of England, for we could now curve around and avoid hills and other obstacles at will. The next improvement was the invention of the equalizing beams or levers, by which the weight of the engine is always borne by three out of four or more driving-wheels. They act like a three-legged stool, which can always be set level on any irregular spot. The original imported English locomotives could not be kept on the rails of rough tracks. The same experience obtained in Canada when the Grand Trunk Railway was opened, in 1854–'55. The locomotives of English pattern constantly run off the track; those of American pattern hardly ever did so. Finally, all their locomotives were changed by having swivelling trucks put under their forward ends, and no more trouble occurred. The equalizing levers were first used by Rogers, in 1844. These two improvements, which are absolutely essential to the success of railways in new countries, and have been adopted in Canada, Australia, Mexico, and South America, to the exclusion of English patterns, are also of great value on the smoothest and best possible tracks. The flexibility of the American machine increases its adhesion and enables it to draw greater loads than its English rival. The same flexibility equalizes its pressure on the track, prevents shocks and blows, and enables it to keep out of the hospital and run more miles in a year than an English locomotive.—*Thomas Curtis Clarke, in Scribner's Magazine.*

THE question, "How can these things be?" which was asked by Nichodemus, is not by any means the first question to ask. The first question is whether 'these things" are. The question, how or why they are, is of but secondary importance in comparison with the primary one. The practical rules of life have their basis in facts which we can ascertain whether we can explain them or not.

"ONCE to every man and nation
Comes the moment to decide
In the strife 'twixt truth and falsehood
For the good or evil side."

THE SENSE OF SMELL.

The function of smell is fourfold. Like the higher senses, it belongs to the intellectual endowments. It is a part of the mind. Through it the mind is reached, roused, and quickened. The percepts and concepts gained through the sense of smell can be named, described, analyzed, compared, and classified. They may thus become the means of a good degree of intellectual life. Smell is a source of knowledge. Through it the mind discerns those qualities in things which we denominate odor. This knowledge it can obtain in no other way. A surprisingly large number of objects have their own peculiar odor. The onion, the carrot, the beet, and all other vegetables have characteristic odors. So have fruits, flowers, spices, and many gases, as well as animals, meats, etc. The knowledge of the kind, quality, and condition of things that can be obtained by the sense of smell, is very extensive. Not only the druggist, the chemist, the cook, but others likewise, make much practical use of the nose as a source of knowledge, having its own special scientific interest. But smell does a highly important work in enabling us to detect foul, hurtful odors. The nose is placed at the entrance to the mouth as a sentinel to guard it from receiving unwholesome food. It is the watch-dog of the stomach. A fourth, scarcely less important function of smell is that of giving pleasure. The nose is capable of ministering to our happiness even more, perhaps, than the touch or the taste. One with a cultivated nose has delights that another knows not.—*Selected.*

A physician, satisfied that there was death in that form of tobacco, had a cigarette analyzed. The result was a startling one. The tobacco was found to be strongly impregnated with opium; while the wrapper which was warranted to be rice paper, was proven to be the most ordinary quality of paper whitened with arsenic, the two poisons combined being present in sufficient quantities to create in the smoker a habit of using opium without his being aware of it, and which craving can only be satisfied by an incessant consumption of cigarettes.—*Franklyn Repository.*

Kind words are the music of the world. They have a power which seems to be beyond natural causes, as if they were some angel's song, which had lost its way and come on earth, and sang on undyingly, smiting the hearts of men with sweetest wounds, and putting for the while, an angelic nature in us. Hard words, on the other hand, are like hailstones in summer, beating down and destroying what they would nourish, were they melted into drops.—*Selected.*

It is not so easy as philosophers tell us to lay aside our prejudices; mere volition cannot enable us to divest ourselves of long established feelings, and reason is averse to laying aside theories it has once been taught to admire.

In a healthy nature the moral faculties live and grow without taking thought of them, just as the heart beats and the lungs breathe.

A BOTANIST'S STUDIES.

The manner in which a taste for natural objects and a thirst for a more intimate knowledge of plants was first awakened in Dr. Torrey, the eminent botanist, is quite remarkable. His father held some official station which required him to visit the prisons of the city of New York, and the lad frequently accompanied the parent on these tours of inspection. In the old State prison, which at that early day was somewhere about Twenty-third street and situated in the country, they found a man in the office of the superintendent who had been condemned to serve out a short term, but was generally believed to have been innocent of any offense. The prisoner was taken into the office to keep the books. He was a man of learning, and especially a fine botanist. Whenever young Torrey appeared at the prison, the book-keeper would point out from the window some plants growing in the vacant lots opposite, and ask the boy to go and fetch them. The two then sat down in the office to analyze and dissect the specimens, presenting the curious spectacle of a prisoner in convict's costume teaching a well-dressed boy. The lad never forgot the lessons, and from the tastes thus acquired dates his application to the study of botany, in which science he was destined to achieve the most distinguished success. The prisoner was ultimately acquitted of all guilt, and became one of the most useful scientific men of the country.—*Journal of Applied Chemistry.*

He to whom the thought of God is unwelcome need not look beyond this fact for proof that he is in that state which Paul calls "the carnal mind," and which he declares to be "enmity against God." His state is one of antagonism toward God, and as God will not change, he must be changed, or the antagonism will be permanent, and in the end involve his own ruin. God is right and he is wrong.

"If you sit down at set of sun,
And count the acts that you have done,
And counting, find
One self-denying deed, one word
That eased the heart of him that heard,
One glance most kind
That fell like sunshine where it went,
Then you may count the day well spent."

A lease of 999 years, made in the days of King Alfred, has just expired in England. The land was leased by the Church to the Crown, and reverts now to the Church of England after a millennium of years.

The temple of Buddha at Kioto, Japan, cost $3,000,000. A ton of ropes made from women's hair is used in and about the structure.

Lebanon means the white mountain, the name being suggested by the prevalence of snow, as is the case with the New Hampshire range.

A large new paper-mill in Japan is getting its equipments of machinery from Fitchburg, Mass.

NEWS AND OTHER GLEANINGS.

—A special oil is now manufactured to be used by vessels at sea to pour on the waves in time of storm.

—As the increasing requirements of commerce have outgrown the capacity of the Suez canal, the management have decided to double its width and increase its depth, and also to light it, so that it can be used by night as well as by day.

—There are seven Japanese students at Yale College, where they are general favorites, and one of the brightest of them is Shinkichi Shinkichi Shigerri, who is only 90 pounds in weight and about four feet tall—or, rather, short. He will graduate with honors at the approaching commencement, but will not go back to Japan.

—India embraces a territory as large as the United States east of the Mississippi river, and has a population of 250,000,000. Of these 175,000,000 are Hindus, 50,000,000 are Mohammedans, and the remainder are divided among other religions, as Buddhism, Parseeism, etc. It is said that about three hundred dialects are spoken by the people of India.

—But little has occurred during the year to interfere with the industrial pursuits and progress of the partially civilized Indians. . . . .

The great body of the Indians have continued peaceable and have made commendable progress towards self-support. They have more land under cultivation than heretofore, twenty-three thousand acres of new land having been broken the last year. They have more and better dwellings, twelve hundred new houses having been erected by themselves. They have more agricultural tools and machines, some of them purchased with the proceeds of their farm products. Their stock has increased in number and improved in quality, and is better protected and cared for.—*Report of Indian Commissioner.*

--People are ever ready to give the newspapers information of scandal, crime, and all forms of sin, and show a keener relish and more earnest desire to put reporters on the track of such news than to give them facts about the good things that men have done—except what they have themselves done. So long as the public claims to know who has gone wrong and is indifferent as to who has done right, it cannot fairly claim the right to criticise the press for telling of the evil along with the good.—*Springfield Union.*

CURRENT EVENTS.

THE Prohibitionist National Convention, at Indianapolis, on the 31st ult., nominated General Clinton B. Fisk, of New Jersey, for President, and John A. Brooks, of Kansas, for Vice-President. The platform includes a clause in favor of woman suffrage, though this was strongly opposed by part of the convention.

EMPEROR FREDERICK of Germany was sufficiently well at the close of last week, to go from Berlin, where he has been since his father's death, to the palace at Potsdam, a few miles distant.

STRICT regulations having been adopted by the German Government in regard to persons entering the provinces of Alsace-Lorraine, from France, their enforcement began last week, and a number of travelers with irregular papers were turned back from Strasbourg. The direct trains from Paris were almost empty.

LICK OBSERVATORY, at Mount Hamilton, Santa Clara county, California, has been transferred to the State University Regents. It has taken thirteen years to construct the observatory and equip it with a 36-inch equatorial and other instruments.

DURING the past week General Philip H. Sheridan has remained desperately ill, and his recovery, while still hoped for, is regarded, (6th inst.), as scarcely possible.

THE bill abolishing hanging for all murderers committed after the present year, and providing that the execution shall be carried out by the use of electricity, has been signed by Governor Hill, of New York.

KNOWLEDGE is proud that he has learned so much —Wisdom is humble that he knows no more.

COUNT your resources; find out what you are not fit for, and give up wishing for it.—*Good Housekeeping.*

NOTICES.

*** The Burlington First-day School Union will meet at Mansfield, Sixth month 9th, at 10.30 A. M. All interested in the work cordially invited. Carriages will meet morning train at Columbus.

WM. WALTON,
MARGARET D. ROGERS, } Clerks.

*** Home for Aged and Infirm Colored Persons. Annual Meeting, Fifth-day, Sixth month 14, 3 p. m. Annual report read, election of officers, etc. Addresses by following ministers: Henry C. McCook, Wm. Hutton, I. W. Becket, and others; and other exercises.

The Public are respectfully invited.

*** The Joint Committee on Temperance and Intoxicating Beverages, of Philadelphia Yearly Meeting of Friends, will meet at Race Street meeting-house, Philadelphia, on Seventh day, Sixth month 16th, 1888, at 1 p. m.

JAMES H. ATKINSON,
ANNIE C. DORLAND, } Clerks.

*** The Temperance Committee of Concord Quarterly Meeting will hold a Temperance Meeting First-day afternoon, Sixth month 17th, at Friends' meeting-house, Chichester, Delaware Co., Pa., at 3 o'clock. All are invited to attend.

J. BYRON THOMAS, Clerk.

*** There will be a *Memorial Meeting* held at Richmond, Indiana, on First-day following Quarterly Meeting in the Sixth Month, at 3 o'clock, p. m., under the charge of the First-day School, in memory of our valued friend, Sarah A. E. Hutton, who was one of the early workers in, and earnest supporter of, First-day schools to the close of her life.

B. S.

PUBLISHERS' NOTICES.

***As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

***Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

ABINGTON FRIENDS' BOARDING AND DAY SCHOOL,

Near Jenkintown, Pa., North Penn and Bound Brook R. R Ten miles from Philadelphia.

Next school year begins Ninth month 10th, 1888. Courses of study arranged to furnish a thorough English education and to prepare for college.

Board and tuition $145 to $175 per school year. Tuition alone $25 to $55. For further information address,

ARTHUR H. TOMLINSON, Principal, Jenkintown, Pa.
Or CYNTHIA G. BOSLER, Sec., Shoemakertown, Pa.

SWARTHMORE COLLEGE

OPENS NINTH MONTH THIRTEENTH.

Thirty minutes from Broad Street Station, Philadelphia.
Under the care of Friends, but all others admitted.
Full college course for both sexes; Classical, Scientific, and Literary.
Also a Manual Training and a Preparatory School.
Healthful location, large grounds, new and extensive buildings and apparatus.
For Catalogue and full particulars, address

EDWARD H. MAGILL, A. M., President, Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.

NEWTOWN SQUARE, PA.

Terms, $150 to $175 per year.

Apply to HANNA R. CALEY, Principal, address, during vacation), Media, Pa.
Or to
THOMAS P. BARTRAM, Newtown Square, Pa.,
CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,

A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 13th, 1887. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,

FREDERICK E. WILLITS, Sec.,
Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—

A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hou from New York city. For catalogue and particulars, address,

SAMUEL C. COLLINS, A. M., Prin.,
Chappaqua Institute, N. Y.

FRIENDS' CALENDAR FOR 1888
NOW READY.

A handsome lithographed card bearing a tablet, giving a carefully selected quotation from Friends' writings for each day of the year. Price, 50 cents. By mail, 55 cents.

FRIENDS' ALMANAC FOR 1888.

Containing an account of the times and places of holding the meetings of Friends on the continent of America. Price, 10 cents each. $1.00 per dozen.

FRIENDS' POCKET ALMANAC FOR 1888.

Price, 10 cents each. $1.00 per dozen.

GOD'S GIFTS TO MAN.

WHEN God at first made man,
Having a glass of blessings standing by,
Let us (said he) pour on him all we can,
Let the world's riches, which dispersed be,
Contract into a span.

So strength first made a way;
Then beauty flowed, then wisdom, honor, pleasure;
When almost all was out, God made a stay,
Perceiving that alone, of all his treasure,
Rest in the bottom lay.

For if I should (said he)
Bestow this jewel also on my creature,
He would adore my gifts instead of me,
And rest in Nature, not the God of Nature;
So both should losers be.

Yet let him keep the rest,
But keep them with repining restlessness,
Let him be rich and weary, that at least,
If goodness lead him not, yet weariness
May toss him to my breast.

—*George Herbert.*

CHRISTIANITY AND WAR.

Do not many Friends err in speaking of Christ as the inward monitor by which spiritual truth is revealed to the soul of man? The Hebrew word Messiah and its Greek synonym, Christ, simply means the anointed; and this confounding of the object anointed with the anointing power leads to confusion and causes misunderstandings. If Jesus was anointed in all its fullness by that anointing power which John in his Gospel calls the Word, which was with God, and was God, and is the life and light of men, one can readily perceive that the divine in him could triumph over the human, and thus, by assimilating him to God, make him one with him. He thus becomes the visible representative of the Eternal Father to the children of men, and by teaching the truths, made known to him by this holy anointing, came to be a redeemer from sin and the Saviour of men. But the substituting the instrument for the principal, which has been so generally done by Christians, has had the effect of diverting the minds of men from the inward life that should be in the soul to the outward sacrifice which took place on the mount of Calvary. And what is worse, to teaching that faith in the latter is the one great essential to salvation, and not simply a means to an end. Hence the dogma that all of spiritual truth that God has seen fit to reveal to man is to be found in the Bible. This has kept the leaven of the gospel of Jesus Christ from operating on the minds of men, and has enabled a hierarchy, under different names, to substitute the teachings of men for those of the Spirit of God, thus preventing that evolution of truth that is constantly going on in the spiritual as well as the natural world. One result of this has been, that whatever was permissible in one age of the world, and under one stage of civilization, is equally permissible under every other. And as war was indulged in and apparently sanctioned under the Mosaic dispensation, so it is under the Christian, losing sight of the fact that while Christ came not to abolish the moral law of Moses, he did come to usher in a law of love that should supersede it. This high ideal of the law of the spirit of life in Christ Jesus, which is to free us from the law of sin and death, it is hardly reasonable to expect is one that will be accepted by all mankind, or even by those claiming to be followers of Jesus, at once. It gradually dawns on the seeking soul, and requires time for its general adoption by society. It should be the ultimate aim of every individual, but we all know there are many battles to be fought against temptation before sanctification is attained.

And until the individuals composing society accomplish this, we cannot expect society itself to attain the end in view. In the meanwhile it must have rules for its government, and these rules must be enforced or anarchy will prevail, and it will lose its advanced position and relapse into barbarism. But this presupposes a law of force by which the refractory shall be compelled to submit to the law, and in extreme cases, will require the calling out of the *posse comitatus* to enforce obedience. This is civil war, more or less violent, according to the numbers engaged in defying the civil authority. Taking men as they now are, could that entity we call the State, which makes and enforces the laws of society exist without the exercise of force? Jesus seems to have foreseen that it could not, when he told his disciples: "And when ye shall hear of wars and rumors of wars be ye not troubled; *for such things must needs be.*" He did not expect the principles laid down by him to revolutionize society immediately, but knowing they came from God, was fully persuaded that in time they would so leaven the minds of men that the prophecy of Isaiah would be fulfilled. That this is gradually being brought about we have every assurance. They have softened the asperities of social life. The benign principle of love is mingled with the sterner sense of justice, and has had a wonderful

influence in moulding the jurisprudence of all Christian nations. And though war has not been abolished, it has abated its cruelty. The prisoner is no longer regarded as a slave. And the institution based on that idea (since the recent action of Brazil) has become a thing of the past in all Christian lands. The propriety of settling disputes between individuals and nations by arbitration rather than by law or war, is commanding the attention of all thoughtful persons.

If there be those among Friends or others, who are so fully under the influence of the divine spirit that they would rather suffer even unto death, than avail themselves of human law to redress a grievance, they may be said to be fully developed Christians. But to that large number who have not yet arrived at that high estate, but are endeavoring to follow after the Master, even though at a distance, something is due. We find them in every-day life, and they largely predominate in all Christian sects. The high ideal of life in Christ Jesus should be held up to their view in our precepts, and as far as possible in our example also; that seeing we practice what we preach, they may be encouraged to follow after. The history of our Society clearly shows that the light did not break in on the minds of our forefathers in all its brightness. There was a dawning, and as the eye was kept single on this, the spiritual perceptions were quickened until the evils of their day were clearly manifested to them. The more spiritual among them were the first to have the scales removed from their eyes, and as they abode under the Divine annointing they became instruments in giving sight to the blind. So I apprehend it will continue to be until the leaven of Jesus Christ leavens all men into that love that, coming from God, shall draw all men unto him.

Loudoun Co., Va. W. W.

FRIENDS' UNION FOR PHILANTHROPIC LABOR.

[Session in New York City, Sixth month 1 and 2. Report begun in last week's issue.]

SIXTH-DAY EVENING, SIXTH MONTH 1.

THE session began with the presentation of the report of the Sub-committee on Temperance. The reports from the different yearly meetings show an increased interest and a desire to enlarge the field of labor. The membership of our western meetings is so small and Friends are so widely separated that it has not seemed practicable for them to enter upon their work in the capacity of an organized society. Their different bodies have coöperated, as opportunity presented itself, with other organizations having a like aim. Friends have been influential, in several of the States in which our meetings are situated, in having laws passed requiring instruction in the public schools as to the physiological effects of alcohol and tobacco. In Illinois Yearly Meeting the committee have given attention to furnishing temperance text-books to public schools. In the States of Iowa and Kansas, where prohibitory liquor laws exist, they have aided in prosecuting the violators of these laws. In New York the Committee has held Conferences and given attention to the circulation of temperance literature by means of the First-day schools. The work in temperance reform has been carried on extensively in Philadelphia Yearly Meeting.

In Baltimore Yearly Meeting the interest in temperance work has been so thoroughly aroused that in many localities it has absorbed the entire interest that Friends manifest in philanthropic labor. Every monthly meeting has a committee on the subject. The law of the State requires all public schools to use text-books explaining the results of alcohol on the human system. Many members of the Committee have made addresses in schools on the subject. Much temperance literature has been distributed and the National and State legislatures have been memorialized on the subject. In the Maryland legislature the proposition to submit a prohibitory amendment to the Constitution came so near a passage that its opponents were amazed and alarmed at the progress made.

John J. Cornell then presented an essay on Temperance. Some of his leading thoughts were as follows: While the field in which we labor is large it has been frequently and thoroughly explored, so that we need not expect to bring forward anything new. Like the Gospel of Christ it needs iteration and reiteration. In the Society of Friends there is an apathy in regard to this question. Many are content that we have nearly purged ourselves from the evil; others think that our testimony should be against only the immoderate use of intoxicating drinks, and not all use; while still a third class contends that it is not wise for us to mingle with the world. There is, therefore, still a need of bringing the truths of temperance before our members. While the strict meaning of the word temperance is a moderate use of anything, as we apply it, it is generally understood to mean total abstinence. The use of alcohol is the greatest, the most important evil we have to deal with to-day. How shall we alleviate the evils that follow it and finally eradicate them? The spirit of philanthropy aims to destroy an evil, not to reduce its amount. We must not content ourselves with uplifting the fallen and teaching the young the evils that we wish them to avoid. While doing this we must also strive to remove the sources of temptation by stopping the manufacture and sale of intoxicants. Every moral reform needs the enactment of laws to supplement its work. There are differences of opinion as to the means that should be employed in opposition to the liquor traffic. The legal enactments that have been used are a high license, prohibition by local option, and prohibition by State law. Those who advocate the first of these means claim that it will restrict the traffic and open the way to its final overthrow. But to license the traffic is wrong. License gives it the sanction of the law and so a greater power to harm. The operation of high license has been to restrict the traffic to a smaller number of sellers, but not to reduce the amount consumed. Local option has done no more than put a partial check on intemperance. Where such restriction exists it is rendered comparatively ineffective by the inadequacy of the penalty, the want

of efficiency of the prosecuting officers, and the apathy of those who approve of the law. Further, as the system existing in any district may be overthrown by an adverse vote in any election, the want of permanency tends to discourage those who would work to secure its enforcement. The plan produces beneficial results to some extent in country neighborhoods, but cannot be carried out in the cities. We can rely only on general prohibition. That can have the necessary degree of permanence only by being incorporated into the State and national constitutions.

The essayist concluded by considering in what way such legal enactments can be secured. He announced that he was satisfied that it was right for him to coöperate with a political party established for the purpose of securing prohibition. Such a party exists and has grown to proportions to make the other organizations fear it. There is nothing inconsistent with the principles of the Society of Friends in joining such a party, and using legitimate means to accomplish by its aid the reform it seeks.

William M. Jackson said that he sympathized with the essayist in his desire to destroy the great evil of intemperance, but not with the means proposed to do it. He had exercised the right of suffrage in behalf of a political party that he believed would ensure the best results for the good of the country. It contained in its ranks millions of prohibitionists to the third party's thousands. He hoped that the time would come when that great party would be composed entirely of prohibitionists. In Iowa, Kansas, Ohio, Rhode Island, Maine, and Massachusetts they have shown their belief by the enactment of prohibitory laws. There are as many prohibitionists in this party in Iowa, as there are in the Third party in the whole country.

After other expressions on this subject by members of the Union, several Friends deprecated the introduction of the question which apparently involves partisan politics, but it seemed to be the general opinion that no harm would ensue from the kindly expression of diverging views on this subject, it being understood that such expressions were those of individuals, and did not assume to be the sentiment of the body.

Jonathan K. Taylor expressed his detestation of the saloon, as a permanent menace to the safety of our free institutions. It is inconsistent for us to build up institutions of learning, and license at the same time an establishment that will graduate to the prison and insane asylum. We must agitate, educate, and arouse public conscience against this evil. Local option is valuable especially as an educator, proving to the community where it is located the injurious effects of alcohol, and the advantage of abstinence. In his own State more than half the counties had established prohibition by the local option vote, with the result that the numbers in prisons and workhouses were very largely reduced. We should go to the polls and vote in such a way as to advance prohibition. As soon as enough counties are influenced a prohibitory amendment can go into the State Constitution, and as soon as there are enough States it will go into the National Constitution.

Robert S. Haviland expressed the opinion that the temperance movement had not advanced beyond the educational stage, and we should continue that work in which we can all unite.

Seventh-day Morning, Sixth Month 2.

The report of the Committee on Corrupt Literature was presented. Members of the committee had been informed of the circulation among school children of improper pictures and cards for advertising purposes, and had used efforts to prevent such circulation. They found that such cards are generally printed in obscure places, and distributed by the Express Company, so as to avoid the penalty of the law against using the mails for improper purposes.

A paper on Corrupt Literature, by Elizabeth Powell Bond, was read. She commended to parents, fathers, as well as mothers, the importance of cultivating in the minds of their children a taste for good reading. At least one hour a day should be given to reading aloud to the children such books or selections from books as may be adapted to cultivating a taste for the best in literature. These daily readings should be continued until the boys or girls are able to read for themselves. In selecting suitable reading for our children we should do well to observe the rules laid down by Emerson: "Never read a book until it is a year old, and never read any but famous books."

Anna M. Jackson desired that special attention should be given in presenting the writings of famous and standard authors, to selecting such portions of their works as are proper and suitable reading for the young. She called the special attention of teachers to the necessity of exercising this discrimination in their instruction in literature.

John J. Cornell said that in his younger days Friends excluded all novels from the literary material supplied to their children. The frequent result of such exclusion was that the children read books secretly, and the extensive and indiscriminate reading of novels had frequently vitiated the taste. He quoted the answer made by T. S. Arthur to one who inquired as to a choice of books to be read: "Do not read that from reading of which you do not rise with the desire to be a better man."

Jonathan K. Taylor said: Create in the mind of the young a desire for that which is right. Teach the child that there is pernicious material in the world and that he will meet it. Teach him that he must not use it. Get his thoughts in the right direction, implant the principle of right, and he will not go astray. We need more Friends' literature of the present: there is a great amount at our command, but it is largely of the past.

The report of the Committee on Social Purity was then presented. In several States endeavors had been made to have the law so amended as to extend greater protection to young girls. In three States Illinois, New York, and New Jersey, this effort had met with success, and the laws had been amended A measure was now pending in the United States Senate to extend the same increased protection in the District of Columbia, and a delegation from the Committee had had a hearing before a Senate Com-

mittee in furtherance of this modification of the existing statute. A paper on Social Purity was then presented by Anna R. Powell. Cordial approval of the sentiments contained therein was expressed by a number of Friends.

The afternoon session was begun with the report of the Committee on Prison Reform. Reports from the different yearly meetings' committees showed that a number of prisons had been visited, and that they had been found to be cleanly and well kept. In several different States movements have been inaugurated to have matrons appointed in police stations where women are confined, and in these efforts the committees have joined other organizations that are laboring to improve the penal institutions. In New York these efforts have resulted in the drafting of a law which has just been enacted.

Edward Stabler, Jr., gave in detail an interesting account of the work of Baltimore Friends in the management of reformatories and asylums in the neighborhood of that city. Since the adoption of local option in a majority of the counties of Maryland, the number of convicts in the penitentiary had been reduced about one half. Two large manufacturing businesses, one of marble workers and the other of stove founders, were carried on by private individuals for whom the prisoners worked. When the term of a convict expired the proprietors of these establishments were always ready to give him work in separate workshops that they maintained outside the jail. When those who were discharged do not wish to continue either of these occupations, the Prisoners' Aid Association will help them to make a start and provide them with the means of going wherever they wish. As a result of these arrangements recommitments to the Maryland Penitentiary are very rare. In those counties in the State where local option exists the county jails and almshouses are usually without inmates. He spoke highly of the results accomplished by the Prisoners' Aid Society.

For New York it was reported that the New York Prison Association had recognized the work of Friends by inviting the Committee to designate one of their number to become a member of the Executive Committee. A memorial had been presented to the New York legislature protesting against the passage of a law framed by one of the labor organizations which, if enacted, would be highly prejudicial to the prisons and their inmates.

Phebe C. Wright reported that in visiting the New Jersey State Prison at Trenton she found that there were 137 inmates who could not read or write. She had secured the establishment of an evening school for their instruction. The matron in the same institution teaches the women sewing. In a visit to a reformatory at Sherburne, Mass., she found that the prisoners were arranged in three grades. Newcomers, by faithful observance of the rules were advanced to the second, and afterward to the third grade. In that they were treated with greater favor in several particulars than those of the other grades, they were supplied with better clothing, were taught to be laundresses, or cooks, and to raise flowers and fruit.

Aaron M. Powell mentioned the system used in Dublin where the prisoner is set first at very severe labor. After a time, if he is obedient, a task of less severity is imposed upon him and finally he is sent away to a farm where no other restraint is imposed upon him, than the liability to be returned to the jail if he abuses his privileges.

The Secretary then presented the report of the Committee on the Education of the Colored People of the South. The aid extended has been given to the two schools at Aiken and Mt. Pleasant, South Carolina. (The report gave numerous details concerning these schools and their work, most of which have been heretofore given in the INTELLIGENCER AND JOURNAL.) A notable feature in the contribution of money has been the assistance of First-day School classes who, in numerous instances, have paid the tuition of one or more pupils in these schools.

A paper on the same subject was read by Howard M. Jenkins. He said in part: Intemperance, unrestricted immigration, or the threatened prostration of industries under foreign control is not more threatening to the interests of our country than the mass of ignorance in the South. The census of 1880 showed that in the preceding ten years illiteracy had increased in the South. In the State of South Carolina nearly one-half (48.2 per cent.) over the age of ten years were illiterate, while in many of the northern States the percentage of illiteracy was less than five. No free government can maintain itself under these conditions. The forces at work against illiteracy are inadequate to cope with it. The country was impoverished by the war, the population is sparse, and a double system of schools for the two races is considered necessary. Only about 55 per cent. of the colored children are enrolled, and the schools are open for only a short time, some States not more than three months. The salaries paid to teachers, (in North Carolina, about $75 a year to a men, $60 to a woman) are not sufficient to command good instruction. The classes in many cases are so large that the teachers are not able to accomplish satisfactory work. The public schools of the South must do most of the work; but their expenditure must be supplemented by the aid of the general government if the advance of illiteracy is to be checked. Yet the aid of private organizations must continue. What is especially needed is moral and industrial training. The negroes need to be developed in conscience and in truthfulness. There are especial reasons why Friends should continue in this work. It is congenial, and in accord with the historical precedent from the time of George Fox, when he admonished the slaveholders of Barbadoes. There is also the encouragement of a quick response, as the evidence of some success in labor expended is seldom wanting. It is especially important to maintain schools that will train good teachers. It is desirable to direct our efforts to this one thing; we can then see good fruit resulting from our endeavor.

Elisan Brown said that she could commend the excellent behavior of the colored people of her own neighborhood in Virginia, many of whom remained with and worked for their former masters, and became worthy and useful citizens.

Edward H. Magill said that a practical duty was presented to us for our consideration. There is one consideration that should especially encourage us who are so small a body and are confronted by so enormous a task. While the government with its vast resources can employ many teachers, many of these go to their work for the sake of the pay, while the missionary teachers, such as those of Friends, are consecrated to the service.

In the evening a paper on Dependent Children was read by Elizabeth B. Passmore. She said: Because parents are paupers or criminals it does not follow that the child must become the same. The charitable institution is needed for the incorrigible and infirm. For others the most natural and practicable system is that of the private family. The adopted child is subjected to the restraining moral influences of the home circle. He learns respect for and obedience to the head of the family instead of the inflexible rules of an institution. In Pennsylvania, Children's Aid Societies have been formed, whose purpose is to remove children from almshouses into suitable homes. They are regularly visited to see that they are properly cared for. The proper training of children in families tends to the security and perpetuity of our free government.

John J. Cornell said that it has been shown that the great number of charitable institutions is a direct cause of pauperism. In one instance we find five generations of paupers as a result of the method of caring for pauper children in public institutions.

The report of the Committee on Indian Affairs was then presented. In examining the condition of the Santee Indians in Nebraska, they found it desirable that a matron should be supplied to teach the women household work. As the Commissioner had no funds at his disposal for this purpose it was proposed that one be employed at the expense of the various yearly meetings. As one failed to coöperate, the plan has not yet been accomplished. There is now a prospect that the government may appoint five matrons for different reservations. Isaiah Lightner has been appointed a commissioner to allot lands in severalty.

Edward H. Magill presented a paper on the Present Duty of Friends to the Indians. He sketched somewhat in detail the earnest labors of Friends in behalf of the Indians. In the first seventy years of the Pennsylvania Colony William Penn's treaty with the Indians remained in force. After that time Friends lost control of the colonial government. Then their efforts as a religious organization began. From 1756 to 1767 a company of Friends in and near Philadelphia, "The Friendly Association," labored to reëstablish friendly relations with the native tribes. In one year this Committee expended $10,000 within the limits of Philadelphia Yearly Meeting alone. Not until the administration of President Grant did the government spend money to aid the work of improving their condition. He appointed agents recommended by religious organizations. Friends were appointed to six agencies. This policy scarcely survived his administration. Our agents gave place to successors who were politicians. Many religious denominations continued their missionary work.

The passage of the Land in Severalty bill does not finish the work. The Indian still needs help. There are abundant fields of labor. While some have been civilized there are still one hundred thousand blanket Indians still in the United States. Let us increase our Committees. They will find work, and of a kind no other denomination can do. There should be visits paid to the Indians every year, and a constant influence exerted at Washington to have suitable persons appointed as agents.

The subjects treated in the essay were commented on by John J. Cornell, Thomas Foulke, Wm. C. Starr, Samuel B. Haines, John L. Griffen, and others.

After adopting the memorials to the President and Congress in favor of the establishment of international arbitration, and in opposition to the traffic in intoxicating liquor with the native tribes of Africa and the Pacific Islands, the meeting of the Union concluded.

Editorial Correspondence Intelligencer and Journal.

TRAVELING WESTWARD.

Perhaps nowhere else do land and water, sky and mountain, blend in more picturesque variety than along the Lehigh river as it rushes in tortuous windings to its confluence with the Delaware; certainly the valley through which it flows was never more w orthy the admiration of the traveler than as it was seen on one of the clear, crisp days a fortnight ago. Every curve the train rounded disclosed some new combination worthy the pencil of an artist,—every stretch of level ground had its own quiet beauty.

The cold, rainy spring, while keeping back the busy work of the farmer, had given a deeper, richer green to meadow and grain-field, and the forests as they climbed the slopes of the "everlasting hills," offered a study of color, that was simply bewildering: one longed to stop were it but for an hour, at some turn in the road, where the mountain-side, wearing still its heavy robes of the deepest evergreen, was putting on the fairy lace-work of Spring's first endeavor; oak and maple and poplar, willow and ash, and birch and beech, and a whole retinue of others found in our forests, making haste to clothe themselves in the distinctive hue and form that belongs to each, while the white blossoms of the lowly dog-wood, sheltered in the arms of its lordly neighbors, gave promise of the beauty yet to be, when the warmer days of early summer will give to every shrub and bramble its garniture of gladness.

The apple-trees in some localities were still fragrant with bloom, the wild or crab variety, in clumps of three or more, presenting a crown of indescribable beauty, in every tint of rosy pink shading to white, that is known to the botanist. It seemed hardly possible that the peaceful river flowing on, almost without a ripple, through these pastoral scenes, could be the same noisy stream we had seen dashing along, cutting its way through gorge and defile, to the quiet valley, where the smiling landscape lay mirrored in its placid waters.

From Waverly, N. Y., our course lay directly west, through a stretch of farming country well dotted over with towns and villages, the fields green and growing but giving scant promise of an early harvest. Night is closing in upon the busy world as the train slows up at Hornellsville. Here the Pullman sleeping car is added, and that luxury of modern times invites the weary traveler to such repose as nerves and temperament permit; few, however, being so entirely free of misgivings as to sleep soundly the night through.

If there is any condition in which we have need of faith and trust in the great Disposer of events, and confidence in one another, it is when we resign ourselves to the repose that nature demands, while the train is rushing onward to its destination, or, possible destruction. One familiar with the changes that the last fifty years have brought about in methods of travel, who thus commits himself to the keeping of the modern management, cannot but call to mind the tiresome stage-coach journeys of the long ago, prolonged almost beyond endurance that some "wayside inn," famous for its accommodations, may be reached, and the good cheer of its host enjoyed. Such a ride comes vividly to mind. It seems so long ago, yet the incidents are as fresh as if they had happened recently. It was the first day of a journey of two hundred-and-fifty miles, and was made in the latter part of summer, starting at sunrise. The day was warm and the coach crowded, the halt for dinner and change of horses, and the delivery and taking up of the mail, served to break the monotony of the ride. Some of the passengers dropped out at the towns through which the route lay, but others took their places, so that every seat was occupied, and such small fry as went for half-fare fared badly enough, having to share with the band boxes (no lady then travelled without that necessary appendage) the scant room that was left.

As the driver reined in his steeds at the end of the journey, far into the evening, rain was falling in torrents; it had found every cranny and crevice of the old coach which gathered it up in little streams that came down upon the luckless passenger whose seat happened to be under its droppings, with a persistency worthy a better cause. The terminus for the night was the State capital, and as it was the main line of travel through the State, the best inn in the town received the guests, who were both wet and hungry. A rousing fire of blazing logs in the great fire-place of the hall offered warmth and comfort, but the women, drenched as they were, must have change of clothing, and what a confused bustle and calling for baggage followed. The boot containing the trunks had to be unstrapped, and quite a delay endured before each, duly labeled, was delivered to its owner. And what small affairs they were. It was well for the women who traveled then, that fashion was not so exacting, though more fastidious, perhaps, than now. A dress could be packed in less space and fewer changes were necessary, so that a comfortable wardrobe for a visit of several weeks, could be carefully packed, where in our more luxurious times, a single gown with all its accessories could scarcely find room.

There were fires blazing in every lodging room, and dusky maids in turbans and tow dresses went from one to another, shaking out the dripping skirts and hanging them before the fire, frequently changing them that they might be ready for their owners when they resumed the journey on the following day. And all must be gone through with as often as the stage and the rain came together. Contrast this with the comfort of a day and night on the railroad of the present. The journey in the stage coach, with all its weariness and discomforts only accomplished about half the distance from north to south of one of the smallest States in the Union, the morning finding the travelers at the same place that the night had closed in upon them, while our travelers who composed themselves to rest in a Pullman sleeper, found on waking, they had come through rain and wind, and were more than 500 miles from the place they had left only twenty-four hours before.

Who that travels would want to go back to the stage-coach of the past? Who would say, in view of all that applied science has done for us, "the former days were better than the presents."

As the train slows up, we find ourselves at Akron, Ohio, famous for its oat-meal. The large mills where the grain is made into this wholesome article of food, and the neat, pretty cottages of the workmen are the chief features of the place, though we see the kilns in which the common drain-pipe of all this region is made in nearly all the towns through which we pass.

At Foraker an immense tract of swamp-land is under process of draining. The land is said to be of great value, and the success of the undertaking is well assured. Our course lay through the great oil-producing district of the State (Ohio). At Lima almost the entire industry of the place is merged in oil. Derricks are seen in every direction and refineries are almost as numerous. Quite recently a well was opened from which the oil flows in fabulous quantities; the subterranean supply seems inexhaustible. A line of pipe six inches in diameter is being laid to Chicago to supply that city with oil for fuel, another pipe of half the diameter is also being laid, but the point of destination was not learned. Street-cars, propelled by electricity, wait for the passengers who leave the train. There appears to be no lack of thrifty enterprise in the towns through which the road passes. The need of better drainage is indicated by the piles of drain pipe lying in the fields or placed in order waiting the leisure that follows the sowing and gathering in of the summer crops.

Through northern Indiana the industries are mainly in the preparation of lumber. Steam sawmills are puffing away in almost every tract of woodland, a war of extermination seems to be waging against the grand old trees that add so much to the beauty of the country, and so affect the distribution as well as the value of its rainfall. In this State, as in Ohio, the winter sown crops are thin on the ground and the grass is short; the prospect for hay is not encouraging, but a few weeks of real summer weather may do much for both.

Chicago is reached a little behind time. A stay of

a few days gives opportunity to study its marvelous growth, and in some measure to comprehend the place it must occupy in the future of this vast western land, so rapidly filling up with the people of every civilized nation.

First-day we gather with the little circle of Friends who meet in worship in a small room of the Athenæum building, on Dearborn street. It is pleasant to find so many of the young people, and gives hopeful promise for the future of the few who are now trying to hold the membership in this city together. They need the sympathy and help of Friends in more favored places, and this should be freely extended. It was a season of refreshment to the one who felt called to offer words of hope and encouragement, that seemed to be shared by all who were present. The "Scripture Lesson" for the day held most of those in attendance together for half an hour after, the free expression of those who took part, gave evidence of the deep interest the subject had awakened. Creighton, Neb., Sixth mo. 6.

THE UNIFYING FACTOR IN CHARACTER.

There is nothing more beautiful or more highly prized in the world of inorganic matter than the crystal. And the crystal owes its peculiar form and quality to a single unifying factor by which unattractive and valueless simples were brought into new and enduring relations with one another, and were given a structure and an appearance which otherwise they could never have possessed. It may have been by the addition of one more element to the compound, that a heterogeneous mixture was resolved into crystalline symmetry and solidity. It may have been by the unifying factor of heat or of cold, of wetness or of dryness, that molecules of carbon, or silica, or alumina, came into that affinity which transformed a dull earthy element into a gem for a royal crown. By one process or by another it was the unifying factor that gave all the other factors, in that thing of durability and of admirableness, their substantial value. And it is the unifying factor which is the one thing needful to completeness and to practical efficiency in every combination of forces in the world of matter, of mind, and of morals.

Many a man who obviously has fine mental qualities, and who is possessed of knowledge in various branches of learning, shows himself unable to use his intellectual powers and attainments to any practical advantage, simply because of his lack of the one element of mental potency which would bring all the other elements of his mind into their proper relations, one to another and each to all. We are accustomed to say of such a man, "He has all kinds of sense but common sense;" which is only another way of saying that his mind is without the unifying factor which is needed to secure the crystallization of his powers into the form where they would be at their best, and would show themselves most attractively. Wisdom has, indeed, been called that talent which enables a man to use all his other talents; or, in other words, wisdom is the unifying factor in the world of intellect.

In personal character the unifying factor is always the chief factor. We speak of the necessity of a man's having a purpose in life, if he would be at his best, and would make the most of himself; and saying this, we recognize in the factor of a life purpose the unifying factor in the elements of personal character. A man may have a fine physique, a well-balanced and well-stored mind, a high moral tone, and a choice social position; but, unless he consciously has something to live for, all his advantages, natural and acquired, fail of arousing his entire abilities, and of putting them into their fullest play. Let him, however, be once possessed of, or by, an absorbing purpose in life, and his faculties are unified and energized, so that he is ready to be at, and to do, his best. And when a great life purpose comes into the personal character as a unifying factor, he who lacks the advantages of many another, in his personal presence, in his mental acquirements, and in his social position, may transcend them all—if they are without such a unifying factor. It may be patriotism, it may be an aroused filial affection, it may be a new sense of love or of friendship, it may be an added interest in some line of special study, it may be a desire for success in business, that proves the unifying factor in the character of an individual; but whatever it is, its presence and potency are sure to be felt and to be seen prevailingly.

In man as man, the one unifying factor, without which man can never be at his best or do his best, is the faith factor. That which distinguishes man from all the lower orders of creation is the ability to recognize the unseen and the infinite, and to rest on the felt presence of Him who is all and in all, of the universe of his creating and controlling. In the lack of a personal faith in God as *his* God, no man can be what he ought to be, or do what he ought to do. Without this faith, a man cannot work or study in assured confidence of results; nor can he see the past, the present, or the future, in the light in which alone all its facts and teachings are intelligible and consistent. With this faith, a man can stand, as it were, at the very centre of the universe, and look out over the vast sweep of God's providences, in simple confidence that all things are working together for his good; since his Father orders them all, and he is in loving union with God through his union by faith with Him who is one with the Father. Without faith, a man's powers are as the earthly elements in their primitive separateness; it is by faith as a unifying factor that those elements are crystallized in symmetry and in durableness.

"One thing thou lackest yet," said Jesus to a young man who had wealth and station and capacity and knowledge, and a loving and a lovable spirit. The one thing there lacking was the unifying factor which alone could bring all the other factors of that young man's personality into their right relations to one another, and to the forces at work in the universe of God. Without that unifying factor the favored young man was at a disadvantage, in spite of all his advantages. And no advantages can compensate any man, young or old, for the lack of the unifying factor which shall enable him to recognize and

to occupy his place in the Divine plan, and to use all his faculties and attainments in their proper order and measure.

We have need to beware lest, with all our advantages and attainments, we lack the unifying factor which shall give the highest effectiveness to our powers in their best exercise. It is not the number of our faculties, nor the variety of our acquirements, but rather our ability to use them severally and collectively as they should be used, that is the measure of our capacity in our sphere of being and doing. Without the unifying factor, all other factors will be incomplete and insufficient, in our case, as in the case of all others. Nor need the unifying factor ever be lacking to us. God, who gives us all that we have of good, will not withhold that which is essential to our best use of all which we have from him. It is only when we culpably bury one talent of the two or of the five talents which God has entrusted to us, thinking that we are doing measurably well by our use of the remainder, that we need fear to suffer from the lack of the unifying talent which can make the other talents as productive as they ought to be. The unifying talent is one of the talents, the use of which God proffers to every one of us. We can bury it, or we can improve it—and take the consequences accordingly.—*S. S. Times.*

"The crown and glory of life is character. It is the noblest possession of a man, constituting a rank in itself, and an estate in the general good will, dignifying every station and exalting every position in society. It exercises a greater power than wealth, and secures all the honor without the jealousy of fame. It carries with it an influence which always tells—for it is the result of proud honor, rectitude, and consistency, qualities which perhaps more than any other command the general confidence and respect of mankind."—*S. Smiles.*

Those who look not inwards, but upwards; not at themselves, but at Christ and all spiritual perfection,—they become more and more painfully aware of their own imperfections. The beauty of Christ's character shows them the ugliness of their own. His purity shows them their own foulness, his love their own hardness, his wisdom their own folly, his strength their own weakness.—*Charles Kingsley.*

All lives in which the sense of duty is lacking are unregulated lives, lives going to waste, with no principle of coherence or growth in them,—worthless to-day, and holding no promise for the future. The home whose inmates are destitute of this organizing germ of happy, useful, united life is a poor, lonely, desolate place, no matter how sumptuous its furnishings or how stately its adornments.—*J. R. Effinger.*

Life is made up not of great sacrifices and duties, but of little things, in which smiles and kindness, and small obligations, given habitually, are what win and preserve the heart and secure comfort.—*Sir H. Davy.*

PHILADELPHIA, SIXTH MONTH 16, 1888.

THE SCRIPTURE LESSONS.

As was stated in our Note last week, our lessons for the next three months pass again to the Old Testament, taking up the principal events therein recorded of the wandering of the Hebrews in their forty years' journey from Egypt to their home in Canaan. This is the most remarkable history that has been preserved of any ancient people, and the sacredness that has been attached to these old records as the infallible word of God, which few among the enlightened scholars of the present time are willing to admit, should not stand in the way, or in anywise prejudice our minds, as Friends, against their reverent study for ourselves, and for the young people amongst us who need to be intelligently directed in their inquiries concerning the relations that exist between the Divine Being and the human family as shown in these recorded experiences of the race.

It is not just to those who wrote in the earliest times to condemn their statements because the conclusions they reached were not arrived at by present methods. They saw Jehovah's hand outstretched for their deliverance, in every peril through which they passed, they heard his voice in the storms that raged among the peaks of Horeb, or swept the barren plains of the wilderness of Sin. These were to them as the communications of the will of God, personally made, and so they declared. The language in which it is written is of necessity symbolic and figurative. Let us not cavil at its unscientific statements. We do well to seek the underlying truth that is conveyed, and we shall find our own methods of expressing the same truth, is by figure and symbol. The things of the spirit, though spiritually discerned, have to be communicated to others in the same words used in the common details of everyday life.

The great value of these writings to us lies in the fact that they teach the nearness of the Divine to the human. More than this they bear testimony to the great fact that this nearness of the Divine may, by watchfulness to its leadings, bring the soul into a living experience of his presence, and a oneness with him in all its aspirations; and further still, it declares with emphasis that this is possible to every soul that is willing to obey the commands upon which it is bas

The study should be reverent because it deals with the holiest and most sacred intentions of the soul, and it should be intelligent that no narrow or partial views of the love and care of our Heavenly Parent towards all of his children may find a lodgment in the minds of any who enter upon this study.

MARRIAGES.

EVANS—WEST.—Sixth month 7th, 1888, at the residence of the bride's parents, King of Prussia, Upper Merion township, Pa., under the care of Radnor Monthly Meeting of Friends, Charles W. Evans, of Philadelphia, son of Elizabeth T. and the late Morris J. Evans, and Sarah R., daughter of William and Rebecca K. West.

HAMMOND—GRIFFITH.—Sixth month 7th, 1888, at the home of the bride's mother, near Mount Pleasant, Jefferson county, Ohio, under the care of Short Creek Monthly Meeting, Bezaleel D. Hammond, of Wichita, Kansas, and Mercy J. Griffith, of Mount Pleasant, Ohio.

HOAG—LA FETRA.—On Fourth-day, Sixth month 6th, 1888, at Friends' meeting-house, Manasquan, N. J., under the care of Shrewsbury Monthly Meeting, Butler M. Hoag, of South Easton, N. Y., son of Isaac and Elizabeth A. Hoag, and M. Elizabeth, daughter of Edmund and Abbie M. La Fetra, of Manasquan, N. J.

JOHNSTON—CRANSTON.—Sixth month 6th, 1888, at the residence of the bride's parents, West Philadelphia, by Friends' ceremony, John Johnston, son of the late William and Isabella Johnston, of Haddington, Philadelphia county, Pa., and Martha Sharpless, daughter of Samuel and Edith S. Cranston.

PRICE—FOGH.—In Denver, Colorado, on Fourth-day, Sixth month 6th, 1888, by Friends' ceremony, at the residence of the bride's parents, Philip and Ellen M. Price, Phebe J. Price to Carl S. Fogh, of Denver, Colorado.

DEATHS.

ADAMSON.—In Philadelphia, Sixth month 4th, 1888, Joseph Lowry Adamson, aged 62 years; formerly a member of Alexandria Monthly Meeting, Va.

BARCKLOW.—Near Moorestown, N. J., Fifth month 26th, 1888, Joseph H. Barcklow, in his 72 year.

BEESLEY.—Fifth month 22d, 1888, at the residence of her brother-in-law, Edward P. Cooper, West Philadelphia, Rachel Beesley, aged 84 years. Interment at Salem, N. J.

FIELD.—Fifth month 8th, 1888, at her residence, near Port Chester, N. Y., Mary B., wife of William C. Field, aged 71 years; an elder of Purchase Monthly Meeting, N. Y.

JONES.—Fifth month 30th, 1888, near Medford, N. J., Keziah H., wife of Wilkins Jones, aged 62 years.

LUPTON.—At the home of his daughter, Esther Green, Richmond, Ind., on Fourth month 30th, 1888, Richard R. Lupton, in his 85th year; a member of Whitewater Monthly Meeting of Friends.

NEWBOLD.—On the evening of Sixth month 7th, 1888, Thomas Newbold, of Mount Holly, N. J., in his 85th year.

POTTS.—At his home in Richmond, Ind., Fourth month 2d, 1888, John Potts, in his 80th year; a member of Whitewater Monthly Meeting of Friends.

SHUTE.—At his home, near Richmond, Ind., on Fourth month 28th, 1888, Albert C. Shute, in his 48th year; an esteemed elder of Whitewater Monthly Meeting of Friends.

TAYLOR.—Sixth month 8th, 1888, at his residence, Crosswicks, N. J., Stacy Taylor, in his 84th year, formerly of Philadelphia; a member of Chesterfield Monthly Meeting, N. J.

WILKINSON.—Sixth month 5th, 1888, at the residence of his son, Charles Benjamin Wilkinson, West Philadelphia, Norris Wilkinson; a member of the Monthly Meeting of Friends of Philadelphia. Interment at New Garden, Pa.

WRIGHT.—At his residence, near Trenton, N. J., Fifth month 21st, 1888, after a short illness, Robert S. Wright, in his 63d year.

Those who have shared the companionship of Robert can testify to his goodness which ever marked his character; he was an earnest and candid seeker after truth, unselfish in his business relations, careful not to infringe upon the rights of others, and his example will ever be remembered by those who were brought in contact with him.

He made no distinction between the rich and poor, was a friend alike to all, and one that believed that true religion was not so much in what we *believe* as in the way we *live*.

Deeply will his loss be felt in his home circle, where two children, a son and daughter, survive him. He was an indulgent father, and a kind and affectionate brother. These dear children are particularly bereft, having lost both parents in about a year of one another, and just at the age when they most needed a father's and mother's tender care. He spent his entire life on the farm upon which he died, and was the third generation that held possession of it. He was a member of Trenton N. J. Preparative Meeting. E.

YERKES.—Sixth of Sixth month, 1888, in East Bradford, Chester county, Pa., Job R. Yerkes, in his 72d year. Interment at Newtown Friends' ground.

LETTER FROM CHICAGO.

Editors INTELLIGENCER AND JOURNAL:

A member of your staff has recently made us a brief visit, and we felt so much edified and profited by her company and ministrations, that we feel disposed to testify to the comfort, help, and pleasure received.

L. J. R. attended our First-day meeting on the 27th of last month, remaining afterward to our Bible class. In each, by sermon and participation, she was peculiarly acceptable. She spoke in the meeting of the "cause" for which Jesus Christ came into the world "to bear witness to the truth." The class having been studying over that portion of the Gospel history so recently, the ground seemed to be freshly prepared for the good seed so fittingly sown, and she was listened to with close attention, especially by the younger element. The subject is as new as it was 1800 years ago. Truly "the old, old story," but ever new to each individual when he first enters into a comprehension of its wonderful meaning.

We feel that the Spirit of the crucified "Son of man" is still a living power, moving on in the world, when we see his inspired instruments dedicated to his service, going forth in bodily weakness, far from home and its affections and comforts, knowing that illness and death, or accident or other calamity may await them, yet "counting not their lives dear" if through them the cause may grow and prosper; and a realization of its vast and powerful force for the up-

lifting and beautifying of life may come to the hearts of unhappy humanity. "How all the dark places would brighten" if this spirit could spread abroad into every country and among all peoples.

My heart received fresh courage and inspiration from a meeting we attended last evening for the Pundita Ramabai, of India. She is now on her way East, hoping to sail for her home in about two months. She has secured almost enough money, or its guarantee, to warrant her in starting her school for India widows, of whom, she said, there were in their country 21,000,000.

Believing as the Hindoos do that there is "no good in women," that they are the "gateway to hell," and that they are "responsible for the death of their husbands," the condition of the widows is pitiable beyond expression. They believe that a woman must have been a criminal in a former life, or her husband would not have died. So they treat them much worse than "dogs," because they believe dogs may finally become human in some of their transmigrations, and therefore respect them for what they may be. But they have no such faith for the progress of women. She can only reach heaven through subservience to her husband. If he says the sun rises in the west and sets in the east, she must say "Verily, it does." Out of these degrading ideas Ramabai yearns to lift them, that the women as well as men may come to realize that they are the beloved children of one Father, and know that Gospel which teaches with authority that "there is neither male nor female in Christ."

She is small and quite dark, and is somewhat deaf, but her black eyes are so bright and intelligent that she seems not to miss greatly the sense of hearing. Indeed, her ability and wisdom are certainly very remarkable. She is called in India Sara-bartri, signifying the same as Minerva. She speaks with fluency seven different languages. Her hope and aim is to found a school where head and hand and heart may be educated. She hopes to have a Kindergarten and Industrial Arts taught, that widows may have a means of support, as they will find it difficult to make a living after violating the custom and usages of ages, by becoming educated. We know what a bondage usage is in our country, and how we have become so accustomed to hanging and drinking liquors, that they do not affect us with anything like the horror that the tortures of women and infants in India, or the bull-fights in Spain do.

Ramabai said that she was advised to identify herself with some denomination, so she would sooner raise the money for her mission. But she said no. She could not join with any one sect. She knew no sect in her work but Christians. All denominations she hoped would feel interested in her work. She was endeavoring to obtain *freedom* for her sisters. She wished them to have the Bible and Christian literature, and Hindu literature, and be free to read and judge for themselves. She wanted no special theology taught in her school, but absolute freedom to think, which they have never had. Said she "believed with the Quakers, in the inner Light which would guide us into all Truth, if it was free to control us, and we were not under bonds to creeds."

True, brave, broad little woman. She is a missionary to America, for Orthodox and Unitarian, and Universalists and Friends join in helping her to realize her "unrivalled evangel," as Francis E. Willard so truly and beautifully styled her mission. "Francisbai," (as Ramabai calls F. E. W., which little termination means sister), introduced her with a tender, loving speech about her and her work. And David Swing followed with some characteristic remarks. Alluding to the Pundita's freedom from theological dogma, he told of a woman who returned from church and said, "Well, that clergyman took away my belief in 'original sin' the first Sabbath he preached. The next, he took away my belief in 'eternal punishment,' and to-day he took away my faith in 'total depravity,' and I don't seem to have anything left." F. E. W. told of the Pundita's horror at our custom of eating animal food of which she never tastes, and of her distress at witnessing our indifference about the comfort of animals.

They met a boy, one day in their walks, who was carrying a chicken with its head hanging downwards. Ramabai stopped and asked the boy if he would like to be carried in that position. He replied he thought he would not. "Well," she said, "suppose you carry the chicken with its head up as you would like to be carried yourself," which the boy did in response to her gentle request. Ramabai spoke about this trying position to a woman afterward, who responded "well I presume the hen liked it." The Pundita very promptly rejoined, "I would rather have the hen's opinion than yours." So we see by this intermingling with other races and peoples, which is made possible by steam and other modern methods, we are gradually educating each other, and the good is mutual. None of us are altogether heathen, and all of us are more or less so. We have yet far to go before we are fully imbued with the teaching and spirit of Jesus who so far transcends any other "sent of the Father."

Canon Rawlinson, of Oxford, said in a recent article in the *Sunday School Times:*

"Crucifixion continues in the East to the present day. Humanity has taught the West that if capital punishment cannot be dispensed with under existing circumstances of society, it should at least be rapid and so far as possible painless. But the East has yet to learn this lesson. It may be hoped, however, that the time is coming and will soon come, when the civil codes of the East as well as the West will expunge from their list of penalties the atrocious barbarity, which was struck out of the Roman Law by the awakened conscience of Constantine the Great."

This morning's paper announced that Gov. Hill, of New York, has signed the bill abolishing hanging and substituting a painless death by electricity. Let us hail this as one step in advance toward a higher humanity, and not lessen our efforts toward abolishing the death penalty.

Many earnest minds are turned toward seeking some method by which society may be protected against the evil disposed, without taking life. Let us speed the day as we may be able.

A new book entitled "His Broken Sword" has recently been published in this city by A. C. McClurg & Co. It is from the pen of Winnie L. Taylor, a young woman whose heart was early touched with sympathy for the erring, and she is often called in our State "the prisoners' friend." She has been very modest and retiring in her work, and began it in a small way, becoming interested first in the case of a young boy whose innocence was afterward proved, but who was unjustly sentenced. In following this up, and securing his release, she became interested in others, visited them in the prison hospital, took dying messages to their friends, wrote letters, looked after unhappy and grieved families, etc. Although her book is in story form, many of her own genuine experiences are given. Knowing her personally, we know how her heart has been in this subject, and how her best life has been given to it, and we hope her book will have a large circulation. It will prove very suggestive to all philanthropic workers. I think I shall never forget one touching passage in it: she learns from a warm-hearted prison officer that the mother of an innocent boy, who had died in prison, had become insane. The officer said: "I wish you would write to his mother." "Why, did you not tell me she was insane?" she asked.

"Yes," he responded," but I did not tell you that she was beyond the reach of human aid and sympathy."

I must be very thoughtless, but I confess this came to me as a revelation of possibilities.

O! how the vista for philanthropic work opens, and as Ramabai said last evening, "how satisfying to be even a small instrument of the Master in the work of redemption from evil."

May we all feel called to help, in *our own* place and way, to bring ourselves and others to a higher level. I desire to emphasize the truth that by "being true to our best selves," by striving to have pure, high thoughts and aims we may lift ourselves and others by our indirect as well as our direct influence.

An evening call from one of our Iowa Friends, B. F. Nichols, who was in the city last week on business, was a pleasure which we count with many like accidents, so called, as among the "springs of blessings." His account of the almshouses in his own and surrounding counties, evidencing the interest of our Friends in the work nearest them, was inspiring. This county work seems something that all may do, and so by each being faithful in his own place, the Master's vineyard may be well kept.

So let us not be discouraged, because our work is so near us that it seems of small dimensions: we are in service in our neighborhoods just as truly as those whose work is world-wide. To make paupers even partly self-supporting, to highten the poor clouded mind in the least degree, to loose the bonds of any needless captive is to serve him who is "bound with them." Browning says:

"Be sure no earnest work
Of any honest creature, howbeit weak,
Imperfect, ill adapted, fails so much
It is not gathered as a grain of sand
To enlarge the sum of human action used
For carrying out God's end."

Chicago, Sixth mo. 5. H. A. P.

For Friends' Intelligencer and Journal.

LETTERS FROM EUROPE.—XX. FROM BRUSSELS TO LONDON.

London, May 15, 1888.

We left Brussels early in April, after a residence of nearly seven months. The weather during the whole time except the first few weeks was gloomy and wet, and indeed the same was the case throughout Europe. Even in Rome, we have been assured by persons whom we have since met, they almost perished; for the Italians, trusting to their usually bright skies, have no sufficient means of warming their houses in exceptionally cold seasons.

The sights of Brussels and its vicinity were soon exhausted. Some of the family visited Louvain, Ghent, and other towns, but found little to reward the trouble. The field of Waterloo was more interesting. A lofty mound has been raised in the centre of the position held by the English on the day of the battle, from which the locality of every important event can be easily seen. And there are guides at hand to point them out. The battle was not as bloody as that of Gettysburg, there were not so many actually engaged, there was by no means such desperate fighting, nor was the result more important. In each case the battle was the turning point in a great conflict. But Waterloo was the more dramatic. The defeat was followed by the instantaneous collapse of one of the contending powers. It was as if in a battle between two war-ships one had suddenly sunk and left the other all alone on the ocean.

In Brussels we had taken an apartment and kept house, and were thus brought into dealings with the people. We had done the same in Rome, and with the means of comparison thus afforded, our experience was very much in favor of the Italians. Even in dairy products, for which the Belgian climate is so favorable, we found it impossible to obtain honest supplies, whereas in Rome we had not once occasion to complain. But the Belgians have a naturally poor soil and an over crowded population, and the temptation to take small advantages must be very strong. In our passage to the French frontier we had the last views of Belgian rural life. The peasants were preparing the ground for spring crops. The land was universally turned by the spade and smoothed by light harrows drawn by men and women, and sometimes, to one of uncommon size, a whole family, down to children of eight years, were hitched.

In the struggle for existence the Belgians claim for themselves the utmost latitude, and a provision of their Constitution secures to them the right to toil every hour of the day and every day in the week, without interference from the legislature. I do not know what is the moral condition of the people, except that crimes of violence are comparatively rare, and that in the City of Brussels the last sanitary report represented more than a fourth of the total births as illegitimate.

Of Paris as a beautiful city I have spoken in an earlier letter. To the grand avenues and boulevards I ought to have added, as a foil, the crooked, narrow streets of the meaner parts of the city, ren-

dered damp and gloomy by the great height of the houses which border them. But my letters contain only the fragmentary impressions of the tourist, and must not be mistaken for a complete account of anything.

The population of Paris, like that of the other continental cities which I have seen, has a generally tidy appearance, and an exceptionally wholesome look; and wherever there is room for the manifestation of good taste it is sure to be displayed. Here in London, for example, the omnibusses are almost hidden under great wooden signs advertising soap, matches, cough mixtures, and ready-made clothes, and the interiors, even the windows, are plastered with hand-bills to the same purpose, while the drivers and conductors dress as suits their means and taste, and vociferate their invitations to every probable passenger. In Paris the 'busses are neat as a private carriage and as free from inelegant paint and print, while the driver and conductor are dressed in a plain, neat uniform, and discharge their duties in grave silence. The vehicles are large, carrying sixteen inside, four on the platform, and twenty on top, and are drawn by three horses abreast, the whole turnout having a compact appearance.

The French police is said to be very efficient, and we were assured that the streets are as safe by night as by day, and that women might in perfect security be abroad at midnight, only exerting a little extra circumspection not to have their status misunderstood. As an attainment of police regulations deserving of mention I may state that the rates of cabfare are so clearly set forth that I never failed to calculate and tender the proper amount, and it was received without a word; whereas here in London, with just the same desire to observe the law, I have never yet succeeded in calculating the just amount or in getting off without paying fifty per cent more than I computed to be due. The fact is that in expressing themselves clearly the French excel. Precision in all things is their forte. With French and Italians I don't think we ever had any misunderstanding. We never failed to comprehend precisely what we had to pay,—which was not our experience in Belgium nor has it been in England.

One of the sights of Paris is the Grand Opera House when some favorite vocalist appears. A party of American ladies from the house where we were staying visited it on such an occasion, not so much to hear the performance as to see the audience and particularly their costumes. For this, good opportunity is given by the custom of the audience to leave their boxes between the acts and promenade in the spacious lobbies adjacent. Our friends described the spectacle as exceedingly brilliant, and the costumes of the ladies as faultless, save that they did not sufficiently cover the upper part of the body, but left bare the arms, the shoulders, and a considerable portion of the chest, though not more than may occasionally be seen in our own country. They observed, however, that the audience was composed almost exclusively of persons somewhat advanced in life, and that there was an unmistakable paucity, almost a total absence, of young persons of either sex. The absence of young women may be due to the fact that unmarried women have no place in Continental society. So long as she is single woman is under tutelage, and we were told in Brussels (which glories in being thought a small Paris) that an unmarried woman of even middle age in the higher circles would not appear in the public streets unattended by her maid, while a married woman of half her years would do so with perfect propriety.

In the buildings once kept for royal pride in the days of the monarchy, France has an elephant quite as troublesome as I described the Forum in Rome to be. The cost of their construction beggared the kings, and the expense of their maintenance oppresses the Republic. Versailles cost thirty million dollars, equivalent perhaps to thrice that amount at this day, and when we were in Paris it was a question whether the palace should not be abandoned to ruin. The roof had given way and the rains had seriously injured the interior and spoiled some pictures in the great gallery. To restore the roof would cost some tens of thousands of dollars, and to put the whole building in thorough repair would require some hundreds of thousands. And yet how the world would cry out upon the barbarism of selling it for a factory! It will probably be utilized for an institution of education.

From Paris to London there are two routes by which a short transit of the channel may be made. One may leave the train at Boulogne, where it first touches the coast, and cross to Folkestone, or proceed on to Calais and thence cross to Dover. The latter crossing occupies an hour and a half and the former two hours, but to save the half hour perhaps half the passengers go on to Calais at the expense of some money and considerable additional travel. But the misery of crossing the channel at the narrow part is famous and it deserves the worst that has been said of it and all that can be said. I have crossed twice at wider parts, where eight hours were occupied in the transit, and experienced no inconvenience. Possibly the channel at the narrow part is made rougher by rapid or conflicting currents: possibly the trouble lies in the smaller boats here used, for large boats cannot enter the ports. We crossed from Boulogne, and were fortunate in so doing; for the Calais boat grounded when about a mile out, and towards midnight was left dry by the receding tide, and the passengers had to walk ashore in the darkness over the wet sands. Among them was the Baroness Burdett-Coutts.

On boarding the boat at Boulogne we descended to the saloon and found every seat occupied by passengers who had hurried down, and were striving to prepare themselves for the coming trial. The seats were occupied by recumbent figures, presumably by those who knew they would suffer, carefully tucked away, and all, sitting and lying, were provided with bowls. My wife elected to remain below, but I and the children reäscended to the deck. There we found the seats nearly all occupied in like manner, and the deck hands engaged in disposing tarpaulins as a shelter against wind and spray. Soon after the boat started, all except a very few favored mortals, among

them my son, became ill and the nausea increased in intensity as time passed on. The wind was not high, but the boat was small. She dipped and waddled along, bobbing in every direction, and every few minutes a wave struck her in a favorable direction and sent the spray aboard in drenching showers. The deck hands did their best to shelter us, but could not save us from being much wetted. They, however, kept us supplied with fresh bowls. Two hours of such unmitigated misery I never remember to have passed, and in the midst of it there actually came to mind the quaint description of seasickness—at first you are afraid you will die; and then you are afraid you won't. And such is the experience of the hundreds who daily make the passage. I am certain that in America we would find some remedy for such a state of things.

On reaching Folkestone I insisted on taking refuge in the nearest hotel, and finding the place a pleasant one we remained a week—the more readily that our London friends gave a terrible account of the fogs there prevailing. Folkestone has houses to accommodate about 20,000 inhabitants, but during the greater part of the year only about half that number are found there. It is a favorite bathing place, and is full only during the season. The handsomest part of the city is built on a plain about 100 feet above the sea-level, which terminates in a cliff at the sea shore. Along the edge of this cliff is a delightful walk, whence one looks out upon the busy channel and may often count a hundred vessels, including two or three great steamers seeking the ocean or coming from their long voyage. The bathing beach is by no means a good one. It is not at all sandy, but covered with small stones, over which walking without heavy shoes would be painful. The bathing is accomplished from small boxes or houses six feet by ten which are on wheels and are drawn into the water by horses and drawn out by windlasses, of which a great number are disposed along the beach. The bather enters the house by a door on the seaward side, and is drawn into the water until it nearly reaches the floor. He (or she) puts on a bathing dress, steps into the water, and after splashing about for a time reënters the house and is drawn upon dry land. The surf was always in motion so long as we were there, and the water never clear, though such a surf would not have rendered our waters turbid.

JOHN D. MCPHERSON.

THERE are some great troubles that only time can heal, and perhaps some that can never be healed at all; but all can be helped by the great panacea,—work. When grief sits down and folds its hands, and mournfully feeds upon its own tears, weaving the dim shadows that a little exertion might sweep away into a funeral pall, the strong spirit is shorn of its might, and sorrow becomes our master.—*Selected.*

CHRISTIANITY consists of the teachings of Christ, and of the life, individual and social, which is based upon his teachings and nourished by communion with him.—*W. Gladden.*

For Friends' Intelligencer and Journal.

A GLIMPSE OF CALIFORNIA.—II.

AT the Raymond, (at Pasadena), where we left our readers, we found very good accommodations and we were favorably impressed with the management and appointments of the hotel. Nothing is lacking in cheerfulness, and the bright young faces of the New England waiter girls, brought here for the purpose, add much to the attractiveness of the dining-hall, arrayed as they are, in garments of spotless white. Our delicious *dejeuner* over, we go out on the broad gallery running around three sides of the hotel and there, mapped out before us, is a scene of marvellous beauty in every direction as far as the eye can reach. The Raymond sits like a queen on a throne of Nature's handiwork, and a flight of steps reaches down to the smooth roadway which winds around the terraced hill and to the railroad station at its base.

But "lift up your eyes" and behold the far-reaching San Gabriel Valley! To the east the clouds, pregnant with dew, rest on the tips of the Sierra Madre mountains, and the foothills, gorgeous with their yellow mantle of poppies, slope down toward the picturesque city of Pasadena (Crown of the Valley) half buried in luxuriant foliage. In the same range "Old Baldy" looms up with gigantic proportions, and ninety miles away, snow-crowned San Jacinto pierces the clouds above the San Bernardino range, reminding us of the departed "H. H.," and of the home of the child of her fruitful genius, "Ramona." Far away, the long blue line, seen through a vista in the parted mountains is Old Ocean, obscured to the south by the Islands of Catalina and San Clemento. Could there be a view more charming, or as varied? It seems indeed as if our transition had been a sudden one from December into June, and from utter desolation to the matchless glory of a summer land.

What a panorama lay at our feet! Square fields of every shade of green, brown fields of upturned furrows; great groves of orange trees, with their round balls of golden fruit peeping from under the dark leaves. Orchards of peach and almond-trees, flushed with their pink mantle of bloom. Ornamental trees of countless shades and variety, almost tropical in their splendor. Imagine all this, as the clouds part and the sun bathes all in a shining light!

But nearer than this an unrivalled beauty awaits us, for all the teeming earth glows with a rich embroidery of flowers. The thought comes to my heart, of how the smile of the Divine Father has beamed here with creative love far greater than elsewhere, and filled the very air with untold gladness, and these, the voiceless children of the fecund earth, rise up with greetings, touching in their very muteness; while amongst all this, his joyous winged creatures flit through the bending shrub branches, and up through the perfume-laden air with songs of praise enough to compensate for all with such a tuneful adoration.

Alas! they tell me this freshness and greenness and beauty are but transient, and that ere long the fervor of the semi-tropical sun will burn out this in-

tense coloring, and nature will take her quiet summer rest after all this laborious effort.

We do not remain long upon this pinnacle, but wind around the terraces where grow a great variety of cacti and palms, and farther on are attracted by the stately eucalyptus trees, with their broad leaves below and long willowy ones toward the top. We have these trees to thank for the oil of eucalypti, so curative in cases of sore throat. They are native of Australia, and have been imported from there. These and the live oaks are the principal shade trees.

The latter are exceedingly attractive, real art studies, with their grotesque, gnarled trunks, twisted into every conceivable shape. They resemble somewhat our apple trees, and a grove of them is frequently mistaken for an orchard. The pepper-trees line the roadways, and are very ornamental and delicate in appearance, with their finely fringed leaves, and graceful clusters of tiny red berries their odor is soon discerned.

Our explorations lead us to a reservoir, near which is an old Mexican adobe house, modernized by a coat of plaster, a souvenir of the valley into which our artist wandered some twenty-two years ago, before any railroads had penetrated that far, and where the inhabitants consisted of Mexicans and Indians. Near by was an extensive orange grove, and after receiving a willing permission we went beneath the fruit-laden trees and gathered more than enough to satisfy our appetites, while cart loads lay untouched upon the ground, wasted as wantonly as our apples at home. The lemon-trees are also breaking beneath their load of fruit, and as this is the season for packing and shipping, great boxes and bags stand filled and ready.

The navel oranges are considered the finest. Large, sweet, and seedless, they command a higher price than the other varieties.

From here we ride in a southerly direction towards Alhambra, through fields of dead looking stumps, and are surprised to learn that they are vineyards,—entirely foreign to my idea of leafy bowers, from which hung the purple fruit. Grapes and oranges are the staple products, as wheat and corn are with us. The grapes yield freely, and command from twelve to fifteen dollars per ton. The market gardens are mostly cultivated by Chinamen who are thrifty and industrious.

A boom has recently struck California and everything is neglected for the time being for real estate, and corner lots and nearly all the fertile portions of the country seem to be staked out to tempt the pockets of invading tourists. Cattle-raising is mostly ignored, and the thousand little hills lose half their beauty from the absence of browsing herds.

Imagine a genuine picnic in March! and as the long line of carriages drove up to the hotel to receive their jolly loads, I thought of picnic-days agone, when their attraction lay not altogether in the scenery.

Out the broad avenues leading through Pasadena we passed. On either side were elegant homes, almost shut in by palm, eucalyptus, and olive trees, and the yards filled with great clumps of rose-trees and other gorgeous flowers. All is enclosed by hedges of cypress —a fine cedar—cut clean, and in a square shape, with here and there a tree allowed to grow above the green bank and tipped by a little cone. The effect is very pleasing. These hedges take the place of fences almost universally, and add much to the appearance of the country.

From the city we go through the valley and up the foothills of the Sierra Madre range. A good broad road leads to the summit, skirting the deep gorges, and now and then passing a diminutive ranch, where are growing, so high up, orange and peach trees. We saw also groups of bee-hives with plenty of honey-dewed blossoms near by. Many of us alight and gather the lovely mountain flowers—wild lilac, and currant, and cherry, and many varieties entirely new to us.

When we reach three thousand feet we halt before a small cabin; roughly built and unwhitewashed, and close by tiny orange trees and shrubbery had been recently planted out. Rapping at the door, it opens and a face peeps out, florid and beaming with good humor, the ruddy hue being intensified by contrast to the snowy beard, long and flowing. The owner announces himself as Owen Brown, son of the well known subject of the song "John Brown's body, etc." He with his brother Jason have lived in this lonely spot for two years, improving their surroundings, and finishing the fine road up which we have just come.

Sporting about over the cliffs close by were goats with their kids, pure white, the objects of love and diversion to these isolated men.

From here we descend and enter the Millard Cañon, up which we go over a very rough but romantic road for several miles, then halt and prepare our lunch under the great, fragrant bay trees. From the leaves of these trees the bay rum of commerce is extracted.

After our repast, with Alpine stock, we take the trail up along a mountain stream, which comes leaping over the smooth variegated stones, and emptying into deep pools; where, down through the emerald water—so transparent that the pebbles can be counted at the bottom,—we see the pretty speckled trout.

After a slight diversion,—caused by the unintentional bath of an amateur photographer in the cool water,—we push on up toward Millard Falls, which come leaping over the rocks, throwing the rainbow-lighted spray upon the walls of the dome-like chamber which encloses it. In this canon, are sycamore, acacia, and bay trees, and the banks are covered with beautiful ferns.

As the sun is lowering we take to our carriages and return to the Raymond, which looms up as a land-mark for the surrounding country.

Next day we join a party for Santa Monica, some thirty miles away on the sea coast. We go down the San Gabriel Valley, running some miles along the Arroyo Sico, the deep bed of an extinct river, through which winds a small stream. Pretty cottages are here and there, in the shade of great trees, with vegetable gardens under cultivation.

We stop for three or four hours at Los Angeles, eight miles from Pasadena. The residence part of

the town is built on a high bluff, from whence is commanded a fine view of the country.

We pass many beautiful homes with extensive grounds, and are tempted into some of the enclosures to get nearer view of the immense banana trees with their huge stalks shooting out of the ground, tipped with banner-like leaves, and bunches of bananas hanging beneath. These, with magnolia and leather trees, mandarins, English walnuts, limes, and many others, formed a novel variety.

Taking the train for Santa Monica we pass through a lovely rolling country, intense in greenness, and soon to our expectant eyes, the shining surface of the grand Old Ocean reveals itself, and, refreshed by the salt sea-breezes and all eagerness, we forget we have passed the heyday of youth, and leaping from the cars we run through the deep sand to the shore of the "Infinite Sea." How grand and impressive to our hitherto mountain-bounded vision, and how we pause to catch the deep-toned roar of the great white-capped waves as they die away on the sandy shore, leaving at our feet a tribute of white shells and graceful sea weeds.

Bending, with outstretched hands and beating heart, I touched for the first time the waters of the Pacific!

Then up we climb to the grand Hotel Arcadia and sit out on the balcony looking for the white sails of ships, but the unfurrowed waters touch the horizon with an uninterrupted line.

Our next near point of interest is San Gabriel, to which we drive, stopping first to make a picture of two giant fan-palms. which stood in front of a large farm-house situated in a knoll, under a group of grand old trees, and in the midst of orange groves and extensive vineyards.

I stepped into an old barn close by, and there saw the floor covered half a foot deep with large, fine lemons, while bags and boxes of them stood near.

A little farther on we came to the quaint old town of San Gabriel.

Here is the famous mission with its church, curious in construction. A long, low building, yellow and time-stained and with no pretentions to a tower, but on the side facing the street are holes cut in an elevated portion of the wall, and in them is a musical chime of bells, evidently having hung there for very many years.

And now, as I sit writing at my window—which overlooks the little court, where a disc of shining water is bordered by a luxuriant growth of callas,—my heart exalted with a faith and belief in the great love, wisdom, and goodness, out of which Supreme Essence springs all that beautifies and enriches the earth, comes the unwelcome news that death has entered the literary field and laid his chilling hand upon one of our most earnest workers "S. R.," whose well-known initials never failed to awaken a thrill of delight in all who loved to follow her in her wanderings through classic lands, where her knowledge and research opened to us such a rich store of information so graphically portrayed. And in her own country her nature-loving eyes saw and appreciated all that was grand and beautiful, and conveyed these impressions to her readers in her own happy way. But her pen is laid aside forever, and we must solace ourselves with the belief that Death has opened for her a vista more glorious than earth can afford, through which her purified spirit has passed into a glorious and beautiful land where there is "no variableness or shadow of turning."

After nearly two weeks at the Raymond, we reluctantly left our charming environments, and after a day at Los Angeles, retired to our sleeper, starting that night for San Francisco, and when morning broke we found ourselves beyond the limits of the green oases and once more out on the arid plains, cheerless and brown. Near noon, we went up grade to Tehachapi Pass, in the Sierra Nevada range, and reaching the summit at an altitude of four thousand feet,descended through a long line of tunnels, and around loops, and into deep cuts, past cottonwood trees, and live oaks, skirting the mountain rivulets.

Lower down vegetation increases, until the leaves wrap the trees in a mantle of green, but e'er we are aware, we leave the sunny slopes, and are once more on the plain. We look ahead over the level, interminable, waveless sea, bounded by the Sierra Nevada mountains, their long base supporting a white bed of snow. All along the route, the soil seems to vary, and suddenly we pass from utter sterility, to great fields of starry-eyed flowers, of the most brilliant hues, here a great dash of orange, followed by a wave of bright canary, then a sea of blue and white and red, then all is brown and bare again. Farther on we overtake little villages, and as we go along we see others increased in size, where better facilities for irrigation are afforded, and vegetation is more luxuriant.

Anon, we run into great California ranches, where thousands of acres of ploughed fields extend as far as the eye can reach, and we see the plows, some drawn by a dozen horses slowly over the scene. When night comes, we see the glittering lights in Oakland, and arriving there are steamed across the Bay to "Frisco," and are soon in the great, white, balcony-lined court of the Palace Hotel.

From Nob Hill a lovely view may be had of the city, the bay with all its shipping, and Oakland on the farther shore.

It is a novel sight to witness the Quaker drab seagulls, flitting about the vessels, dipping their white breasts in the sea.

We go out to the seal rocks, look through the Golden Gate, and enjoy seeing the wind-driven waves dash up on the rocky shore, and return again over the rifted sand hills, the very picture of desertedness.

Though but a few of the many interesting places in California have been visited, duty calls me home, and alone I set out on my journey over the waste places and bad lands, *via* Sacramento and Salt Lake City, feeling grateful to the destiny which shaped my course, even for a brief season, through a land of such sadness and such gladness.

EMILIE P. JACKSON.

OUR greatest good and what we least can spare is hope; the last of all our evils, fear.—*John Armstrong.*

NEWS OF FRIENDS.

MEETINGS AT RICHMOND, INDIANA.

WHITEWATER Quarterly Meeting was held at Richmond, on the 2d of Sixth month. The meeting of ministers and elders was held at 2 p. m., on Sixth-day, the 1st, with a larger attendance than usual.

The Representative Committee of Indiana Yearly Meeting convened at 8 a. m. on Seventh-day morning. This meeting was also well attended, and was an interesting occasion. We had a memorial of Sarah Brown, (prepared by Westfield Monthly Meeting), whose useful life was extended to the extraordinary age of over 101 years. It will go to our next yearly meeting.

The quarterly meeting convened at 10 a. m., and was very largely attended. A goodly number of representative members were present from all our branches. We had the company of several from Miami Quarter, and our friend Jonathan W. Plummer, a minister of Chicago, whose gospel labors were edifying and encouraging. Joel Birdsall, a minister of Camden Monthly Meeting, was also favored to hand forth words of counsel.

At 7.30 p. m. our Quarterly Association of First-day Schools had a large and very interesting meeting. All our schools were represented by representatives, and two new schools were reported. The exercises, essays, and declamations of the pupils were interesting, and the remarks from teachers and others instructive.

At 9.30 a. m. First-day morning, our First-day School convened as usual, with the largest number of visitors we have had for years. J. W. Plummer gave the children a very interesting talk. John L. Thomas, of Fall Creek School, also made remarks. The public meeting began at 11 o'clock, and the large house was well filled. The spoken word flowed freely. Several favored testimonies were delivered. The remarks of J. W. Plummer seemed to meet the witness in many, to their edification and comfort, and the meeting closed under a very precious covering.

At 3 p. m. the memorial meeting in remembrance of our beloved friend Sarah A. E. Hutton convened very promptly, and was opened by appointing A. G. Gano and Emily P. Yeo, clerks, who came to the table. The first paper was a sketch of her life, read by Dr. James F. Hibberd; this was followed by a memorial prepared by the teachers and officers of the First-day School of Richmond. This was followed by remarks from those present, including J. W. Plummer, Joel Birdsall, Franklin Packer, and others. Our venerable friend of 90 years, Cornelius Ratliff, who is entirely blind, was in attendance and spoke very beautifully. A short poem was read by Esther S. Wallace. Sympathetic letters from absent friends, including Jesse M. Wilson, of Tennessee, and Hannah W. Plummer, of Chicago, were read. The attendance was very large. Many citizens besides Friends, who knew and esteemed her were present, and a large number of her old scholars and pupils, now men and women, were of the interesting company. Altogether the occasion was one of much satisfaction.

B. S.

SWARTHMORE NOTES.

COMMENCEMENT will occur on next Third-day, the 19th instant. The graduating class being the largest ever sent out, and other circumstances uniting to mark the occasion as one of special interest, there will no doubt be a large attendance. The exercises begin at 11 a. m. The following is the programme:

Boilers for Steam Heating.	Frank Cawley.
The Emancipation of the Women of India.	Alice M. Atkinson.
The New Astronomy.	Emma Gawthrop.
Gothic Architecture.	Thomas J. Brown.
The Regeneration of Greece.	Hetty C. Lippincott.
Nature in the Poetry of Bryant.	Esther M. Willits.

Conferring of Degrees.

Closing Address to the Graduates.

Joseph Wharton, President of the Board of Managers.

The graduates are as follows:

BACHELOR OF ARTS: Alice Minerva Atkinson, Holicong, Pa.; Sarah M. Conrow, Cinnaminson, N. J.; Joyeuse Linnig Fullerton, Wenonah, N. J.; Alice Hall, West Chester, Pa.; John Russell Hayes, West Chester, Pa.; Martha Potts Jones, Conshohocken, Pa.; Hetty Coale Lippincott, Riverton, N. J.; Jessie Pyle, London Grove, Pa.; Sarah Amelia Skillin, Glen Head, N. Y.; Carroll Hopkins Sudler, Sudlersville, Md.; Annie Eliza Willits, Syossett, N. Y.; Frank Pope Wilson, Purcellville, Va.

BACHELOR OF SCIENCE: *in Science:* Jessie Lippincott Colson, Daretown, N. J.; Edward Lawrence Fell, Holicong, Pa.; Emma Gawthrop, Wilmington, Del.; Thomas Montgomery Lightfoot, Germantown, Pa.; William Stanley Marshall, Milwaukee, Wis.; Charlotte Michener Way, Tempé, Arizona; *in Engineering:* Thomas Janney Brown, Lincoln, Va.; Frank Cawley, Woodstown, N. J.; William Lawrence Dudley, Washington, D. C.; Robert Parvin Ervien, Shoemakertown, Pa.; Philip Sharples Hall, Philadelphia, Pa.; Walter Hancock, Philadelphia, Pa.; Ellis Pusey Marshall, Jr., London Grove, Pa.; Aaron Cooper Pancoast, San Antonio, Texas; Joseph James Rhoads, Bellefonte, Pa.; William Henry Seaman, Jericho, L. I.

BACHELOR OF LETTERS: Esther May Willits, Old Westbury, N. Y.

Two graduates in previous years will now take their Master's degree: Guion Miller, Sandy Spring, Md., as Master of Arts, and Annie Tylor Miller, of the same place, as Master of Letters.

—The usual reception by the Senior Class will be given on Seventh-day evening, (16th instant), and the Class-day exercises will take place on Second-day, the 18th. The meeting of the Alumni Association will be held on Third-day afternoon, at 4 o'clock, and a reunion in the evening.

—At the annual meeting of the American Association for the Advancement of Science, at Cleveland, Ohio, beginning Eighth month 15, Professor Arthur Beardsley, of Swarthmore, will be the Secretary of the Section on Mechanical Science and Engineering.

—On First-day, the 3d inst., Margaretta Walton attended the meeting and spoke, also Prof. Allen C. Thomas, of Haverford College; on the 10th Margaret Howard, of Philadelphia.

YEARLY MEETING COMMITTEE ON THE GEORGE SCHOOL.

The Committee of Philadelphia Yearly Meeting on the subject of the George School held two session on the 8th inst., at 10 and 1.30 o'clock, at 15th and Race streets. Sixty-one out of the sixty-eight members were present. The nominating committee to bring forward names for the several sub-committees reported the following, who were approved:

Committee on the Form of the Trust: James V. Watson, John Saunders, Emmor Roberts, Pierson Mitchell, Clement M. Biddle.

On Location: George Watson, Edmund Webster, Edward Hoopes, Nathaniel Richardson, Isaac Eyre, Susan G. Justice, William P. Bancroft, Matilda Garrigues, Nathan Maule, Robert L. Pyle, Samuel C. Kent, Robert B. Dixon, Henry R. Fell, Clayton Conrow, Benjamin Heritage.

On the Scope and Character of the School: Martha G. McIlvain, Milton Jackson, Annie Cooper, William B. Webb, Rebecca B. Comly, Isaac C. Parry, Mary Satterthwaite, Howard M. Jenkins, Hannah C. Davis, Hugh B. Eastburn, Emma D. Eyre, George L. Maris, Lucy Smyth, Wm. L. Jackson, Benjamin Martin, Deborah F. Stubbs, Samuel Wilkinson, Sarah Ann Conard, Mary H. Barnard, Richard T. Turner, Jr., Rachel Satterthwaite, Jane J. Haines, Jane D. Satterthwaite, Susan W. Lippincott, Howard M. Cooper, John M. Lippincott, Wm. Wade Griscom, Wm. T. Hilliard, Elizabeth J. Acton, John Eves.

On Finance: Howard M. Jenkins, Edmund Webster, Clement M. Biddle.

The time of both sessions was chiefly occupied in discussions upon the general features of the proposed institution. In reference to the probable amount of the Fund, a member stated that, appraising the real-estate at Overbrook, (170 acres), at $2,500 an acre, the estate would amount to about $625,000. The feeling seemed to be general that out of such an amount there should be at least $500,000 reserved as an endowment fund. There was also unanimity of expression that the school should be plain and substantial in its character, thoroughly Friendly, and not expensive.

The general committee adjourned to meet again at the call of the Clerk. It is probable that it will not be called together again until autumn; in the meantime the sub-committees will be at work. Those on the character of the school, and on location, met immediately and laid out some plans of procedure,—in the direction, simply, of obtaining information.

That "we must take people as we find them," in this world, is unmistakably true; but that we must leave people as we found them, is to admit that our efforts in their behalf have been utterly valueless. Taking people as we find them, and leaving them a great deal better for our presence and labors, is the simple duty of all of us.—*S. S. Times.*

"Truth being founded on a rock, you may boldly dig to see its foundation; but falsehood, being built on the sand, if you proceed to examine its foundation, you cause its fall."

LONDON YEARLY MEETING: THE RICHMOND DECLARATION NOT ADOPTED.

In London Yearly Meeting, on the 29th ult., an extended and very interesting discussion took place over the question of action upon the "Declaration of Faith," prepared at the Conference at Richmond, Ind., last year. The meeting was held in joint session of both sexes, and the room was inadequate to accommodate all who desired to be present, a deep interest being felt in the subject. About 1,200 persons, it was estimated, were in the meeting, and others were unable to get inside.

The report of the delegates who attended the Conference on behalf of London Yearly Meeting was read, and also the "Declaration," and other documents, after which brief verbal statements, mainly personal in their character, were added by the delegates. The question was then considered, what disposition to make of the "Declaration," and the report. W. S. Lean, principal of the Flounders Institute, led off in an earnest argument against the adoption of the "Declaration," disapproving it altogether, and urging the Yearly Meeting to make no further use of it in any way. Richard Littleboy followed, taking decidedly the opposite view. Dr. Thomas Hodgkin agreed with W. S. Lean, speaking of the document as a "creed." Theodore Nield, principal of Dalton Hall, Manchester, followed on the same side, and then Helen Robinson, Liverpool, spoke, desiring the Yearly Meeting "not to accept the Declaration in any way, its tendency being to create disunion." Her address made a deep impression. Matilda Sturge was equally emphatic in the same direction. Then followed a few expressions on the other side. Anna Maria Wigham, Dublin, spoke against adoption, and after her Jonathan B. Hodgkin, William White, of Birmingham, Ann Fowler, London, W. E. Turner, of Liverpool, all disapproved adoption but suggested its *reception* as part of the proceedings of the Conference to which the Yearly Meeting had sent representatives. Caleb Kemp, (assistant clerk), thought we could do no less than receive it, and deprecated the idea of its being a creed. Wm. Fowler, London, thought the minute recording the "reception" must be very carefully worded, so that at any future time reference to it would show that it was not adopted. Charles Thompson observed how many Friends had remarked upon the influence our decision would have upon "our American Friends," and pointed out that the minutes of the Conference spoke of it as composed of "all the Yearly Meetings of Friends in the world," and yet there were no less than thirteen yearly meetings in America not represented in it. Had Friends no feelings of sympathy for them? Was not the attitude of London Y. M. toward American Friends tending to promote *sectarian* Quakerism rather than a broad Catholic spirit, which would tend to draw Friends in America together? J. E. Littleboy and W. J. Graham spoke against the adoption of the Declation; after which a sitting of three hours closed.

In the second session, (on this subject), J. B. Braithwaite, Jr., Edward Grubb, Alfred W. Bennett, and W. E. Pearson, all spoke at considerable length, and with marked ability against the adoption of the

"Declaration." W. Graham did not object to a Declaration of Faith as such, but did not consider this one satisfactory. We could, he said, put forth nothing better than Barclay's Apology. Fielden Thorpe suggested a carefully drawn minute, accepting the report, etc., but distinctly regarding them as the outcome of the Conference, and in no way binding upon our members. J. S. Sewell, (editor of *The Friend*), Joseph Armfield, and several other Friends, could accept this conclusion, though some said they would have been better satisfied to have *adopted* the Declaration, notwithstanding some deficiencies contained therein.

Finally, the clerk produced a minute, which was agreed to, admittedly as a compromise. It expresses thankfulness at the safe return of London Yearly Meeting's representatives; gratitude toward American Friends for their universal kindness, acceptance of the report of the deputation, and *reception* of the "Declaration of Faith." It expresses no judgment of this document, and can make no recommendation respecting it; but it will be included among other documents presented to the Yearly Meeting, and appear in the published appendix to the Minutes. (Some Friends thought it would be sufficient to record the report, but that there was no need of circulating the Declaration.)

A good feeling prevailed throughout the meeting, and while there was earnestness and warmth displayed, it was at no time unbecoming.

The action taken is almost precisely the same as that of Dublin Yearly Meeting, but rather more definitely declines to give any assent to the Declaration.

The unfavorable reception of the "Declaration" by Friends of Great Britian will no doubt be a disappointment to the Western bodies that took part in the Richmond Conference, especially those which have gone farthest in assimilating themselves to the usual forms of church procedure. The *Christian Worker*, of Chicago, in its issue of 5th month 31, says:

"We as yet know very little of the discussion in Dublin Yearly Meeting over the action of the Richmond Conference; we may say that its decision is rather a surprise. The delegates from there are men of character and influence, representing the more liberal element of the Yearly Meeting, and we supposed that Friends of like views were much the more numerous. Judging from the discussions through the press in England, we infer that all those who hold doubtful views on theology, and who are not in full sympathy with the aggressive movements in our church are opposed to the adoption of the Declaration, but a considerable number of the more liberal class are of the same mind. Probably the same state of things exists in Ireland.

"It may seem that the result in declining to adopt the Declaration is a triumph for the class who are least in sympathy with American aggression, and that it gives strength to those who have advocated the closing of correspondence. But not so. Many of the most evangelical and liberal Friends oppose the adoption of the Declaration upon the grounds that it is dangerous to adopt *any* such declaration, pleading the evils of creed making. Those who find fault with the *doctrine* taught by *this* document are glad to unite with these in giving their voice against adoption, and thus lovers of our evangelistic methods, and enemies to them are united in this one point. After the battle is over we trust the soul-saving class will be all the more true and zealous in their service and thus overcome any encouragement their allies may have received through this action.

"As time advances it becomes more and more apparent that American Friends must consider their own surroundings and circumstances and needs, and move as the Lord's Spirit makes manifest in applying the Gospel, even though it may lead us apart from our British brethren in methods and the use of instrumentalities. Their action on any question is not to be followed by us, except as it is clear that by doing so we promote our evangelistic, missionary, and pastoral interests. In this way we are to consider our duty in reference to the Declaration of Faith."

THE SHADOW.

I SIT beneath the elm's protecting shadow,
Whose graceful form
Shelters from sunshine warm;
While for around me, in the heated meadow,
The busy insects swarm.
Better than any roof these softly swaying leaves,
Opening and closing to the passing air,
Which from afar the fragrant breath receives
Of forest odors rare.
And, as the branches sway,
Revealing depths on depths of heavenly blue,
The tempered rays of sunshine, glancing through
In flickering spots of light, around me play;
While little birds dart through the mazy web,
With happy chirp and song,
Fearing no wrong,
To their half-hidden nests above my head.
Thus, without motion, without speech or sound,
I rest,—a part of all this life around.

Beneath the shadow of the Great Protection,
The soul sits, hushed and calm.
Bathed in the peace of that divine affection,
No fever-heats of life or dull dejection
Can work the spirit harm.
Diviner heavens above
Look down on it in love.
And, as the varying winds move where they will,
In whispers soft, through trackless fields of air,
So comes the Spirit's breath, serene and still,
In tender messages of love to bear
From men of every race and speech and zone,
Making the whole world one,
Till every sword shall to a sickle bend,
And the long, weary strifes of earth shall end.

Be happy then, my heart,
That thou in all hast part,—
In all these outward gifts of time and sense,
In all the spirit's nobler influence,
In sun and snow and storm;
In the vast life which flows through sea and sky,
Through every changing form
Whose beauty soon must die;

LIFE'S TAPESTRY.

Too long have I, methought, with tearful eye
Pored o'er this tangled work of mine and mused
Above each stitch awry and thread confused;
Now will I think on what in years gone by
I heard of them that weave rare tapestry
At royal looms; and how they constant use
To work on the rough side, and still peruse
The pictured pattern set above them high.
So will I set my copy high above,
And gaze and gaze, till on my spirit grows
Its gracious impress; till some line of love
Transferred upon my canvas, faintly glows;
Nor look too much on warf and woof, provide
He whom I work for sees their fairer side!

—*Dora Greenwell.*

LONDON EPISTLE OF 1788.

We published, last year, the Epistle of London Yearly Meeting issued in 1787, also in connection with it, the Epistle of the same meeting for 1887. This year, a Friend of Plainfield, N. J., sends us the Epistle of 1788, which we print below, not waiting for the reception of that now issued by London. It (the Epistle of 1788), will be found, we think, an interesting and edifying document,—very simple and direct in its expression, and remarkably free from dogmatic and doctrinal matter.

THE EPISTLE

From the Yearly Meeting, held in London, by Adjournments, from the 12th Day of the Fifth month, 1788, *to the 19th Day of the same, inclusive. To the Quarterly and Monthly Meetings of Friends in Great Britain, Ireland, and elsewhere.*

Dear Friends and Brethren,

In that love which is not subject to change, we affectionately salute you. We have abundant cause to acknowledge the renewal of divine help and counsel to us, in this our large annual assembly, through the virtue and influence whereof we have been enabled to attend to the weighty concerns which have come before us, in much brotherly love and concord.

The accounts of Friends' sufferings brought in this year, for tithes, those called church rates, and other demands with which we conscientiously scruple to comply, amount, in Great Britain, to upwards of five thousand one hundred pounds, and in Ireland, to one thousand five hundred pounds.

By the accounts received from our several quarterly meetings, and by epistles from Ireland, New England, New York, Pennsylvania, and New Jersey, Maryland, Virginia, and North and South Carolina, and Georgia, we have the comfortable intelligence of fresh additions to our religious society, by convinced persons, and in these kingdoms more than at some former periods. For the religious progress of these we are warmly solicitous, that, by abiding closely under the forming hand, they may effectually experience an advancement in the weighty work of conversion; which gradually leads the believing and obedient soul into that child-like state, which is meet for the kingdom. May those who have had the privilege of birth-right among us, be watchful, lest, by swerving from the simplicity in which truth leads its faithful followers, they become cause of offense to such as are thus brought into our religious community. O friends! rest not contented with having been educated in a profession even of the truth itself, but wait to know the power, which regenerates and quickens the soul, and qualifies to see the things which pertain to the kingdom of God; that power which awakened the spiritual senses of our fore-fathers, which disturbed their rest in outward forms, and which caused them to be dissatisfied with everything short of the substance of Christianity. Let us not, their successors in the profession of the same living faith, degenerate into formality, taking up our residence as in the outward court; but let us seek after an entrance into that spiritual temple, where true prayer is wont to be made; and humbly and deeply wait for ability to worship the Father of spirits, in spirit and in truth. Cherish, we beseech you, the inward manifestations, and the tender impressions of divine grace, and walk therein: so shall ye experience preservation from the defilements and corruptions of the world. Deplorable hath been the consequences of living above the simple discoveries of the pure word of life in the heart, even darkness, error, and unbelief.

And, dear Friends, as we are convinced that pure and spiritual worship only is acceptable to God, so we are also firmly persuaded that the wholesome discipline established amongst us, can only be rightly and effectually exercised in the wisdom and power of the spirit. Wait therefore in all your meetings of discipline for the renewings of divine life, and to be clothed with the spirit of Christ: the fruits of which are meekness, long-suffering, and love unfeigned.

The religious concern of this meeting hath been abundantly manifested in our epistolary communications from year to year, in order to excite our brethren in profession to seek after durable riches and righteousness. We therefore earnestly intreat that this con-

sideration may take place in every mind: *What spiritual advantage have I experienced from these gospel labors of the church for the promotion of true piety and self-denial?* If such a consideration be attended to, it will not be necessary to communicate much; nor do we feel our minds under an engagement at this time to enlarge; but we refer to the many profitable and weighty advices in former epistles. Nevertheless, dear friends, the continuance of covetousness and of earthly-mindedness in many, calls upon us to endeavor to awaken such as are infected with it, to a sense of what they are pursuing, and at what price. The great Master hath shewn the unprofitableness of the whole world, compared with one immortal soul, and yet many are pursuing a delusive portion of it, at the expense of their souls' interests. But were all thus awakened, what place would be found for extensive schemes in trade, and fictitious credit to support them? To mix with the spirit of the world in the pursuit of gain, would then be a subject of dread; and contentment, under the allotment of Providence, a sure means of preservation.

The increasing solicitude for the suppression of the slave trade, which appears among all ranks of people, is cause of thankfulness to the common Father of mankind; and encourages us to hope, that the time is approaching when this nation will be cleansed from that defilement. Let us, in the meantime, continue, with unabating ardour, to be intercessors for the greatly injured Africans.

We conclude with expressing our comfort, that notwithstanding the many weaknesses which prevail, numbers of our beloved youth are preserved in faithfulness, to whom the gracious Lord hath extended, and is continuing to extend, the visitations of his light and love; whereby there is reason to hope that they will grow up in usefulness, and become a sucession of testimony-bearers to the truth. That they may in all humility receive the saving help, and by obedience to the pointing of the Divine Hand continue steadfast to the end, where the prize inestimable is to be obtained, is the fervent travail of our spirits.

Signed in and on behalf of the Yearly Meeting by

WILLIAM JEPSON,
Clerk to the Meeting this year.

MOST people probably imagine that birds learn to sing by instinct; that the song of the robin is as natural to him as his red breast; and that the blue-bird is no more liable to change his note than his color.

This common impression, however, is erroneous. Young birds will never sing the song peculiar to their tribe if they have never heard it, but, if associated with some other bird, will learn *its* song instead, . . just as an American child, taken to France when but a few weeks old, would never speak English if he never heard it, but would learn to speak French.—*Samuel Brazier, in Popular Science News.*

HOLINESS implies the inward state of purity and piety; righteousness, the careful observance of God's laws; grace, the spirit to obey those laws.—*Selected.*

ADDRESS TO SWARTHMORE GRADUATES.

THE following is the address of Joseph Wharton, President of the Board of Managers of Swarthmore College, to the graduating class, at the Commencement on Third-day last:

Graduates of Swarthmore College:

A sense of responsibility, and a real diffidence, assail me when thus attempting to say to you something not unworthy of the important occasion of your passing out from the pale of guarded education which you have here enjoyed, to take your several parts in the labors and cares of maturer life.

You who have been recipients, are to become givers and creators; from the passive you are to enter the active state; in such fashion as you have been formed and have formed yourselves, you are shortly to mould and form things and persons around you.

Probably you welcome the change, and some of you look forward perhaps to relief from exertion when you shall leave behind you the regularly recurring tasks which have here been set for you, but it would be a great mistake to imagine that an easy, happy-go-lucky life is before you, or that the tasks you are to encounter are easier than those you have had, or that the rules of conduct are less imperative in the great world than here.

Kong-fou-tse, the great Chinese philosopher, whose Latinized name Confucius, is perhaps more familiar to you, said very justly, "The scholar who hugs his ease is not worthy to be called a scholar," and this your experience at Swarthmore confirms. King Solomon said, "Whatsoever thy hand findeth to do, do it with thy might," and the wisdom of this counsel you will perceive more clearly the longer you live, for it is the law not only of morality and religion, but equally the law of development and of enjoyment.

The strength, skill, and knowledge which you possess, you have acquired by the diligent exercise of faculties which you inherited from diligent ancestors. It is not in vain that you have gathered them, for you will need them all, and their proper use will bring a fitting reward. Such further gains as you shall make must be acquired by similar diligence, and, excepting those brief periods of repose which are essential for recreation, you need not expect rest while you live—at least not in the sense of indolence.

Franklin said, "There is resting enough in the grave," to which may be added the French *mot*, "When one is dead, it is for a long time." Frederick, the great king of Prussia, said after the toils and struggles which he and his people endured in their long and finally victorious wars, "It is not yet time for Prussians to enjoy life." Milton tells us that he resolved "to scorn delights and live laborious days." But it can scarcely be necessary to multiply such quotations of individual expressions, for you have not failed to observe in your own experience and in your reading the truth of the proverb, "*Labor omnia vincit.*"

Neither have you failed to observe that a certain simplicity or even severity of life, and a certain sobriety of temper and demeanor, appear, along with diligence, to characterize the victorious men and nations.

You have observed that it was the hardy, laborious Hebrews of the Exodus who conquered all before them, while the comparatively enervated and luxurious Jews of a later period were carried away captive, with their vessels of gold and silver, to Babylon; that the poor and rugged Persians under Cyrus were irresistible, while the vastly more numerous and better equipped Persian armies of Xerxes failed to conquer the then hardy little Greece; that the invincible legions of old Rome consisted of free Italian farmers, while the mercenaries of Rome's rich and insolent later days yielded to the barbarians; that the fierce hordes of tough, sun-dried Arabs under Mahomet and his successors almost overran the world, while, after some centuries of easy life had sapped their strength, they and their adherents were driven from Spain and by successive steps from many other countries. And in all these and numerous other instances of the decay of nations, the decline of women from their pristine simplicity and vigor to mere softness and luxury, though less conspicuous than the decline of men, was not less marked and certain.

Yet, though the lives of persons and of nations point so clearly to the necessity of assiduous toil as a condition of success in whatever may be undertaken, no less in science, or letters, or law, or arts than in the wars of assault and defense which encumber history, yet the energy that is so spent must be well directed by careful intelligence or it will fail of its mark. William Penn advised his family when they engaged in anything, "to lay it justly and time it seasonably."

And further, it is not the mere eager attack of an object, like the dash of a wave that recoils after its blow, which attains its end. "Brag is a good dog," says an old proverb, "but Hold-fast is a better."

"The anger of a young man flames up like straw on fire,
But the fervid glow of heated steel is like an old man's ire,"

says a Spanish verse, which may be accepted for its indication of the effectiveness of deep and abiding purpose, without approving of anger as a motive.

The impetuosity of the Gauls, almost irresistible even to the Romans, failed at last against Cæsar's steady insistence, as it has in later days failed after temporarily prevailing against the firm pertinacity of English and Germans. "*Tenax propositi*" usually attains his ends.

Nevertheless, diligence, intelligence, and perseverance combined, though each is a mighty force, do not suffice to carry men or nations to real and permanent excellence. For, it must be remarked, that all the conquering nations and all the victorious persons have been filled with faith in, or have been as it were, inspired by, some power outside of themselves, which held them fixedly to a purpose.

Moses, Joshua, and David, believed absolutely in the tribal and exclusive Jehovah, the strong God and protector of their little nation, who was at the same time the malignant and formidable enemy of Egyptian, Canaanite, and Philistine, and in that fierce faith they overcame. Jesus, absorbed in loving belief in the Father of all, pointed out so fervently the necessity of faith that many of his followers held faith to be more essential than good works or sound reason, as Tertullian's famous dictum, *credo quia impossibile est*," some times written "*credo quia absurdum est*," I believe because it is impossible, or because it is absurd, in part testifies. And faith is at the bottom of Christianity's wonderful career, conquering and to conquer. No less was faith the mainspring of Mahomet's astonishing success and of his followers surprising achievements, overborne though it has so largely been by the better, though hardly more fervent, faith of Christendom.

If, on the other hand, you regard the nations which have decayed and perished, you will observe that loss of faith in their religion, their leaders, and their form of government commonly preceded their decay.

Take at random the great enduring names of history, and you will find a serious and solid faith (by no means in the same thing or the same power) to have underlaid the intelligence, craft, and diligence of each great man, keeping him fixed and ardent in pursuit of his object.

This power of faith I bring thus pointedly to your attention because of the tendency of modern society to levity, and of superficial modern thought to disbelief, to agnosticism, even to a sort of indifference concerning good and evil; an indifference which you cannot afford to share or to trifle with, for it is a spiritual dyspepsia which prevents achievement and leads to misery.

Yet observe that faith is not to supplant reason and assume to act as guide, for that is not its function. Reason must decide to what faith which binds so firmly shall be attached. You are not to allow your faith to fasten to any impostor or humbug that may claim it; to the shallow trickery of so-called spiritualism, for instance.

Neither are you required to have faith in that which satisfies some other person, and which he calls on you, perhaps for some selfish end, to follow. No man has the right to put a ring in your nose and lead or drive you at his pleasure. The apostle Paul says, "Let each man be fully persuaded in his own mind."

Do not pretend to believe until you do believe. Do not allow priest or book to usurp the authority which belongs to that inward guide, "the true light which lighteth every man that cometh into the world."

Having now reminded you that diligence, good judgment, earnestness, and robust faith in the right are indispensable to you in the pursuit of your aims, let me ask you to consider what are your aims.

You have, each of you, a wonderful array of senses trained to accurate perception of the external world, marvellous adroit fingers and nimble limbs, quick and strong intelligence, the wonderful power of speech; all these and many more, a host of most willing servants for life, more obedient than any slaves, more close and devoted than any friends, all alert and waiting to do your bidding without question or demur.

They may be called the tools with which you are to work, yet not for long, since soon "the night

cometh when no man can work." What will you do with them?

First of all, this compact and generous group of faculties must be kept in existence and in good condition by suitable nourishment and care. No art of man and no fine aspiration can dispense with the providing of due sustenance and shelter for the body, and it follows that earning of a livelihood on the part of man, and wise economy (which means literally house management) on the part of woman, common though these functions may appear, claim precedence over what might seem to be loftier pursuits. Without roots there can be neither flower nor fruit.

As for your further aims, no one can dictate or answer for you. Each individual must choose his own course, but let him choose it considerately, having in view what he is best fitted for.

The particular manner in which you follow your aims, availing yourselves of that natural right, the pursuit of happiness, is your own affair, so long as you do not interfere with the similar pursuit of happiness by others; and though sobriety and earnestness are indispensable, they do not debar enjoyment or even a reasonable share of merriment. All of you, while making better and happier those parts of the world in which your several lots shall fall, will, I trust, have reason to enjoy your lives.

Yet remember the injunction of the wise king, "Whatsoever thy hand findeth to do, do it with thy might, for there is no work, nor device, nor knowledge, nor wisdom in the grave whither thou goest."

For Friends' Intelligencer and Journal.

HOLD FAST TO THE FAITH.

In the far off ages there were righteous men both young and old that were chosen of God to show his power among the people. They did not gain the ascendancy in their time, but the words they uttered of denunciation and encouragement have through a long lapse of time come down to us with the same inspiring power they then gave them; for truth loses nothing in weight or value by lapse of time. Before the blessed anthem of "Glory to God in the highest, and on earth peace, good-will toward men" was sung by angels, intelligent minds were prepared to hear it; and through all the severities opposers could invent, a devoted few maintained their ground, and when chained to the stake, flames spreading around and over them, they could not, they would not, deny the Lord Jesus Christ for the sake of more time here. Oh, the blessedness of that faith that overcomes the world and has for its end the salvation of the soul! May we ever hold fast to it.

Life and death ordained by Thee,
First to prove then to bless
The soul with everlasting rest.

Sarah Hunt.

In character, in manners, in style, in all things, the supreme excellence is simplicity.—*Longfellow.*

The secret of life is not to do what one likes, but to try to like that which one has to do. And one does come to like it—in time.—*D. M. Craik.*

COMMERCE AND ARBITRATION.

The recent action of the Associated Chambers of Commerce, at the annual meeting of that body, held in London, when a resolution in favor of International Arbitration was unanimously adopted, afforded a gratifying proof that the business men of this country are becoming increasingly conscious of the profound connection between their own interests (to say nothing of higher claims) and the maintenance of peace and harmony between the peoples of the world. There is no doubt whatever that wars, even on a comparatively small scale and of short duration, are the occasions of incalculable losses and disasters to the commerce and business of nations, in addition to the bereavements, cruelties, and vice always following in their track. How innumerable are the instances of ruin which have been brought about by war. Indeed, even the apprehension of such an event suffices to bring into immediate confusion and panic all the European exchanges, and to throw down the values of stocks and investments to a great extent.

It is a matter for some surprise that the business men of this country have not taken a far more decided position than they have hitherto done, in urging the Government to enter into serious concert with the rulers of other nations, in order to devise measures for an assured resort to arbitration in every case of difficulty not capable of prompt and easy adjustment by the ordinary course of diplomacy. There is necessary an agreement as to certain definite principles of international law, so as to form, at least, the rudiments of a common Code, together with the establishment of some simple but permanent Court of Reference, always ready and vigilant to grapple with dangerous disputes, at the very outset, before they have become too bitter for a peaceful settlement. Some such arrangements as these surely ought not to furnish insuperable difficulties to the combined wisdom of the Cabinets of Europe; and if secured, they would be of priceless value to the interests of Christendom.

Yet comparatively seldom are the voices and influence of the leaders of the business world exerted in this direction. A noteworthy exception, however, was presented by that outspoken advocate of Arbitration, the late excellent Samuel Morley, one of the chief of "the merchant princes" of Europe. For example, his biographer, Mr. Hodder, records that in speaking of a quarrel between two Continental Powers, he declared: "I do not believe that the only solution is to be found in bloodshed. I have more faith in the utterance that 'Conference is always good;' and that 'Come, let us reason together' was always better than 'Come, and let us fight each other.'"

And on the most important opportunity ever furnished to Mr. Morley for expressing his views, when it devolved upon him, at the opening of a Parliamentary Session, to second the Address of the House of Commons in reply to the Speech from the Throne, he took occasion to raise his voice clearly and boldly in favor of Arbitration, in these memorable words: "Can nothing be done to lead to the establishment

of some International Tribunal, to which might be referred misunderstandings between one country and another, which, although serious in their results, are generally trifling in their origin? I should be glad to know, too, whether we cannot do something that might lead to a system of general disarmament, by which a constant source of danger would be at once removed, so that we might all breathe more freely, and not be continually exposed to the danger of witnessing, or being engaged in, conflicts and slaughter, against which our civilization so strongly revolts. Our commerce, and above all, our Christianity, alike protest against the enormous wickedness and inhumanity of war. It may seem Utopian to hope that the common sense of the world will be strong enough to adopt such a plan of settling the disputes of nations, but I speak under the influence of the agony and desolation to which the people of France were lately subjected; and I cannot help pressing the subject on the attention of the leaders on both sides of the House; and I believe all will agree that some attempt, at least, should be made in this direction."

Years have passed away since these words were spoken; and although several thoroughly practical instances have since occurred in which Arbitration has been had recourse to, for the successful settlement of particular difficulties, there has been no earnest attempt on the part of the rulers of any nation to establish some regular and permanent Tribunal to which, as a matter of course, all international disputes might be referred, at their very inception. The Courts of Europe are so crowded by military and naval dependents, that they cannot be expected to take any initiative in this matter, until a strong impulse is given by the voice and pressure of many such earnest men as Mr. Morley. Many accessions to the numbers of such men are greatly to be desired, in the interests of true patriotism and humanity.—*Herald of Peace* (*London*).

CULTURE IS FOR THE PEOPLE.

THERE is nothing too good for "the people." They are entitled to the very best there is. Whatever of superiority there may be in some, it ought to be for all. It belongs to the idea of the intellectual, moral, or æsthetic culture of the few, that it ought to be a source of blessing to the many. If any one is wiser than others, it is that he may instruct them; or stronger than others, it is that he may help them; or higher than others, it is that he may lift them up. There is one infallible token by which a genuine superiority of culture may be known; namely, its catholicity. It will hold itself to be a possession for all. It will be no private or secret thing, hidden away in a corner, for the special and exclusive enjoyment of one's self or one's set. It will be like the sun, which "shines for all." It will have about it something of the blessed commonness of the air and the sunshine.

Go to the greatest of the masters of human art, and you will see what we mean by the catholicity of culture. Their light was not hidden under a bushel. They made no "corner" in beauty. The sense for the beautiful with which God had endowed them, and the beautiful works of art which their immortal genius was enabled to create, were not regarded as being too sacred for the common gaze or too choice for the common enjoyment. Michael Angelo hung the dome of St. Peters where it might gladden alike the gaze of the peasant and the noble. Raphael painted his immortal frescoes to be the common property and enjoyment of the many. This was the way of the masters and it is God's way. . . . . There is a lesson to learn from the character and life of one who stands for the culture that is ideally perfect; if indeed it be not profanation to use the word of him and of the beauty and glory of "that imperial palace whence he came." No dread had he of contact with the uncultured. He lived among men; he mingled with all kinds of people; he shrank not from coarseness and rudeness; what he had was for all that were willing to receive; he condescended to men of low estate. From heavenly heights he stooped, that he might draw all men to himself. "Though he was rich, yet for our sakes he became poor, that we through his poverty might be rich." His example teaches us what a measureless difference there is between the culture that is of love and the culture that is of selfishness.

O reader, it concerns thee much to know what sort of culture it is that thou hast, if thou hast any. It matters much whether it be spurious or genuine; whether it be like a paltry candle or like a shining sun. By this token shalt thou know that it is true and not false. If true, it will be, not for thine own possession exclusively, but for others also; it will be, in some way and in some degree, for the amelioration and elevation, for the brightening and blessing, of the lot of thy fellowmen.—*Selected.*

Editorial Correspondence Friends' Intelligencer and Journal

TRAVELING WESTWARD.

CHICAGO impresses me as no other city has ever done. It is a constant surprise, whether one considers its location, its rapid growth, or the enterprise of its business men. The last may rather be called a reckless running into ventures, regardless of consequences. Failure in an undertaking is no bar to its completion; if one has to drop out, another is ready to step in and take up the work; nor does failure seem to affect men as it does in our more steady-going eastern communities.

When one considers that little more than a half century ago Chicago was a frontier trading-post, set down on the swampy margin of Lake Michigan with no hint of fitness for the location of a city such as it has grown into, we are filled with wonder at the possibilities of human achievement. There are buildings of such massive proportions that they compare with the best architecture of the age, reared upon a quagmire, yet solidly laid in masonry that seems as enduring as the rocky framework of the earth, and give no indications by flaw or warp of the uncertain foundation upon which they are built.

An invitation to attend the meeting of the Woman's Club was gladly accepted and an afternoon was spent in the rooms of that organization, which are also occupied by the Fortnightly Club, an associ-

ation of a purely literary character. The Woman's Club is largely interested in the leading questions of the day, and in whatever relates to the advancement of women. A lengthy paper on the "Board of Trade" was read by a prominent member of that body who had prepared it for another occasion, and by request repeated it before the club. It was both interesting and instructive to observe the close attention given to the reading of the dry details of the objects and advantages of the organization. The sharp, keen criticisms that followed gave evidence of a full appreciation of the subject, and what was of deeper significance, an intelligent questioning of the methods, as seen from a high moral stand-point. One could not but be impressed with the capability of women who are thus giving attention to public affairs to stand side by side with their husbands and brothers, in all that relates to the general welfare. A cup of fragrant tea with delicate biscuit, handed to each, and an interchange of pleasant greetings in which all seemed to participate, ended the meeting.

An afternoon and evening were given to Friends, quite a number of whom met at Jonathan W. Plummer's, by invitation. While there was no attempt to hold a "parlor meeting" in the distinctive sense, the conversation was directed in the channel of religious thought, and the earnestness manifested by several of the young people in the doctrine and testimonies of the Society as they were made the subject of conversation, was most encouraging. The drawback to social intercourse is the great distance that Friends live from one another, and this makes it necessary that their meeting be held in a central locality. While it is very desirable that they have a meeting-house of their own, the exorbitant prices at which land is held in the business part of the city, places the attempt to build entirely beyond their consideration. No better service could be rendered the Society by our wealthy members, whether east or west, than to start a movement that will give these Friends a permanent foot-hold among the religious bodies of Chicago.

A whole morning was passed among the attractions of Lincoln Park, which as to the floral display, will be finer a month hence. The drive along the lake, can hardly be surpassed for beauty in any other city, east or west. There are fine collections of animals, grouped in families, occupying enclosures in various parts of the park, and thus distributing the interest in the whole. One is led involuntary to ask: How has so much been accomplished in so brief a period? and is again reminded of the push and energy of the people.

From Chicago, westward, the same greenness of field and wood is observed, giving evidence of similar atmospheric conditions east and west. The great rivers Mississippi and Missouri flowed on with usual limits, it being a little too early for what is known along the Missouri bottoms as "the June rise." Of this I had some experience on my first visit to Nebraska, both on a steamboat and in an Indian canoe crossing from the Dakota side to the Santee Indian Agency. The low lands of the Agency were entirely flooded, and as the current swept along, it brought down whole trees that had been uprooted. The rapidity of the stream made these floating obstructions most formidable.

A fine iron bridge now spans the Missouri at the Blair crossing, which we pass over in the early morning, it being necessary to spend one night on the train from Chicago to Creighton, the western limit of the present journey. Along the route from Blair large herds of cattle, some sheep, and hogs of the black Poland variety, were feeding on the rich prairie grass, now in its finest condition. The young stock in many places gave evidence of success, though the cholera is causing some anxiety farther down in the State. The eminent scientist, Dr. Billings, of the State University at Lincoln, is giving special attention to this disease with most satisfactory results. He seems to have the entire confidence of the farmers of the State, in whose interests his time and labor are given; perhaps nowhere else in the country is work in this direction being so well done.

This is University week, and Lincoln is filling up with visitors from various parts of the State, drawn together in the interests of the institution. As Dr. R. is one of the regents, a little party is made up to attend with him. This is very satisfactory, as it gives opportunity to call upon the members of the Society of Friends living in and around Lincoln, and so fulfill one object of this western journey,—the visiting of our isolated members in their homes, and carrying to them the loving sympathy of their fellow members, from whom they are so widely separated. The ride from Creighton to Lincoln is through a pretty section of the State, well wooded with cultivated timber, except along the Elk Horn river, where there is considerable natural growth. The farms are under good cultivation and the homes and out-buildings generally good. In some places the houses are well-built and roomy, and the surroundings indicate refinement and culture in the occupants. West Point, Norfolk, and Freemont, through which we pass, are all rapildy advancing in population and importance. Freemont has a city government, is well lighted, the central part with electric lights, and has water-works. It is very prettily situated, and has large wholesale houses, that send out their salesmen to the towns and villages in the more distant parts of the State. The churches and public buildings, including the school-houses, compare favorably with the same buildings in any of our older settled towns and cities. The cream-colored Milwaukee brick, of which some of the finest private residences are built, has a pretty effect as seen through the fresh green of the trees. These latter every wise builder in this country takes pains to have in fine growing condition, before he builds. The red brick is now made in all this section, and is used in the building of most of the large business houses in the towns through which we pass.

Owing to the necessity of waiting for connecting trains, the trip to Lincoln, which might easily be accomplished in half-a-day, takes from 6.15, a. m. to 9.40, p. m. We make the journey and reach our destination on time.

SCRIPTURE LESSON, No. 25.

SEVENTH MONTH 1, 1888.

TOPIC: GOD'S COVENANT WITH HIS PEOPLE.

GOLDEN TEXT: This is the covenant that I will make with the house of Israel after those days, saith the Lord; I will put my law in their inward parts, and in their heart will I write it; and I will be their God, and they shall be my people.—Jeremiah 31: 33

READ Exodus 24: 1-12.

OUR lesson for to-day goes back to the Old Testament, and deals with the relations of Jehovah with the people of Israel through Moses, their leader. These relations were in the form of a covenant. The word covenant means primarily "a cutting," and refers to the custom in the very earliest times of dividing an animal in two equal parts, and the persons making the covenant, or the contract, as we would say, passing between the parts, which was the ratification of the covenant. (Gen. 15: 8–18.) The word testament is used in the same sense; the old covenant or testament refers to the first part of the Bible, and the new covenant or testament to the part that embraces the Gospel of Jesus. By a covenant each party bound himself to fulfill certain conditions, and was assured of receiving certain advantages. In the making of a covenant between man and man, God was solemnly invoked as a witness. It was the most sacred compact that could be entered into.

As we study this lesson, we must bear in mind that though the language is very literal, it is to be received and understood in the sense in which we now understand the Divine presence and the Divine voice. It is declared in the New Testament, "No man hath seen God at any time." (John 1: 18.) This is sufficient to explain to us that in all those places where it is said God appeared to men and talked with them, the language is figurative, and was so understood by those with whom these covenants were made. The Old Testament declares of Him, "Thou art the same, and thy years shall have no end." (Ps. 102: 27.) It is important that we keep this thought in our minds when reading and studying the Scriptures of the Old and New Testament.

The blood of the covenant. The blood in Scripture has a peculiar and mysterious sacredness as belonging to life. In using the animal creation for food, the Hebrews were required to pour out the blood as an offering to God, and this is what is meant by the blood of the covenant, the only difference being the animals thus slain were selected from the flock or herd according to the requirements of the law relating to sacrifice, and after the offering had been made the flesh was the property of the priests. How deep and significant does the thought become with this understanding of it, that "without the shedding of blood (*i. e.* the yielding of the life) there is no remission of sins." There must be a consecration of the life to the Divine will, to find acceptance with God.

The true teaching of this lesson is, that obedience will surely be rewarded.

"And he said unto Moses, 'Come up unto the Lord.'" We see by this how his patient endurance of bitter trials was regarded by his Heavenly Father. He had just been commanded to make no covenant with the Philistines, nor with their gods, and now, as farther evidence of his acceptance, he is called to come up unto the Lord, and receive his message for the people.

It reminds us of the scenes through which George Fox and many of our early Friends passed, remembering the command not to bow down to false gods, "but thou shalt overthrow them and quite break down their images." Many are hearing this call now, and are hearing also the words, "My angels shall go before thee."

We wonder how the children of Israel could have been so ungrateful to Moses, their best friend, after he had brought them through so many difficulties. Are we not even more so to our loving Father, who is caring for us every moment of our lives?

If our own faults have caused us sore disappointment, we murmur that such troubles should have fallen to our lot, and wish God had ordered things more wisely for us. Our case is much worse than theirs, for we have the example and teaching of Jesus of Nazareth, always seeking the happiness of his Father's children: never his own comfort and preferment.

EARTHLY PLEASURE.

IT was a remarkably hot and sultry day. We were scrambling up the mountain which rises above the east shore of the Dead Sea, when I saw before me a fine plum tree loaded with fresh, blooming plums. I cried to my fellow-traveler, "Now, then, who will arrive first at that plum-tree?" And as he caught a glimpse of so refreshing an object, we both pressed our horses into a gallop to see which should get the first plum from the branches. We both arrived at the same time, and each snatching a fine, ripe plum, put it at once into our mouths, when on biting it, instead of the cool, delicious, juicy fruit we expected, our mouths were filled with a dry, bitter dust; and we sat under the tree upon our horses, sputtering and hemming, and doing all we could to be relieved of the nauseous taste of this strange fruit. We then perceived, to my great delight, that we had discovered the famous apple of the Dead Sea, the existence of which has been doubted and canvassed since the days of Strabo and Pliny, who first described it.—*R Curzon.*

GOD is the light of heaven and earth. His light is as a niche in a wall, wherein is a lamp, and the lamp in a glass, and the glass as it were a shining star. It is lit from a blessed tree, an olive neither of the east nor of the west; and the oil thereof would well-nigh give light though no fire touched it, light upon light.—*The Koran.*

THINK of heaven with hearty purpose and strong hope to get there.

"So should we live that every hour
May die as dies the natural flower,—
A self reviving thing of power;
That every thought and every deed
May hold within itself the seed
Of future good and future meed."

PHILADELPHIA, SIXTH MONTH 23, 1888.

THE GROWTH OF EXTRAVAGANCE.

WE are living in a great age, and it lies so close to us we can but half see its greatness; yet we can see enough to make us to rejoice and be grateful for the triumphs gained by genius and talent in the broad fields of science and art, so many of which tend directly to the comfort and advancement of the people.

And it is one of the glories of genuine culture that it belongs to the whole people, and cannot be kept for the exclusive few. God fashions the truly noble mind, in which is held a great gift, largely after his own pattern, and that which such a mind has to offer is for the benefit of the many. Hence all the great inventions and discoveries, when perfected and applied, tend to civilize and uplift the masses. To take but one instance, from the many that press and crowd upon us when we pause to think them over, that of the railroad, together with its master power, the steam engine, and we at once see how these alone have made practicable the opening up of vast regions with all their far-reaching possibilities.

But it has been wisely said, that "our responsibility keeps even pace with our ability in any line, and to keep the balance true is to accomplish the will of Heaven;" and it is this "true balance" that should largely concern those of us who bear the honored name of Friends, a name which stands for simplicity and moderation, and a perfectness of life that should grow from such a fundamental principle as we profess to hold.

That we are not all watchful enough in this regard is becoming painfully apparent. Especially in yielding too much to the onward march of extravagant expenditure, in the variety of things that are fast laying claim to be n in modern living. In many cases the strain to produce the means needful to sustain these so-called essentials, is becoming a burden too heavy to be borne, and there needs to go up a cry of *halt* ere we pursue further a course that tends to the weakening of the physical, to the retarding of the proper growth and development of the mind, and largely to the unrest of the spirit, stifling its true progress.

Should the question be asked, where do we see this? we will say in reply, let us look at our everyday lives, at the daily expenditures in our families, at our tables with all the modern appointments and the super-abundance of food, at our dwellings filled too full of their furniture and garnishings, at our dress with its too great show of adornments; to all of these we have added little by little, till the care becomes, (we had well nigh said a curse) at least burdensome, robbing us of time, of strength, of money. Especially do we note in some of our schools, the need there is for a wise check to be placed,—in which parents, teachers, committees, faculties, all should coöperate,—upon increased expenditure, not in the needful appliances for learning, but on the non-essentials, such as invitations, entertainments, and all closing-day appointments, that these be simple, inexpensive, and appropriate as becomes a people whose desire has ever been, and should continue to be, to use in true moderation the good gifts committed to our keeping. And this that we may have to spare for the improvements that are always needed, as well as for aiding and assisting our fellow beings to higher and better levels. Let us not become a people "so loving dainties," that we shall "beggar ourselves," and become disabled from doing great good.

MARRIAGES.

[We wish to correct the John Johnston and Martha Sharpless Cranston marriage notice to Mary Sharpless Cranston, and so re-insert the notice].

JOHNSTON—CRANSTON.—Sixth month 6th, 1888, at the residence of the bride's parents, West Philadelphia, by Friends' ceremony, John Johnston, son of the late William and Isabella Johnston, of Haddington, Philadelphia county, Pa., and Mary Sharpless, daughter of Samuel and Edith S. Cranston.

KESTER—VANDERSLICE.—On Fourth-day, Sixth month 13th, 1888, at the residence of the bride's mother, Millville, Columbia county, Pa., by Friends' ceremony, William W. Kester, of West Philadelphia, son of John and the late Ann J. Kester, and Tacy, daughter of Martha and the late Thomas J. Vanderslice.

MAGILL—ALTEMUS.—Sixth month 14th, 1888, at Race street meeting-house, under the care of the Monthly Meeting of Friends of Philadelphia, Edward W. Magill, of Philadelphia, son of Watson P. and the late Mary W. Magill, and Carrie, daughter of Martha and the late Francis S. Altemus, of Philadelphia.

DEATHS.

BROWN.—At Waynesville, Ohio, Fifth month 20th, 1888, after much suffering which she bore with great fortitude, ready and desirous of being released, yet patient to abide the Master's will, Elizabeth W. Brown, in her 79th year; a member of Miami Monthly Meeting.

CORLIES.—Suddenly, at Germantown, on the evening of Sixth month 13th, 1888, S. Fisher Corlies, in his 58th year; a member of the Monthly Meeting of Friends of Philadelphia.

COX.—In Brooklyn, N. Y., Sixth month 13th, 1888, Harriet S., widow of Benjamin Cox, late of Philadelphia, in the 82d year of her age.

EVANS.—Suddenly, on Fourth month 12th, 1888, at Pasadena, California, Lindley Murray, son of the late

Oliver and Mary W. Evans, of Philadelphia; a member of the Monthly Meeting of Friends of Philadelphia, held at Spruce street.

GILLINGHAM.—On Sixth month 15th, 1888, Rebecca, daughter of the late Joseph and Rebecca H. Gillingham, of Philadelphia.

HAMMOND.—At his residence, in Mallory township, Clayton county, Iowa, (north of Colesburg), on Fifth month 23d, John Hammond, aged 73 years.

He came to Iowa in 1855, and settled in Mallory township, and engaged in farming. In 1856 he lost his wife by death, and in 1862 he was married to Ruth Anna Mock, of Bedford county, Pa., (sister of his former wife.) He was a Friend and "his word was always as good as his bond." He made no profession of faith other than that instilled into his mind in childhood, which was founded on the principle of the "Golden Rule." No man led a more blameless life than he. When under the shadow of death he felt that he had no reason for change of faith, or any preparation to make for the coming change. As a neighbor he was universally respected, and his death is greatly regretted. H.

HARDY.—Sixth month 10th, 1888, at the residence of her daughter, Elizabeth Hardy, of softening of the brain, aged 78 years; a member of Fall Creek Monthly Meeting of Friends. She and her husband opened their hearts and home and shielded Frederick Douglass from a heartless mob while delivering a lecture on the Abolition of African Slavery, in the year 1843. She was one of the original members of our meeting when it organized in 1834.

Our love and esteem for her was manifested by the very large congregation that assembled at our meeting-house at the time of her funeral. W. W. Foulke prayed impressively and spoke afterward to our instruction.

J. L. T.

LUNDY.—On the 14th inst., near Rancocas, N. J., Mary W., relict of the late Richard Lundy, in her 83d year.

TYLER.—Fifth month 10th, 1888, Anna H., wife of J. Edgar Tyler, of Upper Providence, Delaware county, Pa., in her 36th year.

FRIENDS AT THE CAPITOL.

A DELEGATION of Friends visited the seat of Government on the 13th of the present month, bearing memorials from the Yearly Meeting of New York to the Congress of the United States and President Cleveland, as follows:

INTERNATIONAL ARBITRATION.

To the United States Senate and House of Representatives:

The following special minute was adopted by the New York Yearly Meeting of the Religious Society of Friends, held in the city of New York, Fifth month 28th to the 31st inclusive, and directed to be signed by the clerks and forwarded as a memorial to your honorable body.

In consonance with our well known testimony against war and in favor of peaceful methods of settling difficulties, we recognize with gratitude to the Divine Father the widespread and rapidly increasing interest in our own and in other countries in international arbitration.

We note with much satisfaction the introduction in our national Congress of measures proposing a permanent Court of International Arbitration, and we are united in earnest, prayerful desire that such a tribunal—peaceful, just, humane—may by the favorable action of Congress and the official approval of the President of the United States, be soon established, and that thus ultimately the Prince of Peace may be honored by all the nations of the earth, and that all in harmonious accord may proclaim, "Glory to God in the highest, peace on earth, good will to men."

ROBERT S. HAVILAND,
AMANDA K. MILLER, } Clerks.

INTOXICANTS AND THE NATIVE RACES.

To the United States Senate and House of Representatives:

The following special minute was adopted by the New York Yearly Meeting of the Religious Society of Friends, held in the city of New York, Fifth month 28th to the 31st inclusive, and directed to be signed by the clerks and forwarded as a memorial to your honorable body:

We view with much regret and concern the very destructive traffic in intoxicating beverages which is being carried on by citizens of our own and of other countries with the native races of Africa and of the Western Pacific islands, disastrous alike to the temporal and spiritual welfare of an untutored people, in some instances threatening the extinction of entire tribes.

And we commend this important subject to the attention of Congress and the President of the United States, and respectfully ask that, in the exercise of their constitutional prerogative "to regulate commerce with foreign nations," appropriate and effective measures may be adopted for the discouragement and restriction of this wasteful and destructive exportation of intoxicating liquors by American citizens to the Congo country and other portions of Africa and to the islands of the Western Pacific.

ROBERT S. HAVILAND,
AMANDA K. MILLER, } Clerks.

These memorials were approved by Friends' Union for Philanthropic Labor, at their recent meeting held in New York, and the officers of that body directed to endorse them over their official signatures, on its behalf.

The delegation consisted of Thomas Foulke, Aaron M. Powell, Amanda K. Miller, and Mary Willits, of New York; William Wood, Jonathan K. Taylor, Edward Stabler, Jr., and Joseph J. Janney, of Baltimore; and Levi K. Brown, of Lancaster county, Pa.

The Friends first asked an audience before the Committee on Foreign Relations of the House of Representatives. Although the House was in session, six members of the Committee responded cheerfully and promptly to the request, and an informal meeting was held in the room of the Committee. The members present were McCreary, of Kentucky, Chairman; Rockwell, of Massachusetts; Hooker, of South Carolina; Russell, of Massachusetts; Cothran, of South Carolina; Morrow, of California.

The memorial on International Arbitration was read by Thomas Foulke and submitted with a few appropriate remarks.

William Wood, Edward Stabler, Jr., and Amanda

K. Miller also spoke in earnest advocacy of the establishment of international arbitration.

The memorial in regard to the exportation by our citizens to Africa and the islands of the Pacific Ocean, of alcoholic stimulants, was read by Aaron M. Powell. He briefly alluded to the terrible havoc the use of liquor is making upon the African races, and earnestly besought the Committee to take cognizance of the subject, and recommend such legislation as will discourage and restrict citizens of this country from sending among them this terrible engine of destruction.

Jonathan K. Taylor spoke earnestly in behalf of both the measures under consideration, and presented statistics illustrating the ravages of war, startling in their character. Edward Stabler, Jr. mentioned several instances wherein arbitration had been successfully invoked to secure a peaceful settlement of grave differences between nations.

The chairmanof the Committee accepted the memorials and expressed his great satisfaction at the interview. He stated that the subject of International Arbitration had claimed the attention of the Committee to no small extent, and they had recommended radical legislation upon it. He also stated that it was designed, in the near future, to hold a Congress of the North and South American Republics in the intersts of International Arbitration, and that important results were expected to flow from that effort. The members of the Committee generally were quite cordial in their expressions of approval, and seemed united in feeling with the delegation on the subject of Arbitration. No expression, however, was given on the subject of the other memorial.

The Friends then repaired to the White House, where they had an interview with the President. The memorials were read and presented to him with appropriate remarks by Thomas Foulke and Aaron M. Powell. The President responded very cordially to the sentiments contained in the memorial on the subject of Arbitration and also to the remarks made in connection with it. He said every practical measure looking to the establishment of a peaceful method of settling national or international differences, would receive his unqualified support. He alluded to an incident of recent occurrence, wherein two of the South American countries submitted a question of considerable gravity concerning which there was a difference, to the President of the United States for settlement. He gave the subject a good deal of his time and his best thought, arrived at a judgment, made the award, and it was pronounced satisfactory by both parties and was accepted by both as final.

The attention of the President was then called to the Indian Question. Joseph J. Janney, Clerk of the Committee on Indian Affairs, of Baltimore Yearly Meeting, alluding to the effort now being made to secure the appointment of matrons to instruct the Indian women in housekeeping, asked the President to throw his influence in favor of that measure.

He spoke of a visit recently made to the Indian Country by Levi K. Brown and himself, and assured the President, that from personal observation, as far as the Santee and Ponca Indians are concerned, the one item of the ignorance of Indian women in domestic affairs, is the only thing that stands between those tribes and independence of Government oversight or self-support.

Levi K. Brown and several other Friends spoke briefly of their experience in connection with this subject, and also in general terms as to the Indian policy of the Government.

The President expressed a great interest in the subject, and promised to use his efforts to promote the special object in view, when opportunity offered. The deputation then withdrew.

The Capitol was again visited and an informal Conference had with Senators Sherman and Evarts of the Committee on Foreign Relations of the Senate. Senator Evarts took charge of the memorials, and on the following day presented them in the Senate. On the same day, on motion of Senator Sherman, the Senate passed the following arbitration concurrent resolution.

The Chief Clerk read as follows:

Concurrent resolution to invite internation arbitration as to differences between nations.

Resolved by the Senate (the House of Representatives concurring), That the President be, and is hereby, requested to invite from time to time, as fit occasions may arise, negotiations with any government with which the United States has or may have diplomatic relations to the end that any differences or disputes arising between the two governments which cannot be adjusted by diplomatic agency may be referred to arbitration, and be peacebly adjusted by such means.

Those who composed the delegation had reason to feel that their mission was satisfactorily accomplished and that the results were on the whole encouraging.

Dr. R. T. Davis, a member of the House of Representatives from Fall River, Mass., presented the memorials in that body. The delegation was greatly indebted to Dr. Davis for assistance in arranging the several interviews. He was unremitting in his attention to the Friends, and deserves the thanks of all concerned. J.

For Friends' Intelligencer and Journal.

A VISIT TO THE PHILADELPHIA HOUSE OF REFUGE.

At a visit lately made to the House of Refuge, I was much surprised at the appearance of the children, who were looking cheerful and happy, as though the best of care was being taken of them. The time was First-day, afternoon, and happily for me I was met on the way by one of the best friends the institution knows. We first saw the whole of the white children, boys and girls, (600) sitting in decorous silence in the Chapel, waiting for the services to begin. It was a beautiful sight, so many young faces, although a sadness came over me when I thought of the various causes that had brought this large number of children together, but this feeling was almost overcome, by one of thankfulness to the Giver of all Good, that there was such a place conducted with

wisdom and love, to reclaim the wandering lambs of the flock. After hearing them sing, and a prayer having been offered, we went over to the colored department; here we found the same state of things, except the number was not so great; they, too, had commenced their exercises. The sermon, which was very impressive, was on the time of the rising of Jesus from the tomb, and his subsequent meetings with his disciples (just before his Ascension) in which he bids them go back to Jerusalem, until they should be baptized with the Holy Ghost, which was the Comforter that had been promised. Several beautiful hymns were sung by these dusky children, who evidently put their hearts in the melody, and seem to have more harmony in their natures than we of paler complexions.

The children are taught by seventeen competent teachers, there being ten grades in the schools, beside a grade of Honor, as it is called, in which each scholar must have been enrolled at least for two months, before they can leave the institution. The girls are taught housekeeping in all its branches, they doing all the work, washing, ironing, etc., both for themselves and the boys. They also make all their own clothing, and the boys' underwear. The boys work a certain portion of each day at various trades, shoemaking, cane-seating chairs, etc. I was informed that the income from this portion of the work amounted to about $3,000 per year. I was impressed with the earnestness and devotion of those having charge of this institution, and the words that Jesus read from Isaiah, came with much force to my mind, "The spirit of the Lord is upon me, because he hath annointed me to preach the Gospel to the poor, he hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised."

On inquiry I learned that there was a large Temperance Society, to which were attached nearly, if not quite all of the inmates of the Institution.

C. A. KENNEDY.

FRIENDS' CENTRAL SCHOOL.

THE closing exercises of Friends' Central School, Fifteenth and Race streets, occurred on the 15th. Thirty-seven pupils received diplomas as graduates of the institution. They were addressed in an earnest, impressive manner by George L. Maris, Principal of the Boys' Department, and Annie Shoemaker, Principal of the Girls' Department. The exercises were opened with reading of Scriptures by Annie Shoemaker, then followed orations and essays. The orations were "The Growth of Our Railroads," by Edward A. Jenkins; "Personal Liberty," by Nelson L. West; "The Tower," by William W. Warr; and "The Next Amendment," by Charles Z. Tryon. The essays were: "A Fourteenth Century Pilgrim," by Maria Amilla Robb; "Lessons Learned in Vacation," by Edna Kenderdine; "Modern Paganism," by Louise C. Browning; and "The Newspaper of the Future," by Maia Atlee Bunn.

At the conclusion of the programme diplomas were awarded to the following graduates: Anna Branson, Laura Branson, Louisa Cooper Browning, Maia Atlee Bunn, Marian Louise Clark, Ida Mary Coates, Emily C. Coles, Edward W. Coon, Lucy Corse Conard, Elizabeth Ethlyn Field, Theresa Jeannette Frohock, Robert M. Griffith, Morgan W. Hall, Maria Stephens Hamel, Edith Heald, Mary Taylor Hibbard, J. Rex Hobensack, Tacy Rachel Hunt, Edward A. Jenkins, Edna Kenderdine, G. Herbert Jenkins, Sarah Conrow Kirby, Julia Clara Loos, Harry V. Register, Maria Amilla Robb, Mary Louise Robbins, Chester Roberts, Evelyn May Shattuck, Arthur D. Smith, Mary Wood Swain, Charles Z. Tryon, Elizabeth Twining, William W. Warr, Helen M. Watson, Frederick E. Wentz, Nelson L. West, Frances Maria White.

SWARTHMORE COMMENCEMENT.

THE 16th annual Commencement at the College, as announced in our issue of last week, come off on Third-day, the 19th. The attendance was large, larger indeed than could find satisfactory accommodation in the seating. The large number of the graduating class, and the announcements made by the President render this Commencement one of unusual interest. The honorary degree of Ph.D. was conferred upon Prof. William Hyde Appleton, and that of Sc. D. upon Prof. Susan J. Cunningham. The address by Joseph Wharton is printed this week, and the list of graduates was given in last issue. The following is the announcement made by President Magill:

I have a statement to make of deep import to the college, and of great interest to every friend of Swarthmore.

To enable the college to supply in its various departments the best instruction possible, it has long been an object of earnest desire among its friends that some, at least, of its principal professorships should be adequately endowed. To make a beginning in this direction, a general subscription was started a year ago for the purpose of endowing at least one professorship, to be selected and named by the Board of Managers. This has been widely circulated, and much interest in the movement, and sympathy with it, have been expressed by Friends throughout the country. Many Friends and others contributed according to their means, and those who felt unable to do this still gave encouragement to the work.

I have to-day the great pleasure of announcing that this effort has not only been entirely successful, but that the result has far surpassed our most sanguine expectations.

About two hundred and fifty persons have sent in subscriptions for larger or smaller sums, and with the amount thus secured the managers have endowed "The Professorship of Mathematics and Astronomy." Nor is this all. Three individuals have generously come forward, and have *themselves* each endowed a professorship, as follows:

I. V. Williamson, of Philadelphia, has endowed "The I. V. Williamson Professorship of Civil and Mechanical Engineering," to the amount of $40,000.

Joseph Wharton, of Philadelphia, has endowed "The Joseph Wharton Professorship of History and Political Economy," to the amount of $40,000.

Isaac H. Clothier, of Philadelphia, has endowed "The Isaac H. Clothier Professorship of the Latin Language and Literature," to the amount of $40,000.

For these most liberal and substantial expressions of the interest of her friends, every friend of Swarthmore is deeply grateful, and with the aid thus received the college will be enabled to furnish, in a greatly increased measure, and at moderate rates, the inestimable advantages of a liberal education.

Truly, this commencement, while a day of great rejoicing, should be also a day of solemn thanksgiving. May we all feel duly grateful to the bountiful Giver of all good, who has put it into the hearts of our friends to confer upon us this great benefaction; and in view of the truly imperishable nature of the endowments this day announced, well may the munificent benefactors to whom the college is thus deeply indebted exclaim, in the expressive language of Horace,—

"Exegi monumentum aere perennius,
Regalique situ pyramidum altius."

"I have builded a monument more lasting than brass,
More lofty than the royal structure of the pyramids."

NEWS OF FRIENDS.

The manner in which the work of establishing the principles of our Society may be begun, where Friends are few, but yet are in earnest, is illustrated, we think, by the following letter which a Friend in Kansas sends us, in connection with some other matters. He says: "The paper is of much value to us, away out here so far from any Friends' meetings. There are two families of us here that are Friends. We have organized a First-day school, and use the Friends' Lesson Leaves, which seem to give good satisfaction, except the way the verses are divided in Scripture lessons; it bothers some about knowing where the verses begin and end. [We would say to our correspondent that the method of numbering is that of the "Revised Version" of the Scriptures. There is no division into verses and chapters in the oldest manuscripts: this division and numbering were made in comparatively modern time; and the Revised Version, not abandoning it entirely, simply *indicates* it.—Eds. Intelligencer and Journal.] I am the Superintendent, and the teachers are of our other family, the officers all being Friends. We are endeavoring to spread Friends' principles among the neighbors in this way. The attendance is an average of 25. We meet at 3 o'clock p. m. at our neighbor's house. We all feel much better than when we had no place of this kind to go to on the Sabbath day, and we feel that good is being done by it."

—A Friend, in Denver, Colorado, sending us the notice of a marriage in that city, says it was probably the first in that city by the ceremony of Friends, and mentions that a leading journal, the Denver *Republican*, in a notice of the event said: "The Quaker marriage ceremony is at once quiet and imposing. Its beautiful simplicity was greatly enjoyed by those who witnessed it."

—The Friends' Social Lyceum of Philadelphia take their annual excursion on Sixth month 27th. This year they visit Bethlehem and Calypso Island, where at 4 p. m. of that day, as an additional feature of the trip, will be given a literary entertainment of which the following is the programme:

The Committee on Hospitality will present to the President and other officers of the Society, the members and visitors. When the guests are seated, there will be a short address of welcome by

The President,	Oscar W. White.
Recitation,	Ida C. Craddock.
Recitation,	May Drinkhouse.
Rhymes,	Dr. James B. Walker.
Recitation,	Carrie B. Steer.
Original Essay—"Eggsactly,"	Isaac Sharpless.
Recitation,	Helena S. Zorns.
Dumb Oration,	George Lukens.
Medley, (original arrangement),	H. Homer Dalbey.
Recitation,	Helen Satterthwaite.
Recitation,	William B. Webb.
Recitation.	Helen Grice.

LETTER FROM WILLIAM JONES.

William Jones, Secretary of the English Peace Society, who was in this country some months ago as one of the deputation from Great Britain on the subject of International Arbitration, writes as follows to a Friend of this city, (I. H. Clothier), under date of Sixth month 2:

"*Dear Friend:* I have duly received thy letters of Fifth month 18 and 19 together with the type lists of the distribution of the books, for which I am obliged.

"I have had some further conversation with my friends, K. Backhouse (who has been in attendance at our yearly meeting) and Charles Tylor. My dear friend, K. B., is much gratified with the evidence of appreciation of her gift and with thy kind remarks respecting it. As there appears to have been some disappointment on account of the number of "Early Church History" not being equal to that of the "Witnesses" sent, she has kindly decided to make up the deficiency by donating a further number of thirty copies of "Early Church History," of which I enclose invoice, leaving the gift again to thy kind care and judgment for distribution. These, I understand, are in addition to the three copies of "Early Church History" already mailed to thy address by Charles Tylor. In these cases I told K. Backhouse that I felt sure thou would be glad to undertake the carriage and the duty, so that she need be under no further obligation of remitting for them.

"Let me add that the references which I have made in our Yearly Meeting to the generous kindness and cordiality with which I was everywhere received by Friends of your branch of the faith were received with great satisfaction. May our *one* Lord bless these little efforts to unite our hearts in his service. . . . . ."

(It is designed by Isaac H. Clothier to distribute the additional copies of the "Early Church History" to those libraries and Friends who received only copies of the "Witness.")

The beginning of anger is foolishness and its end is repentance.

INDIAN SCHOOL AT GENOA, NEBRASKA.

This school is well worth a visit not only to those interested in Indian education, but to any who can appreciate a neat, orderly and prosperous institution.

The school is under the charge of Horace R. Chase, of Illinois, and is located at the outskirts of Genoa. This institution is essentially of an industrial character, half of the time being devoted to the usual school curriculum and the balance to acquiring some useful knowledge of every-day life. The boys are taught farming, gardening, carpentering, blacksmithing, painting, tailoring, printing, harness-making, and shoe-making; while the girls are taught sewing, cooking, house-keeping, and laundry work.

Each department is under the charge of a competent employe, who has made a special study of that particular trade or calling.

With the exception of Dayton Irish, the efficient and energetic school carpenter, but little skilled labor was employed in the erection of any of these buildings, the Indian boys doing the work with a spirit and interest worthy of emulation. As all of these buildings were well put up and are kept neatly painted they present a very imposing and inviting appearance.

The farm is one of the best appointed and finest cultivated of any in this section of the country. The work is performed by the Indian boys under the supervision of John Williamson, one of the oldest residents of Genoa.

The school department is under the charge of Prof. Whitmore Hess, who has a graded and classified school which not only endorses his enviable reputation as a great organizer and successful teacher, but stands as incontrovertible proof of what can really be accomplished with the Indian pupils. Mr. Hess has four assistant teachers.

Most of the children come from Omaha and Winnebago agencies of Nebraska, and the Pine Ridge and Rose Bud agencies of Dakota. There are also twenty-five Arapahoes, the rest of the tribes represented being the Ponca, Arickaree, Mandan, Cheyenne and Santee.

The children appear very quiet and docile, and much more easy to manage than the same number of white children.

They possess a great faculty for imitating what they see others do, and display a marked dexterity in acquiring the mechanical trades.—*The Genoa Leader.*

EXTRACT.[1]

The feeling with which we reach the close of the school season is probably a mingled one with us all. With the natural relief which follows the laying aside of so pressing a duty, comes also the regret with which we separate, especially in the individual classes where we have had such constant intercourse. And again, while we gladly rest from such labor, for a season, at least, the very discontinuance of it brings, in one sense, an added weight of responsibility. We realize now in all its fulness, and perhaps as never before, the magnitude and meaning of the work which we have undertaken.

For my own part, the humbling query constantly arises: By right of what personal attainment—by what clearness of spiritual insight, am I ready thus to lead others? And freely do I confess, friends, that so far as I am able to discern my work in this direction, or weigh my capability for it, it lies not by any means among the heights and depths of spiritual knowledge, much less in dealing with doctrines and forms of belief, but in the simple call to uprightness of daily life. And uprightness of daily life I would in no wise limit to deliverance from the many recognized evils that surround us, but would include as well an overcoming of the petty faults and prejudices which do so easily beset us, and are too often, alas! not regarded as inconsistent with strength of Christian character.

Of what avail is our regular attendance at meeting, our activity in any good work, yea, our having kept all the commandments from our youth up, if in our daily lives there is room for that spirit of unkindness and uncharitableness which is ever more ready to discover a fault in another than to acknowledge one in ourselves? A starting point far distant from the end to be attained, perhaps, but even such little by-paths as this, it seems to me lead to the spiritual heights we all desire to reach, and in such directions largely, has been my effort during the season that has just closed.

Gladly, indeed, would I see each boy and each girl in my class a useful member of the Society of Friends, not by birth-right alone, not because it is a respected and truth-loving body of people, but because the highest conviction of each leads in that direction. But more gladly yet, would I see my boys and girls become good men and good women, ready not alone to cope with mighty foes and to do their part in the world's work, but able as well to rule their own spirits and living in that atmosphere of love and regard one for another wherein alone full christian development is possible.

[1]From a Teachers' Report at final Teachers' meeting of Race St., Philadelphia, First-day School.

EYES THAT SEE NOT.

One of the gravest defects in the education of country school-children grows out of the neglect of the teachers to cultivate in their pupils habits of close observation.

I once took temporary charge of a country school during the illness of the regular teacher. I spent the noon hour in making botanical researches in the woods surrounding the school-house. Upon returning one day loaded with ferns I was surprised by the question of one of the pupils, who asked me, "How did you gather those leaves in your hands when they grow so high up in the tree?"

"They do not grow on a tree, my child, but very close to the ground. Do you not know our native ferns? What makes you think they grew on a tree?"

She replied by running into the house for her geography, which she opened and showed me the fern-like foliage of a palm tree.

As Othello acted on the hint given him by Desdemona, so I at once began to use this disclosure of the

child's ignorance to the profit of the whole school. The children, though country born and bred, were entirely unfamiliar with many of the most interesting objects of nature by which they were surrounded, but which they scarcely seemed to see.

As a beginning to my efforts in their behalf I decided to first convince the pupils that they could not properly understand even their school books without observing the objects about them. As an illustration of what I meant, I had the school read from one of the readers, Whittier's little poem entitled "Jack-in-the-Pulpit." There were twenty-five children present, and only a single one could tell me who "Jack-in-the-Pulpit" was, although all of them had read the poem several times, and some of them knew it by heart.

Not a single child, save the one, could explain the appropriateness of the descriptions. Many of them had never examined the flower at all, and the rest had never dreamed that there was the slightest connection between the poetry and the flower. Now that they were in a manner introduced to Jack, and knew what the poet meant in his exquisite description of him, all were wild with enthusiasm to see the reverend Jack. One little girl hoped that he "really" and "truly" would preach them a sermon from his queer little pulpit! But I thought their neglectful teacher needed a sermon far more than the unobserving pupils.—*Belle P. Drury, in American Teacher.*

BIRDS IN MAY.

Most of the birds which we find in the woods and fields on the first of May have come to remain, and by the middle of the month nearly all the varieties which make their summer home here in Massachusetts have arrived, and we can see them making preparation for their "light housekeeping," or already caring for their little ones. Naturally it will be the best singers that will attract attention in our spring rambles, and these are found in large part among the two families of the thrushes and the sparrows or finches.

One of the thrushes, our beloved Robin Redbreast (*Turdus migratorius*), you all know, and will need no help in identifying. Less familiar, but not less valued, where known, is that prince of singers, the brown thrush (*Harporynchus rufus*), sometimes called the "thrasher." He is larger than the robin, cinnamon brown above, and of a slightly reddish white beneath, thickly streaked with dark brown, and with wings conspicuously tipped with white. His notes are clear and full, contralto in quality, and the song has been turned into English in various ways: "*Sow wheat, sow wheat;*" "*Drop it, drop it, cover it up, cover it up;*" "*Pull it up, pull it up.*" He is often, indeed, called the planting bird. He becomes silent about the first of July.

Another fine musician of this family is the wood or song thrush (*T. mustelinus*). While the brown thrush takes to the orchard and garden, where he does good service in destroying harmful insects, the song thrush, with his cousin the hermit thrush, keeps in the woods. The hermit (*T. pallasii*) is seen here in Massachusetts only on its migrations, and then is silent; but at early dawn, at twilight, and during dark and gloomy days, the melancholy, but exquisitely beautiful song of the wood-thrush may be heard. His tones are flute-like and liquid, difficult to translate into words. The hermit is oftenest found in high, dry woods, while the song-thrush is fonder of damp thickets. In color the song-thrush is clear, cinnamon brown above, white beneath, where it is thickly streaked with blackish spots triangular in shape.

Still another delightful singer is Wilson's thrush or Veery (*T. fuscescens*). His song is simpler than either of the others, being principally a repetition of the syllables *ve-ee-ry* or *che-u-ry*, with two or three clear whistles. The first two notes are sudden and high, then a sliding chromatic scale, peculiarly liquid and sweet. It is rarely heard except in swamps. This is the smallest of the thrushes, and is often called the "tawny thrush" from its color; the breast is thickly mottled.

But it would not do to leave out the cat-bird (*Mimus Carolinensis*), our vivacious door-yard friend, who will mew like any cat, and then give a charmingly varied song to make up for it. He has been called the northern mocking-bird, but it is now conceded that he, like his near relative, the brown thrush, sings only the song that belongs to him. You all know, doubtless, the slim, dark bird, lead-color above and ashen beneath.

The sparrow family is probably best known, musically, by the song-sparrow (*Melospiza melodia*), whose dear, familiar strains are among the first in spring to greet us, often before the snow is gone. Several of the good singers of the sparrow tribe are only passers-by with us, and do their singing and nesting far to the north; but the chipping-sparrow or "hair-bird" (*Spizella socialis*) is a near and dear friend, and if his song is monotonous, a single-toned trill, we love him for his gentle, confiding ways.

The field or bush-sparrow (*Spizella pusilla*) is less known, but if once known is well prized. His notes may be heard all day and all summer in the high pastures and huckleberry fields. The song consists of two or three clear, deliberate whistles, followed by an accelerating run, generally in rising inflection; but this varies with individuals. Perhaps the syllables *de de-de-d'-d'-d'-d'-dr* express the song as nearly as may be in our tongue.

Then there is the vesper sparrow, or bay-winged bunting (*Poœcetes gramineus*), one of the sweetest singers in the family. You must look for this bird in the breezy, upland pastures, and listen especially toward evening, for the tender song is then most frequent. It varies more in quality than in note from the song-sparrow's, but is less vivacious, more tender. The bay-wing, sometimes also called the grass-finch, is a larger bird than the song-sparrow, of a light brown with a strong chestnut tint on the wings, and white lateral tail-feathers.

If you hear a song that resembles a canary's, it is probably that of the purple finch (*Carpodacus purpureus*), and if you can see the bird, you will find him of a dull crimson color, brightest on the head. He is among the "early birds," and is a sweet singer, but

neither his voice nor his personal appearance will atone, to the farmer at least, for his unfortunate habit of eating the buds of fruit and shade trees.

Another bird whose song suggests the canary, is the gold-finch (*Chrysomitris tristis*), but though occasionally heard early, for he often comes north in April, his real singing-time is later, for this variety rarely build their nests before the middle of June. He is often called the "yellow-bird," though this title would naturally belong to the yellow warbler, who is all yellow, while the gold-finch has jet black wings.

About the 10th of May one of our most strikingly colored birds appears, the oriole (*Icterus Baltimore*) As he flashes to and fro among the elm-trees he seems like an animated sunbeam, and his cheery song, loud and clear, *to-wée-do*, confirms the impression given by his brilliant color. This golden robin, or hang-bird, as he is variously called, is too well-known to need description. His beautiful, pensile nest, hung from the swaying elm branch, is the ideal home. How sweetly sleep must come to the birdlets in that swinging cradle!

On the 10th of May, too, comes that inimitable singer, the bobolink (*Dolichonyx oryzivorus*),—what hard names these ornithologists have given to the helpless birds!—whose song it is equally impossible to describe, or, once heard, to forget. This bird is only found in North America, having no kith or kin in the Old World. A chorus of bobolinks heard in the early dawn of a June morning is an event in a lifetime. This bird is strikingly marked, white above and black beneath, but his beauty and his melody are fleeting possessions, for at the end of the breeding season he loses both, and silently flits about in a suit of plain brown, and wends his way southward to feed in the Gulf-State rice-fields, and thence to winter in the West Indies.

There is another family of birds that furnishes a generous share of our summer music; the vireos or greenlets, members of the order of the Fly-catchers. Among these the red-eyed vireo (*Vireo olivaceus*) is the most common, singing as it does in the trees of city gardens and village streets, as well as in the thick woods. Wilson Flagg called this the "preacher-bird;" to him it said, "*Do you see it, do you hear me do you know it?*" But as I have heard the song, it is better interpreted by Mr. Samuels; "*wee-chewêo, turrullit chewêeeo.*" It sings all day and all summer, being one of the few birds whose music greets us in August.

The warbling vireo (*V. gilvus*) is usually found about farmhouses, and in villages, and has a song much like that of the purple finch.

The white-eyed vireo (*V. noveboracensis*) is also common in pastures and fields. Its song is more brilliant, perhaps, but less pleasing than that of the warbling vireo; "*'chip chewéeo, chip, chip, chewêeo,*" Mr. Samuels gives it.

The solitary vireo (*V. solitarius*) is quite rare, but may occasionally be found in deep woods. Its note is very soft and sweet, "full of contentment," says Mr. Torrey. All these are, as their name implies, greenish or a yellowish olive in color, and are white underneath. The red eye and the white eye are distinguishing marks of those varieties. These birds are unknown in the Old World, but though they may not quite make up to us of the New for the lack of the skylark and nightingale, we should be loath to miss them. They are endeared to us by their pretty, engaging ways, their constant singing, and by the good work they accomplish in ridding us of many a noxious insect. They are indeed among the farmer's best friends.

I should have mentioned among the sparrows the chewink or tow hee bunting (*Pipilo erythrophthalmus*); but who, to look at him, would ever suspect him of belonging to that plainly dressed family? He is not a great singer, it is true, like some of his cousins, but he probably considers that he amply makes up in appearance what he lacks in melody. He wears the tri-color; if not exactly that of France, it is at least as conspicuous; glossy black above, chestnut red at the sides, and white beneath. He is fond of bushy pastures and roadsides, and is an inquisitive fellow, flitting in and out, as anxious apparently to examine you as you can be to see him. His ordinary note is a sharp *cherawink*, but he has a more musical and varied song with which to disconcert you when you think you have learned his compass. He is another of the singers that delight the traveler in August.

But I have no room to speak of the warblers, or of many of the lesser songsters that give pleasure in the "pathless woods." Perhaps I may do so at some other time.—*Catherine Amory, in Swiss Cross.*

CHASTENED.

How softly tread the spectres of our sorrow
About our sunniest way!
How gently rest the shadows of to-morrow
Upon our path to-day!

Beneath the laugh of pleasures evanescent
The heart remembers pain,
And catches from the hilltops of the present
The sound of coming rain.

Yet not the skies in which no clouds are drifting
Reveal the beauty rare
Of those whose veiled smiles are ever shifting
Their half-lights everywhere.

We turn unblessed from faces fresh with beauty,
Unsoftened yet by fears,
To those whose lines are chased by pain and duty,
And know the touch of tears.

The heart whose cords the gentle hand of sadness
Has touched in minor strain
Is filled with gracious joys and knows a gladness
All others seek in vain.

How poor a life, where pathos tells no story,
Whose pathways reach no shrine,
Which, free from suffering, misses, too, the glory
Of sympathies divine!

Some day our souls may face the Sun unclouded
And bear its wonders near;
'Tis well awhile to gaze on visions shrouded
In earthly atmosphere.

Frank Mason North, in Christian Union.

IN SUMMER FIELDS.

SOMETIMES, as in the summer fields
I walk abroad, there comes to me
So strange a sense of mystery,
My heart stands still, my feet must stay,
I am in such strange company.

I look on high—the vasty deep
Of blue outreaches all my mind:
And yet I think beyond to find
Something more vast—and at my feet
The little bryony is twined.

Clouds sailing as to God go by,
Earth, sun, and stars are rushing on;
And faster than swift time, more strong
Than rushing of the worlds, I feel
A something *is* of name unknown.

And turning suddenly away,
Grown sick and dizzy with the sense
Of power, and mine own impotence,
I see the gentle cattle feed
In dumb, unthinking innocence.

The great Unknown above; below,
The cawing rooks, the milking-shed,
God's awful silence overhead;
Below, the muddy pool, the path
The thirsty herds of cattle tread.

Sometimes, as in the summer fields
I walk abroad, there comes to me
So wild a sense of mystery,
My senses reel, my reason fails,
I am in such strange company.

Yet somewhere, dimly, I can feel
The wild confusion dwells in me,
And I, in no strange company,
And the lost link 'twixt Him and these
And touch Him through the mystery.

—*Christina Catherine Liddell.*

REVERENCE AS THE ORGAN OF SPIRITUAL KNOWLEDGE.

IN reading some contributions, several weeks ago, by eminent ministers and laymen, on the question: "What has Jesus Christ done for humanity?" I was impressed by the insufficiency of the answers given by some of the respondents, owing, as it seemed to me, to their lack of due reverence for the person and character of Christ. It was tacitly assumed that this Son of Man was to be estimated like all other sons of men, by a critical examination of the words and acts reported of him. He was to be brought down to the level of science—of intellectual scrutiny; and nothing was to be received as true of him which could not be proved beyond all question. Now, for one, I protest against the principle here involved, and maintain, on the contrary, that whoever would truly understand the character and work of Christ, must first learn to approach him with reverence and gratitude. If we believe in any Divine Providence, we must be willing to accept our Christian inheritance as that which was intended to be the groundwork of our spiritual life. This does not mean that we should esteem it wrong to inquire into the foundations of our religion when the time comes for such inquiry. It is only saying that the more natural and desirable course in early life is to yield ourselves freely to all those better impulses and desires which come from the Christian faith which we have inherited. Is it not true of everything beautiful or sublime, that to appreciate it fully we must approach it, not in a critical, but in a sympathetic spirit? Much more is this true of exalted characters. To recognize their worth is in itself a supreme joy; and because we recognize it and revere it, we are filled with an earnest desire to walk by its light. The man whose eyes are always directed to the ground will never see the glory of the heavens above him. It is absurd to lay down the principle that science is the final authority by which all beliefs and all alleged facts must be tested. The philosophy which is greater than science, affirms that there are unquestionable truths which never can be proved—and which need no proof. All knowledge, as one of our wisest teachers affirms, is based upon an absolutely *blind faith*, viz., a faith in the integrity of our own faculties. But much more to my present purpose is it to consider the *power of sympathy* as a guide to truth. If we have nothing in common with some great and good man—nothing that draws us to him by admiration and reverence and love—we can never understand him. Hence Pascal declares that "to know God we must first love him;" and hence that beatitude of Christ: "Blessed are the pure in heart, for they shall see God." A certain *Christian sense* forbids us to assume that we can measure our indebtedness to Christ by any cool and impartial estimate. Imagine the child of some devoted and loving father being called upon for the reasons why he loves and honors this excellent parent. "I owe everything I have to him," the reply might be, "how can I help loving him?" How much more emphatically have millions of devout souls been able to say this of their revered Lord and Saviour? It never, for a moment, shakes their faith in him, that they cannot answer all critical objections. "Impartial" they are not—if that means looking at all sides of the question with equal indifference; but indifference never awakes a living faith in Christ. "We loved him because he first loved us." "Never man spake like this man" to the deepest wants and aspirations of the soul. "To whom else should we go," then? Why search for historical "evidences" of Christianity, when through faith and love and reverence we can have direct intuition of Him whose life is the light of men? Let criticism do its legitimate work faithfully and fearlessly; but let it not claim to be the organ of spiritual knowledge, for that belongs preëminently to reverence.—*Selected.*

"IT is one of the most beautiful compensations of this life, that no man can sincerely try to help another without thereby helping himself."

ABSTRACT truth acquires a wholly different power when identified with the life of a great soul like that of Jesus.—*Selected.*

Do good to all, that thou mayest keep thy friends and gain thine enemies.

DR. RACHEL L. BODLEY.

Dr. Rachel L. Bodley, Dean of the Women's Medical College of Pennsylvania, died at 2 35 o'clock, June 15, 1888, at her home, No. 1400 North Twenty-first street, Philadelphia. She had been suffering with heart trouble, but was not taken seriously ill until the evening of the 13th inst., when she began to fail rapidly.

Miss Bodley was born in Cincinnati, O., December 7, 1831. In 1844 she entered the Wesleyan Female College in that city, graduating after a course of five years. She was then appointed a teacher and remained until 1860, advancing to the position of preceptress in the higher collegiate studies. She came to Philadelphia in the autumn of that year, and became a special student in advanced chemistry and physics in the Polytechnic College. She returned to Cincinnati in February, 1862, and was appointed Professor of Natural Sciences in the Cincinnati Female Seminary, which position she held three years.

In 1865 she was called to the chair of chemistry and toxicology in the Women's Medical College of Pennsylvania. She accepted and thus became the first woman professor of chemistry on record.

She was elected Dean of the Faculty in January, 1874, and from that time until her death she had given herself, time and talents, to the college, promoting its interests and striving to elevate her sex, and to secure for women and her work respect and recognition.

In 1864 she was elected a corresponding member of the State Historical Society of Wisconsin, and in 1871 a member of the Academy of Natural Sciences of Philadelphia. The degree of A. M. was conferred by her alma mater. Up to this time the institution had never given a degree to any of its alumni subsequent to the A. B. at graduation. In 1879 the degree of M. D. was conferred by the Women's Medical College of Pennsylvania. In 1873 she was elected corresponding member of the Cincinnati Society of Natural History, in 1876 a corresponding member of the New York Academy of Sciences, and during the same year a member of the American Chemical Society, located in New York city.

In 1880 she was made a member of the Franklin Institute, and was the first woman to deliver any extended course of lectures in the Institute.

In 1882 Dr. Bodley was chosen a member of the Educational Society of Philadelphia, and in February of the same year was elected School Director of the Twenty-ninth Section School Board, serving three years, and, being out one term, was reëlected in January, 1887, which position she held at the time of her death. She was well and favorably known generally throughout the country, both through her professional reputation and through her literary contributions to periodicals in many States.

The death of Professor Rachel L. Bodley, Dean of the Woman's Medical College, removes an influential woman, not only from educational circles, but from an almost international connection of friendships and missionary interests. She was much concerned in the education of the medical missionaries, so many of whom have gone out from the Pennsylvania Woman's College. She took Dr. Anandibai Joshee into her own house, and, with a beautiful sympathy, encouraged the little Hindoo woman to live firmly to the precepts of her national religion. Her devotion to the Pundita Ramabai, and the enterprise of publishing the Ramabai's book and of forming circles to furnish support and occupation for the child-widows of India, are all recent in the minds of many Philadelphians. Professor Bodley was a graceful writer, and has more than once given her summer leisure to correspondence for the *Ledger*. The interesting and stimulating series of papers on the seaweeds at Longport were from her, and doubtless gave many a *Ledger* reader fresh zest in that delightful pursuit and research of the seaside flora and in the exquisite vignettes she described of the floated weed.—*Public Ledger.*

UNARMED TRAVELERS.

For half a century Titus Coan labored in the Gospel in Patagonian and Pacific Island Missions. When he was a young man at college, the American Mission Board had under consideration the subject of a visit of inquiry to Patagonia, about the year 1825. It was brought before the various colleges, and each student in one of these was requested to retire to his own room for prayer and guidance, as to whether he was required to go. Mr. Coan rose from prayer convinced that *he* must offer himself for the service; and another young man felt prepared to accompany him.

Having heard of the savage character of the Patagonians, the friends of the two young men desired that they should be supplied with weapons of defense; but Mr. Coan had a strong belief that all these, *even his pocket-knife*, must be discarded.

On nearing the Patagonian shore, the captain of the vessel in which these devoted followers of the Prince of Peace sailed, said that, as the natives were so savage and untrustworthy, he could not allow his crew to land; and he could only put Mr. Coan and his companion on the beach in a little boat with their goods, saying that if they lighted a fire the natives would come into sight.

It was a very lonely position for the two young missionaries, but the natives were soon seen lining the brow of the neighboring hill. They came near, and sought to satisfy themselves that the strangers were entirely unarmed by examining every part of their dress, and even taking off their stockings and turning out their pockets; but finding nothing, they expressed their friendly regard by taking their new friends in their arms, and receiving them into their tribe.

"They gave us," writes Mr. Coan, "horses to ride on, and we traveled with them about three months, east, west, and north, visiting their camps and hunting grounds, and falling in with several other clans. In this way we saw nearly all the savages of the eastern Patagonian pampas. The tribes are wild, and in the wildest state of savageism, living wholly by the chase, and roaming with their women and children most of the time, carrying their skin tents and their all with them. We had no interpreter; all our communications to the natives were through signs.

"Some of our friends had advised us to go *armed* into Patagonia. We had said, 'No, our weakness is our strength; our apparent unprotectedness our shield.' And so it was. The savages saw we were defenseless and harmless, and our God made them our protectors. They were not jealous or afraid of us, and we left them unscathed, under the wing of our Immanuel."—*Friends' Review.*

"UP IN THE MORNING EARLY."

BUFFON, the celebrated French naturalist, was, in his youth, very fond of sleep. The habit of lying late robbed him of a great deal of his time; but through the assistance of his man-servant he was enabled to overcome it. "I promised," he says, "to give Joseph a crown every time that he would make me get up at six. Next morning he did not fail to wake me and torment me, but he only received abuse. The day after he did the same with no better success, and I was obliged to confess at noon, that I had lost my time. I told him that he did not know how to manage his business; he ought to think of my promise, and not to mind my threats. The day following he employed force! I begged for indulgence; I bade him begone; I stormed; but Joseph persisted. I was therefore obliged to comply, and he was rewarded every day for the abuse which he suffered at the moment I awoke, by thanks, accompanied with a crown, which he received about an hour after. Yes, I am indebted to poor Joseph for ten or a dozen of the volumes of my works."

Dr. Paley, the eminent divine, in giving an account of the early part of his college life, says: "I spent the first two years of my under-graduateship happily enough, but unprofitably. I was constantly in society where we were not really wicked, but most idle and expensive. But at the commencement of the third year, after having left the usual party at a late hour, I was awakened at five in the morning by one of my companions, who stood at my bedside and said: 'Paley, I have been thinking what a fool you are. I could do nothing, probably, if I were to try; and I could well afford the indolent life you lead. You could do everything, and cannot afford it. I have had no sleep during the whole night on account of these reflections, and am now come solemnly to inform you that if you persist in your indolence I must renounce your society.' I was so much struck with this visit and the visitor, that I lay in bed the great part of the day and formed my plan. I ordered my bed-maker to lay my fire every evening, in order that it might be lighted by myself. I arose at five, read during the whole day, took supper at nine, went to bed and continue the practice up to this hour."

Many other instances might be quoted of great men who were early risers. Dr. Doddridge tells us that to his habit of early rising the world is indebted for nearly the whole of his valuable works. The well-known Bishop Burnett was an habitual early riser, for when at college his father aroused him to his studies every morning at four o'clock; and he continued the practice during the remainder of his life. Sir Thomas More also made it his invariable practice to rise always at four; and if we turn our attention to royalty, we have, among others, the example of Peter the Great, who, whether at work in the docks of London as a ship-carpenter, or at the anvil as a blacksmith, or on the throne of Russia, always rose before daylight.

Do not let us, however, in our eagerness to acquire the habit of early rising, forget the other half of the advice "early to bed." A clever professor used to tell his pupils that "one hour's sleep before midnight is worth more than two after that time." Whether this be so or not, no one doubts that body and mind alike demand regular periods of rest, and that what is called "burning the candle at both ends" must be, both for children and grown-up folk, a very bad practice indeed.—*Christian Chronicle.*

NEWS AND OTHER GLEANINGS.

—The Dunkards at their annual meeting in North Manchester, Ind., decided against the wearing of mustaches and barber-trimmed hair. An arrangement was made to help poor congregations in Denmark and Sweden. Members were cautioned about taking oaths, especially in States where affirmation is regarded as a modified oath, and members living in Western States were warned not to write flattering reports concerning their crops and financial success unless sustained by facts. The Conference reäffirmed all previous declarations about the use of tobacco, and decided that applicants for membership should promise to be free from that habit. Ministers who chew or smoke will not be allowed to assist in church adjudications.

—Some eighty members of the Society of Friends in Dublin, Ireland, have united in a protest against the use of the Society's name in an address made by certain Friends and others to Hon. W. E. Gladstone against the present repressive Irish policy of the English government. The subscribers say that support of the laws is enjoined by the Book of Discipline, and this compels members to condemn boycotting and in general the movements of the Irish League.

—There are 5,500,000 school children in Prussia. 4,800,000 of them attend school. This represents a little over 87 per cent. of attendance. In the United States the per cent. of attendance is 64.6.

—The Philadelphia Board of Charities and Correction have adopted a minute in reference to the death of Alice Fisher, in which it was stated "that to Miss Fisher's organizing faculty and her executive ability, supplemented by indomitable energy and perseverance, the present advanced condition and reputation of the Philadelphia Hospital and its Training School for Nurses are chiefly due."

—The Board of Health of Paris has prescribed the following conditions under which the beating of carpets will be permitted in the city. The carpets must be brushed and beaten in entirely shut-up rooms, and the dust deposited on the floor will be washed with water containing some disinfectant of potent action. Strips of wool, etc., must be burnt immediately. This action has been taken because of the nuisance caused by the beating of carpets in the open air in the built-up portions of the city, and because of the danger which is believed to exist, due to the fact that many of the carpets come from houses in which contagious diseases have prevailed, and that in the process of beating and shaking the germs are dislodged.

—Some facts concerning his new University in California, named after his dead son, have been made public by Senator Stanford. It is to be open to young women and young men, rich and poor alike. Special provision will

GRASS AND ROSES.

I LOOKED where the roses where growing;
They stood among grasses and reeds;
I said, "Where such beauties are growing
Why suffer these paltry weeds?"

Weeping, the poor things faltered
"We have neither beauty nor bloom;
We are grass in the roses' garden,—
But our Master gives us this room.

"The slaves of a generous Master,
Borne from a world above,
We came to this place in His wisdom,—
We stay to this hour from His love.

"We have fed His humblest creatures,
We have served Him truly and long,
He gave no grace to our features,—
We have neither color nor song,—

"Yet He who has made the roses
Placed us on the self-same sod;
He knows our reason for being,—
We are grass in the garden of God."

—*James Freeman Clarke.*

GEORGE FOX'S JOURNAL.

IN the minds of all true Friends there is attached a peculiar—an almost reverential interest to the journal of George Fox. And this is not incompatible with the conviction of his most emphatic doctrine that every one is individually capable of guidance by the indwelling spirit of Christ, and needs not to depend upon human aid in the matter of spiritual direction. In common with all Christians, Friends believe in "helps by the way," and as such value all revelations through spiritual travelers in their search after truth.

In the recently published "Autobiography of George Fox" from his journal, by Henry Stanley Newman of Buckfield, Leominster, England—a notice of which not long since appeared in this paper,—there is collated in its interesting preface, the expressions of many "men of all classes," in regard to Fox and his journal. As these quotations are of much interest we append them.

Speaking of the journal, C. H. Spurgeon says it "well repays the earnest student. It is a rich mine; every page of it is precious as solid gold. Books nowadays are hammered out, and you get but little metal in acres of leaf; but the Journal of George Fox contains ingots of gold; truths which require to be thought of month by month before you can get to the bottom of them. As the great champion of purely spiritual worship, one is inclined to say with William Penn that his epitaph might well be, 'Many sons have done virtuously, but thou excellest them all.' There were some particular truths which it was given to him to feel more intensely, and to set forth more vehemently and constantly, than any other man of his time, or than any other man since his time; more especially the great truth that religion is of the Spirit, that it is an inward thing, and is not to be judged and weighed, and accounted of according to the externals of a man, but according to his inmost soul. I look upon George Fox rather as a practical than as a doctrinal man, and as experimentally carrying out in his own life the work of the Spirit of God."

Sir James Mackintosh says that George Fox's Journal "is one of the most extraordinary and instructive narratives in the world, which no reader of competent judgment can peruse without revering the virtue of the writer."

Coleridge says, "There exist folios on the human understanding and the nature of man, which would have a far juster claim to their high rank and celebrity, if, in the whole huge volume, there could be found as much fullness of heart and intellect as bursts forth in many a simple page of 'George Fox.'"

Dr. Stoughton, in his "Church of the Commonwealth," in speaking of George Fox, says, "Strong in a simple evangelical faith, but without any theological discipline of thought, preferring the words of Scripture to the words of men, he added to all this, as the first-fruits of his mystical tendencies, a belief in the 'inward light,' even the revelation of Christ in the soul, not as superseding Holy Scripture, but as its necessary witness and gracious supplement. He dwelt largely upon redemption through Christ, as consisting in a deliverance from sin, not simply from its guilt, but from its power."

Marsden, in writing of the Puritans, says respecting George Fox, "A young man of one-and-twenty, aroused to the contemplation of his future being, and withdrawn by the instant presence of a world unseen from the opening charms of life and its joyous prospects, presents a scene of moral grandeur, with which the man who is unaffected must rank amongst the most depraved and brutish of his kind. His mission rested upon one idea, the greatest that can penetrate the mind of man, 'God is a Spirit, and they that worship him must worship him in spirit and in truth.'"

A biographer like Colquhoun, in his sketches of "Notable Lives," thus expresses his estimate of George Fox's character: "The truth is, Fox's character, like that of many others, had two sides. We find

this man of fancies and visions, confronted with controversialists, Jesuits, lawyers, and puzzling them with his subtlety. Now in a court of justice he confronts the judge, defies the bar, picks flaws in their indictment, quotes against them adverse statutes, and wrings from baffled judges a reluctant acquittal. Then he is in the Protector's court to meet a man hard to dupe. There he plants himself, his hat on his head, at Oliver Cromwell's dressing table, engages him in loving discourse, sets before him his duty, presses on him the policy of toleration, till the iron-hearted soldier, first surprised, then attentive, at length interested, extends his hand to the Quaker, bids him repeat his visit, and tells him if they could meet oftener they would be firmer friends. No less remarkable are his courage and skill. As storms thicken, he is always in front of the battle. Wherever the strife is vehement, there he is—now in Lancashire, now in Leicester, in Westmoreland, or in Cornwall; meeting magistrates, braving them at quarter sessions, vanquishing officers, governors of castles, and judges. Then he sits down calmly to organize, with a forecast equal to that of Wesley, the scheme of Quaker polity which has lasted to our times. If we smile at the oddity of his language, at the cursive missives which he hurls at mayors and magistrates, goalers and judges, we find at times a caustic style worthy of Hudibras or Cobbett, in which he lashes the frippery of the court, or meets the casuistry of the Jesuits or Ultra Calvinists; and as we dwell on those words of wisdom in which he tells us of his faith, and cheers the drooping heart of Cromwell's daughter, we perceive that he is no common man."

Thus we see that men of very different types of mind, and looking at religious subjects from very different standpoints, have found in the autobiography of George Fox a fascination of truthfulness that has attracted them wondrously. Each brings out a different feature in George Fox's character, which has impressed itself on his own mind. There is another author who has shown his intense appreciation of George Fox in his own humorous style, and has seen another side of his character, which presents some useful lessons if we can humble ourselves to learn them from so imaginative a penman. I refer to the "Sartor Resartus" of Thomas Carlyle.

"Perhaps the most remarkable incident in modern history," he says, "is not the Diet of Worms, still less the battle of Austerlitz, Waterloo, or any other battle, but an incident passed carelessly over by most historians, and treated with some degree of ridicule by others, namely, George Fox making to himself a suit of leather. [Newman here adds, "there appears to be no evidence that George Fox ever wore a perennial 'suit of leather.' The only historic basis for the suggestion appears to be in the 'leather breeches' that did him good service in riding through the country on horseback."] This man, the first of the Quakers, and by trade a shoemaker, was one of those to whom, under ruder or purer form, the divine idea of the universe is pleased to manifest itself, and across all the hulls of ignorance and earthly degradation, shine through in unspeakable awfulness and beauty on their soul; who therefore are rightly accounted prophets, God-possessed. Sitting at his stall, working on tanned hides, amid pincers, rosin, and a nameless flood of rubbish, this youth had, nevertheless, a living spirit within him, also an antique inspired volume, through which, as through a window, it could look upwards and discern its celestial home. The task of a daily pair of shoes, coupled even with some prospect of victuals, was nowise satisfaction enough to such a mind; but ever amid the boring and hammering came tones from that far country. That Liecester shoe-shop, had men known it, was a holier place than any Vatican or Loretto shrine. Stitch away, thou noble Fox. Every stitch of that little instrument is pricking into the heart of slavery and world worship, and the mammon god. Thy elbows jerk, as in strong swimmer-strokes, and every stroke is bearing thee across the prison-ditch into lands of true liberty. Were the work done, there is in broad Europe one free man, and thou art he! Thus from the lowest depth there is a path to the loftiest height, and for the poor also a Gospel has been published. . . . Sublimer in this world know I nothing than a peasant saint. Such a one will take thee back to Nazareth itself. Thou wilt see the splendour of heaven spring forth from the humblest depths of earth, like a light shining in great darkness."

To these appreciative utterances we may add Bancroft's noble words in his United States History, also found in this Preface, which though not new to many of our readers will bear repeating often as they perchance may induce some fresh seeker to explore the field of Christian experience laid bare by such a sturdy ploughman as was George Fox. "The rise of the people called Quakers is one of the most remarkable events in the history of man. It marks the moment when intellectual freedom was claimed, unconditionally, by the people, as an inalienable birthright. It was the consequence of the moral warfare against corruption, the aspiration of the human mind after a perfect emancipation from the long reign of bigotry and superstition. The mind of George Fox arrived at the conclusion that truth is to be sought by listening to the voice of God in the soul. This principle contained a moral revolution. It established absolute freedom of mind, treading idolatry under foot, and entered the strongest protest against the forms of a hierarchy. Now that Fox went forth to proclaim it among the people, he was everywhere resisted with vehemence, and priests and professors, magistrates and people, swelled against him like the raging waves of the sea."

"George Fox proclaimed an insurrection against every form of authority over conscience, he resisted every attempt at the slavish subjection of the understanding. But he circumscribed this freedom by obedience to truth. To the Quakers Christianity is freedom."

STILL Heaven is, our hearts affirm against every disappointment; and whether behind or before us, as memory or as hope, 'tis to be ours,—our port and resting-place some time in the stream of ages.—*A. Bronson Alcott.*

Editorial Correspondence Friends' Intelligencer and Journal.

AMONG FRIENDS IN NEBRASKA.

The cordiality with which Friend greets Friend though they may never have met before, is evidence that the old tie that so closely bound the members of the Society together in the earlier time is as strong and enduring in our day, as in any period of its history. There are many Friends in Lincoln,—families and parts of families, and young men without families, and the feeling of love for the Society and its simple form of worship that is manifested is very encouraging. A meeting has been held every other First-day for more than a year; but the inconvenience of accommodation in Friends' houses, and the conviction that a broader field of usefulness is opening, has led to the consideration of establishing a meeting on a permanent basis. Several lots have been offered free of cost, but the membership, like that of the Chicago meeting, is widely scattered, some living six miles from the centre of Lincoln, and the city being spread over a large area; these considerations make it important that the meeting house be built in a central location where the land has become very valuable. A deep interest is awakened in this subject; every member seems desirous to use his utmost endeavor to bring about so desirable an object, and there is such a truly Christian spirit manifested to come together in this work in that unity of feeling that is willing to set aside all technical differences, and work together for the common welfare, that they deserve the sympathy and substantial aid of all who are concerned for the prosperity of our Zion, and the diffusion of its principles and testimonies in this broad and rapidly filling-up western land.

Lincoln is fast becoming an important educational centre. Being the State Capital and the seat of the State University, it draws to itself the best elements of the people, and the location with the railroad facilities, and the fine advantage for profitable business enterprises, combine to make it one of the most important cities of our central states. Already the population is estimated to be not far short of 60,000.

This is "commencement" week, and many are drawn together from all parts of the State, to witness or participate in the festivities of the occasion. The graduating exercises were held on Fifth-day morning, the Governor of the State, and other notables, with the board of Regents, the chancellor, and the faculty being present. The usual exercises on such occasions were gone through with, and diplomas awarded twenty of the students, six of whom were young women. The orations, seven in number, were creditable to the authors, and well delivered, the two by young women were especially worthy of notice, for the ease and grace displayed as well as for the subjects chosen. The first, "A Plea for Justice," was a dignified yet forcible argument for equality of rights between the sexes, delivered by Alma C. Benedict. The following synopsis will give an idea of the thought presented.

"All I ask for woman is that the opening sentence of the Declaration of Independence be made broad enough to include her. At present she is excluded from its asserted rights and what are called her rights are more properly privileges, not secured to her on the firm basis of natural right. Open the professions to her. Give her perfect freedom of choice to enter any occupation to which she may feel she has a calling, and protection from innuendo in so doing. Aside from this there is a higher and dearer privilege, the right of citizenship, from which woman is excluded. And for what reason? Does her sex render her deaf and blind to the interests common to humanity? Does she not love her country? Is it consistent to prevent loyal American women from expressing their interests in the union they had no small share in saving? They are subject to laws they have had no part in making, and this in a government which boasts that it derives its just powers from the consent of the governed."

The other was a tribute by Cora B. White to Louisa M. Alcott, of whose life and literary work she spoke with an earnestness and sympathy that evinced a high appreciation of their value. The subjects discoursed by the young men were historical, moral, and scientific, all of which were worthily presented.

At the close of the commencement exercises the audience were invited to witness the laying of the corner-stone of "Nebraska Hall," now in process of erection on the campus, at its northeastern boundary. The new building is to be devoted to science and the industrial arts. A fine address was delivered by Professor Hicks. In closing he said: "While primary education is imparted and obtained at the hearthstone —home schools—the great work is to be accomplished in the common school room, the college, and university halls.

"Nebraska, always characterized for her advanced position in all things pertaining to progress and development, especially in educational affairs, will ever keep step in the onward and upward march of scientific civilization. The building, the foundation of which is here placed, is but one of the industrial college buildings she is bounteously providing. It will be christened 'Nebraska Hall.' Adopting the motto of the great royal agricultural society of England, it engraves upon its corner-stone and dedicates to 'Science and Practice.' Tuition here is free and open to all who desire a scientific and practical education to fit them for future industrial pursuits. 'Free and open' in the fullest sense possible of the terms—free to all the citizen youth of the State, of whatever nation, tongue, clime, sex, color, age, or 'previous condition of servitude.'

"Here will be taught agriculture, horticulture, structural and systematic botany, geology, zoölogy, entomology, and civil engineering. There will be provided a museum of geology and zoölogy, and one styled the agricultural museum. In this latter will be gathered samples of grain, grasses, woods, etc. All to serve as object lessons. No young man or woman not afraid or ashamed to work need fear to enter and work their way through this institution."

These are strong, brave words for this our younger sister in the family of States, and that they will be fulfilled is guaranteed by the unstinted provision she

has made for the free education of all her children. The man who is seeking a home in this central, western land can scarcely find a better opening than Nebraska offers, and if he be a Friend, the many centres of society influence to be found all over the State and a soil and climate unsurpassed for fertility and healthfulness invite him to a participation in the development of its vast resources, that can scarcely be found elsewhere. Sixth-day morning is given to social visits, and in the evening a reception for Friends is held at the house of Charles P. Walter, which, later on, merges into a meeting for worship. Eighteen Friends and Friendly people are present.

Loving words of encouragement to faithfulness to that in-speaking Word which may be heard in every soul, were handed forth, The deep interest in the presentation of this fundamental truth of our Society manifested by the little company, was very helpful to the weak instrument by whom it was handed forth.

As the Monthly Meeting of Genoa occurs on the 17th, it was necessary that further visiting among Friends in this vicinity be postponed for the present.

Early on Seventh-day morning the journey from Lincoln to Genoa is undertaken alone, Dr. R., who had expected to accompany me, being obliged to return to L. The company of Dr. Esther Painter relieved the tedium of the journey, which, however, could scarcely be called tiresome to one who takes pleasure in those wide stretches of rolling prairie with their indescribable shades of color that play among the undulations of the surface, and spread overhead a canopy of ever varying beauty. This part of the State is well-watered, and the rains that have been so frequent since spring opened have made rills and pools in all lowland places abundant. And then the roadsides and the unbroken prairie hold in their lap of green velvet jewels of the brightest pink and blue, white and golden and purple, that one longs to gather and study. As we near the stations all this beauty disappears, the busy tread of hurrying humanity leaves no place for these gentle things that bloom ungathered in the quietude of nature. Now the train goes rushing along through apparently interminable fields of corn in fine growing condition, then unbroken prairie waves its coarse sedge of the marshy portion, and the finer grasses that give food and fatness to great herds peacefully feeding thereon, crown the upland. Sand crops out as we near the larger watercourses, and the soil in these portions seems thin and unproductive. The Platte is a broad but shallow stream, crossed in several places by substantial bridges; we follow its course for a considerable distance.

At Garrison, other Friends going to the monthly meeting join us. There are numerous towns and villages along the route, and lying in the distance. The stores are usually built of brick, and many of the school-houses, the homes of the people indicate thrift and prosperity; only one sod-house was seen along the whole route, and the use to which it was appropriated was not fairly made out.

We reach the town of Genoa on time and find good friends with carriages waiting our arrival.

Genoa, Sixth month 16, 1888. L. J. R

HASTY JUDGMENTS.

It is an interesting study of human nature to watch a mixed crowd as they pass through a gallery of pictures. Some simply express admiration at everything. Sure that they must be good, or they would not be there, they feel safe in giving indiscriminate praise. Others spice their approbation with occasional criticism. Some utter impulsively their first impression; others more timid, look silently upon all. The few who, being true artists themselves, are best qualified to judge, are usually the most reticent. Indeed, they seem more occupied in studying than in judging, and more anxious to understand what they see than either to criticise or to flatter. Doubtless, however, the majority of these spectators are secretly conscious of their real incapacity to pronounce judgment, and the wisest of them will refrain from doing so, however willingly they may express whatever pleasure or preference they feel. They know that they are there for their *own* gratification or improvement, not to pass sentence upon works which they can only dimly fathom.

Yet as they pass out of the gallery into the world of living men and women how quickly is this respectful diffidence removed! He who would not presume to criticise a picture, of which he knows but little, will not hesitate to criticise a man or a woman of whom he knows far less. Willing to admit his inability to estimate the work of the painter, he yet feels competent, without study or experience, to estimate the noblest and most complex work of Infinite Wisdom. At least this is what seems to be the case with a great many people, from the readiness with which they pass judgment upon their neighbors, friends, and even their casual acquaintances. From first impressions, or from the most fragmentary knowledge, they proceed to form conclusions and pronounce decisions, compared with which the most superficial and ignorant criticism uttered in the picture gallery would be wise and reasonable. . . . .

There are few powers of mind so necessary to discover truth as that of suspending the judgment. All scientists must exercise it or their work is valueless. We demand it in the court room and the jury box, and usually insist upon it when any very *serious* charge is brought against a man's character. But in ordinary daily life it is not so. The most crude and unproved statements are put forth without any apparent sense of injustice. We hear that such a one is gloomy and discontented, and another frivolous and vain; that one man is said to be tricky in business, and another supposed to neglect his family; that one woman is extravagant and fickle, and another selfish and inhospitable. Daily and hourly are reputations thus stained and good names tarnished, always needlessly and often unjustly. However such impressions may have been gained, if they were dealt with as the astronomer would deal with his, if they were subjected to careful and patient investigation before they were proclaimed, many of them would remain unspoken, and much injury and sorrow would be prevented.

These hasty and unjust judgments injure not only those who are thus criticised, but also him who crit-

icises. He who finds fault ignorantly with a work of art may or may not hurt the artist, but he certainly hurts himself. He shows to all who hear him his vanity, his pretense of knowledge, his lack of sympathy. So he who casts rash censure and odium on his fellow men manifests plainly how shallow, how prejudiced, how careless alike of truth and charity he himself is. Perchance the very one whom he is condemning has virtues of which he knows nothing and a nobleness of manhood to which he is a stranger. It is usually the small-souled and narrow-minded man who can decry faults and failings with an eagle eye, but upon whom all the finer and grander qualities of humanity are lost. To him who ever walks with head bent and eyes on the ground the whole universe appears to be made of dust; but he who goes with head erect and eyes uplifted breathes the pure air and greets the rising sun, and forgets the dust that may be under his feet.

Abstaining from criticism by no means implies a tame and weak submission to evil as such. Let all proper warfare be waged against vice and crime and wrong of every kind. But for those whom we imagine to be identified with these evils let us have only charity and sympathy, and the desire to help, if possible. With their guilt we have nothing to do, for we have no means of estimating it. Under their peculiar circumstances it may be far less than our own. But for their improvement and happiness we may be largely responsible. If we search for the good that is in them, if we cherish and develop it by loving and respecting it in them, and thus winning their esteem and sympathy, we may possibly disentangle them from the evil. All harsh and hasty judgments tend to strengthen and perpetuate evil, while the patience and modesty which wait for the truth, and the charity which gladly emphasizes the good, are the most efficient weapons against every kind of wrong.—*Public Ledger.*

REMARKS IN LONDON YEARLY MEETING.

In London Yearly Meeting, last month, the report of the deputation to the Peace Conference at Indianapolis being read, some remarks followed of interest to our readers. (We quote report in *The Friend.*)

William Jones desired to make a few observations, particularly with regard to what had been done on this question in America amongst our own religious body. It did not appear that there was any specific object before the minds of the Conference when it met. The way was therefore open for the English deputation to act upon the counsel of London Yearly Meeting before they left, and they suggested the various steps that were taken. W. J. then referred to the way in which the peace question was taken up by the Women's Christian Temperance Union. Friends could hardly conceive of the wide extent of the work that would be done if the work of the peace department were thoroughly taken up, as seemed likely, by the 4,000 kindred branches connected with that association. The resolutions passed at Nashville were by no means empty words. In an interview with John G. Whittier, that life-long friend of peace, the latter told him that he would find an open door amongst Friends of all shades of thought on that continent; and he found in the result that he was everywhere cordially received, not only by those who were called Orthodox Quakers, but also by the Hicksites, so-called, though they themselves repudiate the name. Many of these he found to be very deep and spiritually-minded people. He visited Gettysburg, the scene of the most sanguinary struggle of the Civil War, and had been informed that a whole regiment of Quakers had been engaged in that battle. He could not help questioning how it was possible for that to be the outcome of two centuries of training in Christian homes. He feared it was sometimes too much taken for granted that young people as they grew up would grow into the position of their parents, not only in matters of fundamental truth, held by all Christian churches, but in those distinguishing testimonies which we had to bear before the world. Eli Jones had seen the dead body of his eldest son, Major Jones, borne into his house from the field of battle, where he had been shot while at the head of his men. Continuing, W. J. said that he felt it right to avail himself of opportunities to deliver addresses at a number of schools and colleges that were connected with the Society, and these were extremely interesting occasions.

Charles Coffin said there was no doubt that there were many young Friends engaged in the great American war; it was a most unusual occasion, when the nation was stirred to its foundations, and the very existence of the Government was at stake. But he questioned that there had ever been a whole regiment of Quakers engaged in that struggle. No one would suppose that Eli and Mary Jones had been deficient in instructing their children in our principles, yet their son felt it his duty to go into the war, and lay down his life there. A good many went feeling much hesitancy as to whether they were doing the right thing or not. The greatest appreciation of the services of William Jones, was felt in America, especially for the way in which he had stirred up the Women's Christian Temperance Union on the subject.

Charles Brady especially endorsed what had been said by W. J. with reference to his service amongst the Hicksites. In their Philadelphia meeting W. Jones and himself had been invited to take a seat in the gallery, and deliver what message they had; and W. J. was largely engaged in the ministry there, with reference to the peace question. It almost seemed that this great question might be the means in some sort of drawing us and them more closely together.

"Be, and not seem. If you would not be known to do a thing never do it. Never was a sincere word utterly lost. A man passes for what he is worth—what he is engraves itself on his form, on his features, in letters of light."—*Emerson.*

Many favors which God gives us ravel out for want of hemming, through our own unthankfulness. For though prayer procureth blessings, giving praise doth keep the quiet possession of them.—*Fuller.*

From "The Peacemaker," (Philad'a.)

PEACE AND ARBITRATION AS A STUDY.

To President Edward H. Magill, LL. D., of Swarthmore College, Pennsylvania, let praise and honor be accorded for being the first that we know of, to introduce in the curriculum of that excellent institution the important subject of Peace and Arbitration.

We have been for several years appealing for attention to this phase of the peace work, and we have been encouraged by Herm. Molkenboer, of Bonn, Germany, and Josiah W. Leeds, of Philadelphia, who have published much in this direction, but it has been reserved for the Friends' College, of Swarthmore, Delaware county, Pa., to formally place this subject in the list of studies.

It appears under the head of Political Science, in charge of William Penn Holcomb, Ph. D., Professor of History and Political Science, and Lecturer on Pedagogics, and is thus introduced in the catalogue, "Elements of International Law with special attention to the important subjects of Peace and Arbitration."

This has been brought about in the following manner: President Magill saw the importance of having in Swarthmore College the aid of Endowed Professorships, to be selected and named by the board of managers. He therefore sent out an appeal for subscriptions to be made by the 15th of Sixth month, 1888, for the sum of $40,000, no subscription to be binding until that amount shall be subscribed.

The President of the Universal Peace Union, believing this a favorable time, and Swarthmore College the very place for the work of instruction in peace and arbitration, wrote President Magill, proposing a subscription if the endowed Professorship should be named for this enlightened movement. He replied favorably, but presented the difficulty of making a special professorship of any one subject and raising the sum required, but he very satisfactorily suggested the action as stated, and said: I shall take great pleasure in introducing, not only into our own published course of study, but also into the practical work of the class-room, a proper recognition of the important principles of peace and arbitration. Our professor in that department is in hearty sympathy with such a movement. I have shown him thy letter and he will coöperate with me in making a practical application of these principles in his instruction in civics, and especially in international law.

"Now, in view of the fact of our pronounced position on the subjects of peace and international arbitration in connection with our professorship of history and political economy, wilt thou not make the subscription already referred to, and add the names of other friends interested in peace, and thus aid a young college which is destined to do a great work yet in this very line.

"There is surely no way in which the great principles of peace and brotherhood can be so effectually disseminated as by the proper instruction of the rising generation. And I trust that in this very important labor, Swarthmore college founded and endowed by Friends, may be a zealous laborer."

This marks an eventful era in the peace movement of the nineteenth century. To thus drill, as it were, for peace is to hasten the abolition of war and of the military system. All credit to Swarthmore! This example will go round the world. Other places of learning will follow, and as this feature of education is successful, military academies will decline. Already a prominent supporter of Haverford College, of Pennsylvania, also a Friends' institution, upon hearing of this action at Swarthmore, said, "It ought to be introduced at Haverford."

STOPS AS WELL AS STEPS.

It is easy enough for us to believe that "the steps of a good man are ordered of the Lord," and to take all the comfort possible out of our Christ-given right to appropriate to ourselves this assurance. We learn, as we go on in life, to trust gladly in this "ordering," whether it be in the great movements or crises of our experience, or in the smaller duties and affairs of every day's occurrence.

But a recent devout writer speaks of "allowing God's time-table to supersede our own," and "recognizing his planning as put forth in the stops as well as the steps." There is a deep thought here which it may do many of us good to ponder for a moment, especially those who have been called to stop. When we are in the full tide of active service for God and man, in the lines opened to us, and clearly pointed out by God himself, it is not always—is it ever?—easy to stop short, lay down the work, or give it into the hands of others, and accept the divine ordering of the "halt" as heartily as of the "advance."

It seems as if we could serve God so much better by doing something; by speaking or writing, or planning or organizing, teaching or exhorting, raising money or spending it, stirring up others or leading their newly kindled enthusiasm, than in sitting down in silence before the Lord. And so we chafe against these "stops," and almost think that they must be devices of the evil one to hinder and distress us, not gentle orderings of our loving Father to rest and quiet us.

It seems to us that this and that and the other interest would surely suffer if we failed to keep our hand upon them; or, at least, we should like to choose the time for rest, when it seems to our view that we can best be spared.

But our wise and loving Father does not leave it to us for our choosing. In his own way, at his own time, suddenly, or by degrees, gently, or with swift strong hand, he draws us away from the work and the associations which are filling our hearts and hands, and bids us stop for awhile. We look up to him, and say, "Lord, this cannot be! I was serving thee out there! There is no one to take my place. Thy work will suffer."

Yet firmly he holds us where we are, whispering, if we will but listen, words of comfort and assurance to our souls, showing us that it is all of his ordaining, the stops as well as the steps, and that as he has ordained it all, there is no fear that aught will really suffer because one or another is brought to the resting-time before his work seems done. Then yielding to him, waiting on him, trusting in him, we may

learn such lessons that ever after this time shall be remembered as one in which we were truly "taught of the Lord," and "great" was our "peace."

Do not grieve nor murmer, then, you who are in the midst of busy, active life, if the summons comes to you in any form to turn aside and leave all your plans and labors for a time. Your clock may not yet point to the hour for rest. God sees that the hour has come, and calls you away. If you are conscious of seeking to serve him in your steps, recognize now his guidance in the stop to which his providence points, and you will not fail of the blessing there awaiting you.—*The Presbyterian.*

SCRIPTURE LESSON, No. 26.

SEVENTH MONTH 8, 1888.

TOPIC: IDOLATRY.

GOLDEN TEXT: My little children, guard yourselves from idols. 1 John 5: 21.

READ Exodus 32: 15–26.

IT was while Moses was in the mountain of Sinai, where he had gone to receive the commandments of God for the people of Israel, that the occurrences of the present lesson took place. The mountain is sometimes called Horeb. It is not certainly known whether the whole range was meant by one name and the single mountain by the other; it is believed the distinction is one of usage, and that both names are applied to the same place.

Moses remained so long (40 days and 40 nights, Ex. 24: 18) that there began to be a murmuring of the people, as they idly encompassed the mountain; they wanted to be up and going on their journey. Aaron and the other leading men were not able to surpress the feeling of discontent that at last broke out in open rebellion against Jehovah and his servant Moses.

The two tables of the testimony. The two stone tablets upon which the ten commandments were engraved.

The calf. An object of worship among the Egyptians, who made images of animals and birds to represent some deity, or god; these they kept in their houses or about their persons.

One of their chief objects of reverence was the sacred bull of Memphis. He was kept in a temple and had a retinue of priests to wait upon him. This animal was put to death at a certain age, and another calf selected to fill his place. A general mourning followed his death, which was kept up until his successor was found. It was doubtless from this worship that the Hebrews took the thought of the golden calf, which in our own time is used as a symbol of the love of wealth and the hoarding of riches. It is not to be supposed this image was of solid gold. The Egyptians carved the animal from a block of wood, and overlaid it with gold, and these Hebrew artificers doubtless did the same thing, as we read "They burnt it with fire and ground it to powder."

While studying these lessons in Exodus, we are more and more impressed with the grandeur of a soul that has determined to serve its Maker, and try to be faithful under all circumstances. Even his failures and outbursts of indignation encourage us in our times of trial, for we read how humbly he repented, and sought his Father's forgiveness: and how that Father did lovingly receive him back into His favor.

And Moses turned, and went down from the mount. He could not always stay in that exalted condition; he must come down to his people so as to help them.

We to-day have impressions made by the Father of mercies, not on tables of stone, but on our hearts. Let us try not to be like these children of Israel—impatient when our hopes are disappointed, turning away from the living God, and making golden or any other idols for ourselves. Sorrow and bitter trouble must follow.

We cannot wonder that it hurt his noble nature, when he returned from the mount, so anxious to help his people, and found them worshipping a golden calf. Remembering his indignation and sorrow at their idolatry, let us here determine never to cast the words of God from our hearts, let others provoke us as they may. No unkindness should tempt us to forget that his power is over all. The thought of the Holy Spirit will help us, and in "quietness and in confidence" shall we find our strength. It was clearly a Divine inspiration with the early Friends, when they came to feel and to practice the full import of David's words, "Be still, and know that I am God." This saved them when they were called to come out from the unholy excitement prevailing around them.

We think of Moses while leading Jethro's flock across the wilderness, as if he were engaged in very humble duty; yet we see that his soul was led, at the same time, up to the mountain of God, and there he heard the Voice, saying, "I am the God of thy father." What a happy assurance that he was indeed following the true Guide! The same work is not required of all—but each one will be fully blest, in proportion to his faithfulness. Have we not known a fullness of peace and rest, after trying to do right, that may be compared to the Angel of God that appeared unto Moses? We must not be discouraged if hard reverses come so soon after, as he experienced.

EXTRACT.

[From the Minutes of a First-day School.]

WHILE thinking for ourselves and realizing the blessing of such a privilege, we should take great care not to allow ourselves to feel we are entitled to regulate the thinking of others. If the right to one's own opinion be not guarded by humility or deference to others, if because we feel our views to be true, we insist that others must all see from our standpoint, or be entirely wrong, then are we burying five talents instead of one. Our responsibility keeps pace ever with our ability in any line; and to keep the balance true, is to accomplish the will of Heaven. This is one of the stumbling blocks which all thinkers must meet. "If I think well, ought I not to do the thinking for others?" I say *no;* humility, and humility only, can guide us safely through this danger. All may well be taught to have their own thoughts, if they are just as correctly taught not to try to *force* others to think with them. I know no law against persuasion in a good cause, but to go beyond this is to arouse a disputatious, quarrelsome, altogether unchristian spirit, *whatever* be the subject under consideration.

SUMMER CHARITIES.

EXTREMES in any sense always bring their demands upon body, mind, and spirit, and often tax to the utmost level-headed people, in order that as little mischief as possible shall be caused thereby. Just now it is the extreme of heat with which we are called to grapple, and considerate folks, after wisely providing for the necessities of their own households, are on the alert to see what can be done to aid the many "summer charities" that a benevolent age has devised, to assist the worthy poor to a change of air and scene; so that life to them may not become a burden too heavy to be borne.

If there is one charity in the class named that commends itself most to practical people, it is, perhaps, the one known by the name of the "Country Week Association." Its report shows that it is a living concern, well conducted by a number of self-sacrificing women and young girls, who plan the visits and work hard in the arrangement of all the details. Last year over 23,000 persons through this (Phila.) agency, realized what to them would have been otherwise impossible, the benefit of a short sojourn at the sea shore or in the country, the larger number being "one-day jaunts," though 4,218 children and adults enjoyed a week or nine days of such pleasure. The good accomplished by this is hard to estimate, but we can conceive of no better form of enjoyment than that of being removed—even for a brief season—away from a crowded city with its stifling heat, to where the eye can rest on "green pastures," and where the ear can catch the music of the birds, and both body and spirit be ministered unto. And because it is a "living concern" it needs money all the time, for such practical movements cannot be carried on without it. But in this, a little goes a great way, so that all that have a little to spare can find in this charity an avenue for it that may bless both giver and receiver.

Subscriptions to the fund can be left with John Comly, 15th and Race Sts., Phila., and will be promptly forwarded. He will also receive names of persons in the country who shall be willing to entertain "Country Week" guests for a limited time.

HAVE courage to wear your old clothes until you can pay for new ones.

MARRIAGES.

KITSON—GILLAM.—At Atlantic City, at the residence of the bride's parents, on Fourth-day, Sixth month 20th, 1888, by Friends' ceremony, Alfred Ernest Kitson, of Melmerby, Yorkshire, England, son of James and Sarah Elizabeth Kitson, and Susanna Woolston, daughter of Harvey and Sarah C. Gillam, of Philadelphia.

DEATHS.

ADAMS.—Sixth month 17th, 1888, near Atlantic City, N. J., Amy Adams, aged 92 years; a member of the Monthly Meeting of Friends of Philadelphia held at Spruce street.

ELLISON.—On the 19th of Sixth month, 1888, Annie A., widow of Wm. C. Ellison, in the 81st year of her age.

JOHNSON.—At Media, Pa., Sixth month 23d, 1888, Oliver H. Johnson, in his 68th year.

SHEPHERD.—At his residence, Dean's Corners, Saratoga county, N. Y., Sixth month 14th, 1888, Milton Shepherd, aged nearly 67 years; a member of Saratoga Monthly Meeting.

THATCHER.—In West Philadelphia, Sixth month 18th, 1888, of effusion of the brain, Jesse W. Thatcher, Jr., aged 5 months, son of Dr. Jesse W. and Elizabeth B. Thatcher, members of the Monthly Meeting of Friends of Philadelphia.

YERKES.—Sixth month 19th, 1888, in Philadelphia, Robert Harris, son of Hannah and the late Charles Yerkes.

NEWS OF FRIENDS.

FISHING CREEK HALF-YEAR MEETING, ETC.

MEETINGS were held at Bear Gap on Second-day morning, the 18th inst., and at Roaring Creek in the afternoon, and Catawissa in the evening; all well attended and satisfactory. Roaring Creek Monthly Meeting was held at Catawissa, on Third-day morning the 19th. The three queries were answered and a memorial concerning Rebecca John was approved and forwarded to the Half-Year Meeting.

Fishing Creek Monthly Meeting was held on Fourth-day the 20th. It was a large and interesting meeting. The report of the school committee was read in joint session. The school was opened on the the 5th of Ninth month, 1887, and closed on the 15th of Sixth month, 1888. It has been under the care and instruction of Edith H. Cutler, assisted by Chas. D. Lukens, S. Jennie Kester, and Laura B. Garrett, all of whom are members of our Society. There were 91 pupils on the list, 28 members, 41 with one parent a member. Henry R. Russell has given a number of lectures and the progress of the school was encouraging. The committee was continued.

The Half-Year Meeting was held at Millville, Columbia county, Pa., on Fifth-day the 21st inst. It was larger than usual. Allen and Sarah B. Flitcraft, Barton Heacock and his wife, and Catharine P. Foulke were there with minutes. Henry T. Child, of the Visiting Committee of the Yearly Meeting, was present, also Carrie Grant, of Salem, N. J., Reuben Wall, of West Branch, Pa., Wm. Hicks and wife, and Elias Hicks and wife of Williamsport, Pa. In the meeting for worship Allen Flitcraft and Henry T. Child spoke. The meeting for business was occu-

pied in reading and answering the queries, and in joint session in considering a memorial concerning our Rebecca John, which was very fully united with, many young Friends speaking in favor of it.

On Fifth-day evening Allen Flitcraft had an appointed meeting at Millville, which was large and satisfactory. It was addressed by A. Flitcraft, Barton Heacock, and Catharine P. Foulke. Perry John and Henry T. Child had a meeting in a church at Greenwood, about four miles out of Millville, which was an interesting occasion. The Youths' Meeting on Sixth-day was the largest meeting of the week, the house being entirely full. Henry T. Child, Allen Flitcraft, Barton Heacock, and Catharine P. Foulke spoke. It was a very solemn and impressive meeting. Several parlor meetings were held and many of the families were visited. H. T. C.

HISTORICAL SKETCH OF FISHING CREEK HALF-YEAR MEETING.

In 1833 Roaring Creek Monthly Meeting proposed to Friends of Muncy the establishment of a Half-Year Meeting, and the two meetings sent this proposition to the Yearly Meeting. In 1834 a committee of the Yearly Meeting reported that most of their number had attended these Monthly Meetings, and after deliberate consideration, and with feelings of tenderness toward Friends of these meetings, they even united that their request be granted, and said Half-Year Meeting established, at present, under the care of a Committee of the Yearly Meeting, to be called and known by the name of "Fishing Creek Half-Year Meeting." It was to be held in a log meeting-house on the site of the present building, in Millville, Columbia Co. Pa.

The first meeting was held on the 18th day of 9th month, 1834. The Yearly Meeting's Committee, consisting of John Comly, Halliday Jackson, Abraham Lower, Benjamin Davis, and Isaac Parry, was present. It was agreed to hold a meeting of worship on the day following, (this is called a "Youths' Meeting.")

In 1838, the time of holding the Half-Year Meeting was changed to the 5th day following the last 4th day but one in the 6th and 12th months, and has been so continued ever since.

In 1840 a proposition was made to hold a Yearly Meeting in conjunction with Centre Quarterly Meeting, to be known as Fishing Creek and Centre Yearly Meeting of Friends; but after several years' consideration by the Yearly Meetings of Baltimore and Philadelphia, way did *not* open for the establishment of the meeting. There have been 114 Half-Year Meetings held and this was considered to be as large and satisfactory as any one. The interest taken by young Friends, many of them bringing their infant children with them, has been advantageous to the meeting.

In 1862 there were 230 members of Fishing Creek, and 59 of Roaring Creek, making 289. The former has increased and the latter decreased. They have a record of over 400 visitors, ministering Friends, and others—and probably twice that number have been there. H. T. C.

THE SCHOFIELD SCHOOL'S CLOSING.

The closing exercises of the Schofield School, at Aiken, S. C., occurred on the 15th instant, beginning at 11 a. m. There were two graduates, Catherine Scott and Sherman J. Lee. The programme included an original essay, "The Result of Patient Toil," by Catherine Scott, and an oration, "Moral Courage," by S. J. Lee. There were also exercises by members of the junior classes. There was a large attendance of interested friends of the school, and all passed off very pleasantly. A letter from Martha Schofield, dated 17th instant, among other things, says:

"The school term closed with a feeling of gratitude that the work had gone on with so much smoothness, and had made so much progress, and that the Power of God had so moved the hearts of its friends that we have been enabled to meet our expenses, month by month, and now have nearly enough to build the two rooms so much needed. To-morrow we begin building and though most of the students have gone, two are retained to print the annual report, which we hope to have out by the 1st of next month. Dr. A. G. Haygard wrote me that the Board of the John F. Slater Fund had appropriated $500 to our School for next year. We feel that we might have looked for $1,000, if we had a better place for the industrial instruction, and more apparatus. [After referring to the excellent work done by Samuel J. Entrikin, M. S. proceeds.] Elizabeth Criley has been a most efficent co-laborer, in all departments, but her time has often been overcrowded; so that next year we feel it necessary to have a competent matron, who also will be serving teacher, and have charge of the boarding girls, seeing after their conduct, and teaching them how to mend clothing, etc. Lucy Laney, the head of a colored industrial school at Augusta, spoke beautifully at our Commencement on the need of making better *homes*. She is a practical colored woman, and sees the needs of her people as few do."

A report sent by Elizabeth Criley, for the information of those who have been aiding the School, says:

"The term just closed has been a very successful one in every respect, and we feel the work done has been of great benefit to a large number of students, yet as we are finishing everything for this year, and look forward to next, we all see where better work may be done in almost every department.

"The whole number of pupils enrolled for the year was three hundred and forty-seven (347): Girls 182; boys 165. (Of this number thirty-eight were boarding students.) These were divided into nine classes.

"The Commencement took place on the 15th of June. There were two graduates, Sherman J. Lee and Catharine Scott, both of whom passed satisfactory examinations in the required branches, and we hope they both will be a credit to the school. Many patrons and friends of the school were in attendance, and expressed themselves highly pleased with the exercises. Friends from Barnwell county chartered a car, and came out in full force. Many of them had not seen the school before and were very enthusiastic over it. One mother had never been so far away from

home before in her life, and thought it grand that her daughter should have been all the year at such a home as this.

"Sherman Lee's mother, a poorly dressed, tired looking old woman, sat on a front seat and watched her son with a beaming face which was but a slight reflection of the joy in her heart at her son's being such a 'scholar.' She had never witnessed any exercises of the kind before, and to her they were grand beyond expression.

"It is characteristic of the Southern people to approve of whatever makes the most show, and, although we made no effort whatever at display in our Commencement exercises, the progress of the children could easily be seen in the class drills which each teacher conducted in the morning, and these with the essays and declamations made a very good impression on the audience. Altogether our closing day was a successful one."

A LETTER FROM MARY S. LIPPINCOTT.

Editors of FRIENDS' INTELLIGENCER AND JOURNAL:

THE enclosed letter was forwarded for publication in your paper soon after our Yearly Meeting, feeling that it might be an appropriate time. By some mischance it was mislaid; I hope you will find room for it now.

My Dear Friend:

Thy impressive parting exhortation at Yearly Meeting at its close, sank deep into my soul as "apples of gold in pictures of silver" and were treasured up to be brought forth from the treasury as things new and old. "A solemnity spread over the meeting and over my mind until I had to be reminded by the assistant clerk that we had adjourned. If it should be the last time some of us aged ones should attend, the savor will be sweet while memory lasts. Surely the Father's love swallowed us up." I felt encouraged by the yearly meeting, believing many minds are under the preparing Hand. But one thing troubled me; I felt the earnestness of a spirit to lay down our testimony to "Plainness of speech and of dress, etc." I do not mean the cut of raiments or to have uniformity, but simply without ornaments, which are plead for by some who are heard in pretty lengthy testimonies and using "you" to one, "Mr." and "Mrs.," "Yes, sir," "Yes, madam," etc. I cannot believe the Spirit of Truth leads out of these things, and then leads into them. Neither do I believe that the Spirit of Truth is changeable. It is the Spirit of God, the same "Yesterday, to-day, and forever." Ministry without ministers bearing the cross, does not gather to the true fold, first, the natural, then the spiritual. The second birth—Christ-like—overcomes the world and its vanities. Oh! that these ornaments may fall off, then we may come out of the wilderness in primitive brightness in a plain way of living and preaching only as the Spirit gives utterance, which will alone gather the sheep and the lambs. Farewell. Thy friend,

Sixth month 6, 1881. MARY S. LIPPINCOTT.

OUR prayers should be for blessings in general, for God knows what is best for us.—*Socrates.*

EDUCATIONAL NOTES.

MARSHALL SEMINARY, at Easton, Washington county, N. Y., to which allusion has been made in recent issues of the paper, will have a summer session, commencing on the 10th of Seventh month, for the special instruction of those desiring to teach. Guests desiring to spend the summer months are also received, and it would be practicable, therefore, for parents or guardians to accompany students. The institution is near the Hudson river, 20 miles north of Troy, and 15 miles east of Saratoga Springs. Communications should be addressed to Linford S. Pratt, Principal, Easton, N. Y.

—The Educational Association of Haverford College (Orthodox Friends) proposes to hold a meeting at the College, beginning the 3d of Seventh month and continuing until the 5th. The programme as published gives notice of papers to be read by James Wood, the President of the Association, upon "The Influence of Colleges in the Progress of Religious Thought;" by President Rhoads, of Bryn Mawr College, and by representatives from Guilford, Earlham, Penn, Wilmington, and other colleges and academies. Seventh month 4th, at 3 p. m., the subject to be considered is the study of the Bible; next day at 9 a. m., will be a discussion of journals and journalism among Friends.

—In London Yearly Meeting a plan for an institution of higher education for boys received considerable attention. The draft proposed to accommodate 80 to 90 students, at a charge of about $450 a year. Some accumulated money, belonging to the "Grove House Fund," amounting to about $35,000, will probably be applied to this work. The Yearly Meeting gave its approval to the plan, without assuming financial responsibility.

HEREAFTER there will be a police matron at the Central Station in Milwaukee. Her salary and expenses will amount to fifty dollars a month, of which twenty dollars will be furnished by the city, and thirty dollars by the Women's Christian Association, the W. C. T. U., and the Sisterhood of Bethany. A committee of ladies from these three associations has been at work for some time trying to secure the appointment of a matron, and the ladies are much gratified by their success. The choice of the matron has been left to them, and they have selected a Mrs. Rice, of Chicago. She is the widow of a minister, has had long experience in city mission and jail work, and is believed to be well fitted for the place. The need of a matron is shown by the fact that at the Central Police Station of Minneapolis more than four hundred women were detained last year for a longer or shorter time; some drunk, some insane, some young girls arrested for a first offence—all classes and kinds; and there were only men to look after them.—*Women's Journal.*

LORD, I have tried how this thing and that thing will fit my spirit. I can find nothing to rest on, for nothing here hath any rest itself. O Centre and Source of light and strength! O Fulness of all things! I come back to join myself to Thee.—*Hallam.*

MIDSUMMER WORDS.

WHAT can they want of a midsummer verse
In the flush of the midsummer splendor?
For the Empress of Ind shall I pull out my purse,
And offer a penny to lend her?
Who wants a song when the birds are a-wing,
Or a fancy of words when the least little thing
Hath message so wondrous and tender?

The trees are all plumed with their leafage superb,
And the rose and the lily are budding;
And wild, happy life, without hindrance or curb,
Through the woodland is creeping and scudding.
The clover is purple; the air is like mead,
With odor escaped from the opulent weed,
And over the pasture-sides flooding.

Every note is a tune, every breath is a boon;
'Tis poem enough to be living.
Why fumble for phrase while magnificent June
Her matchless recital is giving?
Why not to the music and picturing come,
And just with the manifest marvel sit dumb,
In silenced delight of receiving?

Ah, listen! Because the great Word of the Lord,
That was born in the world to begin it,
Makes answering word in ourselves to accord,
And was put there on purpose to win it.
And the fullness would smother us only for this—
We can cry to each other, "How lovely it is!
And how blessed it is to be in it!"

—[*From "Daffodils."*]

"AS THE GRASS."

My days are as the grass,
Swiftly my seasons pass,
And like the flower of the field I fade;
O soul, dost thou not see,
The wise have likened thee
To the most living creature that is made?

My days are as the grass;
The sliding waters pass
Under my roots, upon me drops the cloud;
And not the stately trees
Have kinder ministries—
The heavens are too lofty to be proud.

My days are as the grass;
The feet of trouble pass,
And leave me trampled that I cannot rise;
But wait a little while,
And I shall lift and smile,
Before the sweet, congratulating skies.

My days are as the grass;
Soon out of sight I pass,
And in the bleak earth I must hide my head;
The wind that passes o'er
Will find my place no more—
The wind of death will tell that I am dead.

But how I shall rejoice,
When I shall hear the voice
Of Him who keeping spring with Him alway,
Lest hope from man should pass,
Hath made us as the grass—
The grass that always has another day!

—*Carl Spencer.*

LONDON LIFE.

[A DISCOURSE recently delivered by F. W. Farrar, D. D., F. R. S., in Westminster Abbey, in which he strongly appeals for greater simplicity of life in the rich, and a more generous giving to aid in uplifting the poor, whose increase is so appalling as to cause great anxiety. His attempt at giving an adequate idea of the great size of London, together with her riches and poverty will be read with interest. EDS.]

The size, the growth, the splendor, the misery of London have long weighed upon the thoughts of all serious men. Its throbbing and feverish life, its luxury and wretchedness, its amazing wealth and squalid penury, alternately fascinate and terrify the imagination. Above all, how intense for every Christian man is the significance of that appalling tide of humanity which is ceaselessly ebbing and flowing through its streets. When we recall that every one of those myriads is an heir of immortality, and is enormously influenced for good or for evil by the daily impression of surrounding life, how deep a sense of responsibility ought to rest upon us all; how awful must be the guilt of those who, for greed and gain, are helping to assassinate physically, morally, spiritually, these numberless immortal souls! how deep must be the blessing of those who throw into these turbid and empoisoned waters but one leaf from the healing tree of life! . . . . . .

Perhaps familiarity has made London to your minds a very common-place phenomenon. Let me, then, show you the kind of aspect it presented to one or two observers of imagination and genius. Sixty years ago a young poet of Jewish race and of brilliant faculty visited London, the far smaller London of that day, and this is what he said of it: "This stern reality of things, this colossal uniformity, this machine-like motion, this sour visage worn by joy itself, this high pressure of London life, weighs down the fancy and rends the heart asunder. It appeared to me as if all London were a Beresina bridge, where every man, in feverish anxiety in order to save a few breaths of life, endeavored to struggle through: where the dashing rider trod down the poor foot passenger, where he who fell to earth was forever lost, where men trampled on each other as they clung to the bridge, ere they sank down into the icy pit of death." So wrote Heinrich Heine. And you will see what struck him most was the wild competition, the rampant and reckless selfishness which met him on every side. To him all these millions seemed to be living, not for heaven, not for Christ, not for their neighbor, but for their bodies, their animal wants, their money, their comforts—for themselves. He was inclined to say, with another poet,—

In the street the tide of being
How it surges, how it rolls!
God! what base, ignoble faces,
God! what bodies wanting souls.

Again, fifty years ago, a young Scotchman came to London from the wilds of Annandale to make his home here for the rest of his days. His name was Thomas Carlyle, and he wrote of London as "a wild, wondrous, chaotic den of discord." "I am awe-struck," he said, "to wander along its crowded streets

and hear the roaring torrent of animals and carriages and wagons and men, all rushing they knew not whence, we know not whither." What struck Thomas Carlyle was the enigma and the perplexity of life, its littleness, the paltriness of its aims amid eternal realities, and under the azure vault of heaven; the thought that we are forever chasing bubbles whose colours fly in a moment; the thought what shadows we are and what shadows we pursue. These have been the words of men who have passed away; let me quote the descriptions of two other men of genius, a great poet and a great man of science, who are still among us. How full of warning and of prophetic sadness are these lines of the Poet Laureate!

Is it well that while we range with science, glorying in the time,
City children soak and blacken soul and sense in city slime?
There among the gloomy alleys progress halts on palsied feet,
Crime and hunger cast our maidens by the thousand on the street;
There the master scrimps his haggard sempstress of her daily bread,
There a single crowded attic holds the living and the dead,
There the smouldering fire of fever creeps along the rotted floor,
And the crowded couch of incest in the warrens of the poor.

Every line of the dark picture is fatally accurate. You will see what chiefly strikes the great poet is the squalor and the wickedness, the children passed through the fire to our national Moloch of drink, the horrible prostitution, the rotting tenements, the neglected masses, the fever-stricken rookeries, the sweater's den. Once more let me repeat to you the sad testimony of one of our foremost men of science, Professor Huxley. He told us not long ago that he spent some of the earlier years of his life in an Eastern parish of London, and over and above the physical misery, what struck him most with an undying impression was the astonishing dullness and deadness of the existence of these poor people. Over this parish might have been written Dante's inscription, "All hope abandon ye who enter here." There was no amusement to diversify the dull round of life but the public-house; there was nothing to remind the people of anything in the whole universe beyond their miserable toil rewarded by slow starvation. He tells us that shortly afterwards he made a voyage around the world, and saw savage life in all conceivable conditions and savage degradation; "but I can assure you," he says, "that in this experience of mine I saw nothing worse, nothing more degrading, nothing so hopeless, nothing nearly so intolerably dull and miserable as the life I had left behind me in the East-end of London; and had I to choose between the life of one of these people in the East-end and the life of the savage I would distinctly choose the latter. Nothing, not even the discovery of a new truth, would please me more than to contribute to the bettering of that state of things which, unless wise and beneficent men take it in hand, will tend to become worse than savagery—a great Serbonian bog which in the long run will swallow up the surface crust of our civilization." You will see that what struck Professor Huxley was the horror of animal degradation and moral death and intellectual gloom. And I bring these pictures and this evidence of others before you, though I could myself quite as easily speak of that which I do know, and testify as to that which I have seen. If these colours seem to you dark and lurid, I can tell you that they could be made much darker and much more lurid with perfect truth; but because you cannot escape from the consequence of anything that I might tell you by some idle remark that clergymen exaggerate, I have purposely preferred to set before you the evidence of laymen, of poets, of agnostics, of men of science. They have no charity to plead for; they, at least, have no conceivable interest in painting the facts otherwise than they themselves have seen them. But I think the bare, bald statistics are enough.

What are the general facts about London? First, you all know that it is the most stupendous city in the world. The world has never seen, and has never even dreamed of seeing, so vast an aggregation of human beings. Its mere daily provisionment, without any centralised or public organization, yet without hitch or hindrance, by the mere natural laws of supply and demand, always seems to me a daily miracle. What can I tell you which will enable you at all to realise what London is and what London means? It has 7,400 streets, which if laid continuously, would extend 260 miles; its area is swept by a radius of fifteen miles. Yearly it adds to its vast extent many miles of new streets; yearly hundreds and thousands of human beings are settled where but a short time ago, were green fields. It has doubled its size in fifty years. Think, secondly, of its human multitude. It has four and a half millions of souls in its crowded space—nearly as many inhabitants as the whole of Ireland, Wales, and Scotland, more than Berlin, Paris, Vienna, and St. Petersburg combined. It has in it more Jews than Palestine, more Roman Catholics than Rome, more Irish than Belfast, more Scotchmen than Aberdeen, more Welshmen than Cardiff. Every day 240 souls are added to its population; every few minutes in this city a human being is born; every six minutes a human being in this city dies. Since we have met in this cathedral at least ten immortal souls in this city have sighed their last sigh on earth, have flickered away from the region of shadows and illusions to another world where all is judged of truly. Then think of its extreme wretchedness and social waste, the flotsam and jetsam flung on the rotting wharf of oblivion by its corpse-encumbered waves. Think of its multitude of struggling sempstresses--

With fingers weary and worn,
With eyelids heavy and red,
A woman sat in unwomanly rags,
Plying her needle and thread.
Stitch, stitch, stitch,
In poverty, hunger and dirt,
And still with a voice of dolorous pitch—
Oh, that its tones would reach the rich—
She sang the song of the shirt.

And the song is as much needed now as when it was written. Thousands there are of such. The common lodging-houses have 27,000 inhabitants, and into them drifts the social wreckage of every class. There is an army of some 100,000 paupers; there are as many on the verge of famine as twice over the inhabitants of Nottingham; there hundreds of deserted children who live by prowling about in the markets, the slums, the railway arches.

In ancient cities there were the gladiators and the slaves, but here in modern and Christian cities there is also a mass of crushed and unreclaimed humanity, the canker that feeds on the exhuberance of luxury, and perforates it with misery and decay. Then think, fourthly of its guilt. The known number of the criminal classes in London would fill a city as large as Huntingdon; the fallen women—most wretched of all the wretched victims of men's debased and callous selfishness—would fill a city as large as Norwich. Behind our temples and palaces, aye, here under the very shadow of your Abbey and your Houses of Parliament, lurk hundreds of festering ills—the prison, the penitentiary, the asylum, the thieves' lodging, the drunkards' cell, the penny gaff, the harlots' rendezvous, the youth-corrupting music-hall, the tens of thousands of places where men may purchase liquid fire and liquid death. Then look, fifthly, at its increase. Every year it adds an enormous circle —a city as large as Exeter, a population of 70,000 souls —to its immense extent, and that rate of increase is ever augmenting, and there seems to be no limit to the reckless and seething vitality which threatens to deluge and destroy the country with a hideous tide of over-population. Consider, sixthly, that this increase means the increase mainly of its squalor, its wretchedness, and its guilt. The increase has been described as the survival of the unfittest, and it is the increase mainly not among the prosperous, but among the destitute; an increase ten per cent. more rapid in the slums and rookeries than in the parks and squares. It is the increase caused, to a great extent, by the disgracefully early and immature marriages of those who marry, as it has been said, within half-a-crown of starvation; it means the increase of those classes which are completely under the demon sway of drink, whose only paradise is the grimy pandemonium of the public-house: it is the increase of a pauper class living on alms and rates and odd jobs in the misery of a chronic indigence and the sansuality of a Godless despair. Some of these gin shops have been described, not by me, not by any clergyman, not by any temperance reformer, but by a champion of the liquor trade, by the President of a liquor Defense Association. They have been described—I will quote his own words—as seething hells of immorality and vice, whose purifying existence is supported solely by millionaire brewers; as pestifierous sores, which destroy the moral vitality of a great body of the people; as miserable dens—I am still quoting his words—to which guant men and ragged women with starving and diminutive children are encouraged to resort that they may spend on a pennorth of gin the last coin that they have earned, begged, or stolen. And in the nineteenth century of Christianity, after such houses have been denounced for well nigh five centuries in the statute book of England, we are so shamefully not in earnest, so utterly dead and insincere, so flaccid of moral modern fibre, so intimidated by the bloated prosperity of a trade which imperils the souls and bodies of myriads of our fellow-countrymen, and disgraces our name and fame all over the wide world, that we can find nothing better or more just to do than to create vested interests in the causes of human ruin. With spurious sensitiveness and with tinkering timidity we deal gingerly with a curse which is now our ruin, and which, unless at the eleventh hour we awake to some degree of moral earnestness, I am fully convinced will be England's destruction. Our fathers faced the lion, but we crouch and cower before the wolf.

I have pointed to London in some of its more serious aspects, but here is yet another St. John in the Apocalypse, recalling what he had seen, perhaps in Rome or in Ephesus, describing a city full of "merchandise, of gold and silver, and precious stones, and pearls, and fine linen, and purple and silk, and scarlet, and citron wood and ivory, and cinnamon, and odors, and horses, and chariots, and slaves, and souls of men." Is not London just such a city? But besides the coëxistence of abnormal wealth and abysmal poverty, there is in London a double aggravation —the contrasts are particularly glaring; and poverty is massed together, for the most part, in crowded and dismal areas.

Look first at the wealth of London. Wealth in this country, according to Mr. Gladstone, has increased more from 1800 to 1850 than during all the centuries from Julius Cæsar to 1800, and more from 1850 to 1870 than from 1800 to 1850. The annual savings of this country are estimated at £130,000,000. London alone spends annually at least £200,000,000. Walk through the west-end of London; see the shops full of precious stones, and gorgeous flowers, and exquisite fabrics, and richest fruits, and delicate dainties from every conceivable mart. There art and science and nature minister to "the lust of the flesh, and the lust of the eyes, and the pride of life" to an extent to which Babylon and Tyrus never dreamed. Walk in the parks and gaze on the superb equipages flashing to and fro, with their blazoned heraldry and richly dressed servants, and the bright apparel of their occupants. Enter those stately houses, to which the inhabitants come for only a few months of the year from castles by the sea or heathy moors, or green pleasaunces where the purple shadows of the cedars fall on the smooth, green turf, and the swans float double on the shining meres, and wonder at the fairy land which can be created by luxurious taste and the command of illimitable wealth. Does not this city "glorify herself and live deliciously?" Aye, but hard by are the dark shadows always flung by a brilliant civilization, the gloom which ever gathers on the edge of the glittering wave. Leave all this and go to the East-end or to the South of London, where misery seems to spread inward in concentric rings. How they swarm in the streets, those ragged, diseased, depraved children, those dirty, slipshod, unwomanly women, those drunken, blas-

pheming, dehumanized men, those bleared and blighted youths who, with dirty pipes forever in their mouths, hang about the bars of the gin shops, and the thievish corners of the streets—the gin shops and the streets which, through our fault and through our callous worldliness have made them what they are, and have wrecked all that splendid immortality. These sons and daughters of misery, of the multitude ready to perish, have no home but filthy lairs, no amusement but obscenity and intoxication. When God returns to judgment, will he not ask us any questions about these things? Will Christ smile pleased approval at this wholesale ruin of those for whom he died? Will he be perfectly satisfied with all the costly gewgaws of our fashionable churches when these are the images which we have made of him?

And I ask you, is there no danger in this state of things? Is it right? Is it natural? Is it safe? Is there no danger to the rich themselves, lest luxury and extravagance, lassitude and callous selfishness, vice and corruption, "pride, fulness of bread, abundance of idleness," should follow boundless wealth, which cares naught for its duties and its responsibilities? That gilded youth who bets and gambles, and lives a life of dissipated worthlessness, and puffs away in smoke every day as much as would feed an honest family; that fair girl—is it enough that she is rich and she is noble, and she treads the crimson carpet, and she breathes the perfumed air, while her heart, under the lace and the diamonds, is as cold as ice and as hard as the nether millstone, while she is spending £600 a year, perhaps, upon dress, never dreams of spending so much as £6 a year on good works for the glory of God or for the good of man? Extavagant and luxurious societies have perished often enough in the past of their own pleasant vices? Oh! if my voice could reach the wealthy of England, I would earnestly plead with them for soberness, for simplicity, for self-denial, lest the day should come when, in the words of St. James, the rust of their riches should eat into their souls like fire; for, as Edmund Burke said, "Reform delayed is revolution begun!" Miracles are never wrought to avert the natural retributions of history. "Since things alter for the worse spontaneously," says Lord Bacon, "if they are never altered for the better designedly, the evil is not likely to stop." "The social relation between the different classes of society," says an eminent civil engineer, "are too intolerable to last long; they must be timely cured, or they will speedily cure themselves."

And will the rich, as they listen, perhaps with indifference, to the voice of neglected warning, dare to say, "Am I my brother's keeper?" Will they dare to plead that selfish answer of guilty Cain, the murderer of his brother? Well, they may ask, what can we do? I will tell them in passing, one thing which they may do—they can give their gifts. Perhaps the gifts of all of us, but certainly the gifts of the majority of the rich as a class, are shamefully inadequate. We do not for one moment say to them: "Sell all that thou hast and give to the poor;" no one in the least dreams of interpreting that as a universal demand. Let them keep their riches and use them as the stewards of them in the name of God; but when every year one reads of sales of ormolus, and bric-a-brac, and furniture, which in two days realize £76,000; when one reads of 600 guineas being given for a pair of candlesticks, and several thousands of pounds for bits of china, it is little short of monstrous that in such a city as London only £1,500 should have been contributed from these bursting coffers for the spiritual needs of this great city. Will they give only two mites to God, and myriad talents to luxurious superfluities? The rich have their immense responsibility in the matter, and woe to them and woe to their children, if they do not recognize it. But most of us are far from rich, yet we do have our proportionate responsibility, for we are members of the Church of Christ, and the Church of Christ, if she be faithful and not dead, is the only force which can cope with these colossal and menacing problems. And by the Church I mean every one, be he Romanist, Baptist, Quaker, or what he may, who loves the Lord Jesus Christ in sincerity and in truth. It is not by Church arrogance, or Church exclusiveness, or Church rubrics, or finical and fantastic superstitions, or any rosewater of that kind that this mighty work can be done. It cannot be done now as it would have been done by such means eighteen hundred years ago in the world of heathendom; it must be done by your generosity. But it must also be done far more by your individual earnestness and your individual work; it cannot be done by cliques and parties, and pedantic theologies and religious factions; it must be done by Christians, by all Christians because they are Christians.

TREES AND TREE-PLANTING.

In planting, the greatest care is exercised; when the soil is not naturally good, holes are dug two feet deep and nine feet in diameter, and filled with good rich loam. The trees are lifted from the nursery with the greatest care, to preserve as far as possible the roots, and in transit to prevent them from drying or freezing. In planting, the soil is packed closely around the roots, and one copious watering is given. A tree protector is at once placed around them, for the purpose of preventing them from being shaken by the winds or gnawed by horses, and perhaps what is most important of all, to shade the stems of the trees until their own foliage is sufficient to do so. For this last reason, the best and cheapest tree protector yet used is one made of wooden strips placed three inches apart, and bound with iron hoops; this gives the necessary shade to the stem, and at the same time allows free circulation of air. The best height for the tree box is six feet. This shading referred to is all-important; when trees are growing in forests or in the nursery, they shade one another, and it must be evident, if set out without any protection from the blazing sun in the streets of a city, they must suffer. Many thousands of deciduous trees, both fruit and ornamental, perish annually the first year of planting through this cause. When taken from the closely planted nursery-rows, and exposed to the full sun and air, the change is too great, and

unless the season is especially favorable, however carefully the planting may have been done, large losses must ensue unless the stems are shaded. Trees in orchards and other enclosures can be shaded by wrapping the stems up to the lower branches with straw or anything that will shade the trunk from the sun; but for trees in streets and elsewhere, exposed to injury, the slatted box is the best method of shading. The grand success in planting the avenues in Washington is, no doubt, due largely to the persistent use of this precaution, for it is never omitted, and the results attest its value. All trees for two years after planting are cultivated, just as if they were a crop of corn or potatoes, by the soil being stirred by a pronged hoe for four or five feet from the stem in all directions. . . . . .

The success with one tree used in Washington is a matter of interest to all cities where soft coal is used. The Carolina poplar is found to be one of the most vigorous growers, and one of the most beautiful in leaf and form. It is similar to the Lombardy poplar in shape, but the head is fuller, its foliage is thick, and the leaves large, dark, and glossy. It grows rapidly from cuttings, and it is found that it will flourish even where a pall of coal smoke is thick enough to darken the atmosphere. In addition to these valuable if not wonderful characteristics, it is regarded as an anti-malarial tree, because of its great capacity for absorbing water from the soil. Mr. Smith has named it the "American eucalyptus," and has used it most extensively in the lower portions of the city, and has given many thousands of it for planting on those sections of the Potomac flats which have been reclaimed.

The Tree Commission have also discovered a method of cultivating another tree, which will flourish in Western cities in spite of smoke, but which has been generally abandoned on account of the disagreeable odor given out when it is in bloom; this is the ailantus, which is semi-tropical and beautiful in appearance, but disagreeable in odor. The simple operation of cutting back the branches every second year, thus preventing it from flowering, removes the whole difficulty. It is therefore in contemplation to restore it to the streets of Washington.

Such is the effect of the wonderful growth of the street trees, seen from the Capitol or other high buildings, that it to some extent presents the appearance of a city built in a forest. Many streets are now completely arched by trees throughout their entire length. Malaria, once such a bane to Washington, has been materially checked, and the night temperature during summer, that used to be almost unendurable, has now been materially lessened. The unprotected sidewalks open to the direct rays of the sun stored up heat during the day, which was rarely exhausted before morning; but now the shaded pavement absorbs little heat, and the nights are comparatively cool.—*Peter Henderson, in Harper's Magazine.*

A GREAT mind observes great laws, broad inward principles, guides its conduct by fixed and determinate methods; while a weak mind sets order at defiance and imagines itself to be free when it is simply lawless.—*Menzies.*

WHAT A HIGHER EDUCATION MEANS.

WHEN a "higher education" is demanded, for any class of persons—as women—it means that it has become desirable to train their faculties for more difficult work than that traditionally assigned to them, and also that it is desirable to enable them to get more enjoyment out of any work that they do. The necessary correlative of the possession of powers is the opportunity for their exercise. The existence of a larger class of effectively educated women must increase their demand for a larger share in that part of the world's work which requires trained intelligence. Of this, literature and other art is one and only one portion. The work of the professions, of the upper regions of industry, commerce, and finance, the work of scientific and of political life, is the work appropriate to the intelligences which have proved themselves equal to a course of training at once complex and severe. A person destined to receive a superior education is expected to develop more vigorous mental force, to have a larger mental horizon, to handle more complex masses of ideas than another. From the beginning, therefore, he must not merely receive useful information, but be habituated to perform difficult mental operations, for only in this way can the sum of mental power be increased. The order, arrangement, and sequence of the ideas he acquires must be as carefully planned as is the selection of the ideas themselves, because upon this order and internal proportion his mental horizon depends. He must be trained in feats of sustained attention, and in the collocation and association of elementary ideas into complex combinations. Since ideas are abstractions from sense-perceptions, he must be exercised in the acquisition of accurate, rapid, far-reaching, and delicate sense-perceptions, in their memorization, and in the representative imagination which may recall them at will, and be able to abstract from them, more or less remotely, ideas. Habits of rich association of ideas must be formed, and of pleasure in their contemplation. And very early must be offered to the child problems to be solved, either by purely mental exertion, or by that combined with manual labor.—*Dr. Mary Putnam Jacobi, in Popular Science Monthly.*

THE TEACHING OF PEACE.

AT Gothenburg, in Sweden, there was recently held a convention in the interests of peace, at which representatives from the Scandinavian States, Sweden, Norway, and Denmark were present. An extended discussion took place on the subject of Pacific Education, and the importance of influencing children and young persons generally, in schools and at their homes, to take an interest in opposing the war spirit. One of the speakers remembered with pleasure the insertion, about fifty years ago, of some of Elihu Burritt's "Olive Leaves," in the Stockholm leading journal, the *Aftonblad.* (An encouragement, this, to our members to carry out the recommendation contained in the Address on War, lately issued by the Meetings for Sufferings of the Philadelphia Yearly Meeting, relative to the insertion, in journals, of our testimony on peace.) Another speaker regretted the

almost exclusively martial tone of every historical book placed in the hands of the young. Hallgren called attention to "the enthusiastic admiration which, throughout Sweden, is everywhere encouraged for the exploits and career of the warrior-king Charles XII. He would not have anything which was really noble in King Charles, or other warriors, depreciated or ignored, but, at the same time, he would urge parents and teachers to set before their children the barren results, or even the mischievous consequences and disasters caused by these dazzling feats of merely physical heroism. The peace cause is not helped by depreciating the lives of soldiers, but rather by showing their inferiority to moral and religious achievements."

As having a practical bearing on the part of the topic just referred to, it will interest our readers to learn that Charles Shieldstream, of Palmer, Nebraska, a Swede who is greatly attached to Friends' principles, holding with us the unchristian character of carnal warfare, has in manuscript a history of the times of Charles XII., which he is anxious to have published. The Scandinavian element in the Northwest having a very large representation, it would appear as though such a work might be one to bring some of that people to a new apprehension concerning the "glory" of war. It is to be hoped that any who would like to forward the undertaking by conditionally subscribing for the book, or by otherwise assisting to a larger extent, will promptly communicate with the author, as above. He has a very good knowledge of our language, and the proposed book would, no doubt, be of general interest.—*J. W. L., in The Student.*

SEEKING A SITUATION.

When seeking a situation, do not propose to take an advanced post. Ask for a chance to *work*, beginning at the bottom. You may be considered qualified for something better, yet be placed at the foot to test your temper and fidelity—to ascertain if you will be "faithful over a few things," as a qualification to become "a ruler over many things." If you sweep, make fires, dust, do anything and everything promptly and cheerfully; you will be advanced so fast as you are seen to have mastered your allotted position. Grumbling at your lot, and asking to be put forward, will disgust your superiors, who are perhaps planning to obtain some one to fill your place that you may be put forward. Men like to manage their own business—dislike to have boys make suggestions as to their own occupation or pay. Plants are not put in large pots until, by healthy growing, they seemed to have filled the small ones. If a puny plant were to tease the gardener for a large pot, or open air planting, he would wisely say, "Fill the place you occupy first, and thus show your adaptation to a larger one;" or, in disgust, he would jerk out the feeble starveling and put a vigorous successor in its place. Many a boy has lost his situation because he whined for a post of duty beyond his present capacity to fill.

He who, in store or shop, begins at the bottom and learns how to do everything, and is competent to every duty, has his position and ultimate success in his own keeping; and he will be sought after by many, if it is known he is at liberty to accept of a new engagement. We have seen a faithful boy take a selfish man's place in a shop or store, having, of course, increased responsibilities, a more elevated position, and better pay than before.—*From "Choice of Pursuits."*

HE REMEMBERED.

Many years ago Abram Dodge, of Ipswich, Mass., owned a beautiful horse which was the pet of the family. He was admired by all who knew his playfulness and good qualifications. In the summer it was Mr. Dodge's habit occasionally to have a frolic with his horse in his barnyard, then let him out alone, and he would go to the river, which was about one-third of a mile distant, where he would bathe, then go to a common and roll on the grass, then start for home; his stable was renovated for him while he was gone, and his breakfast put in his crib. If he met his master he would show some coltish pranks, run for the stable, pull out the wooden pin that fastened the door with his teeth, and rush to his manger to find his food. One night the horse was stolen from the stable. After the expiration of sixteen years Mr. Dodge was at the tavern when a man drove a horse up to the door. Mr. Dodge at once recognized his horse and told the driver his reason for believing it to be his; the man told his story of whom he bought the horse, and that he had owned him for several years. It was finally agreed, that if the horse would, on being taken to his old stable, go through the habit of bathing, rolling on the grass, and pulling the pin from the stable door as above described, that Mr. Dodge should have him. When the horse was let out into his old yard he viewed the premises for a moment, then started for his old bath tub, then for his green towel on the common, then to his old stable, pulled the wooden pin, won for himself a good meal, and his old master his favorite horse. These facts are vouched for by reliable residents of the beautiful, picturesque old town, and show conclusively the long memory of our noble animal.—*Lowell Courier.*

Two sensations I had in Windsor Park, or forest, for I am not quite sure of the boundary which separates them. The first was the lovely sight of the hawthorn in full bloom. I was surprised to see it looking at a distance like a young apple-tree covered with new fallen snow. I shall never see the word hawthorn in poetry again without the image of the snowy but far from chilling canopy rising before me. It is the very bower of young love, and has done more than any growth of the forest to soften the doom brought upon man by the fruit of the forbidtree. Presently I heard a sound to which I had never listened before, and which I have never heard since —Coooo—coooo! Nature had sent one cuckoo from her aviary to sing his double note for me, that I might not pass away from her pleasing show without once hearing the call so dear to the poets.—*Oliver Wendell Holmes.*

THE PHYSIQUE OF THE SAVAGE.

[The following interesting article by Dr. Given, of the Carlisle Indian School, appears in the monthly journal published there, *The Red Man.*]

THERE is a general impression that savagery means high physical health and that in former ages men's strength and stature were greater than now. What have we to-day, we ask ourselves, to compare with the athletes of Greece and Rome?

Yes, what? What has best developed the human body, the life of the ancients or of the moderns?

The trend of testimony goes to show that both in stature and prowess the moderns have the advantage. They can lift heavier weights, and they are not behind in speed or agility. A short time since a student of the California University made a running jump of more than nineteen feet, a record difficult to beat by Greek or Roman athlete. Among evidences of the greater size of men in modern times the *North American Review* asserts that the suits of armor in the Tower of London would to-day cramp a boy of sixteen, and that the old Greek sarcophagi are half a head too short for the average man of the nineteenth century.

The civilization that has the Great Physician for its founder has learned that spiritual growth, mental work, that great preserver of health, the lessening of human misery in physical conditions at least, the immense gain in shelter, heat and food, have brought about better physical development and a longer average of life than any training possible to the savage.

The uncivilized man has not a good physical constitution. Indifference to exposure, utter disregard of all sanitary laws, irregular habits, alternations of gormandizing and fasting, consanguineous marriages, all tend to physical deterioration.

These habits, belonging to the Indian in common with all savage races, make him in this state less healthy than in civilization.

In proof of this assertion come the statements of those who have the best means of knowing, the agents and physicians on the different reservations.

The agent from Standing Rock Agency, Dakota, in his report for 1887, says:

"Out of a population of about forty-five hundred there were one hundred and ninety-nine deaths resulting chiefly from scrofula and consumption."

From the report of the physician, Quapaw Agency, Indian Territory, comes the statement that in winter pulmonary diseases prevail, and owing to the fact that many of these Indians are afflicted with phthisis, in some of its stages, pneumonia and bronchitis are quite serious and often fatal. "Among the Modocs and Quapaws" he says "we have strumous diseases in all their varied forms almost universally."

Among these two tribes more deaths have occurred from consumption than from all other diseases.

The agent from the Fort Peck Agency, Montana, in the report for the same year says:

"There has been little sickness other than chronic affections and consumption, which have prevailed among the Indians more or less for many years."

From Klamath Agency, Oregon, the physician says in his report for 1887:

"The prevailing disease among the Indians is consumption. The number of deaths this year has been in excess of the births."

Reports like these which might be quoted by scores make it evident that scrofula and consumption are the diseases of the Indian.

The testimony of missionaries, explorers, travelers, and of others who have studied the subject as it is presented in foreign countries, shows that among savage races everywhere there is this same predisposition.

With the Indian, in addition to the inheritance of savagery, comes the indolence of the reservation. There is no longer the healthful exercise of the chase, there is no longer the consciousness that they must find this food or starve, and hunger is the earliest and the most unremitting stimulus to exertion, which is probably the reason why the human race has a stomach. The Government has given him abundance of indolence, and, lest through wearying of this he should try to join in the activity about him, it has drawn around him a cordon which watched over by the jealous eyes of the settler has proved to him as fatal as the death line of Libby and of Andersonville.

This enforced indolence is the death lethargy of the race. To come away from the miasma that induces it, to break through this cordon is the only hope of life.

All legislation and education should have for its object the destruction of the tribal and reservation systems and the incorporation of the Indians into the body of our national life.

The best health conditions among the Carlisle students are found in those who are out on farms, the constant demand upon their physical powers and the varied diet of the farmer being conducive to the development of good physical systems. The stronger the body can be made the better able it is to resist inherited tendency, and the better the brain will be.

O. G. GIVEN, School Physician.

YELLOWSTONE NATIONAL PARK.

THE teachers of the United States in connection with their annual meeting July, 17th to 20th, at San Francisco, will be offered the grandest excursion imaginable, and at rates extremely low considering the long distances to be traveled, which will average west of the Missouri river and St. Paul nearly 5,000 miles.

It is the general feeling among the teachers, that while the west bound trip may be made via Kansas City, Council Bluffs, Atchison, or Pacific Junction and any one of the Southern Transcontinental lines, the return trip must be made by the great Yellowstone Park and dining car route—the popular Northern Pacific railroad,—the Yellowstone Park being the point towards which all eyes are directed. The recent completion of the all-rail route between San Francisco and Portland, Ore., called the "Shasta Line," as well as the completion of the Cascade division of the North Pacific from Tacoma to Pasco, the point of junction with the old route along the Columbia river, will make this the favorite line for the return trip.

Teachers en route to the meeting should see for themselves that the return portion of the transconti-

nental excursion ticket, which will be issued them at St. Louis, New Orleans, or some one of the Missouri river points named above, reads for the return trip via Portland, Ore. and the Northern Pacific railroad. The side trip from Tacoma to Sitka, Alaska, is one of the principal attractions possessed by this route.—*Educational News.*

NEWS AND OTHER GLEANINGS.

—The Pope has issued a long encyclical on the slavery question. After referring to the teachings of the Bible, he urges the abandonment of slave-dealing in Egypt, the Soudan, and Zanzibar, and reiterates his condemnation of the practice. He demands protection for missionaries in Africa, and praises Dom Pedro for abolishing slavery in Brazil.

—The Yale faculty have just passed a law which forbids absolutely the use of intoxicating liquor in any shape whatsoever in any of the societies or organizations of students of the university. A member of the faculty said recently that the law had not been passed on account of any especial excesses among the students, but as a matter of general university policy. The action will affect in the academic department the sophomore societies, the junior societies, and two of the senior societies. All the societies of the Sheffield Scientific School will be more or less affected.

—A telegram from Duluth says the recent heavy rains have caused the greatest flood ever known in Northern Minnesota. Along the banks of logging streams tributary to the St. Louis river, millions of acres of land are overflowed, and loss of life is feared. Part of the village of Cloquet is completely submerged. The immense saw mills are flooded and abandoned, and in the booms 80,000,000 logs were jammed on the morning of the 17th instant, and by night the number had swelled to over 200,000,000. All country bridges were carried away. The village of Fond du Lac is under water. At Cloquette, Wisconsin, on the 13th instant, several million feet of logs broke loose from the booms and went tearing down the stream to an island on which several hundred people lived. Eleven houses were carried away, and about forty other buildings are surrounded by water eight feet deep. The Duluth railroad at Fond du Lac, is under two feet of water, and the depots and other buildings have been abandoned. The loss to lumbermen at Cloquette will be very heavy. The damage thus far is estimated at $500,000.

—The miners and colliers of the north of England were once very superstitious. Less than fifty years ago the miner thought it a baleful augury to meet a woman on his pitward path in the morning. The evil omen was heightened if the woman was bare-footed. Red hair was the superlative feature of bad luck. It is said the women turned the prejudice to comfortable account. They dare not, in fact were not expected to, leave their beds till all the workers had been safely and snugly engaged with the "cleek." Nowadays the miner's wife is the first to sound the work alarm in the morning.

—The returns of the accidents on British railways for 1887 show a rate of mortality which is far beyond any figures of American railways. During the year 919 persons were killed and 3,590 injured. This, however, includes persons passing over the roads at level crossings and trespassers on the tracks—among these there being 70 suicides. But to the figures above given are to be added accidents which occurred on the premises of railway companies but were not caused by the movement of the companies' vehicles, which make the total number of personal accidents reported to the Board of Trade by the several railway companies for the year aggregate 977 persons killed and 7,747 injured. This is equivalent to an average of 24 persons every day of the year, or one every hour, either killed or injured in connection with or as the result of the operations of the railways in Great Britain. Yet the total mileage of these railways is only about 20,000 miles, or less than one-seventh of the railway mileage of the United States.

—The New England Yearly Meeting of Friends, (Orthodox) recently in session at Newport, R. I., adopted a memorial to Congress, praying that body, in the exercise of the authority vested in it by the Constitution, to regulate commerce with foreign nations, "to take prompt and effective measures to suppress the exportation of all intoxicating liquors to the continent of Africa, and to endeavor to secure the coöperation of other nations in this righteous act."

—There was one session of the Concord School of Philosophy this year, held Sixth month 16th. It was devoted to the memory of the late A. Bronson Alcott, and there were addresses by Professor W. T. Harris, the Rev. Dr. Bartol, and others.

—The new prohibitory law in New Jersey provides that the local option elections shall not be held within sixty days of a general election. In four or five of the counties the petitions for elections were presented in time for the courts to have ordered the elections to take place this summer, but in two of them ex-Governor Abbett, the attorney of the liquor dealers, managed to consume so much time in the examination of witnesses that the election had to be postponed. In one of these counties, Camden, public indignation ran so high that in the city of Camden the Council has increased the license fee from $250 to $1,000.

—On the 19th inst. the Philadelphia Sanitarium, in its new quarters at Red Bank, on the Delaware, formally opened the twelfth season of its good work. During the day 1,552 persons, 662 of whom were adults, passed through the entrance, by far the largest number that has ever been present at an opening. In previous years the number was usually in the neighborhood of 500. From this time on during the season the institution, with its delightful surroundings, will accommodate every day, except Sunday, all the mothers with ailing children who desire to avail themselves of the advantages offered, and who are gladly welcomed to enjoy the liberal hospitality of the place.—*Public Ledger.*

—On the 20th inst. the first woman to be admitted to membership in the Philadelphia County Medical Society was elected in the person of Dr. Mary Willits, an 1881 graduate of the Woman's Medical College, (and a graduate of Swarthmore College), by a vote of 107 to 39. The question of the admission of women has occasioned discussion for years, the majority up to this time having been adverse to favorable action.

—Mrs. Emma W. Hayden has given to the Academy of Natural Sciences of this city in trust, the sum of twenty-five-hundred dollars, to be known as the Hayden Memorial Geological Fund, in commemoration of her husband, the late Prof. Ferdinand V. Hayden, LL.D. According to the terms of the trust, a bronze medal, and the balance of the interest arising from the fund, are to be awarded annually for the best publication, exploration, discovery, or research in the sciences of geology and paleontology, or in such particular branches thereof as may be designated. The award, and all matters connected therewith, are to be determined by a committee to be selected in an appropriate manner by the Academy. The recognition is not to be confined to American naturalists.—*The American.*

CARPETINGS.

THE CHOICEST STYLES OF THE MARKET ALWAYS HERE.

WE carry a full assortment of BIGELOW and LOWELL BODY BRUSSELS, also Lowell Ingrains. These makes are well known to be superior to all others.

We would call attention to our BARGAIN DEPARTMENT where off patterns and remnants go quickly at marked-down prices.

The patrons and friends of THOS. C. LIPPINCOTT, recently of 1307 MARKET STREET, will find him here and ready to give all who call his best attention.

THE MANSION HOUSE,

SARATOGA SPRINGS, N. Y.

Opens June 1st. HANNAH T. PAUL, 1317 FILBERT STREET.

PRESTON'S SUNNYSIDE, WERNERVILLE, PA.

On South Mountain, elevation 1,000 feet, in the midst of an extensive woodland park overlooking a wide and diversified landscape; invigorating air; table and appointments excellent

Open April 1st to November.

JAMES H. PRESTON.

CONSTANTLY ON HAND

—AN ASSORTMENT OF—

PRICES REASONABLE.

CLOTHS AND CASSIMERES

SUITABLE FOR

PLAIN AND FASHIONABLE GARMENTS.

GUSTAVUS GOLZE, TAILOR, 109 N. 10TH STREET, Philada.

TEA AND COFFEE.

If $3.00 is sent to me I will send 2lb real good Tea, Black, Green, Japan, or mixed, and 8lb of fine Coffee, roasted. Express charges prepaid in the following states: Pa., New York, New Jersey, Del., Md., Va., W. Va., D. C., Ohio, Ill., Wis., Ind. And I will refund the cost of registered letters when the goods are shipped.

WM. S. INGRAM, 31 N. SECOND ST., PHILADELPHIA, PA. ESTABLISHED —1856.—

MILK CREAM, AND BUTTER ALWAYS ON HAND.

LUKENS WEBSTER,

120 S. FIFTEENTH ST.

Butter delivered twice a week to all parts of the city and surrounding country. We are dealing with the most reliable dairies. Orders by mail solicited and promptly filled.

LARD OF THE VERY BEST QUALITY A SPECIALTY.

WM. HEACOCK,

UNDERTAKER,

No. 1508 Brown Street,

PHILADELPHIA.

Clement A. Woodnutt,

UNDERTAKER AND EMBALMER,

1226 NORTH FIFTEENTH STREET, PHILA.

CARRIAGES TO HIRE

ABINGTON FRIENDS' BOARDING AND DAY SCHOOL,

Near Jenkintown, Pa., North Penn and Bound Brook R. R. Ten miles from Philadelphia.

Next school year begins Ninth month 10th, 1888. Courses of study arranged to furnish a thorough English education and to prepare for college.

Board and tuition $145 to $175 per school year. Tuition alone $25 to $55. For further information address,

ARTHUR H. TOMLINSON, Principal, Jenkintown, Pa.

Or CYNTHIA G. BOSLER, Sec., Shoemakertown, Pa.

SWARTHMORE COLLEGE

OPENS NINTH MONTH THIRTEENTH.

Thirty minutes from Broad Street Station, Philadelphia.

Under the care of Friends, but all others admitted.

Full college course for both sexes; Classical, Scientific, and Literary.

Also a Manual Training and a Preparatory School.

Healthful location, large grounds, new and extensive buildings and apparatus.

For Catalogue and full particulars, address

EDWARD H. MAGILL, A. M., President, Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.

NEWTOWN SQUARE, PA.

Terms, $150 to $175 per year.

Apply to HANNA R. CALEY, Principal, address, during vacation), Media, Pa.

Or to

THOMAS P. BARTRAM, Newtown Square, Pa.,

CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,

A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 13th, 1887. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,

FREDERICK E. WILLITS, Sec., Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—

A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hour from New York city. For catalogue and particulars, address,

SAMUEL C. COLLINS, A. M., Prin., Chappaqua Institute, N. Y.

The use of the INTELLIGENCER AND JOURNAL *as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about 3300 persons, reaching, say, 15,000 readers, and its size and shape, and the character of its contents give special weight to each advertisement.* ☞ *When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.* ☜

INTELLIGENCER Vol. XLV. No. 27. | PHILADELPHIA, SEVENTH MONTH 7, 1888. | JOURNAL. Vol. XVI. No. 806.

ONWARD AND UPWARD.

KEEP striving: The winners are those who have striven
And fought for the prize that no idler has won;
To the hands of the steadfast alone it is given,
And before it is gained, there is work to be done.

Keep climbing: The earnest and steadfast have scaled
The height where the pathway was rough to the feet;
But the faint-hearted faltered, and faltering, failed,
And sank down by the wayside in helpless defeat.

Keep hoping: The clouds hide the sun for a time,
But sooner or later they scatter and flee,
And the path glows like gold to the toilers who climb
To the heights where men look over landscape and sea.

Keep onward—right on, till the prize is attained;
Front the future with courage, and obstacles fall.
By those, and those only, the victory's gained
Who keep faith in themselves and in God over all.

—*Eben E. Rexford.*

AMONG FRIENDS IN NEBRASKA.

THE weather for several days has been very hot, tempered somewhat by the cooler breezes of the night; rains are frequent, usually accompanied with thunder and lightning that would be fearful were it not so common that the people do not seem to mind such things. There is, however, a sense of danger shared by all when these storms approach with the wind in certain directions. Cyclones and such phenomena are, however, less frequent as the country becomes settled, and the trees, which are the first consideration of the settler, grow of sufficient size to form wind-breaks around his buildings.

First-day morning (17th) is clear, the heat unabated, and the wind, always an active factor in the temperature of these parts, without a breath of coolness. Yet it is bearable, though moisture stands on the forehead and trickles from the limbs. The First-day school is held before meeting. About 10 o'clock the teachers and children begin to gather, but it is past the hour before the exercises are entered upon.

The meeting-house, which Friends of this meeting through the generous aid extended them have been enabled to erect, is a very neat, substantial edifice, capable of seating 200, and stands on a lot donated by George S. Truman adjoining his farm. The vestibule is large enough to hold the library, and a nice enclosed case has been placed therein. As the library increases other cases will be needed. The interior of the house corresponds with its outward appearance. The seats are of hard-wood with reversible backs to accommodate the classes in the First-day school; the gallery seats are about the same as in other places.

The lessons prepared by direction of the General Conference are used. All appear to be interested in the work, either as teachers or learners, but the distance at which many live from the meeting-house and the necessity of caring for stock and other farm matters, interferes with prompt assembling. Yet all are on hand in good time for the meeting, on this occasion about sixty in number, counting the children, and most of them Friends or professors with Friends. As we gathered into the stillness of this quiet Sabbath morning a sense of the peace of God that passeth understanding seemed to pervade the assembly, and the spoken word was an earnest appeal to all to listen to the Divine voice in the soul.

They who were conscious of having strayed from the heavenly enclosure were earnestly exhorted to repent and seek forgiveness.

Our relationship to the Father was dwelt upon. His readiness to forgive the erring who, like the "Prodigal Son" remembered the home from which he had strayed and resolved to return, was presented with a fervent appeal to all to be faithful to every monition of duty, being assured that the promise of the master, "Come unto me all ye that labor and are heavy laden, and I will give you rest," will be realized in the individual experience of every one who accepts the invitation.

At the close of the meeting a short recess was taken, after which the monthly meeting was held. The report of committees and the consideration of the subject of circular meetings with the appointment of a committee to have the matter in charge, covered about all the business transacted. The reading of your correspondent's minute, granted by Green Street Monthly Meeting, called forth expressions of unity and of willingness to aid in the accomplishment of the mission undertaken, that were very precious and reassuring.

Truly could it be said "The way of the Lord" was already prepared, and the blessing, promised to those who come in his name, realized. After the meeting arrangements for the visiting of the families

composing the meeting were made. Several of these live forty miles distant, near Garrison, a town on a Burlington and Missouri Valley branch road.

An old lady, now 76, came forward and was introduced. In the conversation that followed, she said her early years were spent among Friends, that in her marriage she had gone out from the Society, and removing to this Western land among the earliest settlers, she had been entirely cut off from association with them, and had united with another religious denomination, but her heart still turned to the faith in which she was reared, and it had been very comforting to her spirit to meet with Friends again. "Will you not appoint a meeting at my son's?" she asked. "They are Methodists, but they will be glad to invite their neighbors in, and I want them to have this opportunity to see and hear about Friends." Her earnest appeal could not be resisted, and as the residence of her son was not much out of the line of visits for the early part of the week, Third-day, at 4 p. m., was appointed for the meeting.

Second-day morning was given to the Indian school at Genoa. Great improvements have been made in the appearance of things within the last year or two; the main building, instead of broken windows, and dilapidated doors, and a yard overgrown with weeds, presents a very attractive outside, every surrounding shows thrift and neatness, new buildings for industrial purposes have been added, and altogether one feels that the contrast speaks well for those in charge.

A new building of ample dimensions is nearly completed; it is to be used for a dining-hall and kitchen, the upper rooms to be appropriated to increase the accommodations of the girls' department. We were shown the work of the boys in the shoe and the tailor shops, both in charge of competent instructors, and can bear testimony to the excellence of the work, the button-holes being especially good, and done by hand. There are many points in connection with this school that it would be pleasant to note; but this much must suffice. The principal teacher, with whom I had some conversation, said the greatest need he felt for the children is the want of a library. They are very fond of reading, and while all necessary school books are supplied, no money can be used for other books. What an opportunity is here offered for the friends of Indian education amongst us to gather up from our homes and our First-day school libraries the books that have served their purpose, and been replaced by others, and send these to the young aspirants after knowledge among our swarthy brethren of the West. It would be conferring a great favor upon this excellent teacher, whose interest in his flock leads him to seek their advancement in every good and noble endeavor, and the evidence they give of the success of his labor, is a most gratifying testimony to his fitness for the position he holds.

In the afternoon a visit was paid to a family of Friends who reside in the town of Genoa; here we found four generations represented. A young mother on a visit to the home circle, speaking of her having united with another religious organization, gave as a reason, the need she felt for Christian fellowship,—she was living too far from a Friends' meeting to be a regular attender, and a Congregational church was very near,—the minister and his wife were excellent people and she felt it would be helpful to her to cast in her lot there, but she added "I am still a Friend, and would be glad to live where I could attend their meeting." She was a sweet, tender-spirited woman, and no word but of encouragement went out to her.

Social and religious visits were made with every family of Friends living within a radius of six miles, and the meeting appointed for Third-day afternoon held to the satisfaction of all. The neighbors were invited and our own Friends living near were in attendance, so that a good-sized company met together. The heart of the dear old mother overflowed with gratitude, and we could say in truth, it was good to be there. These visits occupied a whole week, dining with some, taking tea with others, and when it was convenient, lodging at the more distant places, so that none were passed by or overlooked. Looking over these opportunities of mingling with Friends at home with their children around them, it is no little comfort to believe they are all striving to be true to their religious convictions and anxious to sustain by their presence and their efforts the Meeting, and thankful that through the assistance they received from Friends elsewhere, they are in possession of so neat and comfortable a meeting-house.

On Seventh-day we bade farewell to the kind friends who had so kindly aided in carrying out the object of the undertaking and made it possible to fulfill a religious concern that for years has awaited this opportunity.

Benjamin F. Nichols and wife were at Genoa when we reached there. A few words of greeting and we parted, to meet a few days later at Garrison from which point this is written. L. J. R.

Garrison, Neb., Sixth month, 28, 1888.

REALISM IN EDUCATION.[1]

During my life as a teacher I was impressed with the fact that as a rule children awaken very slowly to a realization of the object of education. Few of either sex see the importance of the training to which they are subjected before the twelfth year; the majority do not see it before fourteen. Some, of course, never realize any value in school work and shirk it by every means in their power.[2] Can not most persons recall an epoch when for the first time a *meaning* attached to the words and rules they had been committing to memory on faith heretofore? I can say unblushingly that the real significance of many formulæ set down for the guidance of the youthful mind, only dawned on me when it became my duty to explain them to my own pupils. And further, that even the superior light of a college education brought to bear on some others failed to reveal their hidden recesses. The *labored* simplicity of numerous books invented by mature minds for the immature I found admirably adapted to mystify both teacher and pupil, and

[1] An address to the Alumni of Swarthmore College, Sixth month 19th, 1888, by Frances Linton, M. D.

[2] I have queried if this failure to appreciate their advantages is not due in part or whole to false methods of instruction.

experienced greater difficulty in explaining the explanations of simple truths than making the pupils understand them without the elaborate demonstrations.

Simplicity has been the laudable aim of recent school publications for several years. This has lead to a multiplication of books and a division and subdivision of branches of study with, in some cases at least, a questionable improvement on the axiomatic character of the school books of our parents. Looking back at the methods of teaching pursued in my childhood, they appear to have been based upon theory exclusively. The studies that pretended to deal with tangible objects were taught in such a manner that they became intangible and glided into the realm of memory and imagination to be quickly displaced by more vivid pictures. The senses, certainly intended to be our most potent aids in the acquisition of knowledge, were uncultivated except by hearing and seeing *words, words, words!*

Now words may be things in poetical parlance, but as a matter of fact they are merely the *symbols* of things, and the idea of the thing should precede the word. The word c-a-t shown to a young child conveys no idea whatever to his sensorium, but show him the animal and his instant desire to investigate the mechanism thereof clearly shows that it has given rise to many ideas. Thereafter the spoken word will suggest the object; the written word remains a hieroglyphic till the characters composing it are familiar to the eye.

The most difficult of all studies seems to me to be that of language because it is so purely arbitrary, yet the old system of education *began* with that and to a large extent this plan is still pursued. Memory, the faculty which this method aims especially to cultivate, is weakened by the enforced over-feeding before the mind can digest and assimilate the food. The question arises, Is the primary object of education to teach us to read and write, or is it to teach us to *think?* As the means of communication between man and man, language ranks high in importance and the mental training involved in masking it is of still greater importance; but surely the need for *written* language comes after the mind has learned to formulate ideas. Spoken language is readily acquired and is all that is needed in the earliest school years. As the necessity for symbols to express its thoughts dawns upon the child, learning them will be a comparatively simple matter.

Teachers meet with the greatest success when they depart from the beaten *verbal* rut and take up subjects that appeal directly to the senses. The average child would not care a button about the parts of speech if not stimulated to their mastery by a desire to stand well in class. Only an unusually *dull* child cannot be interested in an object lesson drawn from nature. Occasionally in the experience of every teacher a mind is met with that absolutely refuses to retain the pabulum which she earnestly strives to force into it, till she hits upon *the* subject alone capable of awakening interest; when this is found she holds the key to the proper training of that mind.

Such a case occurs to me as I write;—the rivers of knowledge of the ordinary branches of a common-school education rolled by and left a lad stranded at the same spot year after year. Botany was taken up, when lo! the dreamer awoke and found his avocation! Such dullards often develop into great scientists, whilst others have "attained the right of eminent domain" in literature in spite of, not because of their early teaching. Does not this suggest the advisability of presenting a broader outlook to the child and the unwisdom of strictly bookish instruction? The imagination is exceedingly active in most children; they people the earth, the air, all common things, with marvelous shapes. Unless properly directed this faculty becomes a source of weakness. Not that we should follow the example of Dickens' man of facts, Gradgrind, unless we desire the same disappointment; but we should divest *real* things of the mystery which too often obscures them, by allowing the child to investigate and learn by the aid of his senses all that he is capable of understanding concerning them.

Nature is full of wonders, many of them within the comprehension of a child. The animal kingdom, vegetation in its myriad forms, the treasures of the earth and water,—what a rich mine of knowledge might be opened to his vision! And how infinitely fuller, deeper, broader, would be his enjoyment of life if from early years he were taught to find instruction and amusement in these every-day objects surrounding him! At the same time he would acquire the power of close, accurate observation, so sadly lacking when the imagination is left untrained.

Often a child exhibits early a desire to work with tools or to examine every piece of machinery he sees; such an one should be encouraged in this predilection and given advantages for cultivating it. I was told recently of a young man who was by every indication a natural inventor and machinist, but because his father was a clergyman and his family of the upper ten he was not permitted to indulge this inclination but was consigned to the counting-room. He has gone from one position to another, a success at none, and it is fair to suppose never will be, unless he takes his life into his own hands and exercises his natural talent. A few persons are born bookworms, many more seem born with a distaste for books. Are the latter necessarily of inferior intellectuality? By no means, as the career of many eminent literati will testify. The genius which moves the world comes oftenest from the latter class, from the ranks of those who study their time and their kind more closely than they study books.

Books are indispensable to the acquisition of culture; no one can properly be said to be cultured who has not a wide knowledge of them—neither can any one be called cultured who knows nothing outside of books. Books do not develop character, the proper use of them does. The meaning of a book remains sealed to us, though we know the words *verbatim*, till *experience* touches it with a finger of light. Then it becomes a part of the fabric we have partly inherited, partly acquired from our environment which we call our character.

I think every graduate who has passed from the

sacred precincts of our Alma Mater into the outer world and there begun the struggle for bread in the school-room, the counting-room, the machine-shop, on the farm, or in any other capacity, must have experienced a season of discouragement when it seemed to him that the years spent in college had unfitted him for actual living.

The prestige which attaches to a collegiate education in literary circles accounts for little or nothing when placed side by side with a practical working knowledge of any trade or profession. The college-bred man goes forth to earn his living in a sternly realistic world which demands for every shilling expended its value in brain or hand work. What has been his preparation for the contest? During his college life he regarded those who had not enjoyed his educational advantages with pity or a supercilious disdain which raised a barrier between himself and them. This did no particular harm to any one whilst guarded by the college walls; but it becomes an obstacle to success when he comes into competition with others for his daily bread, which *must* be surmounted before he has an equal chance with them. He finds very quickly that these unfortunates have enjoyed another sort of education of which he knows nothing—a business education; in that they are vastly his superiors and the sooner he acknowledges this and is willing to learn of them the sooner he will succeed.

The *classical* alumnus is not even a good teacher unless nature has endowed him with the qualities which constitute one; and his training has prepared him for no other occupation. He goes armed with A. B. into the school-room, generally to teach the branches he left in the common school when he entered college, and ten to one he will not teach those branches as well as the person who "knows little Latin and less Greek" but has taught the rudiments for the four years that *he* has given to gaining his diploma. In teaching, as in every other profession, years of drudgery generally precede any decided promotion and these are all the more irksome for the heights that beckon the student beyond.

Perhaps authorship should be mentioned as a profession for which the classical alumnus is somewhat prepared by his drill in writing theses and abstracts. He has the mechanical skill required, but if not especially gifted he has a long, wearisome struggle to anticipate before he is rewarded by popularity. Would I therefore discourage a student from taking the regular classical course? No, if his youth permits such a course to be but the stepping-stone to other studies, or if he is able and content to wait long for self-support, or if this will never be necessary, a broad general education is an excellent basis for a specialty, and much pleasure is to be had from a knowledge of literature in any position in life. But if it is desirable or necessary to obtain remunerative occupation immediately after leaving school or college, the studies should be chosen with this in view, and so directed that the pupil shall be prepared for *some definite calling*. If more attention were paid to the individuality of the child there would be little difficulty in ascertaining the field in which he would be most likely to succeed, and if instruction were more practical his tastes would be more easily and quickly decided. It is *mechanical education* which makes *machines* of children! It may be objected that marked inclinations might not be developed early; this does not excuse the parents from providing their child with a means of earning his living if they expect to throw him upon his own resources as soon as they have (in popular parlance) educated him. Think how many years of really aimless drifting might have been spared many young men and women if some effort had been made in their childhood to ascertain the natural bent of their minds, then to direct their training in this line! Years spent probably teaching, carrying on the routine which had made machines of *them*, because, forsooth, they had been prepared for no *other* occupation!

No curriculum can be arranged to meet the special need of each student, and every college desires as many regular graduates as possible, so that college authorities are not always the best counsellors on this subject; and to the ambitious student there is an honor and *eclát* attached to winning a degree which impels him to take the regular course, only to find after winning the much-coveted prize that an elective course would have better fitted him for his future career.

If he is to follow in the footsteps of his father, a careful consideration of that business, whatever it may be, will show by what studies he can best prepare himself to promote its interests. Often some particular language will render his assistance invaluable. If intending to start on an independent career, better go to some trusted representative of that business or profession and ask advice upon the course to pursue. On entering upon the study of medicine I saw clearly how my "instruction might have been bettered" as a preparation for this work had I sought advice of those competent to give it.

Does some one say this plan would result in a narrower education than the usual method? That each one would be a specialist? Better understand one thing thoroughly than half-a-dozen partially. *Few* of us can do more than one thing *well*. But *does* the intelligent pursuit of one branch of learning result in narrowness of mind? The student who has felt "the joy of deliverance," so to speak, which comes with the formation of a definite resolve to accomplish a definite purpose, can truly say that with the resolve his whole horizon broadened, and as he progressed in the direction of his object he saw the path thereto gradually widen till it seemed to embrace all knowledge.

Money is a good thing, but contentment is better. The only advantage of wealth, is power; and this, it sometimes, with poetic justice, turns against its possessor. Cultivate contentment, at all events. If cash comes after that you will be able to bear it.

God's ways seem dark, but, soon or late,
They touch the shining hills of day.—*Whittier.*

Secure on God's all-tender heart
Alike rest great and small.—*Whittier.*

THE WEEPING THINKER.

[Extracts from a discourse recently delivered by Prof. D. A. Swing, of Chicago, Ill.]

Tears do not fall in any northern zone as readily as they do in the lands nearer the sun. Nor do all races weep with one facility. The German or French peasant would cry aloud when an American man of the same grade in education would maintain a calm silence. Wealth is not the only thing that is unequally distributed. The rainfall of tears is heavier in Asia than in England, and was greater in the Palestine of Christ's day than it is in America. In one of the Greek campaigns the soldiers all wept much when their leader was killed in battle and they were without a general, far from home and in a hostile country. The quantity of tears does not depend wholly upon the sensibility of the mind, but upon the mind's willingness to let its feelings be known. The Germans are more open-hearted than the Americans. They seldom attempt to conceal their feelings of grief or joy. They do not hide their soul in a napkin, like the Bible miser, but they put it out at compound interest, and after some years of accumulation have passed that soul has a richness of laughter and tears of which the English and Americans know but little. . . .

This comes in part from that modern wisdom which will not follow a line of thought which must in the end break up the fountains of the heart. We could and should all cry should we attempt to think over all the details of a misfortune. No one can think long over a homeless child, or the grave of some idol of the hearthstone, without becoming a weeper. We give some money to help the child, we place some flowers upon the grave, and then turning away we say to each other: "It is a bright afternoon. Were you at church this morning? How beautiful is the lake in May!" Thus do we avoid those thoughts which would only raise a storm in the heart and send torrents down the cheeks. Feeling is to be found in the American mind; but it is less willing to go onward and onward in that open expression which marks the German country. The deeds of kindness which mark this Nation, the thoughtful faces of its philanthropists, the marks in the features of its great heroes of the former generation, tell what deep emotions swayed all those great leaders of the people. As in hot countries there is many a rainfall in the night which the sleeping natives do not hear or see, but of which they see abundant proof in the morning's sweetness, so in the great American minds there is many a tear-fall inside the heart away from the gaze of the crowd. It is to be detected in the richer life which follows the unseen storm.

In the little histories of some of the days of Christ, he wept twice, but outside of this history he must have wept many times. All those around him were often a tearful group. . . . . .

The writer of the Thirty-ninth Psalm said that while he was musing or meditating the fire kindled up in his heart. Up from his thought came a conflagration. Thus from the sober soliloquy of one come tears, of another come deeds of true heroism; as though man were made for a life of thought, and thought were made to be a pilot upon life's dangerous sea. Thought and human destiny are thus strangely related. The partnership is as beautiful as it is vital. No capital in early life is more valuable than a fund of wise thought. Out of such a form of wealth come the smiles of hope, the tears of reform, the fires in the heart.

The educational forces of our country ought to be bringing more of thought to bear now upon life than was bestowed upon it in former periods. If education strengthens mind and if education has been made more general it must be inferred that the quantity of affection consumed upon society has become more and more enlarged and serious. It is difficult to compare two ages because one of them is always absent. Science can compare two forces, electricity and steam, or two machines, because both can be present in the same street or field; but no science can compare two centuries. . . .

In the absence of demonstration it must be claimed that our age surpasses all its forerunners in the quantity of thought it is pouring into the problems of man's career. This must be the reason why so many fires are burning in the soul and why so many find the tears more abundant in their eyes. In his natural recklessness and perhaps moral imperfection Peter thought that a quick and bold falsehood would meet his entire need. But he underrated the occasion and overrated his act of denial. It is almost certain that society has dashed on in a similar rashness and has expected to find permanent safety in a free sowing of falsehoods. And if now at last we have come to more tears it must be because some power has come to awaken more thought. . . . Modern civilization has gone so far beyond barbarism that it cannot hope from an untruth the assistance the ancients drew from such a source. All the peace and safety of a lie are taken away by that public culture which is liable to think afterward and to weep bitterly.

The slave-trade and slave-labor went on smoothly enough all the way from the Egyptian and Hebrew Kings up to the edge of this century. When deeper thought began to come tears of pity began to fall. Early in this century benevolent masters began to free slaves and transfer them in bulk to some farm or village in a free State. There is a large town in Ohio now quite surrounded by African families whose masters established them upon rich land long before the writing of "Uncle Tom's Cabin," and before the tumult which finally passed from gulf to lakes. That institution which followed mankind through Egypt, through the religious empire of the Jews, through the literary and æsthetic States of Greece, through the military republic and empire of Rome, and then through the Christian dispensation for 1,800 years, met in the nineteenth century its arrest and overthrow. The world thought and wept, and the old falsehood, like the oath of the old novel, was blotted out by these angel tears. The student of history can see this thought growing if he will examine the great open field of church and state. In Athens for the 40,000 model and free æsthetic Greeks, there were 400,000 slaves; but to the Athenians, Homer was say-

ing: "That a slave was not half so valuable as a free man;" another was saying, "No man was ever born to be a slave; that condition comes only as a calamity;" but these little seeds of justice cannot be said ever to have opened into a bud or even a leaf until the coming of George Fox and the Friends, two hundred years ago. These were the first Christians who ever threw against the wrongs of mankind, the doctrines and Church of Jesus Christ. England was soon abounding in these Quakers and from them came the genius of the Methodists and the restless intercession of Wilberforce.

One of the most amazing things in human history is found in the fact that the world could have lived so long and have thought so little.

The questions which arose for discussion were few and those were irrelevant. The omitted themes of study were many and tremendous. The wife, the child, the slave, the drunkard, the plow, the field, the orchard, the home, the school-house, the citizen, the government, rights, and liberty seemed unworthy of public or private debate. Doctrines of heaven and hell seem to have been the only commodity of which the public had a never-failing supply. Far away from this general apathy our Nation has sailed in its adventurous ship, and to the land of thought it has come; and therefore to the land of smiles and tears. Its thought makes the fires burn and the emotions rise high in joy or sink low in sadness.

Two of the clergymen of this city were reported recently as having preached the idea that mankind had made no moral progress since the Middle Ages. With what eyes they read history or read the visible world is unknown, but they are eyes that can not see that vast movement called "The Renaissance," when, in the fifteenth century, literature turned away from fables, from ghosts, fiends, knight errantry, wonder-working saints, and sighing lovers, to deal with real truth, real goodness, real beauty; can not see that second vast movement called "The Reformation," where religion ceased somewhat from the making of ecclesiastical aristocrats and began the manufacture of simple honesty and simple piety, such as made plain Presbyterians, Quakers, and Methodists; that vast movement called human rights, which began at the Magna Charta and quickened its pace daily for hundreds of years; that vast movement called science, which has given to the millions labor, food, clothing, and homes; that still greater movement called education, which has transformed a black midnight into the dawn of a blessed day. To enumerate these great events and then declare no progress appears only a guilty trifling with what seems the guiding hand of a kind God. It seems almost impiety to gaze at the history of Europe and America, and then declare that no progress has come since the times of the Borgias, the dissolute popes, and the Inquisition. The Roman Church herself has made of late years such moral progress that were some of her popes and bishops of the Middle Ages to return in their old habits they would be put into a common jail rather than be employed in their old sacred offices at the altar.

There are three times as many persons in Christendom as were present in the dark ages, and therefore there is more room for the phenomena of virtue or vice, and he who looks at only the sin of society will find an amount too great; but had our times the mental and moral degradation of the past, our age would be monstrous in its crimes and vices.

. . . . Thought alone is not in itself a great progress, for the Greeks and Romans were thinkers. In intellectual power and brilliancy they were an impressive company from Hesiod to Tacitus, a thousand years. But the themes of that illustrious line of men were not great enough, not humane enough to create a noble and permanent society. Christian thought was peculiar in its direct application to man's welfare. Its analysis of human need was searching. It was a diagnosis of disease and a profound study of a cure. Over the study-room of some deep Greek thinker was the motto: "He who loves geometry may study here," but over the little home in Nazareth blazed the words: "Come, all ye who labor and are heavy laden," and in the doorway might have been seen the other words: "They that are whole need not a physician, but they that are sick."

Such mottoes as these had never before been inscribed on the banners of thought. Noble ideas had been uttered long before Christ, but they had not been made the soul of a system, the inspiration of all mental activity. Christian thought does not claim originality; it reveals only that wonderful judgment which could assemble all those ideas which would be most powerful in carrying the human heart toward more of virtue and more of happiness. Christianity did not make its roses; it sought out and gathered the scattered roots and grouped them in its own rich garden. In other literatures these flowers "wasted their sweetness on the desert air," but in the philosophy of Jesus every breath of perfume entered a window and each rose and lily lay in peace upon some human heart. When this system of truths which had been abstract became warm with the breath of a Divine life, God became more of friend, man more spiritual, death a part of a progress, society the unfolding of a wise plan of the Creator, the relations of men to men those of a brotherhood. . . . .

But what is to be the outcome of such a form of deep and continuous meditation? Will that force which has outgrown many gigantic wrongs and vices in the last four centuries pause here and leave untouched the existing foes of the State and the home? Will such an evil as intemperance escape the dissolving touch of that thought which contains tears? It cannot be. The human race strongly held its peace for many generations over the chains of slaves, but when once that peace was broken nothing could call back the scattering eloquence; the same race was long silent over the subjection of men to a throne, and over the divine right of kings, but when the shout of liberty began to rise, it could not be recalled; it passed from statesman to plowman, and from plowman back to patriot and hero, until a whisper became the voice of mighty thundering, expanded until the throne of England has become the affair of only one more generation; so the dissent raised against intemperance has not been raised to be withdrawn after a few summers and winters shall have

passed, its eloquence is growing eloquence, and as the sympathy for the slave ceased only when the slaves were made free, so this latest glow of speech will pass away when we shall have to learn in history about a drunkard's life, a drunkard's home, and a drunkard's grave. All modern evils will pass into this ordeal of sympathetic thought and be abraded by its wearing, as rocks are worn away by the sea.

This emotional thought pertains not only to the reform of nations; it deals not simply with vast evils and sins; but it stands as the most powerful form of philosophy which can fill up the chambers of the individual spirit. The rising generation will find no intellectual pursuit so valuable as that which takes up life and ponders over it with mingled emotion of smiles and tears. The propositions of Euclid and Sir Isaac Newton are beautiful and great, but they are cold as ice compared with the questions: Why am I here? Why do I miss my life with intemperance, or frauds, or cruelty, or with vanity?

Blessed day for our Nation and for our youth when the modern intellectual power so rapidly unfolding in quantity shall become colored all through and through with sympathy and pathos, and shall contemplate the great human landscape not with a haughty coldness, but with the deep emotion of smiles and tears. As Jesus was too noble and too kind to be denied in peace by Peter and Judas, so the world of each heart is too sublime to admit of any sentiment except a daily veneration. Its cradle and grave are divine and pathetic.

SCRIPTURE LESSON, No. 27.

SEVENTH MONTH 15, 1888.

TOPIC: GOD'S PRESENCE.

GOLDEN TEXT: "Lo, I am with you alway, even unto the end of the world."—Matt. 28: 20.

READ Exodus 33: 12-23.

THE people of Israel had forsaken Jehovah, and given themselves over to the folly and wickedness of idol-worship. The heart of their leader, Moses, was greatly troubled, and he called Aaron to account for the part he had taken in the rebellion. They had been shown how greatly they had sinned; Moses laid their case before the Lord, and pleaded for their forgiveness. He asked that his own name might be blotted out from the book of remembrance, for their sakes. The same desire for the welfare of Israel in his day is seen in the declaration of the Apostle Paul, when he said, "I could wish that I myself were anathema from Christ for my brethren's sake." (Rom. 9: 3.)

My presence shall go with thee. This was a promise that the Divine Spirit would not leave Moses without a witness of its continued guidance. To the people the outward manifestation was the flame of fire that, through the day, was carried before the moving hosts of Israel to lead the way, forming a pillar of cloud. The flame of fire became a symbol to the emancipated bondmen of Egypt of the "Presence" of which Moses needed no visible representation to assure and satisfy him.

The ignorant multitude needed more, and to meet their low condition this was the only form that could be given them. Moses was leading them out and away from the false notions of God that had been their inheritance for many generations. Now he would allow of nothing that the hand of man had fashioned to represent the living Presence.

What Idolatry was, and is, Isaiah, centuries after, vividly portrays (Isaiah 44: 6-20.)

Wherein shall it be known, etc. The testimony of Moses that the evidence of the separation of the Israelites from all other peoples was to be known in that Jehovah, the God of their fathers, was with them. This had been claimed by no other people. The patriarchs in their wanderings had set up their pillars, and builded their altars, and received continued evidence of the nearness of the Invisible One, and in these their descendants were to find help and protection from the same divine source.

Moses had no thought of the direct presence of the Lord to guide and help him with these people who were "stiff-necked." He had appeared to him as a cloudy pillar just before the opening of this reading, and many times before.

Prior to the exodus he had heard the voice of the Lord from the burning bush. At another time He was in thick darkness. The Hebrews were not ready to understand a spiritual presence; Moses himself could not, and his race less; they could not grasp that idea, and the voice seeming to speak must be associated with some natural object prominent at the time.

The Indians see God in the clouds and rising storm, or hear Him in the rolling thunder and rushing winds.

Moses had learned the necessity of a higher power to guide him, as indicated in the 12th verse where he says, "Thou hast not let me know whom thou wilt send with me." Now he shows his willingness to be guided, and his request was for what we feel today is vouchsafed to all, this voice of God in our souls, directing, guiding, and controlling us. He was looking for an outward guide.

When we have perfect faith that a Higher Power is over all, and sustaining all, and that through joys and sorrows alike, if we are guided by the voice we may hear, we will be at rest. When we are in oneness with the Spirit there is no contention, no striving with the will; for will and action will reach out in parallel lines, and a restful contentment or quiet routine of work will be the result.

It is so wrong to picture to children that the life of the Christian is a constant warfare, in the only sense they can understand that word. Rather tell them it is a life of very great joy and rest when each hour they do just what they feel to be right.

A child taking its first steps can do it much better when one is near it, or when some object is near it that it feels it may grasp. Men and women are but children of larger growth; they feel the need of something to support them all through life, and this constant reliance and dependence on the Higher Help promised, aids in all daily labor. When we feel that there is a power within us that will warn us when we are deviating, or will sustain us when we are in the right, all our daily duties are better done.

This continued presence has always been one of the fundamental principles of Friends. When George Fox admonished his hearers to "Mind the Light," he but embodied the same thought. We have many names, but one faith for all.

THE AIM OF FIRST-DAY SCHOOL TEACHING.

As it is now very generally conceded that First-day schools have become a necessity in the Society of Friends, it concerns us all to be well informed as to what is the aim and the end that is to be accomplished by the teachings therein given. It is not to be expected that every one interested or engaged in this comparatively new work amongst us, realizes its full scope and responsibility. But that very many do is evidenced by the earnestness that has characterized their patient and prayerful labor in this field, and there should be watchful care over the one class, and cheerful encouragement extended to the other, by concerned Friends everywhere, so that the result may be a deepening of the religious feeling in our natures.

There is one point upon which all should agree, and that is that First-day schools are not to have for their aim simply intellectual culture, but should be positive in the desire to cultivate the spiritual, religious, and moral nature in the children. This may be said to be such a foregone conclusion, that it does not need to be mentioned in this connection; but experience teaches us that such conclusions need often to be brought to the front, if only to be sustained by the facts showing that such teaching is the rule and very seldom the exception. To advance children along this line is to so broaden and deepen character that the intellectual will be stimulated to keep in harmony therewith, and it is never too early to begin this nurture. Indeed long before the child has reached the school—at the mother's knee, and while the infant's uncertain steps are being guided by a tender father's hand,—this virgin soil should have been so stirred that the seed implanted there by the Creator of all, should have already germinated.

When Jesus said of the little ones, "of such is the Kingdom," he uttered a truth so grand that it is strange we so slowly realize it. If we did we should more patiently and gently watch the unfolding of the tender germ, and so try to strengthen both root and branch of the divine within that mature growth will be strong and vigorous in the direction of righteousness.

But we are slow to rid ourselves of the traditional idea that religious life must necessarily be one of much sorrow, and we shrink from too early requiring a child to conform thereto, unmindful or unimpressed that within its own nature is the angel side that can overcome sorrow and sin, and lead it to happiness and heaven. A noted divine, in a few strong words, thus pictures youth without religious attributes: "How deplorable a young soul without wonder, without reverence, without tenderness, without inspiration; with superficial mirth, and deep indifference; standing on the threshold of life's awful temple, with easy smile, without uncovered head, or bended knee, or breathless listening! Is that the time, do you say, for enjoyment? Yes;—and for enthusiasm, for conviction, for depth of affection, and devotedness of will; and if there be no tints of heaven in that morning haze of life, it will be vain to seek them in the staring light of the later noon.'"

Is there not in these words the key-note to the direction in which our teaching should tend? Awaken wonder at the greatness of God and his creations, and most youthful souls will be filled with reverence and awe, while at the same time his boundless compassion and tender mercy can be so impressed that the "bowed head" and "bended knee" of the spirit will manifest itself in pure enjoyment of life, and a keen sense of its duties. Clearly, then, the aim of the First-day school must be to inspire a love for all things religious, using the word in its broadest and fullest sense. And that it shall accomplish this end, is or should be the concern of all that love the Society and this important work that the present time has developed as needful to be performed.

DEATHS.

ALLEN.—At the residence of his daughter, Mary G. Smith, in Hoopeston, Ill., Fifth month 18th, 1888, Jehu Allen, at the ripe age of 84 years.

In the calling home of this dear, aged Friend whom, to know him was to love him, the Society, as well as his children and grandchildren, has sustained no common loss. To review his life and standing in society for many years in a long eulogy would be most fitting: but we will briefly say, to content ourselves with the belief, that his light shone on each side of his pathway to the extent required by his Master whom he lived to serve; an attempt at eulogy would seem to those who knew him as but a pale reflection.

He was born in Shenandoah, Virginia, in the year 1804, moved with his parents to Wrightstown Meeting, Belmont county, Ohio, in 1811, where he was raised and received his education and fixed principles of our Society. In 1849 he removed to Duck Creek Meeting, Henry county, Ind., re-

maining there until the year 1865, when he came to Benjaminville Meeting, Ill., where he resided a faithful elder in Society until six weeks before his death, when he came to Hoopeston, Ill., to visit his children and grandchildren on the 53d anniversary of his marriage, having survived his wife about seven years. He was a faithful attender of meetings, having attended all of Illinois Yearly Meetings except one, and never missing his home meetings when well enough.

During his last sickness (which lasted about four weeks) his untiring patience and fortitude under great suffering gave evidence that an upright life with an undying faith had not been in vain. When nearing his close, at intervals between the severest pains which he described as the "slow breaking of a bone," he spoke of his delightful visions of the future, closing by exclaiming, "Beautiful! Beautiful! It's all well! It's all well! I will bear it all patiently, for it will soon be over and I will be in that beautiful Kingdom." Still nearer the end, he came out of a delirium of pain and repeated from Pope in a muffled, weak tone, but clearly audible, the following:

"Oh the pain, the bliss of dying!
Cease, fond nature, cease thy strife;
And let me languish into life.

Hark! They whisper: Angels say
Sister spirit, come away.
What is this absorbs me quite,

Steals my senses, shuts my sight,
Drowns my spirit, draws my breath,
Tell me, my soul, can this be death?

The world recedes, it disappears;
Heaven opens on my eyes, my ears
With sounds seraphic ring.

Lend, lend your wings! I mount! I fly!
O, Grave! where is thy victory,
O, Death! where is thy sting?"

When the end came he passed away very quickly and peacefully without pain.

His remains were taken to Benjaminville and laid by the side of his wife in Friends' burying-ground, on the 19th of Fifth month, 1888.

I. T. L.

BEDFORD.—Suddenly, at Springboro, Warren county, Ohio, on the 20th of Sixth month, 1888, William S. Bedford, in his 84th year; a consistent and esteemed member of Springboro Monthly Meeting for 57 years; having removed from Philadelphia—his birth place—to Springboro, in 1831.

DOWDALL.—In New Garden, Chester county, Pa., Sixth month 28th, 1888, Joseph Dowdall, in his 89th year.

ELLISON.—At her residence in New York City, on the 19th of Sixth month, 1888, Annie A., widow of William C. Ellison, in the 81st year of her age.

EVANS.—Suddenly, on the 12th of Sixth month, 1888, at Pasadena, California, Lindley Murray, son of the late Oliver and Mary W. Evans, of Philadelphia; a member of Philadelphia Yearly Meeting. Interred 24th of Sixth month at Fairhill, Philadelphia.

CERNEA.—In Newtown, Bucks county, Pa., on the 25th of Sixth month, 1888, Sarah T. Cernea, widow of the late Dr. Arthur D. Cernea, of Buckingham, in the 75th year of her age; a member of Makefield Monthly Meeting.

GAIGE.—At the home of his son Albert, Maple Ridge, Tioga county, Pa., on the 6th of Sixth month, 1888, Perry Gaige, aged 78 years. He was born in Duanesburg, Schenectady county, N. Y.; a birthright member of Quaker Street Meeting, and was always a firm believer in the Friends' principles, social in his nature, and observing the Golden Rule to do to others as we would have them do to us.

HOOVER.—Near Spiceland, Indiana, on the 23d of the Fourth month, 1888, at 6 o'clock p. m., Margaret Hoover, widow of Levi Hoover, and daughter of Samuel and Rebecca Harvey, aged 76 years and 8 months; a valued member of Fall Creek Monthly Meeting and Indiana Yearly Meeting. She was born in Clinton county, Ohio, the 26th of Eighth month, 1811. She was married to Levi Hoover, of Wayne county, Indiana, in 1827.

When a life has ceased its earthly pilgrimage, and in its departure gives the beautiful evidence of its completeness, it is but fitting to offer a tribute to its memory.

She was an elder and much esteemed at the meeting where she belonged, where she will be much missed, for she was a regular attendant when in health. She was very active in the cause of First-day schools and always ready to minister to the wants of the poor and afflicted, extending the hand of sympathy to all.

Although the summons came suddenly we have good reasons for believing that it found her not unprepared. At her funeral there was a large attendance of sympathizing friends, who with her loving children and grandchildren mourn her loss. Although the ties that held her here were of the strongest, yet such was her faith that she expressed her willingness to go and rest with God, and with words of trust in Him who stilled the waters, that he would bear her safely to a home more beautiful than her earthly one, she passed triumphantly through death which, with her, was transition unto life eternal.

"Life's blessings all enjoyed,
Life's labor done." M. K.

MALONE.—At the late residence of her nephew, Watson M. Trump, on Third-day, Sixth month 26th, 1888, Hannah I., widow of Seneca E. Malone, in her 72d year.

MARPLE.—At the residence of his step-father, Richard S. Dare, Olney, Philadelphia, Sixth month 26th, 1888, John H. Marple, in his 21st year, a grandson of the late Isaac Bradway.

SMITH.—In Brinton, Allegheny county, Pa., on the 27th of Twelfth month, 1887, LeRoy Smith, aged 2 years and 9 months; and at the same place, on the 26th of Sixth month, 1888, Edward H. Smith, aged 9 months; children of Edward H. and Carrie E. Smith, and grandchildren of the late Dr. Benjamin Smith, of Newtown, Pa.

TRUMP.—At his residence, near Hestonville, West Philadelphia, Sixth month 25th, 1888, Watson Malone Trump, in his 47th year; a member of the Monthly Meeting of Friends of Philadelphia.

WHENE'ER a noble deed is wrought,
Whene'er is spoken a noble thought,
Our hearts, in glad surprise,
To higher levels rise.—*Longfellow.*

TRUTHS, however they are known and understood, if they are not at the same time *lived*, are nothing but inanimate truths; and inanimate truths are, as it were, lifeless statues.—*Swedenborg.*

HOLD faithfulness and sincerity as first principles. Have no friends not equal to yourself. When you have faults, do not fear to abandon them.—*Confucius.*

LETTERS FROM EUROPE.—XXI. A SURVEY OF THE ENGLISH SITUATION.

LONDON, June 2, 1888.

A CYNICAL reviewer advises travelers to express their opinions of a strange country as soon as they enter it, because when they come to know it thoroughly they will find it difficult amid the multiplicity of facts to form any opinion at all. This was, I think, apropos of the recent strictures of Matthew Arnold upon American manners, and I intend to follow the advice, not however for the reason assigned, but because I am persuaded I have at hand all the facts necessary to sustain the very limited views I am about to announce. They may be summed up in the opinion that England is the worst governed nation in all Europe. And I will try to show that from its constitution it must be so, and in fact is so.

I must premise that I use the term England in preference to the correct one,—of the United Kingdom of Great Britain and Ireland,—both because it is less cumbersome and because in fact Ireland, Scotland, and Wales are mere appendages to the larger kingdom which far overbalances them all combined, and manages all matters at its own will.

The constitution of England, which is that of the United Kingdom, nominally vests the supreme authority in the King, Lords, and Commons, constituting their independent orders; but in fact the Commons govern alone. Two hundred and forty years ago the House of Commons was powerful enough to put the King to death, and abolish the House of Lords, and establish a so-called republic, and it could probably do the same thing to-morrow. Nominally the sovereign can veto absolutely any act passed by Parliament, but for more than a century, I believe, no king has ventured to do so. Indeed it is a maxim that "the King reigns but does not govern." The true governor is the prime minister, for the sovereign is bound to act entirely by his advice, and without him is nothing done that is done. The minister is appointed by the sovereign, but in making the appointment the sovereign is bound to select a man acceptable to the House of Commons, and when he ceases to be acceptable and the House indicates the fact either by a resolution to that effect, or by rejecting some measure proposed by him, he must forthwith resign. Thus the sovereign—at present the Queen—is ruled by the minister, and the minister in turn is ruled by the House of Commons. This would not be so bad if the House was entirely free to select a minister, but in fact the House has no means of making known its wishes, and the Queen, by a custom which is nearly a part of the constitution, is bound whenever a minister is voted out, to select as his successor the leader of the party which defeated him. This often leads to the most absurd consequences. It may be illustrated by a review of the present condition of things in Parliament. The Earl of Salisbury, the present premier, has a clear majority in Parliament of about eighty votes, and has been supported by that majority in all the measures he has proposed except one. He has introduced a bill to constitute certain elective bodies to administer the business of the counties, and to these councils, as they are called, is given authority to license houses where intoxicating liquors are sold, and it is provided that if the Council shall refuse to continue the license of any existing house, the owner thereof shall be compensated at the expense of the county for having, as it is termed, been deprived of the means of making a living. The proposition has been met with intense hostility on the part of the temperance people and religious societies generally, and the opposition party, (who are called Liberals, the party in power being Conservative), have seized upon it as a probable means of defeating the minority. If, with the aid of the popular feeling they can muster votes enough in Parliament to reject the measure, the ministry must retire, and the leader of the opposition, who is Mr. Gladstone, must be made prime minister. Now Mr. Gladstone is committed to the policy of Home Rule for Ireland, and has made himself highly obnoxious to the majority in Parliament, while Lord Salisbury is entirely acceptable to that majority, who are willing to sustain him on every question save this of compensating the liquor sellers. So that a leading Conservative defines the question for Parliament to be, whether it is best to run the great national risk of re-admitting Mr. Gladstone to power, or as the lesser evil to pay off the publicans at a pecuniary sacrifice. But the absurdity is that parliament cannot reject Lord Salisbury's proposition and yet retain him in power, as a large majority gladly would do. To affect that object they will have to turn Lord Salisbury out and bring Mr. Gladstone in, and then turn Mr. Gladstone out and bring Lord Salisbury back. But meantime Mr. Gladstone when he gets in can dissolve the Parliament and subject all the members to the risks and expenses (which are enormous) of a new election. So the prospect is that the dissatisfied members will sacrifice their convictions to their political interests and vote the compensation which some persons compute will cost the people more than a thousand million dollars.[1]

I think your readers will agree with me that under a constitution which thus places members of Parliament under powerful personal inducements to enact bad laws, and which must also frequently compel them to place in power men of whom they disapprove, bad government is inevitable. There is much in the condition of affairs in England to show that the government is bad. And its worst measure is free trade.

I mentioned in my February letter what had been said in Parliament respecting the decline of Agriculture in England: that farmers were working at a loss and sinking their capital; that many farms were unoccupied and great areas of land uncultivated; that the wages of farm laborers has fallen, being from $1.75 to $2.25 per week, and great numbers had gone to seek employment in the cities. In fine, "the condition of the agricultural districts is terrible." Another debate in the following month supplied some additional particulars. The depreciation in the value

[1 Since our correspondent wrote, the Government have withdrawn the compensative clauses from the bill, and so avoided probable defeat at this point.—EDS. INTELLIGENCER AND JOURNAL.]

of land in the last ten years was stated to be $3,000,000,000. More than 2,000,000 acres of good wheat land were abandoned. Landlords were suffering and tenants hopeless. The purchasing power of the agricultural community was said to have decreased $200,000,000 a year. At least a third of all the food consumed in the kingdom was imported.

So much for agriculture: with manufactures the case is little better. A writer in the *National Review* says that mills and factories are being closed in all directions. That some branches are entirely given up. The silk industry some time ago came to an end and the last sugar refinery has just closed. Meantime the imports of foreign goods are rapidly increasing, while exports increase indeed also, but very slowly,—the increase of imports being as 474, while that of exports is but 32. The loss of wages represented by the excess of imports over exports has amounted in ten years to $200,000,000. And it is charged that British manufacturers who have gained a reputation for certain articles have goods with their trade mark made abroad and sent into England for sale.

Now, certainly the idle manufacturers would be glad to make clothing for the idle agriculturists, if the latter would give them food in return; and the agriculturists would be glad to cultivate the vacant land and make food for the manufacturers; and the law-makers ought to be able to bring these two producing powers into harmonious activity. The obvious means of effecting this is a protective tariff, but no one ventures to propose this, and Lord Salisbury said plainly that the imposition of duties on imports of food would almost produce civil war.

And again: the seas around the British Isles abound with fish, and enough might be taken to feed a great part of the almost starving population, but for the cost of transportation by rail from the accessible ports. A recent article alleged that the freight on herring from Penzance to London (260 miles) was a half-cent, which, if six herring make a pound, would be equivalent to 23 cents per ton per mile—about ten times the fair rate. In consequence of these charges, a thousand tons of herring were at one time thrown back into the sea, and a successful mackerel fleet after selling 40,000 mackerel for manure, threw away 40,000 more. The London *Times* said recently that off the east coast of Ireland more fish were thrown overboard than would feed all the unemployed in London, who are counted by hundreds of thousands. The Scotch fishermen are said to lose $1,000,000 a year for want of means of carriage to market. A bill is before Parliament to remedy this wrong, but can hardly by possibility pass.

A conspicuous failure of the Government is apparent in its inability, after eight hundred years of possession, to reconcile the people of Ireland to the English rule. Still an enormous standing army is required, aided by a numerous constabulary, to enforce the laws of Parliament in that island, while famine and emigration in the last fifty years have reduced the population by a half. The so-called Coercion Act makes crimes in Ireland of acts which are lawful in England. To report in an Irish newspaper the proceedings of a meeting of the National League, is a crime punishable by imprisonment with hard labor; but those proceedings may be lawfully published in every other newspaper in the kingdom. So to address a public meeting in Ireland held to discuss Irish grievances is punished as a crime; but the same meeting held in England for the same purposes may be addressed with impunity. And so it is with a variety of proceedings which are resorted to in order to procure a redress of grievances.

It is disgraceful that so important a portion of the country should remain in a condition of chronic discontent. A government which cannot or will not satisfy the people, ought to abdicate or be displaced. A few days ago an address was presented to Mr. Gladstone, as the leader of the friends of Ireland, condemning the course of the government and encouraging him in his opposition thereto. It was signed among others by twelve hundred persons who described themselves as members of the Society of Friends. This has drawn forth a protest from a small number of Friends (105 in all) who deny the right of any part of the Society to use its name to give weight to their political views, and criticise as "subversive of the just principles of morality" a paragraph in the address declaring it to be "unwise and unjust to the Irish people to stigmatize as crime that which does not commend itself as such to their moral feelings." This declaration the protesting Friends regarded, and perhaps correctly, as tacitly and perhaps unwittingly supporting the "Plan of Campaign," and boycotting, which though supported by the occasional use of the shot gun or even more dangerous weapons, probably does not commend itself as crime to the moral feelings of the Irish. The paragraph in the address is, I think, unfortunately worded. Certainly it cannot be admitted that no act shall be declared a crime or punished as crime which the moral sense of the perpetrators or of the community in which they live does not regard as crime. Such a doctrine would protect polygamy in Utah. But the protesting Friends are hardly more fortunate in their version of the obligation of the citizen. "We have [they say] ever maintained that it is our duty to obey all the enactments of civil government except those by which our allegiance to God is interfered with." Now as the moral sense of the individual is the sole judge of what interferes with his allegiance to God, it is his moral feelings after all that must decide what laws he will obey and what not. The early Friends thought it inconsistent with that allegiance to pay tithes, which were a part of the rent of the land which the owner had devoted to the support of the church. Now it seems to me the Irish might with equal reason deem it inconsistent with that allegiance to pay rent to a landlord whose only right to it rested on conquest and the spoliation of the original possessor, and who would use it to maintain himself in idleness and luxury and in many cases in gross debauchery, an object not a whit more moral than the maintenance of a "hireling" minister or the repair of a "steeple-house."

The result of all this misgovernment is the creation of a class of wretches such as exists nowhere else in the world. And as authority for this extreme opinion I transcribe from Canon Farrar's sermon on

London Life (which I sent you a few days ago) the following passage. [Our correspondent here quotes from Canon Farrar's address published in the INTELLIGENCER AND JOURNAL of last week, the testimony of Professor Huxley. It is given on page 412, first column, beginning with the words "once more," and closing with "I would distinctly choose the latter."—EDS.] I have seen numbers of the people described by Lilly and referred to by Huxley. They may be seen everywhere, even mingling in the well-dressed crowds in Hyde Park. Their rags and filth are disgusting, but what strikes you with horror is the aspect of their faces, from which, as Lilly truly says, "Everything purely human has been erased." There is no appealing look, they don't beg, they notice nothing as they pass, but wander aimlessly along, and I doubt whether a blow would rouse in them any feeling of resentment or bring a human expression even of pain to their countenances. I think I have in some earlier letter spoken of the stolid and hopeless expression on the countenances of the German women who were drawing wagons on the streets, harnessed alongside a stout dog. That was sad enough, but those women had at least an air of determination; the will power was not dead in them. It is otherwise with the London wretch. He has no vital force for good or evil. There is but one thing that can rouse human feeling in his exhausted frame, and that is a dose of spirits. By the aid of that he may, if only for a few moments, be a man again and forget the dead misery of exhausted nervous energy. In my judgment he is no more to be blamed for snatching a fleeting taste of the only comfort left to him in life, than is the tortured neuralgic patient for seeking temporary relief in ether or chloroform. But below this depth there is still a lower deep. I read in an article on this subject that women offered themselves in the public streets "in order to avoid a deeper degradation." I could not conceive what this might mean until I read in Farrar's sermon, Tennyson's verses.

Just before writing the last few lines I was called away to go see a demonstration in Hyde Park. I have mentioned above the bill pending in Parliament to give the people substantially local option in regard to the liquor trade in each county by giving to a council elected by them, the power to grant or refuse licenses to sell liquor, coupled with the provision that if a license be refused to one who has hitherto enjoyed it he shall be compensated.

The temperance people believe this provision will render the option negatory, as the county authorities will rather grant licenses than pay for the privilege of refusing them; and they made what is here called a demonstration against it in Hyde Park. It consisted of an immense procession of teetotalers, two miles long, with banners and mottoes and brass bands, ending in some speech-making which I did not wait to hear and which probably is not yet concluded. There was nothing which may not be seen at home except six vans filled with little children under six years of age, waifs from the East End, in their daily dirt and rags, representing, and perhaps in part, being the neglected children of drunken parents. Their vans bore the inscription: "Who will compensate these?" The sight was overwhelmingly pathetic, and not the less so that the little creatures were in high glee enjoying the ride and the sight of the lovely park which probably not one of them had ever seen before; and some of them plied their accustomed trade, holding out their hands for pennies, which so far as I saw, none of them got. And there was presented a scene which could not have occurred elsewhere in the world. The procession entered Hyde Park about five o'clock, just when the Park was crowded with the carriages of the aristocracy, filled with lords and ladies, the proudest, richest, and most luxurious on earth. These carriages drew up on one side the road to let the procession pass, and the occupants gazed within three yards into the faces of the offspring of the wretched creatures described by Lilly and Huxley and Tennyson as degraded by their tyranny beneath the level of the Australian savage. Near me was an open carriage blazoned with ducal arms; in it were a gentleman and lady, and on the box a coachman and a footman in faultless livery, with wigs and cocked hats. I had just before seen one of the Prince of Wales' carriages with a young lady who was probably one of the princesses, attended by a lady in waiting. Interspersed among the carriages were little ladies of 8 to 15 years on spirited ponies, each attended by her groom. And all this splendid company gazed at the little dirty waifs whom they knew to be predestined at birth to a life of crime and shame, without the slightest expression, and, as I believe, without the slightest feeling of compassion. I am sorry to say that the crowd of onlookers displayed very little more. Some essayist's writing of the manner of the middle ages, when the lord of the castle kept his prisoners, whether enemies, debtors or criminals, in the cellars or "dungeons" below, while his family dwelt above, remarks how blunt must have been the sensibilities of the lords and ladies of that time who could live undisturbed by thoughts of the wretchedness so near them, which, he says, would be impossible in our day of refined susceptibilities. But we are true children of our fathers. The only difference is our dungeons are not underneath, but next door.

J. D. MCPHERSON.

P. S. June 3. I attended this afternoon service at Westminster Abbey. The preacher, Canon Furse, resumed the subject of Arch-deacon Farrar's discourse on London Life, and handled it boldly. He laid the blame of the wretchedness of the poor upon the rich, and denounced in strong terms the apathy of the occupants of the gilded palaces of the West End, which, he said, were too often haunts of licentiousness as well as of luxury. He censured, too, the failure of the church to take a proper stand in favor of the removal of the evil, and announced his intention to treat the matter in a series of discourses. From other pulpits, dissenting and Catholic, the same tone is heard. But I have no idea that organized Christianity will produce any effect. Possibly the extended suffrage may enable the people to right themselves peaceably: otherwise they will at no distant day do so with red hands. J. D. M.

NEWS OF FRIENDS.

On the 10th of last month the meeting in the new house at Westland, Ohio, was a very interesting one. Some of the neighbors had often suggested a "dedication" of the house and that our ancient Friend, Rebecca Wells, who is an approved minister, should preach the sermon. They were informed that was not Friends' way and we could not guarantee anything being said. But "they could not understand why Friends should be so different from other people." They, however, concluded to go to meeting that day and spread an invitation, so that the house was nearly filled with a very quiet and attentive audience, during which R. W. felt called on to address them, and was greatly favored to hand forth what seemed required of her, and it was well received. After meeting the happy good feeling prevalent was very encouraging; each seemed ready to say that it was good to be there. One not a member, who had come several miles to attend, said if he lived near to 'Quaker meeting" he would go every time. Such a 'meeting seems rather peculiar and the hope is entertained that it will tend to encourage a better attendance. M.

—The writer was present at Friends' meeting in Chicago, on First-day, Sixth month 17th. It is held in the second story of the Athenæum building, on Dearborn street, between Lake and Randolph. The hour of meeting is 10.45. The day was extremely warm, and some of the elder members were probably deterred from attending on that account. There were nineteen present, of whom five were women. Among the strangers was Stephen R. Hicks, of Long Island, who was about returning home from a family visit, and Jonathan Smith, of Bucks county, Pa., who was visiting his son in Chicago. The meeting was held very decorously, and there were communications from J. W. Plummer and two other Friends. Afterward, the Bible Class, under charge of Hannah A. Plummer, spent an hour in the study of the First-day School Lesson for the day.

SILENT WORSHIP.

How oft the heart can feel an inborn union,
An ever-close companionship with God,
As if we hold with Him that sweet communion,
That Enoch knew when by His side he trod!

And wander on wrapt only in the feeling
"To live with Christ and gain is in the grave;"
Though dangers round our paths are ever stealing
His voice will comfort and His arm will save.

And though His love may always seem as dearer
Than all the love our earthly friends can show,
At times He seems to draw His children nearer,
And showers His richest blessings here below.

As though at times the thoughts that bind to Heaven
Would let us gaze upon His holy face,
As though the cup of love that He has given
Must overflow with mercy and with grace.

And where is this? Is it when night is stealing
Over the earth and in the dim-lit room?
The voice of prayer where children's forms are kneeling,
Rises so gently through the dusk and gloom?

Or in thy home, when evening lamps are burning,
And all thy friends meet round the fire's bright cheer,
And one the page of Scripture slowly turning
Reads the old story that we love to hear?

Or is it where the hymn of praise is swelling
And thousands gladly join the well-tuned song,
When one tumultuous burst of thanks is welling
From heart and soul in the great churches' throng;

And all the ministers' aisles repeat the voices,
And the loud organ-peals roll through the hall,
And we can feel that every heart rejoices
And God our God is glorified in all?

Yet nearer still; there is one place yet nearer,
The voice of prayer is sweet, the songs of praise,
And Scripture's words are clear to us; yet clearer
His lamp of love at times shines on our ways.

'Tis where the solemn silence is unbroken,
The world forgot with all its toil and care;
Where though no words by mortal tongue be spoken
All join together in one heartfelt prayer;

Where though no strains of music are ascending
The angel-songs of love by all are heard;
And hearts and souls in unity are blending,
Though none may interchange one thought or word;

Where though no outward sign or deed is telling
How deep may run the stream of mercy's tide,
All, all can feel His love within them dwelling
And walk, like Enoch, by their Master's side;

And simply resting on His will and pleasure
Have heavenly blessings freely on them poured,
And making Him their greatest joy and treasure
Find heaven on earth by waiting on their Lord.

—*Albert E. Bull, in British Friend.*

COMPENSATION.

The truest words we ever speak
Are words of cheer.
Life hath its shade, its valleys deep;
But round our feet the shadows creep,
To prove the sunlight near.
Between the hills the valleys sleep,—
The sun-crowned hills;
And down their sides will they who seek
With hopeful spirit, brave, though meek,
Find gently flowing rills.

The snow-star, melting as it flies,
Involves a life,
A joy, and beauty that shall be
When summer with glad feet and free,
Treads earth with blossoms rife.
The seed that in its furrow lies,
Awaiting spring,
And winds that blow, and clouds that rise,
And night that gems with stars the skies,
A hope, a promise, bring.

For every cloud a silver light!
God wills it so.
For every vale a shining height,
A glorious morn for every night,
And birth for labor's throe!
For snow's white wing a verdant field,
And gain for loss!
For buried seed the harvest-yield;
For pain a strength, a joy revealed;
A crown for every cross!

Mary Johnson, in Christian Register.

GOD'S HIDDEN ONES.

SILENTLY—shadowly—some lives go,
And the sound of their voices is all unheard,
Or, if heard at all, 'tis as faint as the flow
Of beautiful waves which no storm hath stirred.
Deep lives these,
As the pearl-strewn seas.

Softly and noiselessly some feet tread
Lone ways on earth without leaving a mark,
They move 'mid the living, they pass to the dead,
As still as the gleam of a star thro' the dark.
Sweet lives those
In their strange repose.

Calmly and slowly some hearts beat,
And none may know that they beat at all:
They muffle their music whenever they meet
A few in a hut or a crowd in a hall.
Great hearts those—
God only knows!

Soundlessly—shadowly—such move on,
Dim as the dream of a child asleep;
And no one knoweth till they are gone
How lofty their souls—their hearts how deep.
Bright souls these—
God only sees.

Lonely and hiddenly in the world—
Tho' in the world 'tis their lot to stay—
The tremulous wings of their hearts are furled
Until they fly from the world away,
And find their rest
On "Our Father's" breast.

Where earth's unknown shall be known the best,
And the hidden hearts shall be brightest blest.

Father Ryan, in Words of Faith.

THE METLAKAHTLAN INDIANS.

A WRITER in the *British Friend*, residing in British Columbia, gives the following interesting account of these Indians, who have lately removed from that place to Alaska. She says:

"I thought you might like to hear the latest accounts from Metlakahtla, Alaska. Mr. Duncan's good companion and co-worker, Dr. Bluett, was here, *en route* for Portland, Oregon, the other day. He had to see to some business for the village, as Mr. Duncan was kept busy teaching school. He could not bear to leave his pupils, as he finds they have (owing to their unsettled state, moving, etc.) been neglected long enough. They will not be able to attempt the canning this summer, or indeed any other home industry, so much money would be required for such a large undertaking, and they cannot borrow, as they have no security to give. They are all living as yet in very temporary abodes, and will have of course to do so until they can earn enough at the neighboring canneries to erect more substantial ones, as well as build roads, make side-walks, and indeed make all the other public and private improvements which go towards constructing a proper village. This will no doubt take years to do, and if Duncan is spared it will be done. The poor Indians suffered great hardships this winter. They left the old mission at a stormy time, and took their household treasures with them, across the most dangerous sound that is known up there. Seventy miles on a rough sea in small canoes, and with constant storms of bitter wind and rain is bad enough, but when you realize they were leaving forever their old homes and the land of their forefathers, and, like Abraham, going to a strange land they had never seen and knew nothing of, and when on landing they had no shelter from the inclement winter but calico tents, earthern floors, and sodden wood to dry and burn, we must allow that the outlook was not very cheerful or encouraging. Several young children have died from cold, and it was reported that one or two old people have also succumbed, yet no murmur or complaint escapes them; they toil on in faith and hope, at any rate free from the persecution and provocation which made their lives a burden. They have completed a large building which they hold service in at present until their real church is built, when it will be used for the cannery. They will have a hard struggle for the next few years, as everything is strange to them, both by sea and land. At the old Reserve every tree, rock, stream, and stone was familiar to them from childhood. Each spot had its haunts for the different fur-bearing animals, on which so much of their prosperity depends; but in Alaska all is new and strange, and will be for many a day. They find it dangerous going about in a totally unexplored forest—as should a hunter get lost, his case would be hopeless. They do not know as yet the best places for the different fish. The greatest deprivation of all to which they are to be subjected, is the taking away of the use of the "Volachan," a beautiful silvery fish something like the smelt. It is called "The Candle," because the natives dried and used them for lighting their huts on occasions. They are only known to run in two or three rivers—the Frazer, Ness, and Columbia, and the run only lasts three weeks. The Indians are then kept hard at work, fishing, drying, mixing with berries, etc., and packing in boxes for use during the whole year. One box will bring as much as 36 dollars. This oil means life, health, medicine, and money to the Indians up north, and we hear that influence is being used with the government to prevent their going to these rivers to obtain this staple commodity. I suppose Duncan's men could go quietly and secure the oil or fish, but they would not like to do anything illegal, so they are in a sad plight. This Volachan oil is the great cure for consumption—much better, purer, stronger than cod-liver,—and the Indians suffer terribly from lung troubles, which makes the loss of it very serious indeed.

"The Indians of New Metlakahtla are a brave and independent people, and in their direst need they have made no direct appeal for help. They are industrious, and will become self-supporting in the new settlement as they were in the old one. So far from being a burden to others, they formerly supported native missionaries to other Indians. But their present needs continue to be pressing. Deprived of the land which had been theirs by descent, from remote times, their property also withheld, they had to start the world afresh with most of their capital,

the fruits of past industry, taken from them. They are not exclusively a body of able men: they are burdened with their proportion of sick and aged, of women and children. It is touching to note they cannot even borrow money, for in their present condition they have no security to offer. Contributions continue to flow in, and it should be known that further help will be most thankfully received, and information readily supplied, fuller in its detail than can seek insertion in this paper. Friends wishful to write direct may address William Duncan, New Metlakahtla, Alaska, care of Ladd & Tilton, bankers, Portland, Oregon, U. S. A.

"The needs of the Indians are mainly to be kept in prominence; but without wishing to judge individuals, we must recognize that this sad case of expatriation and suffering is the outcome of the indiscreet administration of a hierarchial system. This native Christian Church is pastored by a layman, and the difficulties have arisen largely from his unwillingness in the present state of the converts to administer the bread and wine. This naturally arouses our sympathy, and it is to be hoped that some Friends will feel drawn to visit this colony and see if it has no special claim on our Society.

"There are many points in this story which specially seem to call out the sympathy of Friends toward these Indians—their religious scruples and escape from ecclesiastical tyranny—their absolute refusal to resort to warlike measures of defense—their abstinence from all spirituous liquors—their determination to suffer temporal loss for spiritual freedom—and their abandoning the land of their forefathers for a strange land—Britain for America (as our early Friends also were compelled to do)—where they sought a new home where they could worship God in peace, and possess their lands and their goods in security."

A FLOATING CAPITAL.

Next to Korea, the hermit kingdom, Siam, the land of the white elephant, has been one of the last to open her shut-in ports to Western civilization and the Bible. Fifty years ago, almost all that Europeans knew of it was that it was the native land of the Siamese twins. The Great Wall of China was not more difficult to scale than it was to break down the barriers which prejudice and fanaticism had built around the fair peninsula.

But all that is changed now. The late king Chon-Fai-Yai, seeing something of the working of English ideas in the neighboring kingdom of Hindoostan, borrowed an adviser from England, and imported an English lady as governess for his harem. The leaven worked—as leaven always will. Now the young Prince Chula-Lang-Kom—Royal Hair-Pin, as the name signifies in Siamese—is on the throne, and is putting in practice the liberal ideas he learned in his youth. He gives the missionaries full liberty in the land, though not allowing the Bible to be used in the government schools.

A curious incident, however, has showed us how the good hand of the Lord is guiding all things. The old king, who had a great desire for educating the people and establishing a library, had imported from England a quantity of text-books, and among them were a number of readers; for some reason they had been packed away and never used. When the head teacher came to the present ruler for English books for the government schools, he ordered the old ones to be brought out. In common with many readers, they were filled with extracts from the Scriptures; so, although the Bible as a whole is interdicted, yet in parts it is taught in all the schools in Siam.

The American missionaries who are holding the fort in this out-of-the-way corner of the world are a noble band of men and women, and the seed they are sowing with a lavish hand is already bringing forth fruit. There are some very pleasant features in Siam as a mission field. The climate is a delightful one. The country is narrow, and the Bay of Bengal on one side, and the Gulf of Siam on the other, keep it refreshed with sea-breezes. The vegetation is a marvel, the flora exquisite, and the fruits and vegetables are of infinite variety and delicious flavor. All, it seemed to me, that we had ever known, and many more of which we had never heard, were represented on the table. "I thought you missionaries out here lived on rice," I said; "but you fare much better than we do at home."

From being one of the least known and least visited countries in the world, Siam has come to be a stopping port for almost all around-the-world tourists. When we sailed up the river Meinam, which is the great artery of the country, we turned so many tortuous curves that I did not wonder at the name of "the time destroyer," with which the missionaries have christened it. It is their only means of locomotion through the country; the time draws out drearily that is spent in and out among the winding of the stream,—particularly when the work to do is so great, and the laborers are so few. "Men and money for Siam" is the cry all along the line.

When the last sharp tack had been made on our way to Bangkok, a wonder scene lay spread out before our eyes. Venice is the city in the sea, but Bangkok is the city on the sea; for while the queen of the Adriatic is built on foundations which rest on the solid ground, the Siamese capital has no foundations, but actually floats on the water, rising and falling with the tide that comes in from the sea.

During the last century the city stood farther up the river, and on the banks; but the dense population, and the utter absence of all sanitary measures, together with the annual overflow of the river, and the miasma arising from the deposit of liquid mud, caused such frightful visitations of cholera that a remedy was imperative; and some De Lesseps of the East conceived, and carried out, the idea of the floating city. And so successful has it proved that not an epidemic of cholera have they had. And certainly a more unique and interesting scene cannot be presented in any part of the world. Huge bamboo rafts have been constructed, and then lashed together in groups of four or five with enormous chains. On these are built the city, consisting of rows and rows of tastefully decorated houses, between which run broad canals. The king's palaces, the temples,

the houses of the nobility and of the foreign residents, are on the river bank, fronting the water, while behind stretch the beautiful gardens; but all the city proper rests on the broad bosom of the clear stream.

All communication must be by boat; there can be, as in Venice, no footways and no bridges across, and the tiny canoes ply incessantly from one raft to another. They are manned by one rower, often a young girl; for the Siamese, unlike other Eastern nations, do not shut their women up, nor veil their faces. The shops go around from door to door; one boat will be filled with fish, whose silvery scales glitter in the sunlight; others with luscious fruits, whose dewy freshness and absurdly low prices tempt us irresistibly. All sorts of craft are carried on in the little vessels: in one you will see a Chinaman stirring his rich soup over a hissing charcoal-pan, with one hand, as he rows himself with the other, on his way to deliver your dinner; another is baking rolls over a mite of an oven, in order to have them "hot as hot" for his customers; others have cargoes of goats, and it was comical to see them stop before the doors, and draw the milk fresh into the measures brought out to them. Sometimes you will see an embroiderer bending over his lap, where he is weaving gold threads in and out in so marvelous a design that you think only fairy fingers could have executed it. A more peculiar, picturesque, and brilliant panorama cannot be imagined than one sees before his eyes. And at night, when the colored lanterns, hung out of the door of the houses, are all ablaze with light, and every ray is duplicated a thousandfold in the water, the effect is indescribable.

In the midst of the little boats moored about the houses are Chinese junks, painted over with yellow dragons and curious monsters of all sorts. As soon as one arrives fresh from the China seas, a gaily striped awning is stretched over the deck, cases of goods are brought up, tables are spread out, and when we went on board we found displayed all sorts and conditions of goods.

There was a strange sense of insecurity in going shopping in a floating bazaar, which gave an added zest to the purchasing, and an added fascination and value to the "antikas," as the Orientals call all kinds of curios, which we picked up. The lotus lilies float upon the river, and cast their dreaminess over us till the spell settles down, and we are loath to leave.—*Sara Lee, in S. S. Times.*

OUR FATHER, WHO ART WITHIN.

He pervades, penetrates our souls. . . . We do not discern him because he is too near, too inward, too deep, to be recognized by our present imperfect consciousness. And he is thus near, not only to discern, but to act, to influence, to give his spirit, to communicate to us divinity. This is the great paternal gift of God. He has greater gifts than the world. The very attributes from which the earth and heavens sprang, these he imparts to his rational offspring. Even his disinterested, impartial, universal goodness, which diffuses beauty, life, and happiness, even this excellence it is his purpose to breathe into and cherish in the human soul.

In regard to the spiritual influence by which God brings the created spirit into conformity to his own, I would that I could speak worthily. It is gentle, that it may not interfere with our freedom. It sustains, mingles with, and moves all our faculties. It acts through nature, providence, revelation, society, and experience; and the Scriptures, confirmed by reason and the testimonies of the wisest and best men, teach us that it acts still more directly. God, being immediately present to the soul, holds immediate communion with it, in proportion as it prepares itself to receive and to use aright the heavenly inspiration. He opens the inward eye to himself, communicates secret monitions of duty, revives and freshens our convictions of truth, builds up our faith in human immortality, unseals the deep, unfathomed fountains of love within us, instils strength, peace, and comfort, and gives victory over pain, sin, and death.

This influence of God, exerted on the soul to conform it to himself, to make it worthy of its divine parentage, this it is which most clearly manifests what is meant by his being our Father. . . .

And when the Father's presence is felt like that of a visible friend, and the parental love of the All-Perfect penetrates his inmost being, suffusing his eyes with tears of thankfulness, and lifting them upwards with immortal hope,—in such high moments, whence does he consciously derive his unutterable joy? By experience he then knows, as well as feels, that this peace past all understanding is the influx of the Peace of God. With mingled gratitude and awe, he recognizes then, that above, upon, within his own spirit is moving the Divine Spirit, bringing the Light of an eternal day. Thenceforth the truth, written in his heart by the finger of God himself, becomes a glorious reality, that to all who ask for his Holy Spirit, the Father gives.—*W. E. Channing.*

One great principle which we should lay down as immovably true is, that if a good work cannot be carried on by the calm, self-controlled, benevolent spirit of Christianity, then the time for doing it has not come. God asks not the aid of our vices. He can overrule them for good, but they are not the chosen instruments of human happiness. . . .

The moment a man parts with moral independence; the moment he judges of duty, not from the inward voice, but from the interests and will of a party; the moment he commits himself to a leader or a body, and winks at evil, because division would hurt the cause; the moment he shakes off his particular responsibility, because he is but one of a thousand or million by whom the evil is done,—that moment he parts with his moral power. He is shorn of the energy of single-hearted faith in the right and the true. He hopes from man's policy what nothing but loyalty to God can accomplish. He substitutes coarse weapons, forged by man's wisdom, for celestial power.—*W. E. Channing.*

We judge ourselves by what we feel capable of doing, while others judge us by what we have already done.—*Longfellow.*

THE MANUAL TRAINING QUESTION.

[From an article by Henry R. Russell, in *Education*.]

If manual training is to be introduced into our schools generally, as enlightened public sentiment seems to be demanding, it must be done largely in the school-rooms as they are at present arranged, in connection with the studies as they now exist, and by the teachers to-day employed. It is true there are a few well-organized manual-training schools, with well fitted up workshops, with courses of study arranged with special reference to shop-work, and supplied with teachers educated for this particular kind of work. Such schools will turn out some trained teachers to carry on similar work in other schools, and they may open their doors to give to our regular teachers short and comprehensive courses in manual training during the vacations. Normal schools will, doubtless, make provision for giving their graduates the benefits of a manual-training course, and summer schools may do something in the way of helping a few here and there into the theory and practice of hand-training; but the great work must be done by the great body of teachers who are already working hard enough, and who are already exacting enough from their pupils. There must be some readjustment, some modification of the courses of study, some more intelligent direction of the energies of both pupils and teachers, so that all may be able to do their work well and feel a delight in the exercise of their powers. . . . In some cases, especially in large schools, the work will be conducted by specialists, as is now done in drawing; but, as in drawing, much of it will be done by the regular teachers, and be done, too, without there being any feeling of an imposed burden. It will be so connected with the regular work as to elucidate it and enrich it. If the child has gone to a kindergarten before his real school-life commences, provision has already been made for his proper beginning in the manual-training course. If he has not been so fortunate, then his first introduction into the school should conduct him into a systematic and intelligent course of training for the hand: but it should be so skillfully done as not to create any prejudice in the mind of pupil or patron against it. The exercises introduced need not even be called manual training. They are as much mental as writing and drawing, and they may be made to contribute quite as much to the mental and moral development of the young as any branches of study that can be introduced into our schools or homes. Wherever manual training has been properly introduced and conducted, the results have been highly satisfactory. Anticipations as to its benefits have been more than realized.

This, however, need not surprise any one. * * We all know how much more we are all interested in some things than in others, and it would be strange if children were not so too. One of the first things, then, in order to secure the benefits of manual training to the children is for the teachers to become interested in the subject, and to know how to present it to their pupils so as to interest them. While skill in the use of various tools is desirable, it is not essential, though some practical knowledge of drawing and construction is necessary. An intelligent teacher, however, may soon acquire enough insight into the work to make a proper beginning and continue it in the right direction, with a fair assurance of a good degree of success. This may be done with no appliances except a knife, a lead pencil, a ruler, a pair of compasses, a pair of scissors, and some manilla paper and cardboard. With these a series of interesting and instructive lessons and exercises may be given in the school-room to children of the primary grades, occupying a good deal of time, covering a great deal of ground, and laying a broad and firm foundation for subsequent work, both in drawing and construction. Drawing, itself manual training, must ever lie at the foundation of all school manual training worthy of the name. It may be made exceedingly interesting to boys and girls alike. They are fond of using drawing instruments, as every teacher must have observed who has seen how busily they will often occupy themselves in decorating the covers and fly-leaves of their books. * * A course of instruction of this kind in manual training, with no instruments, tools, and materials other than those mentioned above, could be carried on so as to give the pupils a great many of the leading facts in plane geometry; teach them how to draw all the figures, erect perpendiculars, divide lines, bisect arcs and angles, determine areas; get glimpses of the uses of the triangle in measurements; make testing squares and divided rulers and protractors; cut out of cardboard all the plane figures in elementary geometry, and out of paper kindergarten materials for paper-folding, mat-making, number work, and color study, and do many other things that the fertile brain of the teachers and children themselves will readly suggest, and it will be found to be a truly excellent process of awakening and developing the child. Perhaps no subject is better suited for the purpose of making a proper beginning in manual training than geometry. If it is logically presented, concisely stated, and so worked out as to call into use with precision the pencil, the ruler, the compasses, the scissors, and the knife, the power of thinking and doing will both be promoted, and soon pupils so trained may be set to work from dictation written upon the board, and be left to work alone while the teacher is engaged with other classes. * * The class might sometimes be resolved into a whittling class, using the pocket-knife in shaping soft wood into regular forms; and clay-modeling might come in occasionally, as teachers have time and ability to direct. As pupils get older the work can be made more difficult, taking in the drawing and construction of paper models of solids and more advanced work in clay and with wood and the pocket-knife.

The Christianity which is now and hereafter to flourish, and, through its power in the circles of inner thought, to influence ultimately, in some manner more powerfully than now, the mass of mankind, must be filled full with human and genial warmth, in close sympathy with every instinct of man, regardful of the just title of every faculty of his nature, apt to associate with and make its own all, under whatever name, which goes to enrich and enlarge the patrimony of our race.—*Gladstone.*

SELF-DENIAL.

Self-denial, for the sake of self-denial, does no good; self-sacrifice for its own sake is no religious act at all. If you give up a meal for the sake of showing power over self, or for the sake of self-discipline, you are not more religious than before. This is a mere self-culture, which, being occupied forever about self, leaves you only in that circle of self from which religion is to free you; but to give up a meal that one you love may have it, is properly a religious act—no hard and dismal duty, because made easy by affection. To bear pain for the sake of bearing it has in it no moral quality at all; but to bear it rather than surrender truth, or in order to save another, is positive enjoyment, as well as ennobling to the soul. Did you ever receive even a blow meant for another in order to shield that other? Do you not know that there was actual pleasure in that keen pain far beyond the most rapturous thrill of nerve which could be gained from pleasure in the midst of painlessness? Is not the mystic yearning of love expressed in words most purely thus: Let me suffer for him? This element of love is that which makes this doctrine an intelligible and a blessed truth. Sacrifice alone, bare and unbelieved, is ghastly, unnatural, and dead; but self-sacrifice, illuminated by love, is warmth and life; it is the death of Christ, the life of God, the blessedness and only proper life of man.—*F. W. Robertson.*

The flashy and trashy, the vulgar, the vile, the pernicious,—such is the literature that trains a superficial and sensational generation, who substitutes skimming for reading, excitement for thought. What alcohol is to the body, this literature is to the mind. It vitiates the taste, it destroys digestion. A single reading intoxicates; habitual reading dissipates. Pupils in this school demand sensational preaching from the pulpit and sensational editing in the press; and this school is the world with more pupils in it than any other under the sun. The common sense and solidity of the past is superseded by the common nonsense and superficiality of the present. The demand is not for meat, but for milk; and the more it is watered, the better it is liked, hence the great army of intellectual babes and weaklings.

Fear no man, high or low, rich or poor, taught or untaught. Honor all men; love all men; but fear none. . . . Let your words breathe a heroic valor. . . . Having deliberately, conscientiously sought the truth, abide by your convictions at all hazards. Wait not to be backed by numbers. Wait not till you are sure of an echo from a crowd. The fewer the voices on the side of truth, the more distinct and strong must be your own. Put faith in truth as mightier than error, prejudice, or passion, and be ready to take a place among its martyrs. Feel that truth is not a local, temporary influence, but immutable, everlasting, the same in all worlds, one with God, and armed with his omnipotence.—*W. E. Channing.*

True blessedness consisteth in a good life and a happy death.—*Solon.*

NEWS AND OTHER GLEANINGS.

—It is anticipated that the Government exhibits at the approaching Cincinnati Exposition will cover forty thousand square feet of space.

—Prior to the war the United States produced about 4,000,000 bales of cotton, while since the abolition of slavery about 7,000,000 bales of cotton have been produced in a year.

—The number of immigrants arriving at the ports of the United States from the principal foreign countries, except from Canada and Mexico, for the eleven months ending Fifth month 31st, 1888, was 471,343.

—On the 28th of last month, the new training school for male nurses, built at a cost of $100,000 on the grounds of Bellevue Hospital, New York city, was formally turned over to the city by the donor, D. O. Mills. Chauncey M. Depew made the address and read the letter of presentation from Mr. Mills. Mayor Hewitt accepted the gift on behalf of the city.

—Three thousand sand crabs, so it is stated, have been sent to Europe by a lady living in Asbury Park, N. J., whose son, a student at the Berlin University, was deputized by the faculty of several German colleges to secure specimens of the crabs, so that they can be properly studied. They are packed in jars, and an effort is to be made to get some of them to their destinations alive.—*Public Ledger.*

—It is Thomas A. Edison's intention to take a record of the strength of his baby's lungs every three months. "I will preserve the record," said he, "until the child becomes a young lady. Then the phonograph can be operated for her benefit; and she can see for herself just what kind of a baby she was, and won't have to take her mother's and the nurse's word for it."—*Lowell Times.*

—The Children's Aid Society and Bureau of Information, 127 South 12th St., (Philad'a,) received during the month of May five children from the Department of Charities and Correction (Bureau of Charity); three were brought by mothers; one came from the Perry County Children's Aid Committee; and one came alone. Nine children were placed in private families on trial, and suitable boarding accommodations were provided for fourteen children. There were two cases of adoption. One hundred and forty-five visits were made to children during the month. Service places were found for forty-seven women, each taking one child with her. Enquiries should be addressed to Mrs. Anna T. Wilson, General Agent.

—It will be remembered that a few months ago a large timber raft which was being towed down the coast by a steamship, broke the tow-rope in a storm and went adrift. The whereabouts of the logs since then has become an interesting problem, both because of the danger to navigation presented by their wide dispersion, and also because their present positions would show the effects of the currents and storms of the North Atlantic during the past three months. Numerous reports have been received at the Hydrographic Office at Washington from navigators who have encountered the logs in small or large masses and singly, and these seem to show that most of them had drifted in a direction about east by south, and the greater part of them are now in the region between the 33d and 38th parallels and 30th and 50th meridians. Very few, if any, have drifted north of the 40th parallel. A great deal of timber has been reported farther north, to the westward of the 20th meridian, but from the descriptions given, does not seem to be part of the great raft.—*The American.*

—The family of General Harrison, the Republican candidate for President, consists of a wife, a son, and a daughter. The daughter was married a few years ago to J. R.

CARPETINGS.

THE CHOICEST STYLES OF THE MARKET ALWAYS HERE.

WE carry a full assortment of BIGELOW and LOWELL BODY BRUSSELS, also Lowell Ingrains. These makes are well known to be superior to all others.

We would call attention to our BARGAIN DEPARTMENT where off patterns and remnants go quickly at marked-down prices.

The patrons and friends of THOS. C. LIPPINCOTT, recently of 1307 MARKET STREET, will find him here and ready to give all who call his best attention.

STRIVE, WAIT, AND PRAY.

STRIVE; yet I do not promise
The prize you dream of to-day
Will not fade when you think to grasp it,
And melt in your hand away;
But another and holier treasure,
You would now, perchance, disdain,
Will come when your toil is over,
And pay you for all your pain.

Wait; yet I do not tell you
The hour you long for now
Will not come with its radiance vanished,
And a shadow upon its brow;
Yet far through the misty future,
With a crown of starry light,
An hour of joy you know not
Is winging her silent flight.

Pray; though the gift you ask for
May never comfort your fears,
May never repay your pleading,
Yet pray, and with hopeful tears;
An answer, not that you long for,
But diviner, will come one day;
Your eyes are too dim to see it,
Yet strive, and wait, and pray.

—*Adelaide Proctor.*

Editorial Correspondence Friends' Intelligencer and Journal.

AMONG FRIENDS IN NEBRASKA.—V.

STARTING from Genoa at noon of the 23d, Lincoln is reached in due time, which might be less by one-half were it not for the detention caused by having to make connections. There are many short roads that run off to centres of agricultural interest, and bring remote sections into communication with Omaha and the East through the great artery of commercial enterprise for this section—the Union Pacific R. R. In making these connections there are from one to four hours, as the case may be, lost to the traveler who finds little of interest in many of the towns that have grown up around the "junctions." The weather, which changed after the rains of the early part of the week, has continued to be most delightful, just cool enough to make a fan unnecessary, and to give invigoration to the body.

A much larger company assembled at the residence of Chas. P. Walter, on the morning of the 24th, than on the previous occasion, word having been more fully extended to those who live at a distance. The meeting gathered into the customary stillness, which brought a feeling of solemnity over the little company, under which the message given was handed forth in the earnest desire that some word, like a good seed, might find lodgment in soil prepared for its reception. At the close, an appointment was made for a meeting on the following First-day, as Benjamin F. Nichols expected to be in the city and wanted to meet Friends. After meeting your correspondent went home with Friends who live six miles out of Lincoln, not far from Woodlawn Station, a branch road of the Burlington and Missouri Valley R. R., in a well-improved agricultural district. Here was real farm life. A fine dairy where butter such as the best that comes to Philadelphia market is made, a hundred pounds a week, and the most of it finding ready sale in Lincoln at very fair prices. Then there were the calves and the pigs; what a sight it was to see the great cans of milk fed to them, and nowhere do we find finer pasture for the cattle or more abundant water of excellent quality, the saline district about Lincoln not extending in that direction. In this family there are three generations. They come from Eastern Pennsylvania, and have their membership still at the old home in Western Quarter.

The following day these friends took me in their comfortable family carriage to visit another family of Friends who live a little farther out, but who attend the meeting when the weather is favorable. Here we found a most interesting group of children, five in number, all bright and intelligent and availing themselves of the advantages that the school system of Nebraska furnishes her children. It was a visit that will not soon be forgotten. A large barn, much more capacious than are usually seen among the farmers hereabouts, was in process of erection. The stone used for the foundation are huge boulders and fragments of rock gathered up on the farm; some that look as if they were a ton in weight and might have been brought down from the distant mountain in a pre-glacial age. Points of rock are seen jutting out in many of the fields similar to these, but too large to be removed by the ordinary farm implements.

Arrangements having been made to hold a meeting at Garrison, where several families belonging to Genoa Monthly Meeting reside, it was necessary for me to leave this pleasant neighborhood before all the Friends had been visited who live out in that direction.

Taking the early afternoon train on Third-day, Garrison was reached in due time. There a disappointment awaited us. The train upon which Benj. F. Nichols and wife were to come had not arrived. The meeting had been gathered in the little chapel belonging to the Methodists, and only a short distance

from the station. After waiting until considerably past the hour, the little company settled into the quiet of a Friends' meeting though many in attendance had never sat in such a meeting before. A brief explanation of our manner of worship was given, followed by a gospel message that was felt to be appropriate to the occasion, and was received with evident feelings of unity to which satisfactory expression was given at the close. Just then the sound of the whistle announced the arrival of the train, and in a little time our friends were with us.

There being a great desire among the people for another meeting, it was agreed that we attend with our Methodist brethren on Fifth-day evening, which was the usual time for holding their evening service.

Fourth- and Fifth-days were spent in making family visits. All except one family live on farms, and are very comfortably situated; they are mostly from northern New York and Canada, and are earnest, consistent Friends, uniting with their neighbors in Christian work but maintaining the distinctive testimonies of the Society.

It would be a great boon to this little settlement to have a meeting of their own, and when the young life in their midst comes into active service there may be a realization of their earnest desire. The meeting on Fifth-day evening was held according to appointment, the attendance being somewhat larger than on the previous occasion. The spirit and tone of the services as shared by the members of the church, were noticeably in harmony with what we are accustomed to in our own devotional gatherings. We could feel the presence of the great Master of assemblies, and as our brother B. F. N., gave forth in clear, concise statement the ground of our hope and confidence as Christian believers, the truths he uttered were felt to be so plain and simple that all who heard him must have received it as a divine message.

Sixth-day morning we bade farewell to the kind Friends who had so cordially welcomed us among them, and after a detention of nearly two hours, caused by an accident to the engine, were fairly on our way back to Lincoln, hoping to reach there in time to finish up the family visits to Friends in that vicinity. This was not accomplished, and we rested quietly until First-day, making, meanwhile, a few calls in Lincoln.

The meeting was held according to appointment, at the house of Charles P. Walter, where, as was before stated, Friends have been accustomed for the last year or more to gather on the 2d and 4th First-days of every month. It might be helpful to other Friends similarly situated to give some account of their plan of holding these meetings, when no minister is in attendance. After gathering into worshipful silence for a time which is longer or shorter, as the feeling seems to indicate, some one who has been so impressed produces and reads an essay or sermon previously selected from the FRIENDS' INTELLIGENCER AND JOURNAL, or some other standard publication in harmony with the views of Friends or the writings of Friends. Thus the hour is felt to be profitably spent and the younger portion of the little company have some word of gospel truth, worthy to be treasured up, to carry home with them.

On the present occasion Benjamin was favored to present the plain path of Christian duty, and as the gathering was composed of Friends and Friendly people, to press home the obligation of obedience to the Divine Will as made known to the individual conscience. Other similar and confirmatory testimony to this great truth was handed forth, and near the time for concluding Benjamin opened the matter of establishing a meeting of record in Lincoln, which was favorably received, several expressing great unity with such a measure. It resulted in the appointment of a committee to give attention to the subject and take the necessary measures to organize a meeting. Benjamin gave an account of the manner in which Marietta Monthly Meeting was estabtablished, as being a good plan to be adopted by the Friends of Lincoln, who are similarly situated.

The announcement was made that the meeting next First-day will be held at the residence of Dr. H. K. Painter, when the subject will be further considered.

An appointment was made for holding a circular meeting at Lincoln, under the direction of Prairie Grove Quarter, sometime in Eighth month, the date to be given hereafter. L. J. R.

Seventh month, Fifth, 1888.

LETTERS FROM JOHN COMLY TO A COUSIN.

[A friend at Norristown, Pa., has sent us the following letters of John Comly, of Byberry, Pa., not before published, as we understand.—EDS. INTELLIGENCER AND JOURNAL.]

BYBERRY, Eighth month 6, 1818.

THY very acceptable letter of 6th inst., was duly received, and afforded peculiar satisfaction in the accounts of your family, the parting of thy uncle and aunt, thy attendance of the Yearly Meetings, and passing thy leisure hours in reading. I much desire thy encouragement; I know by experience the great advantage of thus endeavoring to set out right in the days of youth. For our Heavenly Father beholds his children in their desires and endeavors to walk in his fear, "and marks them for his own." His eye is over them for good, and though they meet with trials, and sometimes let in discouragements, yet as they cleave to him, he will sanctify all their troubles, and teach them patience and humility. Thou hast been favored to see the beauty of the Truth, and to feel the preciousness of a calm and quiet mind, devoted to follow the leadings of the Heavenly Shepherd,—may none of the seducing allurements of vanity and gaiety ever divert thy mind from a steady pursuit after those joys and unfading pleasures which flow from obedience to the openings of Divine light upon the mind. Heaven has favored thee with understanding and the precious visitations of Divine Love, thou hast many favored relations, whose example and counsel are a blessing that calls for gratitude to the Giver, thy situation is much more guarded, and less exposed to various kinds of temptations than many others of thy age. Oh, what a favor! Go on, then, dear one, in faithfulness to what is made known unto thee, as consistent with the will of thy Heavenly Father. It rejoices the hearts of thy parents and others to behold their children and youth,

thus early choosing like Mary, "that good part," which the blessed Jesus declared should not be taken from her. Trials we shall meet with. The cross to our own wills must be borne. It is alone the way to the crown. But those who begin early, and willingly bear the yoke of restraint, on their own wills, find the easiest work, and the greatest source of real happiness, in this world. Thy example may do much good to encourage others of thy relatives and acquaintance. Thy watchful care over thy little brothers and sister may be a great help to them, and afford thee much peace. Then be encouraged, dwell in love, keep a quiet, calm mind; that the blessing of preservation may attend thee, is the desire of thy assured friend, JOHN COMLY.

BYBERRY, Second month 7th, 1821.

I don't know that I am indebted to my dear cousin on the account of letter writing, but, that as it may be, a renewed feeling of love and good will lays me under some obligation to spend a little time in conversing with her on paper. In attending to the state of my own mind, I have often found that whenever I become willing to retire into the closet of my own heart, and shut the door, I can find something to do there. So I believe it was formerly, when man was innocent, he was placed in the garden of Eden to dress it, and to keep it. Now, my dear cousin, if when innocent man had such a work to do, surely we have as much, and may we not say more, to do in our gardens. How is the garden of thy heart dressed and kept? Suppose we call watchfulness and plainness the hedge or enclosure, dost thou my dear one keep the hedge up, so this language or description may apply to thee, "A garden enclosed is my sister, my spouse." For where a good fence is kept up round a garden, what encouragement there is to work in it, to dress it, and keep it clean, and can we not always find something to do in such a garden? yes, and not in vain, for it produces fruit, and abundantly rewards our labor, under the blessing of the sun and rain of heaven. My dear cousin can read the allusion to her own mind, and oh! how I wish for her encouragement in industry, well knowing it is the diligent hand that maketh rich, not the slothful and idle.

Now, in our attention to the state of our minds, and when we wish in all things to be found doing right and pleasing our Heavenly Father, I am sensible the humble mind often has its provings, and sometimes gets into discouragement under its trials, that require a renewal of patience and resolution to hold on in striving against evil things. But it will not do to give out, because the work seems hard; nor be discouraged, because we seem to make slow progress, and sometimes none at all. Yet let us press forward, do our best, and leave the rest, since he

> "Who does the best his circumstance allows
> Does well, acts nobly, angels could no more."

So says Young, and what can any do more than the best their state and circumstance allow! Jesus bore this encouraging testimony of a poor, humble woman formerly, "Let her alone, she hath done what she could." Oh may my dear cousin be encouraged to hold on her way in well doing, be industrious in keeping clean the garden of her preciously visited mind, and also by example and admonition encourage others, and as a means of improvement, I would suggest writing me a letter once in a quarter at least, and fill it up with whatever comes to mind, for thus it is that we truly partake of the fruit of one another's garden. Affectionately thy friend,

JOHN COMLY.

BYBERRY, Second month 2d, 1823.

My Dear Cousin:

I have now nearly done copying Job Scott's precious writings, and expect to have a little more leisure to converse with my friends on paper. This laborious undertaking has been much the cause of my getting so much in debt in the letter way. But I can say in sincerity of love to my dear cousin, "Have patience with me, and I will pay thee all." Thou will recollect this quotation from the precious Scriptures, and how it shows us, in the parable, the long suffering and patient waiting of our Heavenly Father towards us poor creatures, when we endeavor to amend our ways, and strive to live near the Truth. For thus it is that he forgives all that return to and serve him with full purpose of heart. "Go and sin no more," is his gracious language to the contrite-hearted ones. What an encouragement! I some years ago kept a daily account of the state of my mind, and every evening reckoned with myself accordingly, and though it was a very poor account, yet it was a useful exercise. I have often had to recommend to young people and others, such a daily examination, as "short reckonings make long friends." It tends to excite us to much watchfulness over our words and actions, and this is the great business and duty of a Christian from day to day. May thou, my dear friend, be encouraged to persevere in this blessed, though for a time laborious, way of the cross. It will assuredly lead thee to the enjoyment of the crown of peace. My——friends are yet dear to me, I should rejoice to see and spend a little time with them, if my Heavenly Master should see meet to give me leave, or again send me among them. It is a precious feeling when we can really love one another. "A new commandment" (says the blessed Saviour) "I give unto you, that ye love one another as I have loved you." Now we know that he loves us, even when he rebukes and chastens us for our sins. It is all in love to our souls, and we ought also to love one another, as he commanded, even them that do not love us, that we may be like him "who maketh his sun to shine on the evil, and on the good," and "sendeth rain on the just and the unjust."

But now in conclusion, I wish my dear cousin to hold on her way, that she may see her duty, and do it in all things faithfully, then I am sure she will be blessed with that "blessing that maketh rich, and whereunto no sorrow is added."

Farewell, and remember thy friend, whose love is to the family, and dear grandmother, especially,

JOHN COMLY.

ONLY one judge is just, for only one knoweth the hearts of men; and hearts only are guilty or guiltless.—*Edwin Arnold.*

THE INWARD REVELATION OF CHRIST.

[Extracts from a sermon by Dr. Richard S. Storrs,) Congregational) Brooklyn, N. Y.]

When it pleased God. . . . to reveal his Son in me.—Gal. 1 : 15, 16.

The outward phenomena attending the conversion of Paul on his way to Damascus were so vivid and signal they sometimes hide from our attention that subsequent revelation of Christ in the apostle's own soul which was the real inspiration of his fervor and the secret of his success in his missionary work. The two were coincident, but the second revelation, though simultaneous with the first visible and overpowering manifestation, was continuous, abiding,and progressive through life, consummated only in heaven. The first might have been given alone, but then it would have meant only a transitory, dazzling, aerial phenomenon, productive, perhaps, of no permanent results. But the second, this revelation of the Son of God in the heart and experience of Paul, was the vital element of his wonderful power and triumph.

Furthermore, we do not realize that this is true of all the disciples of Christ—that it is this discovery of him in the believer's soul which imparts incitement and unwasting vigor to the Christian life. We listen to an outward appeal when we study the work, the miracles, the teachings of our Lord; when we come under the influence of the speech and life of Christ's friends; when we enter the service and observe the sacraments of the church which set forth the leadership and mission of Christ to the world; when we trace him in history through all the troubled centuries; and when we reflect upon the results of the gospel in the vast development of liberty, education, inventive arts, commerce, and all the processes by which the world is fitted to be the arena of grace.

We may discover Christ in any of these ways or in all combined as in one supernal and entrancing vision. There are degrees of sensibility. Some, as on the road to Damascus, may only hear a sound or notice the light, while another sees the very Christ. But all this is only an introduction to a silent, subtle, vital disclosure of the Lord in the personal experience of the believer, which is to be to his unfolding life its impulse and its joy.

Now, there is nothing mysterious about this. Have we not all felt this inward revelation of Christ?—a discovery, larger, sweeter, and more and more luminous, of this nature and work, which enters and is woven like a thread of gold into the fabric of thought and character. The disciples doubtless had a conception at first of the Saviour as a general benefactor to the race and his teachings as generally helpful to men; but after their characters began to mature they came to understand the personal, individual, and vital relationship between him and them.

Again, in the silent government of the soul's activities we recognize Christ revealed in us. We all feel the check to the gratification of individual impulse and inclination which society, usage, and a regard to the feelings of others impose; but there is the restraint of a higher and more ubiquitous law that regulates the soul in which Christ dwells. There is realized the grasp of a hand unseen on the helm of life, and the authoritative voice of him who gives the rule of higher rectitude than the world teaches. We recognize inward impulsions that are not born of us, but of a resident and daily more regnant power that is working through our own volitions. In labor and worship, in acts of beneficence and in all the service of life, we feel the silent government of the indwelling Master. Now we refuse what once we accepted, and take up what we would reject but for Him who dwelleth in us. We bear sacrifices patiently, consciously sustained by a power which we feel is not our own, and not the fruit of human resolution, but of a divine Helper.

With these inward revelations and spiritual intuitions we are guided in the duty. We do not find, nor do we need, in the New Testament minor rules, a rubric dealing with details. Christ gives us guidance by the inward motion of his will on our own will. What is now called "Christian consciousness" as a discerning power must always be subject to the written word of Christ. If it transgress this it is vain and false. But the mind of Christ does reveal the truth to us, and gives us an aptitude of mind. Truth is verified in our vision, because it is illuminated by Him who is the light of the world. We have a conception and conviction of the solemn truth that life is a discipline and struggle for a great future. Christ's mind reveals it to our mind. So the law of love is seen to be the law of his spiritual universe. He formulates it for all his children. Sin is the transgression of that law. It was a great crisis that brought the Son of glory from heaven. We believe in the final judgment and in the future irreversible destiny of men according to the character formed on earth. We rest in the providence and grace of God, because their truth is revealed to us by Christ who spoke in Palestine, and speaks as articulate to us as if in audible tones. He who shined in darkness shines in us, giving us a knowledge of the Son of God and of his truth.

Christ finds a home in our affectional nature. At first we feel that we ought to love Christ more than all else—parents, friends, or treasure; but it is hard to do this, and our obedience is apt to be mechanical until the inward grace and subtle sense of the indwelling Helper comes to be recognized. It is as indefinable a sense as the odor of the lily and rose that perfumes our dwelling, yet we know it to be a reality. We see bane changed to blessing and a spirit of nobleness begotten in us, so that we come naturally, that is, reasonably and by the tutelage of his grace, to love him better than all things else. This love toward Christ as he is within us testifies of the divine indwelling, and it is a love which he will crown and glorify.

In the joyful assurance of the future we find evidence of this revelation of Christ in us. He satisfies and gratifies us every hour by these revelations to us. Men of the world wonder at us. They call our confidence, credulity and superstition. Nay, it is the dictate of our assurance of Christ in us. Were the

assurance founded on some outward promise alone it might with some be less pronounced and assuring a confidence; but if God be in us, then the same power works in us that wrought the miracles of old. We are assured of his friendliness. If I approach a father carrying a babe in my arms he will not meet me with anger, and if I carry Christ in my soul will not the Infinite Father welcome me as I pass through the portal of pearl? The mother in her pang of pain, the prisoner in the desolation and darkness of his dungeon, the martyr in the flame—all these have felt this joyful assurance of the future. It is the old story repeated, the bark on the stormy sea, yet peace within it; of disaster written on the thunderous clouds, yet serenity filling the soul.

The text illumines other utterances of Paul. When Jesus was revealed not only to him, but in him, then he was ready to preach his gospel among the heathen, not conferring with flesh and blood. He who persecuted now preached the faith. The life he lived was the life of Christ in him: "I, yet not I." Thus was fulfilled the promise, "We will make our abode with him." As the branch is in the vine, so is the believer vitally united to the Redeemer. Here is the eternal incarnation of Christ in the world, a solemn and impressive truth, the perverted shadow of which gives majesty to some of the rites of Papal Rome.

OUR SOCIAL DUTIES.[1]

Friends of the Somerville:—In considering social duties and the way they are regarded now, the first thought which comes to my mind is the changed feeling concerning them which has crept into many circles in the last generation. Women have found a new place in the world and have assumed new duties. Thanks to the champions of their higher education, a new era has been ushered in; and those earnest workers, whose eloquent pleading and untiring efforts have brought about this change, must look with pride and delight on the college girl of to-day who is in a measure their creature. She is a creature of high resolves and earnest purposes, conscientious and zealous, whose whole being is quickened with the hope of accomplishing a good work in the world, or her ambition stirred with the thought of gaining an independent livelihood. The character and purpose of a girl's education being thus changed it follows that her social aims and duties must have changed also. Formerly, society was her whole field of action, and to shine in society her sole ambition; to-day there is hardly a department in the world's work which woman has not entered; her field of action has enlarged so that it now includes all the professions and many trades.

With this changed condition of things has grown among the now earnest college-bred girls something of contempt for social life—partly, I suppose, because it is the nature of literary people, both men and women, to shrink from general society and to revel in their books and in the companionship of a few congenial friends, and partly because it is the nature of reformers when they start on a new course to see before them in their ardent enthusiasm only one good.

In speaking, then, of our social duties, I shall try to recall them from the contempt into which they have fallen, by showing that they are as real and important as any which claim us, and that the social life rightly lived calls forth beautiful virtues and develops most lovely traits of character. Of course for the woman who has to earn her daily bread there are few social duties; to succeed in her work she must enter into it so heartily and so completely that there remains neither time nor strength to go out among people. But there are many who, after college life is over, are so situated that they may enter social life to a certain extent; this I would have them do, nor need they feel in doing it that opportunities and talents are being wasted, nor that it is nobler to turn from the social life and devote time and talents to what is called self-improvement.

For what, let us now inquire, are our social duties? Of course they vary with the varying circumstances of each individual, but first and always comes the one great duty, which left unfulfilled makes social life a failure, the duty of self-sacrifice. This must be ever the guiding principle. Forgetting self, pleasing and helping others, must be the constant rule. The very choosing of the home life may have to be done at some sacrifice of taste and inclination, for in that choice much must be abandoned which is pleasant and under other circumstances good—the systematic study of literature, or science, or music, or art, cannot be indulged because the social life must be lived from day to day, nay, from moment to moment; there can be no planning or appointing of time to self, the unexpected calls of family and friends preclude all possibility of regular work; though they do not prevent the enjoyment and knowledge of what is passing in the literary, musical, or artistic world, and the political world too, (for as I recall my ideal society woman I remember she could talk with charming grace upon all the topics of the day), neither is shut out the possibility of passing many moments in the substantial world of books, among the poets with their "nobler lores and nobler cares." To say that systematic self-culture must be abandoned for social duties may seem to some a hard saying, but I am sure if it is abandoned in the true spirit, the culture which comes in its place will be acknowledged by all to be a flower of rare beauty and sweeter fragrance. For self-culture is not an excellent thing when it is gained at the sacrifice of something nobler. When for its obtaining, duty to parents, or husband, or friends is forgotten, it grows ugly.

Our society girl, then, having accepted and fulfilled the first duty of making home bright for parents or husband, her next thought is to open its doors and share its happiness with others. And in doing this she finds a wide field for her talents—poetry, music, art, politics—she may summon them all to her aid and offer a true feast to those she invites. She must be able to brighten all who come within her influence, to sympathize with all, to give to each what suits his need, and to encourage those

[1] A paper read at the annual meeting of the Somerville Literary Society of Swarthmore College, Fourth month 14, 1888, by Caroline E. Hall.

who falter by speaking her word for the right. To do this perfectly she must never let go the real things of life, but live in sincerity, simplicity, and self-forgetfulness; being, not seeming—her watchword, others,—her care and self-sacrifice, her habit.

There are many, I think, to whom the term society woman suggests one ruled by petty, even vulgar ambitions—whose chief desires are to outshine her neighbors, to win the smile of some one just beyond her in the social scale, to be flattered and admired. These women who live for self are too common, those whom I have described as living for others are by no means so rare in society as some would have us think, and as the ranks of society are filled more and more from our colleges let us trust the number of the good will grow. You all know examples of these women; generous, warm-hearted, and womanly, who know how to be bright and sunny when cheerfulness is hard, women whose contact with all kinds of character gives them a gracious ease, a ready sympathy, a fine tact not often found elsewhere, women who have the courage to defend what they believe right and good, where it has few or no defenders, and to do it so gracefully that its cause is won.

In thinking of the fundamental differences in these two types of women there appear two differences especially important; one we have already noticed in speaking of the duty of self-sacrifice, our best type is always generous; her other distinguishing mark is that she is always real. This brings us to our second great duty in society—to be true to ourselves. The woman we admire never apes another nor assumes to be what she is not nor to know what she does not. She suffers neither sham nor affectation. Perfect simplicity in manner and living mark the well-bred woman. We have then discovered the two great duties of social life—to be generous and to be genuine.

It seems to me that next to these in importance comes the duty of taking a stand against vulgar display. Let the hospitality which you offer be solid and in accordance with your means. It is pitiful to see a pinching in necessities that a certain entertainment may be given with the adjuncts which the style of the day dictates. The root of all evils of this kind is that weakness of our nature which leads us to consider what other people will say or think of us. These considerations nowhere lead to a more disastrous end than in society. Witness as another result the heartburnings and jealousies which come from real or imagined slights. Let us then consider only what is good and true and real and not give entrance to the thoughts of how the world will regard our action. It is vanity which prompts the question, and to try to answer it means the death of all serenity and peace of mind.

It is only necessary to remind you of the social duty so much spoken of, so hard to follow—of abstaining from all gossip and detraction, better "silence, long, barren silence," than that. Good society demands that its conversation be pure and peaceable.

These, then, are the duties we must observe, no matter where our lot may fall, whether among the great or with the humble; whether our social pleasures are those of city or country, taking people as we find them and opening our doors to them and offering what we have to give to all within our circle, never raising the question of congeniality or of what they will give us in return, and these social rules followed out must surely make the world better, and make a society worthy of respect, one whose best pleasures consist not in the great ball and extravagant dinner, but in pleasant intercourse between man and man, in genial exchange of hospitality, and in such social gatherings as will make better men and women of those who enjoy them. And the woman who by giving herself to others has made a social success in the best and truest sense, may feel that she has improved her talents as truly as if by long years of study she would astonish the world with her learning. For it is our aim which makes life mean or great. The recluse can delight in meditation and the scholar in poring over the thoughts of the past, but the man or woman who realizes in this life the result of the meditation and lives the thoughts which animate the book, is a more perfect being. We may be in the world and yet no more of it than is the recluse. We may mingle with our fellow beings and yet draw our inspiration as certainly from the source of all good. Among all the perils and temptations of life in the world we may still have "a secret channel of communication with the Most High" which will keep our lives pure and strong and fresh; and the steadfast, loyal heart, the generous giving, the brave word spoken for the right, and best and brightest of all, the life given for others, is found as often in society as in the world of workers—while joined with the virtues are the more delicate and gentle ones which the hard knocks one receives in the struggle for a livelihood often destroys. Let none then despise their office if there fall to them no greater nor loftier work than that of living a true life in society, and of carrying abroad from a true home the sweet influence which lifts the world as surely and steadily as the more ambitious efforts of professional or literary life.

SCRIPTURE LESSON, No. 28.

SEVENTH MONTH 22, 1888.

TOPIC: WILLING SERVICE.

GOLDEN TEXT: "God loveth a cheerful giver."—2 Cor. 9: 7.

READ Exodus 35: 20-29.

THE tent or tabernacle of the leader of a host in Eastern countries was always placed in the centre of the camp. It was a special object of interest, and the armies marched and counter-marched around it. This must be borne in mind as we consider the lesson before us. In the lesson which precedes it, Moses receives the promise that the Divine Presence will go with them. That the people may realize this, the directions are given for the gathering up of material for the construction of a tent for this invisible Presence, Jehovah—the God of their fathers, in which shall be placed the sacred treasures of the camp, and over which the cloudy pillar, the flame of fire, symbol of his glory and greatness, shall abide. As in the construction of the tent for the captain of the host, the

best of all that the camp affords, or the nation can procure, is willingly offered, and where he is honored and revered, each vies with the other in the value of his offering, so, in this tabernacle for Jehovah, the free-will offerings of the people came in abundance, as the enumeration shows. Gold, silver, precious stones, tapestries of rare and of great value; also woods that were precious, everything, in short, that would be necessary, or would add to the beauty of the structure.

Every one whom his spirit made willing. It was the willingness of the offering that made it acceptable. What we give willingly for any good object increases our interest in the object or cause.

And all the women that were wise hearted. Here a qualification is acknowledged. Not all the women of the nation were willing to spin and weave, to labor over the frames, to spend themselves in designing and executing the elegant tapestries, so tedious and costly Doubtless there were women then, as now, who thought more of their own personal adorning than of giving into the treasury of the Lord. In all the ages since the Christian church has existed, as well as in the more ancient times, there have been wise-hearted women, and these have been recognized as a prominent and powerful factor in the work and service of the church.

And the rulers brought. All were interested in this work. The offerings came from every class of the people. The precious stones, the spicery, and the oils were articles of great commercial value, and only those who were among the governing classes could make such gifts. In the spiritual Tabernacle there is a place for all. The gifts and graces of the Holy Spirit are bestowed without respect of person, and each, however small, has its place in the Holy Tabernacle, the Spiritual building.

We all know well the double value of prompt and willing service, over that which is hesitating, even if the amount be just the same. Very often we have been obliged to ask a favor of a friend, and we did not fear refusal, but we feared hesitation. How our hearts have bounded when the answer has come, "Certainly I shall do it gladly." When assistance is volunteered, it often seems as if great loads become light through sympathy.

Recently, looking from the window in early morning, two masons were perceived laying a sidewalk. They had a very large flagstone to put to its place, and it seemed to be beyond their strength. Suddenly one looked up and called, "Say, John, wont you give us a lift?" "To be sure," came the reply, and a young fellow came running to them, with as much alacrity and as cheerful a face as if bidden to a feast. He helped place the heavy stone, had a few merry words the while, and was soon running down the street, to make up his lost time. He did not stop very long, the exertion did not seem to tire him; but how many men would have come so cheerfully and have gone so merrily. The observers felt that a great lesson had been given.

A late valued Friend was accustomed to say, when giving his annual contribution to a little benevolent society in New York City, "If you need more, come again." The encouragement derived from those words can scarcely be estimated. The society felt that not only had money been given, but sympathy as well.

We see in the reading that everyone whose heart was willing, brought what he had; some one thing, some another, some gold, some precious stones, some the work of their hands. As was the duty then, so is it now, to give what we have. The poor man is not directed to give gold, the sick man is not to give bodily service, but each individual has something to hand out for the world's benefit, and he must not hold it back. The willing service to those around him is what God asks of each one, and we all know the words, "Inasmuch as ye did it unto one of these my brethren, even these least, ye did it unto me."

For Friends' Intelligencer and Journal.

AN EXHORTATION.

"Wash you, make you clean, put away the evil of your doings from before mine eyes, cease to do evil; learn to do well."

"Come and let us reason together," saith the Lord: "Though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool."

These gracious promises of Him whose arm is not shortened that it cannot save, have been presented to my mind at different times, with the impression given to write down the same, for the help and encouragement of those who may have strayed from the path of rectitude, and have not obtained the peace the soul at times craves. Wash ye, make ye clean, not with elementary water, which only cleanses the outside; but under the baptizing influence of the spirit of God within, by which the work of regeneration is carried on, and all old things are done away, and all things become new. A new heaven and a new earth, wherein dwelleth righteousness, and the peace of God that passeth understanding is realized. It is written: All have sinned and fallen short of the glory of God. Many, very many, in the course of their lives, may discover errors and short-comings for want of watchfulness and the spirit of prayer; but the mercy of the Lord endureth forever. It will not fail to them who are willing to return, repent, and live. "Let the wicked forsake his ways and the unrighteous man his thoughts; and let him return unto the Lord, and he will have mercy upon him; and to our God, for he will abundantly pardon."

In the exercise I have felt for the welfare of my fellow creatures, I have been constrained to offer these few remarks, if happily they may find a lodging place in the mind of any who are seeking for the pearl of great price, the peace which the world with all its disguise can never give. It is a hidden treasure within the heart, bearing the soul immortal to a glorious rest when passing from the fading things of time to unite with the redeemed who surround the throne of God in praises, throughout the endless ages of eternity. Rebecca Price.

THE INWARD REVELATION.

THE interesting sermon which we print elsewhere under the caption "The Inward Revelation of Christ" is one among the many evidences which continually appear to show that the heart of Christianity turns ever more and more to the sound foundation of faith. Dr. Storrs, the preacher, is an "orthodox" Congregationalist, and one of the ablest in the religious body to which he belongs. Yet the substance of this discourse is such as Fox or Penn might have declared, —and many times did declare. Looking inward, he says, "we realize the grasp of a hand unseen on the helm of life," "we recognize inward impulsions that are not born of us." He does not use, it is true, the same descriptive language that Fox or Penn might have employed, and he does not cite those notable passages of the Scripture which prove that in the ages past our highest exemplars, and most inspired writers, realized the existence of a divine power within them, but the thought, as he works it out and illustrates it, is the same as that which underlies not merely Quakerism but all sound Christianity,—the same rock to which men find themselves forced to repair in order that they may meet successfully the sharpest assaults of Doubt and Difficulty. That "inward impulsion" which is "not born of us," that "authoritative voice" within, is not confined to any rank or class, or nation or people; on the contrary, as John declared, "there was the true light which lighteth every man that cometh into the world." Dr. Storrs and his co-workers, confronted by the problem of the unconverted "heathen," and embarrassed by the speculations of their own theologians, have had to turn to this as their escape from the alternative of theories like those of Andover.

The reservation will be observed that this "Christian consciousness" must always be "subject to the written word of Christ." If he means, here, to say broadly that the Christ power in the consciousness of men must be secondary to injunctions found in the printed volumes of Scripture, how can that be maintained? For, as Barclay declares, the divine Power is the fountain itself, but the Scriptures are but the stream which flows from the fountain. Barclay said that Quakerism would willingly be tried by the Scriptures, and that whatever any professed inconsistent with them might be accounted a delusion. Yet even this presents no difficulty. For the Scriptures are the record of that religious faith to which ours is the fellow and the successor. What was true to holy men of old, in the broadest and highest sense, is true for us. The communion of man with his Creator, then as now, was the greatest of all truths in religion. And as the Scriptures hand down to us the experiences of those who in their day most felt and submitted to the voice of God in their souls, so it is that we may appeal with confidence to them. Barclay knew the Scriptures well—no man better—and he did not shrink from their test, because he knew that, like every faithful witness, they declare the universality of God's love, and that his light is spread abroad in every soul. He did not leave to them the *proof* of the existence of an Inward Light: this he found in the experience of man: as Dr. Storrs declares, "we recognize Christ revealed in us," or as preachers among Friends have said a multitude of times, "we come to know" this power. But the Scriptures said the same; they confirmed experience now by the testimony of former experience. To them it cannot be unsafe to appeal as confirmation, unless fundamental truth could change its nature.

Nor did Barclay submit himself and his faith to the test of detached passages, or of human construction, or of fallible translation. He challenged the translations as they stood in his time, at more than one point, and he swept away much of the ensnaring dogmatism which burdened the Christianity of the seventeenth century. It was to the Scriptures in their entirety, and in their highest expression, that he was ready to submit. And so do we. Not to any subtle constructions of theology, nor to any minor or secondary passages which seem to controvert the great thought. But to that thought itself, we can bring our faith for confirmation. For the idea of the Divine revelation to every one is primary. It conceded, all else follows as secondary. Whatever may seem doubtful or obscure must be tried as to its consistency with this. When we have conceived of God and his power and his attributes, the conception that he speaks in the soul of each of his creatures is the vital thought upon which faith must build.

DEATHS.

BRADSHAW.—In Philadelphia, Seventh month 1st, 1888, Lewis Bradshaw, aged 64 years. Interment at Abington.

BROWN.—On the 24th of Sixth month, 1888, at Zanesfield, Ohio, Susanna Brown, wife of John Brown, aged 78 years and 38 days. She was striken with paralysis Tenth month 9th, 1887, and since that time has been quite helpless, yet patiently and uncomplainingly she bore her affliction as if only awaiting the call of the Father. She was a consistent member of Green Plain Monthly Meeting of Friends.

ENGLAND.—Suddenly, at Glen Riddle, Pa., 2d of Seventh month, 1888, Thomas H. England, in his 69th year. Interment at Middletown ground.

ROBERTS.—At Sandy Spring, Md., Sixth month 18th, 1888, Mary L. Roberts, relict of B. Rush Roberts, and daughter of the late John Needles, of Baltimore, in the 77th year of her age; a valuable and useful member of the Society.

TROUPE.—Departed this life Seventh month 3d, 1888, at their residence, near the Relay House, on B. & O. R. R., Raymond Bowes, twin son of Calvin F. and Hattie Hull Troupe, and grandchild of William and Caroline R. Hull, aged 1 year and 2 days.

THE LIBRARY.

A Brief History of Proceedings in the Medical Society of Pennsylvania, to Procure the Recognition of Women Physicians, [etc.] Philadelphia: 1888.

This pamphlet of forty pages relates to two phases in the history of the movement to place women physicians on the same professional plane as those of the other sex. The first of these is their admission to membership in the medical societies, the second their appointment as physicians-in-charge of women patients at the insane hospitals.

These movements cover about thirty years of time. In 1858 the Philadelphia Medical Society adopted a report of its Board of Censors recommending the "members of the regular profession to withhold from the faculties and graduates of female medical colleges all countenance and support," and further declaring that they could not, "consistently with sound medical ethics, consult or hold professional intercourse with their professors or alumni." And the following year, this action was approved by the Medical Society of Pennsylvania, no one apparently dissenting. But a year later, the Medical Society of Montgomery County began the utterance of an emphatic protest against this course. The Montgomery County Society contained some liberal and broad-minded men, and at the meeting in May, 1860, nine members present, seven of them,—including Dr. Hiram Corson and his brother William, (the latter now deceased),—voted for the adoption of a series of resolutions, (submitted by Dr. Hiram Corson), dissenting from the views adopted by the Philadelphia and the State societies. They declared the belief that "the time has fully come when women should not be excluded from the medical profession, but, if properly educated and observant of the code of medical ethics, should receive the same treatment from the male members of the profession as is accorded to the male members thereof;" and that "it is selfish and unjust to refuse women admission into our best colleges, and then, when by great sacrifice and perseverance they have graduated at a college of their own establishing,—which compares favorably with many medical colleges for men,—withhold from them our recognition of their rightful rank as members of our profession."

This declaration was the keynote to an effort which continued for eleven years, and ended in the complete triumph of the principles laid down by the Montgomery County Society. Immediately after its meeting, the State Society met, (at Philadelphia, June 1860), and Dr. Corson, a delegate, introduced the Montgomery resolutions. He was, however, excitedly rebuked, and one other only, Dr. Levergood, of Lancaster, had the courage to support so unpopular a movement; the resolutions were at once laid on the table. Dr. Corson then, to test the question whether the opposition was on account of sex, or was really because of the alleged imperfect medical training and instruction of women professors and physicians, offered another series of resolutions, so worded as to make this distinction, and upon these considerable discussion ensued, ending however, with the adoption of a substitute, declining fellowship with the women, "inasmuch as some of the professors are irregular practitioners, and all of these [female medical] colleges are ineligible to representation in the American Medical Association."

During the war the subject lay in abeyance. In 1866 it came up again in the State Society, Dr. Corson having once more a series of resolutions, including an appeal for recognition from the Female Medical College of Pennsylvania, (signed by T. Morris Perot, and Joseph Jeanes, for the Corporation, and Dr. Ann Preston and Emeline H. Cleveland, for the Faculty). Dr. Corson had secured a friend to second his resolutions, but the friend, after talking with other delegates, excused himself, but Dr. Winthrop Sargent, (in 1866 a Philadelphian, but previously a member of the Montgomery County Society), cheerfully consented to fill his place. A letter from the venerable and distinguished Dr. William Darlington, of Chester county, was read, supporting the claims of the women, and on the proposition to rescind the resolution of 1860, Dr. Traill Green, Dr. Washington Atlee, and Dr. Ezra P. Allen, three eminent members of the Society, came forward gallantly to the aid of Dr. Corson. Finally, when the vote was taken, while there were 27 against rescinding, there were 23 in the affirmative,—a most encouraging growth. But in 1867, there being a larger attendance, the vote was 55 to 29. In 1868, it was less unfavorable,—46 to 38. In 1869, the subject did not come up. In 1870, the question being the same in substance, but on a collateral formulation, 48 votes were cast for recognition, and 62 against it, the result, as the author of this pamphlet says, giving the confidence of coming victory to the friends of women physicians. And so it proved, for at the meeting of 1871, the attendance being scarcely less than a year before, 55 voted to rescind the resolution of 1860, and only 45 voted in the negative. So far as the action of the State Society could effect it, the recognition was accorded, and the efforts of the Montgomery county liberals had met with a complete and most gratifying triumph.

The appointment of women physicians to the full charge of female patients in the hospitals for the insane is a movement akin to that already detailed, but reaching farther and deeper. The present pamphlet describes with a vivid and absorbing interest the progress made in Pennsylvania,—embodied in the Act of the Legislature of 1879 authorizing the Trustees of the State Hospitals to appoint women chief physicians for the female insane. It is under this law that

Dr. Alice Bennett (a graduate of the Women's Medical College of Philadelphia), was appointed in 1880 chief physician of the women's department of the great Eastern Hospital of Pennsylvania, at Norristown, where she now has entire medical charge of over eight hundred patients. The hospital, says the pamphlet under notice, "in all things that pertain to the health, comfort, and management of the patients, is not surpassed by any one in the world. The fitness of women doctors to have charge of the medical management of the insane of their sex has been grandly illustrated in the Eastern Hospital, under the exclusive care of Dr. Bennett, the first woman who ever undertook such a duty." "Nowhere else in the civilized world are insane women under the exclusive care of physicians of their own sex," and this exceptional instance and its success are largely due to the exertions of Dr. Corson, who in both the movements described in the pamphlet was so earnest, so persistent, and so broad-minded. The reception tendered him, in Philadelphia, a few weeks ago, (Sixth month 6,) by many physicians of both sexes, in commemoration of his sixtieth year of professional labor, was a fully merited honor, though the beneficent results of the work he has performed in philanthropic fields will be his highest testimonial.

Correspondence Intelligencer and Journal.

LETTERS FROM CHICAGO.—II.

CHICAGO, Seventh month 2, 1888.

DURING the week of the Republican Convention, we were favored with the company of a number of visitors,—among them, at one time, were one of the editors of your paper; Benj. H. Miller and wife, of Sandy Spring, Md.; Mercy J. Hammond, (formerly Griffith, of Mt. Pleasant, O.), on her way with her husband, Bezaleel Hammond, to their home at Wichita, Kansas. These, with two of our old and cherished friends, C. and F. Roberts, dined and spent an evening with us. It was a beautiful moonlight evening, and as we sat out upon the porch and steps in the shadow of the elm trees, with a slight lake breeze coming upon us occasionally, we formed a congenial party, talking of the various questions of the day, Politics, Philanthropy, Suffrage, Temperance, Society, etc. It was so rare a treat to us that it was with sincere regret and reluctance that we saw our little social conference break up as the evening waned. Where there are large bodies of Friends, with frequent chances of meeting socially there can hardly be realized an appreciation of the pleasure and comfort we find in these "few and far between" opportunities.

The "Woman's Club" of this city make a point of giving receptions in their club parlors to notable women, listening to an address or talk, and asking questions, followed by tea and social converse. They gave one to Susan B. Anthony and the Baroness Grippenburg of Finland, after the Convention. S. B. A. was much affected by the occasion. After so many years of "hand to hand" conflict, of contumely, derision, and false report, and even personal attack, because of her firm and persistent advocacy of equal place and opportunity for women with men, to see the cause advancing, and a large body of educated, influential women taking hold of the subject and championing it bravely and successfully, gave her a comfort and encouragement which brought tears and a broken voice to a courageous woman, who had passed with apparent indifference through hardships and abuse almost inconceivable, blazing the way for the more delicate and refined workers who were to follow. Age is creeping on her, and she said she felt glad to be able to lay her work upon younger shoulders. She was an able, dedicated, far-seeing general, with a small band of soldiers, but they planted the banner of freedom under the "star of empire" and held it there till relieved by the army of recruits that are coming to their aid. May we never let it trail in the dust! That the Father's children are "born free and equal" is a truth that was boldly proclaimed by the founders of our Society, and that the fathers and mothers were equally responsible for the condition of the world around them, and the advancement of the truth seemed to them a "self-evident truth" in their Religious Society. Not taking part in government affairs, (being under a monarchical government in their rise), the subject of civil rights for women was not considered. But now, being under a democratic instead of an aristocratic government, we all have individual responsibilities, and the ability to do well increases with responsibility. When we have to act, we have to think *how* to act.

A young man recently asked a woman, "What do you want to vote for?" She replied, "For the same reason you do,—to do good, or what seems good." This morning's paper reports that our Governor Oglesby has just appointed two women on the State Board of Education. One of them is a daughter-in-law of our old friend, Alexander Young, deceased, well known I think to many readers of your paper, a bright, capable woman, who will no doubt do good, faithful work, Matilda B. Corse. She was lately placed upon our County Board, and Ellen Mitchel upon our City Board. An old German who was on the County Board presented his resignation, but when he saw M. B. Corse and how she took hold of the work, he withdrew it, being so well pleased that his prejudices were overcome.

On the 23d of Sixth month we went to visit our children living in Dixon, Illinois, about ten miles from the little settlement and meeting of Friends of East Jordan.

On First-day morning, we drove over to meet with them. The drive was an event in our lives. It was one of the "perfect days of June" which Lowell has so vividly described in his poem of "Sir Launfal." The Rock river, upon which Dixon and Sterling are situated, is a wide, blue stream, running through most beautiful rolling country of fine rich farms. The fields of grain in various shades of green, the dark wheat, the light barley, and graceful corn, separated by well trimmed hedges, lighted by the brilliant sunshine and swayed by the gentle breezes, enlivened by the songs of robin, thrush, and other musical and brilliant birds, formed an enchanting contrast to our noisy, smoky city streets and walls.

One of the interesting features of the ride was the large number of stock, fine horses and cows browsing so comfortably and peacefully, many of them with their baby colts and calves gamboling about them, with no reflections upon the past, or fears of the future. (Why can't we live a little more that way?)

We reached the meeting-house in time to witness most of the exercises of the First-day school. The Superintendent, M. A. J., and a few others, are faithfully keeping alive the Truth in that part of the vineyard. The meeting and school are composed of her mother and several brothers, with their children, and one or two other families of Friends. One of the exercises of the school seemed very impressive to me. They all stood, and teachers, visitors, and children repeated in concert Pope's "Universal Prayer." My mind went back to my childhood, when we had no First-day schools, but instead my mother took down the "English Reader," and read that prayer to me, and asked me to commit it to memory, which I did, and to this day it has been a strong influence in my life. It was recited with earnestness and deliberateness, and with evident understanding of its meaning. The lines:

"What blessings thy free bounty gives
Let me not cast away,
For God is paid when man receives,—
To enjoy is to obey.
To Thee, whose temple is all space,
Whose altar, earth, sea, skies!
One chorus let all beings raise,
All nature's incense rise."

seemed full of meaning, in view of the charms and privileges of the day. It made me also regret that I had not been more careful to store the minds of our children with such strong, true verses while they were yet free from other and more worldly things, and like a pure sheet of paper ready to receive impressions and to hold them, as their memories will not in later years. I wish I might impress this upon young mothers whose little children are still around them. Instead of reading so many stories to them, good though they may be, I believe it would be better to select good standard, even classical poems, and patiently teach them to understand and commit them. Even if they do not comprehend fully, at first, that will come later, and some sentiment be often brought vividly to remembrance with force and power in time of need.

We dined at Sarah John's in company with several of her children and grandchildren, and some of our old Richmond friends and schoolmates, N. Wilson and wife and sisters, spent a pleasant afternoon out in porch and yard under the pine trees planted many years ago by father Johns when he settled in that "new prairie country," emigrating from Pennsylvania,—then quite a serious undertaking,—now so easy.

A beautiful ride home to Dixon toward evening, good roads, with banks of wild roses along the roadside, the birds singing their vespers, the sun setting in beauty behind us, the moon rising before us, the wide rolling prairie with its greenness and beauty and odors around, and the sky spread out like a vast blue dome above us, was an inspiring sight to those who so love nature and see so little of it; not least of all was the pleasure of reunion with our beloved children, from whom we had been much separated for several years past. It was a full day, and we lay down to rest with thankful hearts for all "His benefits."

H. A. P.

SWARTHMORE NOTES.

The great empty college building makes the place seem a little lonely through the two summer vacation months. But those who remain at their homes, near or on the college grounds find Swarthmore a very charming summer residence, scarcely surpassed by any among the mountains or by the sea.

—Although the students are absent, the tennis courts on the front lawn are not always deserted on these summer evenings.

—The list of new entries for next year is advancing. Most expect to enter the college classes.

—The few students not promoted are mingling with their summer pleasures preparation for the fall examinations.

—The contributions of Swarthmore to the recent meeting of the College Association in Philadelphia were a paper by Prof. W. P. Holcomb on "The Place of History in a College Course," and one by the President upon "The True Province of the College, in contradistinction from the Universities on the one hand, and the Academies, High Schools, and other institutions for secondary instruction on the other." The next meeting of the Association is to be held in Philadelphia in the autumn of next year.

NEWS OF FRIENDS.

The *Daily News* newspaper of Lincoln, Nebraska, in its issue of Seventh month 2, under the heading, "A Friends' Awakening," says: "An unusually interesting and prolonged meeting was held yesyesterday under the leadership of Benj. F. Nichols, of Illinois, who is chairman of the committee appointed at the quarterly meeting held at Prairie Grove, Ia., whose privilege and duty it is to visit the various churches in Nebraska, and adjoining states, arouse and strengthen the brethren, also to arrange for a series of circular meetings which are to be held in Lincoln, Omaha, and Genoa. C. G. Littlefield was chosen clerk, also a committee of seven to work up the interest in the society by securing better accommodations in the way of a public hall in which to hold regular meetings, etc. Louisa J. Roberts, also of Philadelphia, was present and spoke very earnestly, urging upon the society the importance of united efforts and laboring together for a common end and purpose, promising the aid and coöperation of Friends in the East."

The good we do to others
Shall never miss its meed;
The love of those whose sorrows
We lighten shall be ours,
And o'er the path we walk in
That love shall scatter flowers.
—*William Cullen Bryant.*

METHODISTS AND FRIENDS.

[The following good-spirited article is from the *Christian Advocate*, New York, the leading journal of the Methodist Episcopal denomination. It is of interest, in several particulars,—among others in the fact that it recognizes very distinctly that Quakerism is not found in those departures of so-called Friends who are returning to the forms and rituals of the churches.—EDS.]

SPEAKING of the annual assembly of "the Quakers in their meeting-house at Rutherford Place," a daily paper says it was the smallest assembly and the most quiet. There were intervals of absolute silence. This silence "was in wonderful contrast to the clamoring for the floor by the Methodist brethren at the Metropolitan Opera House."

This is true, and everything else of a visible nature exhibits the same contrast. The Methodists sing; the Friends do not. Some of the Methodists shout; the Friends do not. The Methodists baptize with water; the Friends do not. The Methodists administer the Holy Sacrament of bread and wine; the Friends do not. The Methodists hold services with the definite understanding there shall be public speaking; the Friends do not. The Methodists sit with their hats off in the house of God; the Friends do not. The Methodists are governed by parliamentary rules in their proceedings; the Friends are not. The Methodists have a thousand times as much business to do as the Friends. One represents the Church militant, the Church energetic; the other, the Church meditative.

The same paper says: "The Quakers are becoming fewer every year. No other ecclesiastical body makes propositions to unite with them or absorb them." We have the greatest possible respect for them. Their benign influence extended over the community where the writer was brought up, and some of the most profitable meetings in a religious way that he ever attended were when sitting in silence for more than an hour—not a syllable from human voice falling on the ear from the beginning to the close. The Methodists and the Friends agree in attaching great importance to the Inner Light, to the influence of the Holy Spirit.

Methodists are divided into two general classes—those who live an outward life with too little meditation and inner devotion; the other class consists of those who still pray in secret, commune with God, are willing to mingle in the activities, not to say the fray, of modern life, but who retreat as often as they can to "the Spirit's secret cell, where song and prayer forever dwell." Without this latter class confusion and death would follow.

So the Friends are divided into two general classes—those who retain their primitive simplicity and spirituality, and those who, with the garb and accent of Friends, are among the shrewdest of the shrewd, and steadily accumulate large fortunes. It was the opinion of one of the wisest Friends that the affinity between the best Methodist and the best Friend is greater than between any other types of Christians. Yet the accidental differences presented above are so great that hardly any more striking contrast can be found than the subdued quietness of a Friends' meeting and the energetic demonstrations of a Methodist revival.

Friends have undergone considerable modifications. They have a society in Brooklyn where they sing, and where quite a demonstrative revival was in progress a few years ago. Over this a pious Friend grieved, remarking to the writer that he could not "fellowship" their proceedings. He believed in being one thing or the other, and if he were going that far he would leave the peculiarities of the Friends behind.

We are sorry to see them declining in numbers. Recent statements in the papers show that in the West they are growing; but where they grow they are assimilating to other religious bodies. Their early history is among the most romantic in the annals of Christianity; they bore testimony against kings and priests; were ready to die for their faith; practiced the most astonishing self-denial without retiring to cloisters or monasteries; and without starvation or set fasts of a severe nature, they brought their bodily appetites and passions under subjection, and attained the quietness and composure equal to that of the most devout mystic. Their relations to the early history of the United States were peculiarly beautiful. They witnessed a good confession when many other professed Christians poured out libations to Bacchus, and bore their testimony against slavery when almost a whole nation bowed down before the golden calf. But, as in the early Church the Lord recognized Nathaniel as an Israelite, indeed, in whom was no guile, and Peter and John, though sons of thunder, as his disciples, so there is room to-day for the gentle spirit and unobtrusive life of the consistent Friend, and the energy and devout zeal of the most characteristic Methodist.

"UNLEAVENED BREAD."

ABOUT a week before the Passover, several families join in the making of this so-called "bread," which is to be the chief article of food for the whole paschal week. The male members—both adults and boys—meet very early at the appointed house, where certain rooms on the lower floor are already cleansed and set apart for the occasion. However wealthy a man may be, he would not forego the privilege of lending a hand in this holy work, as it is considered a great blessing. No women take part this day. In faithfully grinding and preparing the finest wheaten flour, packing it in new sacks made by themselves, the ladies have done their share. The Arabian Jews use for this purpose none other wheat but that sold by their own people, who testify that Hebrews supervised the thrashing, and that no water or moisture ever touched the grain. This of course tends to make the Passover bread much more expensive than the ordinary staff of life. The services of two or three professional Jewish bakers are secured for the day. They do the baking, and guide their fellow-men in the handling, shaping, or making of these thin, round biscuits, somewhat in the shape of large pancakes. Strictly speaking, they should be termed thin wafers, or crackers, and are intended to keep over for several

weeks. No alien should take part in this sacred work. The oldest member of the company is designated to read aloud portions of the Exodus account, both from Scriptures and from rabbinical legends. The others silently proceed with their work. None would open his mouth while he had a portion of the dough in his hands, for fear of its being desecrated by his breath and saliva. All perspiration should be carefully wiped off; the hands must be scrupulously washed; and the long, flowing sleeves tied together on the back of the neck, so as not to come in contact with the dough. They usually manage to finish the baking in one day, so that towards night each householder takes his portion home. It is deemed meritorious to make the unleavened bread thus in a sort of joint-stock company, as it offers a favorable opportunity for helping the needy in a delicate manner. The rich bring extra quantity of flour, and leave the surplus for those who have less.—*Ezra Isaac, in S. S. Times.*

MAKING SHOES.

In his little hut by the rocky shore,
Where the waters ever with changing hues
Creep in and out with a drowsy roar,
Sits an old man fashioning babies' shoes;
His face is wrinkled, his hair is white,
His form is bent with his years of care,
But always the old man's heart is light,
And he sings to himself as he labors there:
"Pegging away
All the long day,
Stitching ever till set of sun;
Tides ebb and flow,
Hours come and go,
Rest comes after the work is done!"

Through the window, glistening far away,
He watches the white sails out at sea
As they slowly fade from the shining bay,
Chased out by the west wind light and free;
And a far-off look in his faded eyes
Reveals that his thoughts are drifting far
With the gleaming sails where the sea gull flies,
And he sings with his heart o'er the harbor bar:
"Pegging away
All the long day,
White sails drifting across the sea;
Tides ebb and flow,
Tides come and go,
Voyage soon over for you and me!"

He turns to his work, and his rough old hands,
As honest as human hands can be,
Draw out the threads with their twisted strands,
And stitch the crooked seams faithfully.
For babies' feet must be shod with care,
And old age carries the work along,
And shoes are better by far to wear
When pegged and stitched with a little song:
"Pegging away
All the long day,
Infancy, childhood, youth, and age;
Tides ebb and flow,
Years come and go;
Life is only a written page!"

And thus he toils, while the days go by,
Spring turns to summer along the shore,
The summers fade and the roses die,
And snow-drifts whiten the headlands o'er;
And, day by day, as the seasons run,
He sings and toils in a thoughtful use,
His thread near wasted, work almost done,
An old man fashioning babies' shoes:
"Pegging away
All the long day,
Shine and shadow, spring and fall:
Tides ebb and flow,
Men come and go;
God the Father is over all!"

—*F. S. Cutler.*

CHILD-LOVE.

Oh, to recall the days when, on the road
That led me, cheerful or depressed, towards home,
My little timid son was wont to come
Within my ken, not far from my abode!
On seeing me his eager joy he curbed,
Uncertain of my mood. He peeled his stick
With anxious mien, while casting glances quick
To learn my humor; if I seemed disturbed
As I drew near, he loitered by my side—
A thought behind—and looked intent on work;
But if I smiled—then, with a sudden jerk,
His stick flew far, and such a whelming tide
Of love burst forth, in smiles and misty tears,
And pressure of his loving little hand, and eager confidence of hopes and fears.

Oh, that we did not fail so oft to find
God's angels in our children! How our eyes
Are holden, while we deem that we are wise;
Whereas we are but very dull and blind!
For what are trifling faults—a noisy tone,
A broken platter, or a missing hat?
Can we not foster love so passionate,
Yet gently chide? Alas! why be so prone
To silence lips so loving, or to make
The little heart e'en for a moment ache
Because our nerves are jarred? How soon we lose
Perception of the treasure of its love!
Shock our fastidious sense, and we refuse
The love that fills the little heart with joy—the solace that could half our griefs remove.

—*The Spectator.*

LOUISA ALCOTT'S CHILDHOOD.

A few weeks before her sudden death, Louisa M. Alcott prepared for the *Youths' Companion* an account of her youthful reminiscences. It has since been published in the *Companion*, and will be of new and touching interest, as one of the last pieces of work from the pen of that beloved writer. She says:

One of my earliest memories is of playing with books in my father's study, building towers and bridges of the big dictionaries, looking at pictures, pretending to read, and scribbling on blank pages whenever pen or pencil could be found. Many of these first attempts at authorship still exist, and I often wonder if these childish plays did not influence my after-life, since books have been my greatest comfort, castle-building a never-failing delight, and scribbling a very profitable amusement.

Another very vivid recollection is of the day when running after my hoop I fell into the frog pond and

was rescued by a black boy, becoming a friend to the colored race then and there, though my mother always declared that I was an abolitionist at the age of three.

During the Garrison riot in Boston the portrait of George Thompson was hidden under a bed in our house for safe keeping, and I am told that I used to go and comfort "the good man who helped poor slaves" in his captivity. However that may be, the conversion was genuine, and my greatest pride is in the fact that I have lived to know the brave men and women who did so much for the cause, and that I had a very small share in the war which put an end to a great wrong.

Being born on the birthday of Columbus, I seem to have something of my patron saint's spirit of adventure, and running away was one of the delights of my childhood. Many a social lunch have I shared with hospitable Irish beggar children, as we ate our crusts, cold potatoes, and salt fish on voyages of discovery among the ash heaps of the waste land that then lay where the Albany station now stands.

Many an impromptu picnic have I had on the dear old common, with strange boys, pretty babies, and friendly dogs, who always seemed to feel that this reckless young person needed looking after.

On one occasion the town crier found me fast asleep at nine o'clock at night, on a door-step in Bedford street, with my head pillowed on the curly breast of a big Newfoundland, who was with difficulty persuaded to release the weary little wanderer who had sobbed herself to sleep there.

I often smile as I pass that door, and never forget to give a grateful pat to every big dog I meet, for never have I slept more soundly than on that dusty step, nor found a better friend than the noble animal who watched over the lost baby so faithfully.

My father's school was the only one I ever went to, and when this was broken up because he introduced methods now all the fashion, our lessons went on at home, for he was always sure of four little pupils who firmly believed in their teacher, though they have not done him all the credit he deserved.

I never liked arithmetic or grammar, and dodged these branches on all occasions; but reading, composition, history, and geography I enjoyed, as well as the stories read to us with a skill which made the dullest charming and useful.

"Pilgrim's Progress," Krummacher's "Parables," "Miss Edgeworth," and the best of the dear old fairy tales, made that hour the pleasantest of our day. On Sundays we had a simple service of Bible stories, hymns, and conversation about the state of our little consciences and the conduct of our childish lives which never will be forgotten.

Walks each morning round the Common while in the city, and long tramps over hill and dale when our home was in the country, were a part of our education, as well as every sort of housework, for which I have always been very grateful, since such knowledge makes one independent in these days of domestic tribulation with the help who are too often only hindrances.

Needle-work began early, and at ten my skilful sister made a linen shirt beautifully, while at twelve I set up as a doll's dress-maker, with my sign out and wonderful models in my window. All the children employed me, and my turbans were the rage at one time to the great dismay of the neighbors' hens, who were hotly hunted down, that I might tweak out their downiest feathers to adorn the dolls' headgear.

Active exercise was my delight from the time when, a child of six, I drove my hoop around the Common without stopping, to the days when I did my twenty miles in five hours and went to a party in the evening.

I always thought I must have been a deer or a horse in some former state, because it was such a joy to run. No boy could be my friend till I had beaten him in a race, and no girl if she refused to climb trees, leap fences, and be a tomboy.

My wise mother, anxious to give me a strong body to support a lively brain, turned me loose in the country and let me run wild, learning of nature what no books can teach, and being led, as those who truly love her seldom fail to be,

"Through nature up to nature's God."

I remember running over the hills just at dawn one summer morning, and, pausing to rest in the silent woods, saw, through an arch of trees, the sun rise over river, hill, and wide green meadows as I never saw it before.

Something born of the lovely hour, a happy mood, and the unfolding aspirations of a child's soul seemed to bring me very near to God, and in the hush of that morning hour I always felt that I "got religion," as the phrase goes. A new and vital sense of His presence, tender and sustaining as a father's arms, came to me then, never to change through forty years of life's vicissitudes, but to grow stronger for the sharp discipline of poverty and pain, sorrow and success.

Those Concord days were the happiest of my life, for we had charming playmates in the little Emersons, Channings, Hawthornes, and Goodwins, with the illustrious parents and their friends to enjoy our pranks and share our excursions.

Plays in the barn were a favorite amusement, and we dramatized the fairy tales in great style. Our giant came tumbling off a loft when Jack cut down the squash vine running up a ladder to represent the immortal bean. Cinderella rolled away in a vast pumpkin, and a long black pudding was lowered by invisible hands to fasten itself on the nose of the woman who wasted her three wishes.

Little pilgrims journeyed over the hills with scrip and staff and cockle-shells in their hats; elves held their pretty revels among the pines, and "Peter Wilkins's" flying ladies came swinging down on the birch tree-tops. Lords and ladies haunted the garden, and mermaids splashed in the bath-house of woven willows over the brook.

People wondered at our frolics, but enjoyed them, and droll stories are still told of the adventures of those days. Mr. Emerson and Margaret Fuller were visiting my parents one afternoon, and the conversation having turned to the ever interesting subject of education, Miss Fuller said:

"Well, Mr. Alcott, you have been able to carry out your methods in your own family, and I should like to see your model children."

She did in a few moments, for as the guests stood on the door steps, a wild uproar approached, and round the corner of the house came a wheelbarrow holding baby May arrayed as a queen; I was the horse, bitted and bridled and driven by my elder sister Anna, while Lizzie played dog and barked as loud as her gentle voice permitted.

All were shouting and wild with fun which, however, came to a sudden end as we espied the stately group before us, for my foot tripped, and down we all went in a laughing heap, while my mother put a climax to the joke by saying with a dramatic wave of the hand:

"Here are the model children, Miss Fuller."

My sentimental period began at fifteen, when I fell to writing romances, poems, a "heart journal," and dreaming dreams of a splendid future.

Browsing over Mr. Emerson's library I found "Goethe's Correspondence with a Child," and was at once fired with the desire to be a second Bettine, and making my father's friend my Goethe. So I wrote letters to him, but was wise enough never to send them, left wild flowers on the door steps of my "Master," sung Mignon's song in very bad German under his window, and was fond of wandering by moonlight, or sitting in a cherry tree at midnight till the owls scared me to bed.

The girlish folly did not last long, and the letters were burnt years ago, but Goethe is still my favorite author, and Emerson remained my beloved "Master" while he lived, doing more for me, as for many another young soul, than he ever knew, by the simple beauty of his life, the truth and wisdom of his books, the example of a good, great man untempted and unspoiled by the world which he made nobler while in it, and left the richer when he went.

The trials of life began about this time, and my happy childhood ended. Money is never plentiful in a philosopher's house, and even the maternal pelican could not supply all our wants on the small income which was freely shared with every needy soul who asked for help.

Fugitive slaves were sheltered under our roof, and my first pupil was a very black George Washington whom I taught to write on the hearth with charcoal, his big fingers finding pen and pencil unmanageable.

Motherless girls seeking protection were guarded among us; hungry travelers sent on to our door to be fed and warmed, and if the philosopher happened to own two coats the best went to a needy brother, for these were practical Christians who had the most perfect faith in Providence, and never found it betrayed.

In those days the prophets were not honored in their own land, and Concord had not yet discovered her great men. It was a sort of refuge for reformers of all sorts, whom the good natives regarded as lunatics, harmless but amusing.

My father went away to hold his classes and conversations, and we women folk began to feel that we also might do something. So one gloomy November day we decided to move to Boston and try our fate again after years in the wilderness.

My father's prospect was as promising as a philosopher's ever is in a money-making world, my mother's friends offered her a good salary as their missionary to the poor, and my sister and I hoped to teach. It was an anxious council, and always preferring action to discussion, I took a brief run over the hill and then settled down for "a good think" in my favorite retreat. It was an old cart-wheel, half-hidden in grass under the locusts, where I used to sit to wrestle with my sums, and usually forgot them, scribbling verses or fairy tales on my slate instead. Perched on the hub I surveyed the prospect and found it rather gloomy, with leafless trees, sere grass, leaden sky and frosty air; but the hopeful heart of fifteen beat warmly under the old red shawl, visions of success gave the gray clouds a silvery lining, and I said defiantly, as I shook my fist at fate embodied in a crow cawing dismally on the fence near by.—

"I *will* do something by-and-by. Don't care what, teach, sew, act, write, anything to help the family; and I'll be rich and famous and happy before I die, see if I won't!"

Startled by this audacious outburst, the crow flew away, but the old wheel creaked as if it began to turn that moment, stirred by the intense desire of an ambitious girl to work for those she loved and find some reward when the duty was done.

I did not mind the omen then, and returned to the house cold but resolute. I think I began to shoulder my burden then and there, for when the free country life ended the wild colt soon learned to tug in harness, only breaking loose now and then for a taste of beloved liberty.

My sisters and I had cherished fine dreams of a home in the city, but when we found ourselves in a small house at the South End with not a tree in sight, only a back yard to play in, and no money to buy any of the splendors before us, we all rebelled and longed for the country again.

Anna soon found little pupils, and trudged away each morning to her daily task, pausing at the corner to wave her hand to me in answer to my salute with the duster. My father went to his classes at his room down town, mother to her all-absorbing poor, the little girls to school, and I was left to keep house, feeling like a caged sea-gull as I washed dishes and cooked in the basement kitchen where my prospect was limited to a procession of muddy boots.

Good drill, but very hard, and my only consolation was the evening reünion when all met with such varied reports of the day's adventures, we could not fail to find both amusement and instruction.

Father brought news from the upper world, and the wise, good people who adorned it; mother, usually much dilapidated because she *would* give away her clothes, with sad tales of suffering and sin from the darker side of life; gentle Anna a modest account of her success as teacher, for even at seventeen her sweet nature won all who knew her, and her patience quelled the most rebellious pupil.

My reports were usually a mixture of the tragic and the comic, and the children poured their small

joys and woes into the family bosom, where comfort and sympathy were always to be found.

Then we youngsters adjourned to the kitchen for our fun, which usually consisted of writing, dressing, and acting a series of remarkable plays. In one I remember I took five parts and Anna four, with lightning changes of costume, and characters varying from a Greek prince in silver armor to a murderer in chains.

It was good training for memory and fingers, for we recited pages without a fault, and made every sort of property from a harp to a fairy's spangled wings. Later we acted Shakespeare, and Hamlet was my favorite hero, played with a gloomy glare and a tragic stalk which I have never seen surpassed.

But we were now beginning to play our parts on a real stage, and to know something of the pathetic side of life with its hard facts, irksome duties, many temptations, and the daily sacrifice of self. Fortunately we had the truest, tenderest of guides and guards, and so learned the sweet uses of adversity, the value of honest work, the beautiful law of compensation which gives more than it takes, and the real significance of life.

At sixteen I began to teach twenty pupils, and for ten years learned to know and love children. The story writing went on all the while with the usual trials of beginners. Fairy tales told the Emersons made the first printed book, and "Hospital Sketches" the first successful one.

Every experience went into the caldron to come out as froth, or evaporate in smoke, till time and suffering strengthened and clarified the mixture of truth and fancy, and a wholesome draught for children began to flow pleasantly and profitably.

So the omen proved a true one, and the wheel of fortune turned slowly, till the girl of fifteen found herself a woman of fifty with her prophetic dream beautifully realized, her duty done, her reward far greater than she deserved.

SIDNEY HOWARD GAY.

Sydney Howard Gay—a well-known journalist and writer, and an active Abolitionist—died at his home West New Brighton, Staten Island, on the 25th ult., in his seventy-fifth year. He had been for several years partly paralyzed, and his death brought relief from much suffering. He was born at Hingham, Mass., and entered Harvard College at fifteen, but was obliged to relinquish his studies before graduating, on account of ill health. A biographical sketch in the New York *Evening Post* adds: He spent some time in travel and in a Boston counting-house, after which he began the study of law in his father's office, but he soon abandoned it from a peculiar cause. Believing the institution of slavery to be iniquitous, he felt that he could not conscientiously take the oath to support the Constitution of the United States, which recognized the system as legal, and he was therefore morally barred from practising in the courts. He had to a notable degree the "courage of his opinions" upon all moral and political questions, and he joined the Garrisonian abolitionists at a time when their numbers were very weak and their views most unpopular. In 1842 he became a lecturing agent for the American Anti-Slavery Society, and from 1844 till 1857 he edited the *Anti-Slavery Standard*, published in this city.

Then he became a member of the editorial staff of the New York *Tribune*, and from 1862 to 1866 he was the managing editor of that paper. Mr. Gay was warmly in favor of the most energetic and persistent prosecution of the war for the Union, and his pen was forcible in the advocacy of his principles. In 1867 he removed to Chicago, and till the great fire of 1871 he was the managing editor of the Chicago *Tribune*. During the winter following the fire he acted with the Relief Committee, and in the spring of 1872 he wrote the first public report of their important work.

Afterwards, for two years, Mr. Gay was the managing editor of the *Evening Post*. In 1874 the late William Cullen Bryant, then the editor of this journal, was invited by the publishing house of Charles Scribner's Sons to undertake the preparation of a "Popular History of the United States," and he consented to aid in the work on condition that Mr. Gay should be its author. Mr. Bryant wrote the preface to the first of the four volumes, and Mr. Gay wrote the history itself, with some assistance in special chapters, for which credit was given in the prefaces. The work treated American history upon a new plan, and was received with much public favor. Mr. Gay afterwards wrote a "Life of James Madison," (Boston, 1884), and when disabled by illness was engaged upon a biography of Edmund Quincy for the "American Men of Letters" series. He leaves a widow, one son, and two daughters.

Self-forgetfulness in love for others has a foremost place in our ideal of character, and our deep homage as representing the true end of our humanity. We exact it from ourselves, and the poor answer we make to the demand costs us many a sigh; and, till we can break the bonds that hold us to our centre, and lose our self-care in constant sacrifice, a shadow of silent reproach lies upon our heart. Who is so faultless or so obtuse as to be ignorant what shame there is, not only in snatched advantages and ease retained to others' loss, but in ungentle words, in wronging judgment within our private thoughts alone,—nay, in simple blindness to what is passing in another's mind? Who does not upbraid himself for his slowness in those sympathies which are as a multiplying mirror to the joys of life, reflecting them in endless play?—*A. P. Peabody.*

There's things go on in the soul, and times when feelings come into you like a rushing mighty wind, as the Scripture says, and part your life in two a'most. . . . Those are things you can't bottle up. . . . That shows one there's deep, speritial things in religion. You can't make much out wi' talking about it, but you feel it.—"*Adam Bede.*"

Night brings out stars as sorrow shows us truths. —*Bailey.*

WHAT WE OWE TO THE SLEEPLESS.

It is because there are others who will not sleep, that we have the privilege of sleeping in restfulness and in safety. And it is because of the wakeful watching of those who cannot sleep, that our wakeful hours have much of their added cheer and helpfulness. Sleeping and waking we are indebted to those who wake while others sleep; and it behooves us to be mindful of our multiplied obligations to the sleepless.

In our city or our village homes we go to our sleep at night with a feeling of security because of the wakefulness of policemen and of other watchers, who guard our persons and our property while we sleep. Riding across the country by railroad at night, we lie down to sleep as restfully as in our homes, because of our confidence in the sleepless watching of engineer and of brakemen on the train, and of guards at the bridges and the switches along our track. Crossing the ocean, we seek rest in our berths without anxiety, because we know that at the pilot-house, on the deck, at the lookout, and in the engine-rooms below, there are keen eyes that will not sleep. And so on land or sea, at home or abroad, in the ordinary course of busy life, we have reason to realize our indebtedness to those who wake while others sleep.

From the beginning of our troubled life to its fevered close, our safety pivots on the willing sleeplessness of those who watch in our behalf. It is because the loving mother will not give way to sleep, when her tired body and her throbbing head long for it, and she keeps awake only by the exercise of all her firm will, prompted by the best impellings of her whole true heart, that the helpless child is brought safely through the varied trials and ills of infancy. It is only as the devoted wife or sister, or as the skilled nurse, watches in tireless wakefulness by the bedside of the strong man struggling with acute disease, that he on whom the family, the community, or the nation leans is held to continued life, and is raised to renewed activities in health. It is, indeed, by the sleeplessness of the sleepless, that the sleeping and the waking of those who sleep and wake bring rest and refreshing, and are guarded from unnumbered perils. . . . .

There is, in fact, no promise of God's loving fidelity to those who trust him which is more precious as it stands, or for which we have more reason to be grateful, than the promise of his tireless sleeplessness as the watcher over his dear ones:

> "He will not suffer thy foot to be moved:
> He that keepeth thee will not slumber.
> Behold, he that keepeth Israel
> Shall neither slumber nor sleep."

Therefore it is that the Psalmist says, and therefore it is that every one of us can say:

> "In peace will I both lay me down and sleep:
> For thou, Lord, alone makest me dwell in safety."

Yet how little prominence has this thought in our minds as a cause of unfailing rejoicing!

But it is not alone those who wake and watch on their own choice, as a matter of duty, to whose sleeplessness we are indebted for much that we have reason to be grateful for. Those who *cannot* sleep are, in many an instance, enabled by their very sleeplessness to be a means of good to us beyond all that they could compass in our behalf if they slept as others sleep. There are sorrows and sufferings which forbid sleep, but which enrich the soul of the sleepless one; and out of such sleeplessness there comes a blessing to all who are within the sweep of its beneficent influence. Paul and Silas, with their smarting backs and fettered feet in their inner dungeon at Philippi, could not sleep, but in their sleeplessness they could sing God's praises with such added sweetness and power that the strains of their rejoicing filled the ears of their heaviest-hearted companions in bondage, and transformed the gloomy prison-house into a sanctuary of light and peace in Christian believing. And the song-filled sleeplessness of weary prisoners of grief and pain is one of the potent forces of good in the universe of God to-day.

And because of this loving, grateful service of God's sleepless worshippers, we who sleep and rest are sharers in the blessing which their devotion brings.

It is in the hours of sleeplessness from sorrow and pain that the faithful heart grows tenderest toward God and toward God's dear ones; and it is only through these experiences in sleeplessness that any God-inspired comforter of those who mourn or who suffer acquire his chiefest power of comforting. He who has never been so racked and tried that he could not sleep, cannot speak intelligibly to the heart of hearts of a sleepless sufferer. And he whose words come home to every aching heart like strength-bringing balm, is sure to be one who has waked and watched involuntarily while others slept restfully. To realize this truth is inevitably to give us a new sense of our indebtedness to those who have acquired their power to help us at the cost of wearying sleeplessness. They need our grateful sympathy, and they deserve it.

There is comfort in this truth to those who cannot sleep. Since there is new power for good through waking and watching while others sleep, then that sleeplessness which is unwelcome for its own sake can be welcomed for Christ's sake. When we must count the long hours of darkness drearily, through pain or sorrow that will not let us sleep, we can thank God that by this means we are gaining an insight of his love, and a nearness to himself that shall enable us to minister in his name to those whose needs can be met only through our wise use of sleeplessness. It is a privilege that God grants to us, when he permits us to be sleepless sufferers, in order that we may wake and watch for those who are dear to himself.—*S. S. Times.*

Inclination may run in the same direction as duty; but the direction of inclination does not in itself decide the direction of duty. When duty runs in the opposite direction, the only safe thing to do is to go in the opposite direction from that of inclination. In other words, it is often the case that one must have a care to do what he doesn't want to do, and not to do what he does want to do.—*Sunday School Times.*

SINS OF MEMORY.

A QUAINT English worthy prayed, "Lord, forgive the wickedness of my memory, that it is incontinent of good things, and keeps only what is bad."

Many a man has had the same trouble. The severest punishment for listening to profane and indecent jesting is the officiousness with which memory obtrudes the offensive thing, at the very time when we are endeavoring to join in some serious or holy occupation. But inasmuch as we must often, of necessity, see and hear evil, it is wise to keep in mind also the path to a Lethe, which can drown the recollection, and wash away the stain. The only natural means, which is at all efficacious, is to abstain, if we may borrow the photographer's term, from developing the picture. The impressions of an event received at the moment, like the impressions of light upon the sensitive plate in the camera, do not constitute a picture, but only the foundation for one. They can be developed and fixed only by an act of our own minds; the act of attention to them. Hold the attention resolutely upon something else, and the impressions fade into forgetfulness. It is not the mere hearing that makes the impression, it is the listening; it is not merely seeing that fixes the image, it is the looking at the object. It is unfortunately true, that sometimes the very hatefulness of a thing compels your attention, and then the ugly memory of it may long cling to you. Yet the general law is really a universal one; we can fix the remembrance of what is good by persistently holding the attention to it; and we can banish the memory of evil by resolutely keeping the attention on something else. These are the natural means of keeping the heart pure, upon which we can ask the blessing of God in full faith of final success.—*Dr. T. Hill.*

SUNNY HUSBANDS.

VERY much has been said about the obligation of wives, in regard to wearing perpetual smiles, but it seems as if our literary talents have never once thought it worth while for the "man o' the house" occasionally to don a smile when at home in his own family circle.

It certainly is just as essential to domestic happiness for a man to be sunny and good-tempered as it is for the woman.

We often doubt whether the male head of a family really appreciates the opportunity he has for diffusing sunshine at home, or comprehends how much of gloom he can bring into the family circle by entering its sacred precincts with a frown on his countenance. The wife and mother is within four walls from morning till night, with but few exceptions; and must bear the worriment of fretful children, inefficient servants, weak nerves, and many other perplexities; and she must do this, day after day, while the husband goes out from these petty details of home care, has the benefit of the pure, fresh air, meets with friends, has a social, good time, which altogether acts as a charm upon the physical man, and, if he does as he should, he will come home cheerful and buoyant, and thereby lighten the household life for his wife, and drive dull care and gloom from her careworn brow. Some men can be all smiles away from home, but at home they are as cross as bears; and yet we hear it said, on every side, "Wives, meet your husbands with a smile."—*Aunt Jane, in Homestead.*

LET patience have her perfect work and bring forth her celestial fruits. Trust to God to weave your thread into the great web, though the pattern shows it not yet.—*George MacDonald.*

"O, WOE to those who trample on the mind—
That deathless thing! They know not what they do,
Nor that they deal with. Man, perchance, may bind
The flower his step hath bruised; or light anew
The torch he quenches; or to the music wind
Again the lyre-string from his touch that flew;—
But for the soul, O tremble and beware
To lay rude hands upon God's mystery there!"

DUTY performed is a moral tonic: if neglected, the moral tone and strength are weakened, and the spiritual health undermined.—*Tryon Edwards.*

NEWS AND OTHER GLEANINGS.

—E. P. Duplex, a colored justice of the peace, has been elected mayor of Wheatland, Cal. It is said that he is the first of his race to fill such a position on the Pacific coast.

—Harriet Beecher Stowe wishes it distinctly understood that no one but her son is in possession of letters and papers to serve as a basis for an authorized version of her life. Mrs. Stowe has no interest in the biography now being written by Florine Thayer McCray, of Hartford, Conn.—*Exchange.*

—Degrees were conferred upon four Japanese students by Yale College. "One of them," says the *Christian at Work,* "is Shinkichi Shegimi, of the Scientific School. He is a typical Japanese, four feet tall, and weighs ninety pounds. He came to this country without money or friends, drifted to Yale, was taken in charge by President Dwight and members of the faculty, and now graduates with honor."

—It is reported from Chicago in regard to Western crops that corn in Eastern Colorado, Kansas, Nebraska, Iowa, and Illinois could not look better. In Western Kansas, where they had a failure last year, the outlook is superb. The roads are muddy in Colorado, and good corn is to be seen in the eastern part of the State, grown without irrigation. The wheat crop is much improved, and the grass crop is something wonderful. Even the high hills between Kansas and the Rocky Mountains are green with grass. It is believed there will be the old yield of 23,000,000 bushels of corn this year.

—An exhibition of devices for the prevention of accidents has been planned to take place in Berlin from April to June, 1889. The Prussian government has permitted the gratuitous use of the large exhibition place in that city near the Thiergarten and the Lehrte Depot. A report of the U. S. consul-general to the Department of State, says:

"The articles to be exhibited are to consist in machinery, apparatus of all kinds now in use to guard against accidents, in tools, working pieces, and working materials; in models; in plans, drawings, photographs, and specifications; in copies of regulations, rules for factories, statutes, and printed matter relating to accidents and to their prevention, as far as they come under the province of trades

WM. H. JONES,

The Dealer in **Agricultural Implements, Seeds and Fertilizers.** Removed to **2043** and **2045 Market St.**, Philadelphia, Pa. Cheapest and largest variety. Every conceivable implement of farm use, harness, seeds and fertilizers. It is a curiosity, and of great interest to every utilitarian to see the establishment. If you cannot get here, write for wants. I am in communication with all the Agricultural implement builders in the U. S.

PURE RELIGION AND UNDEFILED.

He whom Jesus loved hath truly spoken :
The holier worship which he deigns to bless,
Restores the lost, and binds the spirit broken,
And feeds the widow and the fatherless.

O brother man, fold to thy heart thy brother!
Where pity dwells, the peace of God is there.
To worship rightly is to love each other—
Each smile a hymn, each kindly deed a prayer.

Follow with reverent steps the great example
Of him whose holy work was "doing good;"
So shall the wide earth seem our Father' temple,
Each loving life a psalm of gratitude.

—*J. G. Whittier.*

Editorial Correspondence Friends' Intelligencer and Journal.

AMONG FRIENDS IN NEBRASKA.—VI.

On Second-day, the 2d inst., Benjamin F. Nichols and wife left Lincoln on an early train for a point in Kansas, he feeling quite unwell and not able to go to Beatrice, forty miles directly south, where a meeting had been appointed for the evening. This was a great disappointment to us all, but we felt that the meeting must be held, and as our kind host, C. P. W. and his wife were willing to bear your correspondent company, we started on an early afternoon train, arriving at the station in due time. Friends were there to meet us, and we were soon made welcome at the home of Albert L. Green, where we were surprised to meet Mary B. Lightfoot, the mother of Albert's wife, and well known through her useful work among the Indians some years ago.

The basement of a Presbyterian church in the neighborhood had been engaged for the meeting, which was appointed for eight o'clock. At the hour a small company gathered, including the three families of Friends who reside in Beatrice. It was an occasion of weighty responsibility, shared as it was by our beloved M. B. L., whose loving spirit was helpful and strengthening. The message given was handed forth with an earnest desire that it might find a welcome in the hearts of the hearers. It was mainly a summary statement of the doctrine and testimonies of the Society of Friends, based upon the declarations of Jesus as given in the New Testament, and the spiritual interpretation of what are known as the sacraments of the church, and the nature of true worship were emphasized. The close attention of the audience to the word spoken was very encouraging, and the expressions of interest in what had been said, when the meeting closed, led to the hope that Friends and their faith would be better understood by those present for the opportunity of being thus gathered together in "His name."

It might be well to say, just here, that there is a great openness in this Western land for the ministry of the Word, as it is understood by Friends of our branch, but there is need of great wisdom in handing it forth, that the inquirer may be led along step by step as the truth is revealed, often in the littleness of the babe in Christ. Our principle and the testimonies based upon it have nothing to fear from the plainest presentation, when couched in the language of the Master, and when the diviner meaning which his words have for us to-day is made clear! The question is often asked, "In what, then, do Friends differ from other religious bodies?" and it is not difficult to make answer: "It is the Christ that never was crucified, but liveth and abideth forever, that is the Saviour of the world." To this Jesus himself bore testimony when he said, "And I, if I be lifted up, will draw all men unto me,"—lifted above the earthly, material understanding of his life and mission into the true meaning and significance of that other testimony, "It is the spirit that quickeneth, the flesh profiteth nothing."

Third-day was devoted to social visits; two other families, Samuel Green's and Bradley Taylor's are all the Friends that live in Beatrice.

A family of Russian Mennonites present at our meeting extended an invitation so cordial that we accepted and found them most delightful people to visit. There is quite a settlement in the neighborhood, and a meeting-house in which regular service is held. They hold to the usages of their sect with great tenacity, though some of the young people find their customs burdensome in many particulars.

This part of Nebraska is well settled, and the soil unsurpassed for fertility. Vegetation is from one to two weeks in advance of the northern countries, and the rains have been timely so that every indication favors a plenteous harvest.

Beatrice is a city of about 12,000 inhabitants, beautifully located on rising ground, presenting from the surrounding country a charming picture. Its growth is almost unparalleled even in this rapidly developing country. This is due to a way they have out here of advertising the new cities, large sums varying from five thousand to twenty thousand dollars being raised for this purpose. In all parts of the East, and wherever indeed people may be found who are wanting to improve their worldly condition these advertisements, setting forth in glowing terms the advantages to be gained by coming to the newly laid

out city, are published in magazines, farm journals, and newspapers at great cost. "But it pays," said one who had much to do with the building up of the city. "It brings to our place an intelligent class of citizens, and with the coöperation of the railroad corporations, which are always ready to extend branch roads where there is a prospect of remunerative traffic, the development of our resources is assured, and the debt incurred is not burdensome upon any."

This may or may not be the testimony of all concerned. I know that the tax-rate of Lincoln is regarded as very high, though the percentage was not given, and doubtless the same might be said by many others who are not engaged in the speculative enterprises which advance the price of land without materially improving the condition of the actual settler.

We are in the cars by six o'clock the next morning (the 4th) intending to stop for a few hours at Crete, the Chautauqua of Nebraska, situated about half-way between Beatrice and Lincoln. The grounds are beautifully laid out in a fine grove overlooking the Big Blue at a widening of its stream, which forms a pretty lake, upon which pleasure boats invite to a sail over its tranquil waters.

The main pavilion, which is cool and inviting, is large: it will seat, I was told, so many as four thousand persons, while the platform itself will accommodate about two hundred. The day's exercises were already begun when we reached the grounds, and, as it was the nation's holiday, and there was to be a commemoration of it in the afternoon, the exercises at this time, including the singing of the national airs, bore relation to the day. At ten o'clock we repaired to the pavilion of the Women's Christian Temperance Union in another part of the grove, where Mrs. Saxton, one of the prominent workers of that organization, spoke for about an hour, with great force and earnestness, pressing home upon parents the solemn obligations that rest upon them, and the great duty of training the children to the habit of willing obedience as the first step towards good citizenship, expressing the belief that there is a lamentable defect in this particular in the home training of our people. National Prohibition was the theme of her discourse; all else was incidental, but so much to the purpose that it is well worthy of mention.

Outside the grove the day was sweltering as we found when we left, at 2 p. m. to return to Lincoln; crowds of people were going and coming, and the white tents that dotted the encampment presented a most animated appearance.

The plan of work is similar to other summer resorts of like character.

A brisk shower late in the evening cooled the air, and made comfortable sleep possible. The next day a ride of 18 miles to fulfill an appointment at Bennet, where several families of Friends reside, was undertaken, an attender of the Meeting at Lincoln, who lives seven miles in that direction, having kindly offered to take me in his carriage. He was prompt to the hour, and although the sun was very believed herself excused from present service in that hot, the air was cool and invigorating, which made the ride exceptionally pleasant. We halted at his house for dinner and a little rest. Here again Nebraska farm-life was seen, with the immense fields of corn and oats, varied by the gold of the rye which stands uncut in some fields and in others in shocks ready for the harvester. Millet diversifies the picture, and hay-harvest adds to the changes from the deepest green to the gold of the ripened grain. The wide expanse, dotted over with the white and red of the farm buildings, and the groves in which they mostly nestle, present a view nowhere else to be seen. One can but ask, What will the next century with all the improvements and appliances that it holds in store, not do for these fields? The wildest dream of a hundred years ago falls far short of what has been realized and the work of development is yet in its infancy.

Resuming our journey, the first stopping place was reached late in the afternoon, and to our disappointment we learned that the word in reference to having a meeting at Bennet that evening, had not reached its destination, and no appointment has been made. The farmers were in the press of their work, and had not been to the post-office. In these remote places, this often happens, and it is only as word is taken from one to another that there is any certainty of its being received. All that could be gotten together on so short a notice were invited to meet us at the house where we stopped, and quite a number came, though the hour was late. The little company gathered into stillness and a message of loving encouragement was handed forth, which to them was grateful, such opportunities being very rare are greatly prized by our friends who are so remotely situated. They were encouraged to be faithful to what they felt to be required of them, and to try to hold a meeting among themselves as is done at Lincoln. But there is need that some one take the initiative, with a firm resolve to press forward through every obstacle; whether such an one is there remains to be seen. It is so much easier to fall in with that which is already established and invites to a participation than to mark out a way for ourselves in the plainness and simplicity of our profession.

Leaving these isolated ones at an early hour the next morning, we returned over the same road we had come, and stopped to dine with a family eight miles out of Lincoln, who attend that meeting whenever it is possible for them.

Thence back to Lincoln in the cool of the afternoon, and the visits in that part of the State were accomplished.

The long rides and the extreme heat of the past few days, made the going to Omaha on Seventh-day with a holding of a meeting on the afternoon of the First-day following, a question difficult to solve. The undertaking, with the visiting of families that it called for, seemed too great for one who had been so constantly on the wing, yet it was hardly felt to be right to put this work all upon Benjamin F. Nichols and his wife.

But after weighing the matter with an earnest concern to be in her right place, your correspondent,

direction yet willing, if way opens, to meet with the Friends living there, at a future time.

And now for the rest and recuperation that the next four weeks may bring. The work has been so in harmony with the best desires of my life that it has not been other than soul-satisfying, yet the weariness of the body cannot be ignored; we find that now as formerly the spirit may be willing but the flesh weak; and while we are in these clay tabernacles we must be subject to their infirmities.

Parting with the good friends who had been so helpful, and had entered into all my plans with a heartiness that gives assurance of continued interest in the work of the Society in that place, I enter the cars for an all day journey of 170 miles directly north, arriving at Creighton just as a shower which we had been following for an hour or more, passed over the town, leaving the air cool and refreshing.

I am soon at home, and with the little ones, whose joy finds expression in loving words of welcome. L. J. R.

Creighton, Neb., Seventh month 12, 1888.

LETTER FROM EDITH W. ATLEE.

[As we learn that some Friends were disappointed in not finding this letter in the published Extracts of our late Yearly Meeting, we herewith insert it that those who were not present may have the privilege of sharing it. Trusting that the deep concern for her Society, which from the couch of suffering she felt to reach out to her people, may find a resting place in some hearts and be as "Seed sown in good ground."—EDS. INTELLIGENCER AND JOURNAL.]

To Philadelphia Yearly Meeting of Women Friends,

BELOVED FRIENDS:

Although I am unable to participate in the proceedings of this Yearly Meeting, yet I am so bound with you in affectionate interest, I feel impelled to communicate in this form some of the exercises of my mind.

Surely we can unite in fervent gratitude to our Heavenly Father, that he continues to bless us with his guiding Power, and by the operations of his spirit within each heart, cements us in loving fellowship. We should humbly confess our innumerable errors and deficiencies; but let us, without ceasing, hopefully strive for the attainment of approval from our Divine Master in all our actions, endeavoring faithfully to follow him in the work of regeneration, accept the written injunction, "Take my yoke upon you and learn of me, for I am meek and lowly of heart," in the faith that we will be favored to receive the promised results of "Peace" unto our souls.

We are, dear friends, a spiritual household, and earnest is my solicitude that the maternal bond shall be firmly preserved while the development of the children is progressing. I feel assured that many of the youth in our Religious Society are now viewing with tearful eyes the vacant places of honored mothers, and with the same tender feeling observe the tokens of future bereavements. With unfeigned love they call to remembrance the faith and frequent exhortations of these "To lay up in store for ourselves a good foundation for the time to come, that we may lay hold of eternal life."

Beloved young friends, cherish this affectionate veneration for the experience of Christian wisdom, which will be among the agencies to hold you steadfast in every disturbing element.

At all seasons, remember this injunction, "Be not ashamed of the testimony of our Lord."

The salutation of gospel love is affectionately extended to those who may be appropriately termed "Mothers in our Church," and fervent is my desire that their faith in the "Eternal Word and Power of God" may continue firm through all the changes that we may be permitted to see in our Religious Society; and that they may be favored with renewed ability to give freely of what they have conceived from the Treasury of the Lord to feed the hungry. The encouraging words of Jesus may be offered to every class, "Blessed are they who hunger and thirst after righteousness, for they shall be filled."

Affectionately your friend,

EDITH W. ATLEE.

SEEKING FOR TRUTH.

"But what is Truth? 'Twas Pilate's question, put to Truth itself, that deigned him no reply."—*Cowper.*

WE often hear it asserted that this is an age of inquiry. The same might have been said, and probably has been said, of every age for the last five centuries. Great advances have been made in science, in the arts, in general education,—in fact, in all that pertains to civilization. Accompanying this march of intelligence, has been the increasing demand for civil and religious liberty.

The manifestations of this demand may be seen in the tendency to call in question the authority which proclaims the law, or lays down the tenet, and to inquire whence comes this authoritative statement. Inquiries of this character are shaking the Papal throne, divorcing Church and State, undermining the platforms in theological seminaries, bringing pulpits to the level of the floor, and converting formulated creeds and catechisms into waste paper. Sects are increasing in number rather than in membership; new ones being formed, and the old continuing to divide and subdivide, until we are ready to inquire have they found, or are they likely to find, any limit to their theological polemics? and have they anything of religion left except the bare name?

But amid all this turmoil,—this confusion of tongues, working of intellects, and clashing of opinion,—it is to be hoped that there is still preserved a remnant who have chosen "the better part," and who,—having known the power of vital religion,—can retire to the closets of their own hearts, and renew their strength, even though the strife of tongues be fierce around them. These have learned that controversial theology can do no more than amuse the intellect, excite the brain, and rouse the passions; while vital religion has power to preserve from temptation, to comfort in affliction, and to purify the heart. All who have passed beyond the argumentative stage, and arrived at one that is more satisfying,—whatever may be their name to religion,

—will admit, even though they cannot appropriate, the sentiment of the poet:

"His hand the good man fastens on the skies,
And bids earth roll, nor feels her idle whirl."

When men of combative tendencies are in the fulness of health, and possessed of both physical and mental vigor, they are prone to inquire, to argue, and if possible to vanquish an opponent. They like to trip a clergyman, to pick a flaw in a sermon, or to find—what may seem to them—a discrepancy between different portions of Holy Scripture. They usually claim to be very charitable, and are particularly fond of saying that they are "open to conviction." It will be found, however, that their charity is for skeptics and cavillers, and their conviction is that *they* are right, and that *their* view is the only rational one to take of the subject in question. Such persons regard faith as a synonym for stupidity; honest conservatism they treat as if it were dogmatism; and if a brother should feel most easy to walk in a straight and narrow way, they call it going in a rut; or if he be seriously inclined they may charge him with being morbid, or dyspeptic. They are skilful in discovering the traditional walls, and ready to raze them; but after having laid waste the enclosure to the ravages of intruders, they have no protection to offer, and no substitute to supply the place of what they have taken away. It is recorded of Thomas Paine that he felt the bitterness of remorse in his last days for this kind of devastation. Not only was he left without support for himself, but he felt the guilt of having disturbed the faith of others.

The contrast drawn by Cowper, in his poem of "Truth," between the vanity, the unrest of Voltaire, and the trustful contentment of the lace-knitter, is a striking picture of the difference between learned skepticism and simple faith.

That voluminous writer and man of the world, Walter Scott, when near his end, said to his son-in-law: "There is only one book to read from"; he referred to the Bible.

I once heard a minister,—not of our denomination,—say that men in health liked to *argue* about religion; but when they came to die the subject presented itself to them in a very different light.

"Men may live fools, but fools they cannot die."

We all know how wide is the difference between denominational appreciation and sectarian bigotry; and without a trace of the latter, may we not rejoice at the thought of the beauty, the simplicity, the inwardness, and the individuality of our "Quaker Faith?" The wrangling of the schools we may hear as distant thunder; but it need not, and it should not, disturb us in the quietness of our meditations. Our fathers in the church proclaimed no new way to the kingdom; but merely called their follower to the simplicity of early Christianity, and to the precepts of its Founder and his immediate disciples. Their mission and their message corresponded with it—it was to call back to first principles. More than two hundred years ago they declared, with innocent boldness, that the Truth is unchangeable, and that the only way to true peace, is the old way of self-denial and the daily cross. As William Penn expresses it, "The bent and stress of their ministry was conversion to God, regeneration, and holiness." Having themselves experienced these three conditions, they were prepared to call others to "Come, taste, and see" what *they* had found.

But when we reflect on the responsibility that this faith imposes upon us, we are almost ready to shrink from the profession of it, and either to seek out a man-made ministry, with its prepared catechism, or else to turn rationalists, and conclude that we will reason out things for ourselves. Simple obedience offers so little to satisfy our human desires for activity, and the way of the cross is such a hard way for the worldly-minded, that we would fain devise something more pleasing to self.

This devising is sometimes called inquiring, or *seeking for truth*; but all depends upon whether we are seeking within or without. If the former, we shall be likely to be still, serious, humble, prayerful; but if the latter, the conditions will all be reversed, and there will be a tendency to activity, levity, pride, and reasoning. A careful and impartial self analysis will enable any one to determine whether he is sincerely seeking for light to walk by, or whether he is merely devising something for the gratification of self, or for intellectual entertainment. The inward seeker, as he abides in faith and patience, will be likely to receive the promised reward, "Seek and ye shall find"; but the outward inquirer will be likely to grow more and more worldly, until he loses every trace of the Friend, except perhaps the name, and the claim that he *believes* in the inner light.

When those who have tasted and known the reality of the inward principle turn to the world and its activities, seek for the truth by the light of reason instead of faith, substitute good works for the religion of the cross, and look out instead of inquiring within,—they may be said to have removed from Jerusalem to Babylon, and before they can return to the quiet habitation they must experience both the poverty and the humility of the Prodigal Son. While feeding the swine, and hungering for some husks, they may well adopt the language of the same poet, whose lines stand at the heading of this article:

"What peaceful hours I once enjoyed,
How sweet their memory still;
But they have left an aching void
The world can never fill."

H. *

Seventh month 7, 1888.

When a deed is done for Freedom, through the broad earth's aching breast
Runs a thrill of joy prophetic, trembling on from east to west,
And the slave, where'er he cowers, feels the soul within him climb
To the awful verge of manhood, as the energy sublime
Of a century bursts, full blossomed, on the thorny stem of Time.—*Lowell.*

It may be said that the hardest thing in the world is to do right one's self; and the easiest thing in the world is to see where others fall short of doing just right.

GENESEE YEARLY MEETING.

By some confusion of arrangements which we supposed had been made, our usual report of Genesee Yearly Meeting failed to reach us, and we copy, therefore, the following from *Young Friends' Review* for Seventh month, contributed by our friend, Samuel P. Zavitz, of Coldstream, Ontario:

A little past midnight on the morning of the 8th of Sixth month, we started by private conveyance for London, 16 miles from home, in order to catch the 4.45 a. m. train for Hamilton, Toronto, and Trenton, on our way to Bloomfield, 275 miles away, to attend Yearly Meeting. We made good connections, and shortly after 2 o'clock p. m. were at our destination and mingling with the Friends who for the next week so kindly entertained us. At Trenton, 25 miles from Bloomfield, we joined quite a large company of Friends, mostly from Western New York, who had crossed the lake during the night from Rochester to Port Hope and had preceded us by train an hour or so earlier. Later in the day or rather on in the evening a number of Friends belonging to New York Yearly Meeting, among whom were Isaac Hicks, and Daniel Underhill wife and sister, of Long Island, Robert and Esther Barnes, and Tacy L. Ward, of Rochester, and Mary E. Davis and mother of Albany, accompanied by some of our own who had been in attendance at Philadelphia and New York Yearly Meetings arrived from the east, crossing in boat from Cape St. Vincent to Kingston and from Kingston to Picton, 5 miles from Bloomfield. Next day the different trains augmented our yearly meeting to its usual size. Select meeting on Seventh-day was largely attended and words of encouragement and council were handed forth.

A shower early on First-day morning settled the dust, which had been deep, and cooled the air, making the day favorable for the public meetings which were largely attended and deeply interesting. In the morning after a short silence John J. Cornell arose and in a clear and lengthy discourse defined the distinctive principles and practices of our Society, showing where we differ and why we differ from much that is taught in the Christendom of to-day. The discourse was an able one and was listened to with interest and attention by the large audience. In the afternoon Sunderland P. Gardner was alike favored to uphold the pure and simple religion of truth as taught by Jesus of Nazareth, and spoke long and eloquently to the edification of an interesting assembly.

On Second-day the business of the Yearly Meeting commenced. Reports from our different quarterly and half-yearly meetings were read. A minute of unity for Isaac Hicks, of Long Island, was presented, whose company, as well as other Friends without minutes, was acceptable. Epistles from New York, Philadelphia, and Baltimore were read, which were found deeply interesting and the practical nature of these as well as of those from Ohio, Indiana, and Illinois, which were read on Third-day, made them truly profitable. Expressions of pleasure were given for their practical worth, and sympathy and encouragement extended to work in the different fields opening up to us for elevating and bettering the condition of the sinful and needy, the oppressed, the unfortunate, and the ignorant.

The usual committees were appointed, and one appointed to search after and extend encouragement to our isolated Friends.

On Second-day afternoon a large and interesting session of the First-day School Association was held, at which reports from a number of our schools were read and epistles from some of our kindred associations. Samuel P. Zavitz and Alberta Wilson were appointed clerks, and a number of delegates appointed to attend the approaching general Conference. The association was unanimous in its desire to have our "Lesson Leaves" follow the International series of lessons.

At its session on Third-day the Yearly Meeting approved the appointment of Jonathan D. Noxon and Rebecca Wilson for clerks as recommended by the representatives; read the remaining epistles and took up the consideration of the state of the society brought out by the reading and answering of the queries. No unusual discouragement to notice and much to encourage. Our freedom from the use of intoxicants was highly gratifying while the usual complaints of the small attendance of some of our meetings brought with it regret. The Temperance meeting in the afternoon was much enjoyed. No abatement was manifested in interest in the work of ridding our land of the devastating hand of alcohol. Short addresses were given by J. J. Cornell, Letitia Yeomans, the well-known and successful temperance lecturer and worker, Isaac Wilson, and others. Two recitations were also given which were well rendered and well received. Especial stress was placed by the speakers on the dangerous habit of the use of cider.

Public meeting on Fourth-day and the Youths' meeting in the evening were interesting occasions. In the former, John J. Cornell's exercise occupied most of the time; in the latter many gave utterance to their feelings, and the meeting, which will long be remembered, deepened in life and power to the close.

The closing session of the Yearly Meeting on Fifth-day was taken up by reports of different committees, the reading of the minute of exercises, and the reading of the epistles prepared to send to other yearly meetings. It was also proposed and united with that an enumeration of our members be taken, and the meeting's compliance in the request to publish with its usual extracts the business of the First-day School Association and to defray its expenses renewed its manifestation of sympathy in the work, and its grant of seventy dollars to help bear the expense of publishing the *Young Friends' Review* showed again its willingness to encourage and promote useful work within its borders. With feelings of gratitude for the blessed privilege of thus mingling together when the presence of the Divine was around and about us and so near, drawing us in nearness of feeling to each other and to Him, the meeting closed in the hope of meeting again next year. One of the most encouraging features of our meetings, and one that was plainly manifest, was the large and deeply

interested company of young people who attended all its different sessions. A large proportion of the real work of the Yearly Meeting rested upon their shoulders and the work was not only willingly taken up by them but was ably done. How gratifying such a sight is and how encouraging to see our Society willing to place its confidence more and more on the younger members. It is awakening a newness of interest in them and a newness of life in Society.

If this growth goes on and permeates every nook and corner of our heritage we will see rising up on every hand a band of young workers, willing, strong, and dedicated to the promotion of our Society, and to the spread of its blessed principles.

In an editorial article commenting upon the Yearly Meeting, the *Review* says:

The great I AM manifested his power and presence also in raising up servants to perform his will and in qualifying them to declare his truths unto the people. They were led to review the fundamental principles of the Society, which, we believe, are also the fundamental principles of Christ's Christianity, with unwonted clearness and power, showing that they accepted them not as inherited or traditional beliefs merely, but because they felt a living sense of their soundness and sacredness by their being indepen dent revelations from God to their own souls. The necessity of our Society seems to call us to declare charitably, yet fearlessly and more broadly than has been our modest custom, whatsoever God has revealed to us. Our simple faith, to be accepted more widely, needs but to be known.

Another most prominent and promising feature was the great interest manifested by the younger people. They seemed zealous for the welfare and honor of the Society, with a zealousness tempered with that wisdom and propriety that springs alone from rightly dedicated hearts. No more do we hear the lamentation, "Oh where are the standard bearers coming up to fill our places," accompanied by a hopeless, sorrowful visage that would tend to chill back in every young aspirant the tender hope that was already growing; but the outlook is more promising to-day, and the word from the higher seats is, "Keep the faith, and there will be nothing to fear or mourn over." . . . . .

Then there was a harmony in thought and act that flowed through the whole Yearly Meeting. There are times when opposition seems to be necessary; but such times are always painful. There appeared to be no need for such now. We never attended a yearly meeting where so much life was accompanied with so much unity. We rejoice that all can thus advance together in meeting the new demands of the advancing years.

AND what is this good instinct but the Spirit of God within you seeking to will and to do its own good pleasure?—*Selected.*

A RELIGIOUS hope does not only bear up the mind under her sufferings, but makes her rejoice in them. —*Addison.*

JAMES FREEMAN CLARKE.

AT the close of a sermon recently delivered in Boston, Phillips Brooks said:

"Still and forever the Church is the great Christian power, and the epistles of the Lord are human hearts.

"Where shall I seek my illustration? I need not look far abroad to-day to find it. For, as I was writing these last words, the tidings were running through the town, and came to me, that one of our best and purest and noblest Christians, one who had long made a part of the religious history of our city, and had represented to more than a whole generation of souls the power of Christ in a Christian life, had passed away from earth. I cannot stand here to-day without paying a tribute of affectionate and reverent remembrance to Dr. James Freeman Clarke, the minister of the Church of the Disciples, the friend and helper of multitudes of souls. How much that name has meant in Boston these last forty years! When I think of his long life; when I remember what identification he has had with all that has been noblest in every movement of the public conscience and the public soul; when I recall how in his earliest youth he felt the inspiration of that great spiritual movement which woke New England from its lethargy; when I remember how he carried the spirit of that movement into the Far West, and left it in distant Kentucky, where it still survives; when I see how, in the days of the great national struggle, from first to last, he was not merely true to freedom, but a very captain in her armies, and a power of wisdom and inspiration in her councils; when I think what words of liberty the slave and the bigot have heard from his lips; when I think how his studies have illuminated not merely our own faith, but all the great religions; how he has shown, as almost no other man among us has shown, the spirit of tolerance, instinctively and instantly in all that he held to be ever the living heart and germ of truth; when I see how much of Christ was in his daily walk among us, in his unswerving truthfulness, his quiet independence, his tenderness, and strength, his pity for the sinner and his hatred for the sin, his spirituality and innocence, his loving communion with his God, his patience with and never-failing belief in man; when I think how he loved Christ,—when all this gathers into my memory at the tidings of his death, the city, the country, the Church, the world, seem emptier and poorer.

"He belonged to the whole Church of Christ. Through him his Master spoke to all who had ears to hear. Especially, he was a living perpetual epistle to the Church of God which is in Boston. It is a beautiful, a solemn moment when the city, the Church, the world, gather up the completeness of a finished life like his, and thank God for it, and place it in the shrine of memory, to be a power and a revelation thenceforth so long as city and Church and world shall last. It is not the losing, it is rather the gaining, the assuring, of his life. Whatever he has gone to in the great mystery beyond, he remains a word of God here in the world he loved. Let us thank our Heavenly Father for the life, the work, the inspiration, of his true servant, his true saint, James Freeman Clarke."

SCRIPTURE LESSON, No. 29.

SEVENTH MONTH 29, 1888.

TOPIC: THE TABERNACLE.

GOLDEN TEXT: Behold, the tabernacle of God is with men.—Rev. 21: 3.

READ Exodus 40: 1-16.

THE tabernacle, or tent of Jehovah, who, as we have already learned, was claimed by the Israelites as their leader, was called by other names,—as sanctuary, and tent of meeting, and was the central part of the tent of meeting, which seems to have been constructed for the purpose of protecting the tabernacle, or most holy place, in which the tables of stone containing the ten commandments, the ark, and other sacred treasures, were preserved. It was constructed of curtains of fine linen, while the tent that enclosed it was covered with a cloth woven of goats' hair, and impervious to water.

The tabernacle served as an object lesson to the Jews in the low spiritual condition which their long bondage in Egypt had brought them. It was necessary that they should have some visible manifestation that Jehovah was their leader and in the midst of them, and his tabernacle made his "presence" a reality to them.

The world in its highest enlightenment has not yet passed beyond the bonds of this necessity, has not yet come fully to understand what the Apostle meant by "the true tabernacle, which the Lord pitched, and not man." (Hebrews 8: 2.)

Every part of the furniture of the tent of meeting and of the tabernable had its allotted place.

The anointing oil. Anointing was a ceremony by which everything devoted to a sacred use was to be set apart. The oil used for this purpose was doubtless pressed from the fruit of the olive tree, which was abundantly cultivated in that country.

The laver was made from the mirrors of the serving women who served at the door of the tent of meeting (Ex. 38: 8), and was of brass. It was a large basin in which Aaron and his sons washed their hands and feet before offering sacrifice. This custom of frequent washing was observed by all the people, not so much as a necessity to preserve the purity of the body as it was made a religious rite. Jesus reproved the people to whom he spoke because of their having given so much thought to the washing of "cups, and pots, and brazen vessels, holding the traditions of the elders, and leaving the commandmentof God." (Mark 7: 1-13.)

The altar of burnt offering. This was made of wood overlaid with brass, and was the place where the animals for sacrifice were offered. The first altar spoken of in the Bible was raised by Noah after the flood had abated. Though generally built for sacrifice there appear to have been those in the earliest times who built them as memorials only—non-sacrificers—men of peace, not blood, of whom Melchisedec was an example.

The original thought of the tabernacle was, the place where man meets his God, the Holy of Holies.

There it was that the spirit came upon the elders and they prophesied. This tabernacle was a movable structure; its position was central, the tribes of the east and south in front, those of the north and west in the rear. Smith's Bible Dictionary says that each march involved the breaking up of the whole structure, all the parts being carried on wagons by the three Levite families. And wherever there was difficulty to he met, thither the people came to bring their cause, for upon it still rested the symbolic cloud, which was dark by day and fiery red by night. And when the cloud moved the host knew that it was a signal for them to go forward.

Tabernacle, a place bearing record of spiritual experience, tending to lead men upward to it, to lead them to the thought which they most need,—of a Divine Presence never absent from them, protecting, ruling, judging. Our lesson to-day is one of *deep* instruction, and of firm assurance of the Divine Father's presence at all times and under all circumstances. And it is beautifully significant, representing as it does, spiritual truths by outward and visible things, giving us the implicit faith that the dear Father will always illuminate our minds according to our needs and our ability to receive. Thus when the outward sunshine is shedding its light about us, the cloud is seen; and when our spirits are covered by discouragement, as the darkness of night, and we look towards this tabernacle, the appearance of fire is there that we may have a sure guide under all circumstances.

DUTY A DIVINE SUGGESTION.

THE voice of Duty,—what is it, if it be not the suggestion of God? Is it the mandate of your own fancy, imposed upon yourself,—the mere imperative mood in the soliloquies of your own will? Not so; for were the law of your making, you might forgive its violation, and the thought that set it up might take it down; yet you feel its authority above your reach, and your boast of indifference to be a sad pretense. Is it a mere echo of men's opinions,—a deference to their arbitrary demands? Not so; for how often does it lift you above that opinion, nerve your heart to withstand the injustice of a crowd, and fight the good fight though in the forlorn hope alone! As well might you persuade me that my own eyes created the daylight, or that the sunshine was the gift of public opinion, as that the sense of right was anything but the direct illumination of God, the piercing ray of the great Orb of souls. Not more certainly does Perception teach us what is external to our senses, than Consciousness what lies beyond our personality; and that the authority of Justice, Purity, and Truth is no manufacture of my own, but is imposed upon me by a Divine source above me; I am no less sure than that the stars are not twinklings of my vision and the thunder is no rumbling in my brain.—*Martineau.*

NOBLE souls, through dust and heat,
Rise from disaster and defeat
The stronger;
And conscious still of the divine
Within them, lie on earth supine
No longer.

PHILADELPHIA, SEVENTH MONTH 21, 1888.

LOVE FOR OUR RELIGIOUS ORGANIZATION.

To pursue further the line of thought expressed in a recent editorial on "The Aim of F. D. S. Teaching," we desire to emphasize in this connection, the need of cultivating in our youth love for their own religious home, *i. e.*, the meeting to which they belong, or to which their training and inclination tends. To make a good member of any society there must be strong love for it. And here is a legitimate aim that can be pursued by teachers, who should themselves be firm in their allegiance to the body in which they engage to give moral and religious instruction. They should by precept and example show that they love and value the religious service thereof, and respect and honor the rules and regulations that govern it. This need not necessarily imply that these are perfect and beyond improvement for all homes, both secular and religious should recognize in themselves the elements of growth; but the welfare and success of any religious body make it imperative that its members love it and manifest a willingness to work for its advancement. The young should be very early influenced to attend its meetings, both for worship and discipline, and if this is judiciously done there will be fostered a love for it. They should never be wearied by too long meetings. Indeed, none should be wearied by being kept in a meeting after it has lost the life. This, however, is a condition almost ideal when we consider the varied needs of all assembled. But the little one in this, as in other things, soon catches from parent or teacher the feeling of love and reverence for the service, and oft-times comes to realize the blessing of assembling for social worship. If weariness occurs it is usually evanescent, unless, as is too often the case, the child is sympathized with to its own hurt; when it soon assumes the attitude of a "martyr" and the good influence of many a quiet hour is lost.

In our Society it has always been felt to be a grave thing to profess belief and request membership. So weighty has this been in time past that many a concerned Friend has been deterred from application to fellowship religiously with us, because of our high standard. And we would in no wise lower it. But we believe it would be wisdom to more fully encourage such as give evidence of some degree of spiritual growth, to enter the fold and therein seek to complete the work. We have sympathy with these words of one interested in another branch of the Christian church: "Membership should be extended to all such adult persons among us, well known for their interest and service, as may simply make a declaration of their *desire* for it, it being understood that the life lived is the real confession of faith, and that whoever with earnest heart and unblamable aims casts in his lot with us strengthens our cause and helps build us up with imperishable good."

Let us note well the words, "the life lived is the real confession of faith," for herein we desire no abatement from the high aim of following the pure example of the Master, remembering his gracious words, "If ye keep my commandments, ye shall abide in my love: even as I have kept my Father's commandments and abide in his love." But we all owe a duty to our youth ere they reach the "adult" age, and greater care should be extended to foster their love for religious association. We know how very difficult this is in a society granting so much of liberty in thought and action. We can see where with some, this liberty has tendered to license, where all restraints have been cast aside to the injury of the individual, and to the humiliation of the meeting. The great question is, where is the remedy? For a remedy there must be, else our great fundamental principle of direct guidance, and freedom of conscience is a delusion. Our love is not strong enough for our meeting. We have not faith enough in the good that it does for us. We hold too lightly and traditionally, many of us, to our membership. We fail to realize what we should have been without its fostering care; else we should try harder to enoble it and turn more confidently to the young seeking to inspire in them respect for its wholesome restraints.

In order to win their love during the age when their aspirations are high and their souls are so susceptible to influences of purity, justice, and truth, we should, as individuals composing the body, put forth our strength to enrich our characters, cultivating all of our faculties, acknowledging them as good gifts of God, yet letting our "moderation be known unto all men." In professing to abhor bigotry close watch should be kept lest we become "illiberal liberals" and proscriptive in our judgments. Restraining the greed for gain that unselfishness be developed; holding reverent converse relative to the things of the spirit, at the same time respecting the private emotions and experiences of each soul; in short, show them by our daily lives that we do approach the Christian standard, making it further manifest by the interest we express in their welfare, both

materially and spiritually, thus shall we be able to win them to love to mingle with us.

On the other hand, is it not well to expect something of them? To establish a period to which they can look, when they will be required to choose their religious home; to say whether they will or will not worship, after the manner of their fathers. Having received instruction at our hands, should they not accept their obligations and enter upon the performance of their religious duties as men and women? Do we not count it joy to arrive at the period of citizenship with its rights and privileges? Might we not experience a higher joy when we in some form acknowledge our right to enter upon the full privilege of religious fellowship? If happily these efforts to lead "in the way of good," results in the blessing of a full measure of the grace of God, we may look forward to a succession of standard bearers, dedicated ones, who shall love our faith and carry it forward to a brighter and better future.

DEATHS.

COMLY.—On the morning of Seventh month 13th, 1888, in the Adirondacks, N. Y., Charles F., son of Seth I. and Emma R. Comly, of Philadelphia, and grandson of the late Thomas Ridgway, in his 22d year; a member of the Monthly Meeting of Friends of Philadelphia.

GILLINGHAM.—Seventh month 10th, 1888, Jonathan, son of the late John W. and Alice A. Gillingham, in his 41st year; a member of the Monthly Meeting of Friends held at Green street, Philadelphia.

HARNED.—Suddenly, Seventh month 14th, 1888, Jacob L. Harned, in his 71st year; a member of the Monthly Meeting of Friends of Philadelphia.

JOHNSON.—In Greenwood township, Clearfield county, Pa., on the 21st of the Sixth month, 1888, Elah Johnson, in the 77th year of his age; a member of West Branch Monthly Meeting.

THE LIBRARY.

MEMOIR OF FLEEMING JENKIN. By Robert Louis Stevenson. 12mo. Pp. 302. New York: Chas. Scribner's Sons.

THIS memoir was originally prepared as an introduction to a memorial edition of the essays and correspondence of Prof. Jenkin, which was published in England, soon after his death, by his family and friends. It is published in this country without the accompanying matter, and rests its claim to attention on the portrayal probably as much as on the person portrayed. For Fleeming Jenkin was not a man of wide note. He was one of those men who impress their friends as being cheated by accident of their seats among the immortals. But on a moderate scale his life was honorably noteworthy. He was thrown by chance into the field of electrical science, the development of which has been one of the material triumphs of the century, and he bore his part well, but not as one of the main leaders. He was a man of incessant intellectual activity, and his brain contributed a few acknowledged important ideas to the discussions of the period following the publication of Darwin's "Origin of Species." In his later years, as professor of engineering in Edinburgh University, he occupied a position of influence in scientific circles, and kept his name always fresh in the minds of his follow-workers by a constant stream of new and valuable thought. His name occasionally strayed into popular notice on this side of the ocean, and we doubt not there are many whose curiosity was sufficiently established to make them heartily welcome the closer acquaintance which this volume offers.

For after all it was his personality which was his greatness, and which made his friends who felt his greatness in this point, vaguely wonder that he did not impress it more upon the world as intellectual greatness. He was original to the root: acting and thinking from the depths of his own resources: feeling warmly, and impressing himself strongly at every turn. He had in large measure the faults currently ascribed to an overdose of originality;—he was self-assertive and sometimes dictatorial; he was often careless of other people's feelings, and gave offense by his impolitic candor and hasty zeal in correcting their errors and attacking their foibles. He naturally wore off these sharp corners more or less as he went through life, but retained to the end enough of his uncut rock surface to rasp the feelings of chance acquaintances, and perhaps to furnish a still firmer hold for the affections of his friends. Could he have expressed his character in literature, he might have become great to the world; but his scientific writings in no wise express himself, and he will probably receive more of a just fame by this volume than his own works could ever have gained him.

His life was not eventful, at least after his boyhood, and there are few salient points to pick out as outlining his career. He had the beginnings of a liberal education, but owing to the family fortunes failing he entered the machine works of Fairbairn at Manchester, and after various changes of employers finally got into the business of submarine telegraphy, in which he remained until he left commercial life to accept the Edinburgh professorship. He was married at twenty-six to a daughter of Alfred Austin, a brother of Charles and John Austin, and a man of hardly less ability than his more distinguished brothers. The marriage was a singularly fit and happy one, and, as told by R. L. Stevenson, the story of it forms a delightful feature of the book.

But indeed R. L. Stevenson's touches of exquisite literary art are likely to embalm the whole of the memoir. He was himself a pupil of Prof. Jenkin, and draws his portrait with more than literary art. But of every part of the book we may say that it is a constant reminder how rich is the prose of real life to him who has spiritual eyes. We know of nothing more touching in literature than the account of the last years of the mother of Prof. Jenkin when half deprived of her faculties by paralytic strokes, and the tender care taken of her by her husband, who was greatly inferior to her in ability, and whom, in the days of the full possession of her faculties, she had almost despised.

ORTHODOX FRIENDS.

FIGURES OF GROWTH AND DECLINE.

An editorial article in *The Friend*, (Philadelphia), of Seventh mo. 14, presents some interesting figures and suggestions concerning the influences exerted upon Friends by country and city surroundings. It says:

We cannot but regard with concern the unfavorable influence which the change in social position and habits has had and is having on the size of meetings in many of the older settled and more wealthy communities of Friends.

It is a well established fact in social science, that with the increase of riches and the consequent increase in the comforts and luxuries of life, the average number of children born in such a community decreases. This is the aggregate result of many influences tending to the same end. The increase of population in such cases comes mainly from among the poorer classes. This subject has arrested the attention of many thoughtful observers; some of whom have lamented the decadence of the old American families in New England and elsewhere, and the fact that they were gradually being supplanted by the more recent emigrants from Europe, whose numerous offspring fill the vacancies in the population.

This change is not connected with religious profession, but depends on social conditions; and it affects the Society of Friends equally with others. The habits of economy and self-restraint which religion inculcates lead to material prosperity. Hence the average condition of our members is apt to be above that of the people among whom they reside, and as a consequence, the number of their children less. This effect is more marked in the older settlements, where the causes have had fuller opportunities of producing their effects.

In examining the statistical reports of several of the yearly meetings, published in 1886, we find the following statements of gains and losses for the preceding year:

London Yearly Meeting, . . .	Births, 170;	Deaths, 276
Dublin " "	" 25;	" 45
New England Y. M. (larger body)	" 20;	" 106
New York Yearly Meeting, .	" 35;	" 69

We have not the statistics of Philadelphia Yearly Meeting, but we have little doubt that the number of deaths among the members would considerably exceed that of births.

When we come to those Yearly Meetings in which the members are principally engaged in agricultural pursuits, and are in more moderate circumstances, we find a different showing.

North Carolina Y'rly M'ting, . .	Births, 95;	Deaths, 66
Indiana " " .	" 293;	" 186
Western Y. M. (larger body), .	" 207;	" 131
Iowa " " .	" 157;	" 131
Kansas " " . .	" 186;	" 107

It seems to be a general law, imposed by the Ruler of all things, that in proportion as a race or people become luxurious and self-indulgent, they shall die out and make room for more hardy and simply-living successors.

These general laws man is powerless to resist; he must either adapt himself to their requirements, or submit calmly to the consequences.

It is evident from what has been said above, that in the first group of Yearly Meetings referred to, there is a natural tendency to diminish in numbers, independently of any losses or gains by disownment or convincement. But in the second group, there will be a natural increase under the same conditions.

In those meetings where there are not enough young people to take the places of those who are being removed from works to rewards, if a gradual decline in numbers is to be prevented, it must be by additions from outside. In the limits of Philadelphia Yearly Meeting, there has been a shrinking from anything that would seem like a proselyting spirit; and it is deserving of inquiry whether this caution has not been carried to excess. While no strength would be derived from the addition of persons not convinced of our principles; yet the greater the number of those who are truly convinced, the more influence will the Society have in the world. It has seemed to us, that there is an increasing feeling amongst us, of the importance of spreading abroad a knowledge of these principles which are so precious to ourselves; and an increasing willingness to invite others to join with us in their maintenance and diffusion.

Toward those who are so convinced and led, we believe the right-hand of fellowship ought freely to be extended, and they should receive that sympathy and help to which they are entitled, and which they need. A valuable elder in one of our meetings, who himself came into the Society by convincement, recently remarked, that few or none but those who had experienced it knew what an ordeal must be passed through in joining our Society; and he felt that the way ought to be made easier, not, we suppose, by any alteration of the discipline, but by the cultivation on the part of Friends, of a disposition to sympathize with such, and to recognize more fully the sincerity of their motives and desires.

This is especially needful where the persons so convinced belong to a class who are poorer than the average of the members of the meeting which they seek to join. The social difference is in itself a source of discouragement; for they may naturally doubt whether they would feel *at home* among those with whom they have not heretofore mingled on terms of equality, and therefore there should be an increased care to make them feel, that if they are prepared to uphold our doctrines and testimonies, they will be gladly welcomed among us.

LETTER FROM WM. JONES, AN ENGLISH FRIEND.

William Jones, Secretary of the English Peace Society, writes as follows to a Friend of this city (Isaac H. Clothier) under the date of Sixth month 15th, 1888.

. . . . . In the latter part of Ninth month I expect to sail for the Southern Hemisphere in the hope of getting rid of a troublesome throat affection which threatens to become chronic. Yesterday the Friends of my Monthly Meeting (Westminster) saw right to liberate me by minute, though not a recorded

minister but an Elder in our body to attend the coming Conference of Friends in the Australian Colonies at Melbourne, in the Eleventh month, also to visit the settled meetings and to promote the cause of Peace as way may open. The sympathy and concurrence of J. B. Braithwaite and many other Friends in this prospect was very grateful, and I doubt not I shall be favored with the prayers of many Friends on both sides of the Atlantic.

The death of the German Emperor which we are mourning to-day, is very affecting after so long a period of calm fortitude and serene endurance under suffering. May the priceless lesson be blessed to his bereaved consort, his family, and his people. His death removes one of the bulwarks of peace in Europe, and now we are launched upon the unknown. May the sad lesson, in the hands of the Great Disposer of events, soften the hearts and dispose them to seek peace and ensue it.

[A note from another English Friend, Chas. Taylor, to the same Friend in this city, referring to the volumes ("Witnesses for Christ" and "Early Church History," recently sent to this country and distributed among Friends), says: "I saw Katharine Backhouse several times during our Yearly Meeting. She is much gratified that the volumes on which her husband spent so many years, and which he designed for a very general circulation are so acceptable to thyself and thy fellow members. It is entirely the same with thy sincere friend."]

WOMEN PREACHERS AMONG FRIENDS.

[Josiah W. Leeds, of Germantown, Phila., a well-known Orthodox Friend, who has been active in his opposition to War, Impure Literature, etc., prints the following article in the *Episcopal Recorder*.]

James H. Brookes, of St. Louis, in the Fifth month number of his journal, *The Truth*, has quite a lengthy article upon "Woman in the Church," which takes decided exception, upon Scriptural grounds, to the call and qualification of women as ministers of the gospel. Nevertheless, I observe that the editor, though he quotes many passages of Scripture in support of his position, makes two notable omissions: the declaration of Paul that "there is neither male nor female" in Christ Jesus, and the prophesy of Joel, "I will pour out My Spirit upon all flesh; and your sons and your daughters shall prophesy; . . and also upon the servants and the handmaids in those days will I pour out My Spirit." Now this prophecy was surely fulfilled upon the day of Pentecost; we know, also, that it was abundantly verified during the days of the apostles, for the names of not a few women who labored in the gospel are mentioned in the Epistles. If there is still continued in the earth a divinely ordained ministry, how can we say that the qualifying spirit has been withdrawn from women and not from men, in view of the words of Paul that in Christ Jesus "there is neither male nor female?"

The words of Friend Brookes, however, to which I take special exception, occur near the conclusion of this article, where he says: "Thank God, there are thousands and tens of thousands of humble and faithful Christian women in the land who are content with their lot, and have no desire to be *dragged into the glare of notoriety*." Will it be said that it has been the desire for notoriety which has drawn or "dragged" the men ministers of the day into the places which they occupy? Well, to the extent to which this may be so we may confidently aver that, however such persons may have received the authorization of man by the imposition of hands or other process of ordination or recognition, they still lack the one essential for acceptable service as preachers or prophets of the most High God—the Divine commission. Now, inasmuch as it is said that "every tree is known by its fruit," it has occurred to me that the annals of Friends—a people who, from their rise have recognized the equal right of woman with man, to preach, if Divinely qualified, may shed abroad some light on this much disputed subject. The Society of Friends took their rise about the year 1650.

I will first cite the case of Elizabeth Stirredge, of Gloucestershire (1634–1706), the daughter of an honest, zealous, God-fearing Puritan, concerning whom she says: "My father being one of those called Puritans, prophesied of Friends many years before they came. He said: 'There is a day coming wherein truth will gloriously break forth, more gloriously than ever since the Apostles' days, but I shall not live to see it.' He died in the faith of it seven years before Friends came; whose honest and chaste life is often in my remembrance, and his fervent and zealous prayers amongst his family are not forgotten by me." In the year 1670, at a time of great suffering amongst Friends, because of the prevailing persecutions, Elizabeth Stirredge feeling a drawing (a *drawing* of God, mark, not a *dragging* of men) to the ministry, makes a record: "Thus the Lord gently led me toward the service and testimony that He was pleased to lay upon me to bear; which was the greatest trial that I ever met with. My exercise increased, my inward pains grew stronger and stronger, my heart was troubled within me, my eyes were as a fountain of tears, and I cried out, 'Woe is me that ever I was born. Lord, look thou upon my afflictions, and lay no more upon me than I am able to bear. They will not hear me who am a contemptible instrument. And seeing they despise the service of women so much, make use of them that are more worthy.' The answer I received was, 'They shall be made worthy that dwell in my fear.'" And further on she adds: "I can say to his praise, I was so encouraged in all times of persecution, wherein I might bear my testimony for the Lord who had redeemed me out of the pit of misery, that I rejoiced to do the will of the Lord, for it was more to me than all that my eyes beheld, and to stand a faithful witness for Him.

I will next speak of Susanna Hatton (afterward Lightfoot), an account of whom is given in the Journal of James Gough, of Ireland, a minister of excellent repute in the Society of Friends. The narrative opens about 1737, when S. H., at the age of eighteen, came to this country as a *domestic* in the service of Ruth Courtney, a minister. Young in years as she was, she began thus early to speak in meetings. Returning, in the course of a few months to Ireland,

James Gough says of her: "I was very much affected with her inwardness, fervency, and tenderness of spirit out of meetings, as well as her awful [*i. e.*, solemn and powerful] utterances in meetings." At about twenty-three years of age she married a linen-draper and lived in a very humble way, her husband keeping two looms going, and she keeping two cows, and carefully bringing up her family. Her life was one of simple faith, and though at times her outward condition was such that she had not a morsel of food for herself and family, yet when reduced to such extremities, and without making her case known, sudden relief would come in from one quarter or another. When settled in the province Ulster, her narrator, himself a true minister, testified concerning the religious services of this humble and devout handmaiden of the Lord: "Not one in those large meetings rose up with that Divine authority and dignity that she did." Removing to Waterford, and going soon afterward upon a religious visit to Carlow, Mountmelick, etc., the following incident occured as told by J. Gough: "A Friend put four guineas into my hand and desired me to present her with them, which I did; but she refused to accept them, telling me she had others offered before in that journey, but durst not receive them, being under no present necessity." Her confidence that the Lord would provide everything needful was not misplaced. As her children grew up they found friends ready to aid them to good positions; her own circumstances improved, and, her husband dying, she afterwards married an exemplary Friend from America, with whom she returned to this country, and settled in Chester county near Philadelphia.

Mary Dudley, of Bristol, England (1750–1810), was a Methodist, held in much esteem by John Wesley and others in that connection. She was frequently urged to serve as a class-leader, but becoming sensible that it was her religious duty to profess with Friends, she united with them in 1773, and was recommended as a minister four years later. She, however, at first put aside the intimations of the holy command publicly to declare to counsel of God, until the sufferings she endured by her disobedience became great. (Let it be remembered that in this, and the other instances cited, there was no priest, committee, or other human intermediary required to be consulted. The eyes of these women were to the Minister of ministers alone, who hath the key of David, and "openeth, and no man shutteth; and shutteth, and no man openeth.") Upon yielding finally—not to any "dragging" of man, but through the constraining power of God—she says: "Oh! the rest I again felt, the precious holy quiet! unequal in degree to what was my first portion, but as though I was altogether a changed creature, so that to me there was no condemnation. Here was inded a recompense even for years of suffering, but with this alloy, that I had long deprived myself of the precious privilege by yielding to those reasonings which held me in a state of painful captivity."

Another Mary of the same period, a true mother in Israel, was Mary Capper (1755–1845), who was brought up in the established Church of England, having a brother who was a clergyman therein. Having united in membership with Friends, she was recommended as a minister at about the age of forty years. In relation to the beginning of her ministry, which was at London, she says; "I have no distinct recollection as to any serious thoughts of speaking in a religious meeting; it sometimes arose to my view that possibly I might have to tell unto others how I had been taught, and kept from the broad way of destruction, but a few words arising in my mind with something of unusual power, I think at the Peel Meeting, I stood up and spoke them, and was very quiet, nor did I anticipate or foresee that such a thing might ever be again. And thus was I led on from time to time, not knowing but each time might be the last." At eighty, her language of encouragement to another was: "Everlasting mercy and help is on the side of the humble and devoted, though they may have to pass through many tribulations," and, as her spirit peacefully passed away, at ninety: "Oh! how beautiful! to go to a mansion prepared for us!" A devout, childlike, divinely-anointed minister of the Lord fifty and five years, shrinking utterly from anything like "notoriety," who will say that this Mary who loved so to sit at the feet of Jesus was misled or presumptuous, or followed a false guide?

One of the most remarkable characters in modern Quaker annals is Stephen Grellet, a French Romanist (1773–1855), who, after becoming an infidel, if not an atheist, came to this country at the time of the Revolution in France, and took up his abode on Long Island. There his views, through the providence of God, underwent a radical change. Being in a tender, seeking state, he attended a meeting of Friends at which two women ministers from England, Deborah Darby and Rebecca Young, were present. "After the meeting," he says, in his personal narrative, "my brother and myself were invited to dine in the company of these Friends, at Col. Corsa's. There was a religious opportunity after dinner, in which several communications were made. I could hardly understand a word of what was said, but as Deborah Darby began to address my brother and myself, it seemed as if the Lord opened my outward ear, and my heart. Her words partook of the efficacy of that 'word' which is 'quick and powerful, and sharper than any two-edged sword, piercing even to the dividing asunder of soul and spirit, and of the joints and marrow, and is a discerner of the thoughts and intents of the heart.' She seemed like one reading the pages of my heart, with clearness describing how it had been, and how it was with me. I was like Lydia; my heart was opened; I felt the power of Him who hath the key of David, no strength to withstand the Divine visitation was left in me. O what sweetness did I then feel! It was indeed a memorable day. I was like one introduced into a new world; the creation, and all things around me wore a different aspect—my heart glowed with love to all. The awfulness of that day of God's visitation can never cease to be remembered with peculiar interest and gratitude, as long as I have the use of my mental faculties. I have been as one plucked from the burning—rescued from the brink of a horrible pit. O, how can the ex-

tent of the Lord's love, mercy, pity, and tender compassion be fathomed!" All this Stephen Grellet says for himself: only the revelations of the last day may show the blessed results to others, both of high and low degree, which followed his religious labors and travels in Gospel service in this and other lands. I know of no more interesting and instructive biography, and rejoice that its value has of late been extensively recognized, and that various editions of his life have been issued. Can any aver that Deborah Darby stood not in her appointed place, in the Lord's ordering, when she delivered that searching, soul-reaching, after-dinner discourse at the house of Col. Corsa? In the writer's possession is a time-stained manuscript letter of this same Deborah Darby and her faithful companion, Rebecca Young. Its language is that of serene and God-loving spirits, content to follow on as they were divinely led, in the highway of holiness, but whose pens, I verily believe, would have fallen from their grasp, at the thought that they were seeker safter, or were being dragged into notoriety.

It has just been told how a minister from England, a woman, was an instrument in the Divine ordering, for the effectual religious convincement of a French-American, Stephen Grellet. On the other hand, it was an American, William Savery, of Philadelphia, who, while on a religious visit to England, was the instrument of similarly influencing the then youthful Elizabeth Fry (1780–1845). Concerning her appearance in the ministry, years afterward, one of her biographers says: "Elizabeth Fry was no stranger to the conflict between a fervent desire to yield in childlike submission to the Divine will, and the fear lest, in admitting a belief that this most weighty and important service was appointed by her Lord, she might be subject to the impulse of delusion. For more than eleven years did she wait ere the prospect, which was presented to her mind in youth, became matured and realized, and she felt strengthened to follow the footsteps of holy women, who, not only under the Mosaic dispensation, but also in the first and purest age of Christianity, exercised the gift of prophecy." Her petition was: "Thou who knowest my heart and all its temptations, be pleased to preserve me, and enable me to do Thy will in strength and in weakness, when it leads into the hardest crosses, as well as in the way of rejoicing." Did this woman, who preached to the consolation of thousands in prison and in palace, mistake her gift and requirement? A German prince who once interpreted a religious discourse for her in a foreign land, was moved to exclaim, "It is the gift of God!" A Christian woman wrote concerning a memorable occasion: "In a full and beautiful prayer, she seemed to bring the blessing of heaven upon us. Oh! may we long retain the power and the blessing of it! Surely, these times do leave a peculiar savor which is not to be forgotten. It adds to the precious seasons which are oretastes of heaven."

The mere gift of speaking well on moral subjects even of "speaking directly to the point," will not suffice to constitute a woman, any more than it will a man, a rightly qualified minister of the everlasting Gospel. With the lengthening of the cords, and the setting forward of the stakes, which now seem imminent, how important the recognition of the Scripture standard concerning the true call to acceptable service in this direction—that it needs to be altogether of God, his constraining, putting forth, drawing, and guiding, and not of man and his willing.

Now, there have been many hundreds of women since the rise of the Society of Friends, who have felt the burden of that inward unescapable requirement, "Woe is me if I preach not the Gospel!" Very faithfully, though ever with shrinking at their unworthiness and insufficiency, have they nevertheless obeyed the mandates of their Lord, "Preach the preaching that I bid thee." The good savor, and often the rich blessing which have attended the public ministrations of these handmaidens, have been attested in thousands of instances, and they themselves have testified with bowedness of spirit, yet with rejoicing lips, that their God is very pitiful, and a rich rewarder of all that put their trust in Him. Thus have they stood as witnesses to the truth of the asseveration of the Apostle Peter, in reäffirming the words of Joel, which the Lord commanded him to speak: "On my servants and on my handmaidens I will pour out in those days of my Spirit; and *they shall prophesy*."

Fifth month 31*st*, 1888.

NEWS OF FRIENDS.

WHITEWATER FIRST-DAY SCHOOL ASSOCIATION.

A CORRESPONDENT in Cincinnati, O., sends at a late date a report of Whitewater First-day School Quarterly Association of Friends, held at Richmond, Ind., on the evening of Sixth month 2d, 1888, prepared by F. M. Robinson. We make room for it, somewhat condensed. The exercises, after the reading of the opening minutes, began with readings and recitations from several persons. Also two essays, one on the Bible, in which the writer pleads most earnestly for more diligent reading and study of the Scriptures. Following this were encouraging reports from all the First-day Schools. Most of these speak of an increase in attendance and there seems to be a growing interest in all. Two new schools have been opened this quarter.

Albert Shute, of Richmond School, an earnest and faithful worker, has been called home from works to rewards. While his loss is deeply felt, it is the universal tribute that a good man has gone to his rest, while his sickle was yet busy in garnering grain in the Master's vineyard.

The question, "Would we not be benefited by participating in the Sunday School conventions of our counties?" claimed attention and elecited much earnest comment.

The chairman then called attention to the meeting of the General Conference in the Eighth month and reminded Friends that reports and names of delegates from each school should be sent to our clerk, Emily P. Yeo. Also urged the Visiting Committee to be more faithful and diligent.

Attention was called to the fact that the views of many of the churches had been greatly modified in recent years, and that from lack of association with them we frequently misjudged them.

Jonathan W. Plummer, of Chicago, made some well chosen remarks, in which he said we should study to know the truth for ourselves. Seeking to gather from any and every source that we can, that which will bring light upon this question of faith, as the spirit of truth within us bears witness. It is well for us to talk together from the standpoints which we variously occupy, and in comparing methods we may find ways more valuable than our own, by which our views may be better imparted. Our phraseology is not easily understood. To teachers he said, "There is, perhaps, no period of life in which the words that are spoken remain more steadfastly in the memory than in the first ten years of existence. Do not fail to consider what the child's life is; what its temptations are; what its aspirations are; what its circumstances are, and try to meet them with some application of that lesson which it can understand. Bring it into its daily experience. Appreciate the fact that the truth applies to every human being in the world. There has been no greater opening for the Society of Friends to give an intelligent exposition to thought, and we must give it in language that will be comprehended by others. Use words that every body understands. Our own views will be stronger and clearer than if we keep them from others. Let us be diligent. Let us gather from every source and develop our powers, and not bury our talents but cultivate them."

After vocal supplication for the divine blessing the meeting concluded under the cover of an impressive silence.

CENTENARY OF PLAINFIELD MEETING.

The Friends' Meeting-house at Plainfield, New Jersey, was first occupied on the 20th of Eighth month, 1788, and, consequently, the one hundredth anniversary of that occurrence will be Second-day, the 20th of next month.

It has been deemed appropriate to suitably commemorate the event, and at a conference of local Friends, Nathan Harper, Aaron M. Powell, Samuel B. Underhill, George R. Pound, Mary Jane Field, Catharine R. Webster, and Sarah Underhill, all residents of Plainfield, were constituted a committeee of arrangements.

It is proposed that the hour of commencement be two o'clock p. m., and the order of exercises as follows:

1. Historical sketch of the old meeting-house, its erection and occupancy, by Nathan Harper.
2. Biographical notes of the early Friends in Plainfield and vicinity, by Oliver B. Leonard.
3. Women in the Society of Friends, by Elizabeth R. Lafetra.
4. The past and future of the Society of Friends as a Religious Body, by Aaron M. Powell.
5. Reading of Whittier's poem, "Quakers of the Olden Time," by Anna R. Powell.
6. Remarks and reminiscences.

The occasion promises to be of great interest, and the company of Friends from abroad will be gladly welcomed. As some who cannot conveniently attend may desire to express their thoughts and feelings in writing, all such communications, addressed to either member of the before mentioned committee, will receive proper attention.

COMPULSORY EDUCATION; OR A PLEA FOR HUMANITY.[1]

It is a fact too well known to need verifiying, that in every city, large or small, there is a class of persons who are not self-supporting. And it is a fact equally true and equally well known that their ranks are being constantly recruited from the children of pauper parents. While there are some belonging to this class who have received an education and who are dependent upon charity because of indolence and bad management, and from choice, they are in the minority, they are the exception and not the rule. By far the largest number are paupers because they were brought up to that and nothing else. They have had no opportunity to learn how to do anything well, but to steal or beg.

What is the remedy for this? Undoubtedly, education.

And who owes them this education? The State. And she not only owes the education to them, but she owes it to herself and to her citizens to see that they do get an education.

Why do we hesitate? Is it because of the cost? Let us consider a moment. These people must be cared for, and every year, as cold weather approaches, comes the agonizing cry, "Help, help or we perish." Does it go unheeded? No. The city makes an appropriation, and the citizens put their hands in their pockets, entertainments are given, etc., and a fund is raised to meet the immediate necessities, and so it goes on, each year the same old story, varied only by the death of the old stagers and the birth of new paupers to take their places.

Now this same money, rightly expended, would educate these children out of pauperism and make them a help instead of a hindrance to a community, and the State should compel every child to obtain this educatoin.

What are the obstructions in the way, at present, of their receiving an education?

1st. Poverty, which interferes in three ways:

a. The children cannot be provided with proper clothing.

b. They are not able to buy books, etc.

c. The services of the children are required to earn their daily bread.

2d. An unwillingness on the part of children to attend school and a carelessness on the part of parents as to whether they do so or not.

3d. Total depravity, (we might term it,) on the part of a certain class of paupers, who would mutilate their own bodies in order to gain the sympathy of the benevolent, and thereby live without working; and who would, as a consequence, think very little of keeping their children in rags and filth in order that they might beg for them with better success.

4th. Helplessness from disease or bodily infirmity on the part of parents, which makes them dependent on their children's labor.

Now, how is the case to be dealt with? It looks formidable at first glance, but if we will only combine our efforts and look the matter squarely in the face,

[1]Read before the Indiana Yearly Meeting's Committee for Philanthropic Labor, Richmond, Ind., Seventh Month 9, 1888.

many of the difficulties (like goblins bravely met) will disappear when the light is turned full upon them.

The laws of our State already do, and have for sometime provided books for those who were unable to buy them.

The unwillingness on the part of children to attend school, and the disposition of parents to train them into vagabonds and beggars I think all will agree, should be met with the stern voice of the law.

Now, we only have left the provision of clothing for the poor, and the case of those children whose services are really needed to provide the necessities of life, and it seems to me that it is only necessary to consider how much help these families already receive, to see that it would be cheaper from a financial standpoint, to train these children to be self-supporting, even if in the meantime we are obliged to give more assistance to the parents.

It has for a long time been my opinion that systematic, organized charitable associations should be formed to help people to help themselves, and that in so doing much more good could be done and with less expenditure of money than is now being made for charitable purposes.

Students and others have proved it to be a success to "club together" to reduce living expenses to the lowest minimum. With the assistance of benevolent associations it would be possible for poor families to club together and enjoy the same benefits. I will not enlarge upon that phase of the subject now, but hope it will be brought up on another occasion.

Certainly all citizens of the United Stated should be required to receive an education in the practical branches of an English education, some manual training, good moral habits, and the ability to support themselves.

Where a child showed a natural ability to go beyond this in any direction that would make his services of more advantage to himself or the world, there would no doubt be some friend of humanity who would put it in his power so to do.

Men of property are taxed for the support of the Public Schools with the promise that their money shall be so expended as to raise the standard of citizenship. The tax is regulated by the number of children entitled to school privileges. Now, statistics show that a large number of children never receive this education for which they are taxed, and when it comes to voting, they are frequently left at the mercy of the ignorant, who out-number them, and they should demand value received for their taxes which they pay with the understanding that citizens shall be made better and more enlightened.

I KNOW my hand may never reap its sowing,
And yet some other may;
And I may never even see it growing—
So short my little day!

Still must I sow—though I go forth weeping
I cannot, dare not stay,
God grant a harvest! though I may be sleeping,
Under the shadows gray.

THE DOVE.

[A Friend sends us for republication (for it appeared in print many years ago) this touching poem written by the late Mary Townsend, of Philadelphia. There are those still living who cherish the memory of her many virtues, and who will reread it with a saddened pleasure. A local paper in which it early appeared says: "It was composed after hearing Edgar A. Poe's 'Raven' read; her own situation of blindness and utter helplessness being most touchingly alluded to and the contrast in the spirit of the two poems is very striking."]

'Twas midnight! solemn, dark, and deep,
And vainly I had courted sleep,
When worn with pain, with anguish tossed,
Hope, faith, and patience nearly lost,
I heard a sound, a gentle sound,
Breaking the solemn stillness 'round.
A gentle, soft, and murmuring sound,
Making the silence more profound.

I hushed my breath, again it came,
My heart beat faster, still the same
Low gentle murmur, met my ear,
Approaching nearer, and more near;
A single sound yet soft and clear,
And strangely fraught with memories dear.

A flood of clear and silver light,
Then burst upon my ravished sight,
Filling my little chamber quite;
And in that light a bird was seen
Not "grim and black with stately mien,"
But purely white and beautiful,
With look so mild and dutiful;
A lovely bird with plumage white,
In that calm, still, and clear moonlight.

Floating a moment round my head,
It rested opposite my bed,
Beside a picture lovelier
Than heathen gods, and holier;
Two beauteous babes, whose sinless eyes
Bespeak them still in Paradise,
Whose loving, soft and gentle eyes
Tell where that land of beauty lies;
There sat the radiant, white-winged bird:
I listened, but no sound I heard,
And then I spoke, "sweet bird," I said,
"From what far country hast thou fled?
Whence cam'st thou, and why cam'st thou here?
Canst thou bring aught my soul to cheer?
Hast thou strange news? Speak, gentle dove."
And the bird answered, "God is love."

"They tell me so," I faintly said,
"But joy is flown and hope is dead,
And I am sick and sad and weary,
And life is long and dark and dreary.
Think not thy words my spirit move."
Still the bird answered, "God is love."

"Some dearly loved are far away—
And some who fondly near me stay,
Are sick and sad and suffering,
While I am weak and murmuring.
Each for the other grieves and tries
To stay the tears that fill his eyes;
Why comes not comfort from above?"
Firmly but mournfully the dove
Distinctly answered, "God is love."

I started up, "The world" I said
"Though beautiful it once was made,

Is full of crime and misery now;
Want sits on many a haggard brow;
The warrior wields his bloody sword,
Slaves tremble at the tyrants' word,
Vice honored, virtue scorned, we see,
Why are these ills allowed to be?"
He raised his head, that soft eyed dove,
As though my boldness he'd reprove,
Then bowed and answered, "God is love."

"Forgive," I said in accents mild,
"I would I were again a child,
I've wandered from the heavenly track,
And it is late to journey back;
My wings are clipped, I cannot soar.
I strive to mount, but o'er and o'er
My feeble wings I raise in vain,
I flutter, sink, and fall again."
In low but earnest tones the dove
Still softly murmured, "God is love."

"Thou movest me strangely, wondrous bird,
My soul is strongly, deeply stirred,
My heart grows lighter—may I still
My mission upon earth fulfil,
Proving my love to God sincere,
By doing all my duty here?
Shall past omissions be forgiven,
And shall the weary rest in Heaven?"
He spread his wings, that radiant dove,
And cheerily answered, "God is love."

"Thanks, heavenly messenger," I cried,
"Remain that picture, still beside,
Surrounded by the light of truth,
Companion meet for sinless youth,
Thou blessed type of love and peace,
My hope and faith thou'lt still increase.
Be ever near me, gentle dove,
I know, I feel, that God is love."

MARY TOWNSEND.

THE MOMENT FOR REVENGE.

[From a Persian translation]

THE haughty favorite of an Eastern king
Paused in mere wantonnèss a stone to fling
At a poor dervish, who, despite his pain
And fury, dare not hurl the stone again,
But caught it from the dust; close hid away
Within his robe he kept it: "Yet the day
For sweet revenge will come! In patience wait
That happy time, no man can hurry fate."

Now the same dervish walking, on a day
Within the year, along the crowded way,
Heard the mad shouting of an angry crowd,
Who chased with jeers and curses loud
A flying victim,—'Twas the favorite rude,
Fallen from the height of favor where he stood
Of late. "Now," cried the dervish, "now's the hour
For my revenge!"

But now his arm lacked power
To cast the stone: "What, strike one sunk so low?
The curs alone attack a fallen foe.
Lo! if our enemy much power enjoys,
The blow we strike ourselves alone destroys;
And if in misery he be sunken low,
Our own hearts bid us spare the fallen foe.
Behold," he cried,—the stone slipped to the ground—
"The moment for revenge no hour brings 'round."

—*Alice Williams Brotherton, in Unity.*

MAKE YOUR DAUGHTERS INDEPENDENT.

WOULD it not be wiser far to induce young girls in thousands of happy, prosperous homes to make ample provision for any and all emergencies that the future may have in store for them? Could a better use be found for some of the years that intervene between the time a girl leaves school and the time she may reasonably hope to marry? The field for woman's work has been opened up of late years in so many different directions that a vocation can easily be found, outside the profession of teaching, that will be quite as congenial to refined tastes, and considerably more lucrative. Book-keeping, type-writing, telegraphy, stenography, engraving, dentistry, medicine, nursing, and a dozen other occupations might be mentioned. Then, too, industrial schools might be established, where the daughters of wealthy parents could be trained in the practical details of any particular industry for which they display a special aptitude. If it is not beneath the sons and daughters of a monarch to learn a trade, it ought not to be beneath the sons and daughters of republican America to emulate their good example, provided they possess the requisite ability to do so.

Two years will suffice to make any bright, quick girl conversant with all the mysteries of the art of housekeeping, especially if she be wise enough to study the art practically as well as theoretically. The management of servants and the care of the sick and children will be incidentally learned in most homes, and can be supplemented by a more extended study of physiology, hygiene, etc., than was possible at school. Sewing need not be neglected either, while leisure will readily be found for reading or any other recreation that may suit individual tastes. Another year, or longer, may be added to the time devoted to these pursuits, if desired. But, above all, let two or three years be conscientiously set apart for the express purpose of acquiring a thorough experimental knowledge of some art or vocation which would render its possessor self-supporting, and consequently independent.

If the tide of public opinion favoring such a course would but set in, many a one would be spared untold suffering and misery in after life. Let the rich set the example in this matter. They can afford to do whatever pleases them, and therefore have it in their power to mold public opinion. Be not afraid, girls, that you will find your self-imposed task irksome. Remember that occupation is necessary to happiness, and that there is no reason why you should not dream while you work.

The cry will be raised that there is danger that such a plan as the one advocated here will tend to give girls a distaste for the quiet retirement of home, but there is little cause for fear. Not one girl in twenty will voluntarily choose a business life in preference to domestic happiness. Indeed, it is absolutely certain that happy marriages would be promoted by this very independence among women. Not being at leisure to nurse every passing fancy, girls would elect to wait patiently until the light of true love came into their lives.—*Open Letter in the Century*

PROTECTION OF BIRDS IN GERMANY.

THE movement for the protection of the singing birds is not confined to our own country. The U. S. Consul-General at Berlin, in a recent report, gives some account of the state of the question in Germany. He says:

The indiscriminate slaughter of birds, so common in many parts of Europe, is one of the most crying evils of the day. If for no other reason than those dictated by æstheticism, these little winged creatures have claims upon human protection. The appeal comes to men from all sides and is made by birds of all varieties. Our song birds, those which once sang glad songs among the blossoms of spring and built their nests among our trees, delighting our little ones, are gone or are fast going. It is only a question of time when the meadow lark, which sprang up in our path in the fields, trilling his notes of ravishing sweetness, delighting the ear long after the tired eye had lost power to follow him into the sky, shall share the robin's fate by disappearing from our fields and gardens. The friends of poor little tom-tit, the most genial of all man's feathered friends, comes to the German Government with an indignant protest, supplemented by an appeal. In the autumn and early months of winter thousands of these gay little fellows are killed and trapped in the Thuringian forests, whence they find their way as delicate tidbits to the tables of gourmands and epicures in large cities. The thrush, fleeing from the cold of a Russian winter and Baltic breezes, finds himself tangled in the meshes of thousands of horse-hair nets and shares the same fate. The northern thrush is classed by ornithologists among our most useful insect and worm destroying birds. Thousands in their flight southward beat their little heads against the light-houses along the coasts; other thousands, landing to rest their weary wings on the island of Heligoland, are brutally beaten to death with clubs. Escaped from the perils of the sea, they seek shelter among the woods of middle Germany. Hundreds of traps are now set for them among the branches of the juniper bushes, whose berries constitute much of their winter food, especially when because of the snow they can find no animal food. Sometimes in one day a hunter bags a hundred thrushes caught and strangled in his horse-hair meshes. Did men but stop to think, when eating these dainty morsels, how little need they have of such, and how much life and freedom means to these little creatures, if one can judge from their glad songs and merry ways, would they not pause and ponder over the sufferings endured by these little fellows, and would they not refuse ever to eat another one? Not only is the thrush caught in these meshes, but great numbers of other birds, notably the red breasts and white breasts, larks, barley birds, and goldfinches. This is easily understood when we learn that the traps are often left to do wanton work, because the bird-catchers have been too lazy to go and remove them after the thrush season has passed. Thus they remain to snare the springtime and summer songsters. People in the country, subject to many inconveniences and money losses from annoying and destructive insects, are indignant at the wholesale destruction of their bird friends, but they are powerless. Time was when newspapers cried out against Tom and Tabby, the barn cats, because in a dearth of mice and rats, caused by their own faithful watching, they took to killing a bird or two. But here is destruction little less than wanton going on by the wholesale. Then again newspapers set up a hue and cry against the destruction of birds in Italy and the Mediterranean country, where they were a necessary article of food. It is time, say German writers, to look at home and do that which is to be done at our own door. So long as Germans eat these little birds as luxuries or delicacies no international action looking to the protection of birds on the shores of the Mediterranean is possible, for there they serve as necessary articles of food. The importance of the trade in such birds is infinitesimal compared with the great injury resulting from their destruction. So from a commercial economic standpoint the destruction of our song birds is attended with incalculable losses. Then what must the effect be upon a nation's finer feelings, the æstheticism of the mind and feelings of the heart, where such wanton cruelty is practiced?

The recent movement in the United States looking to the protection of birds, influenced me in giving some attention to the subject here. The tendency is to find some way of projecting an international law protecting the most useful and pleasure-making friends of mankind.

HABITS.

IT seems to be a common failing among good men who undertake to improve bad men that they consider their work ended when the bad men give expression to virtuous sentiments. But it is the steady, unwavering, unquestioning obedience to law that is the best proof of a man's fitness for a responsible position; and this attitude is not acquired suddenly and impulsively, but is the result of long and severe training. Erratic display of kindly and honest feelings does not demonstrate beyond peradventure that a man is a good man, but the persistent adherence to a right course is the best evidence of such a condition. An engine that runs forty miles an hour and keeps on the track all the time is much to be preferred to an engine that runs sixty miles, but is liable to run off the track. Most of the goodness in this world is, indeed, only a matter of habit. Men act largely on instincts; and these instincts, whether honest or dishonest, are the result of the habits of themselves or their ancestors. By far the larger part of the average man's action is based on habit. A very little effort will start us rightly, and from the performance of little duties we obtain the moral momentum to carry through successfully great and noble plans. Practice makes perfect in the moral and mental as well as in the physical world, and lack of practice results in debilitation and death.—*From the Summary.*

I AM never to lose consciousness of my own importance as an intellectual and moral being. Whoever respects it is my friend. I deserve this respect. —*Channing.*

BREAD DAY IN NORMANDY.

A WRITER in the *Epoch* gives an interesting account of bread-making in a French peasant's family, and it is one which will, no doubt, arouse in the American housewife an increased attachment to her own methods of work.

On calling at the farmhouse, the travelers were offered a lunch consisting of cider, goat's cheese, and hard, heavy bread. The loaf placed upon the table was one of a half-dozen, resembling cartwheels, which had been leaning against the wall, and was cut with a small saw made for the purpose.

These loaves were baked but once a month, bread day in a Norman peasant's family somewhat resembling washing day with us.

After luncheon, the daughter of the house took the visitors to a picturesque stone building where the bread was made, and where several pairs of *sabots*, or wooden shoes, hung against the wall, looking as white as if they had been painted. In one corner of the place was a large enclosure surrounded by boards, which were also snow-white. This was the dough trough.

Once a month the father of the family and his hired man here set the yeast rising. Flour and water are stirred together with huge wooden spades, and when it approaches the proper consistency, the men put on the *sabots*, jump in, and begin kneading.

They hop and prance, stamp and kick, until they have no strength left, and when that process is finished the dough is baked in a hugh oven.

"In America bread-making is woman's work," remarked a visitor.

"Ah," exclaimed the little Norman girl, "how cruel you men are! I would rather shoe horses!"

ONE'S LOT.

THE souls that would really be richer in duty in some new position, are precisely those who borrow no excuses from the old one; who even esteem it full of privileges, plenteous in occasions of good, frequent in divine appeals, which they chide their graceless and unloving temper for not heeding more. Wretched and barren is the discontent that quarrels with its tools instead of with its skill; and by criticising Providence manages to keep up complacency with self. How gentle should we be, if we were not provoked; how pious, if we were not busy; the sick would be patient, only heis not in health; the obscure would do great things, only he is not conspicuous!

Of nothing may we be more sure than this; that, if we cannot sanctify our present lot, we could sanctify no other. Our heaven and our Almighty Father are there or nowhere. The obstructions of that lot are given for us to heave away by the concurrent touch of a holy spirit and labor of strenuous will; its gloom to tint with some celestial light; its mysteries are for our worship; its sorrows for our trust; its perils for our courage; its temptations for our faith. Soldiers of the Cross, it is not for us but for our Leader and our Lord, to choose the field; it is ours, taking the station which he assigns, to make it the field of truth and honor, though it be the field of death.—*Martineau.*

NEWS AND OTHER GLEANINGS.

—In view of articles which have appeared recently on the subject of the wretched conditiom of the London poor, recent compilations show that there are 1024 existing organizations for the distribution of private relief, with an aggregate income of $21,752,695. Some of these benevolent societies are of great antiquity, but most of them are of recent origin. In the matter of ammounts distributed, London is the most charitable city of the world.

—James Russell Lowell is a member of the committee which is arranging for the commemoration of the bi-centennial of Alexander Pope, the poet.

—During the blizzard in Nebraska, last winter, an ingenious woman saved the lives of two men. She heated a flat-iron, and placed it close to a window to keep off the frost, and set a lamp by the window. The men, who had lost their way, saw the light, and were saved.

—There has just been organized in Chicago an underground railway company, the general plan of which is to build and equip twenty-seven miles of road covering the several divisions of the city, the underground roadway to be from one hundred to one hundred and twenty-five feet below the surface.—*Pittsburg Chronicle Telegraph.*

—Gambling is undergoing severe treatment in Canada. The Legislature has passed a law prohibiting contracts for the purchase of stocks with the object of profiting by a rise in their price, without the *bona fide* purpose of acquiring possession of the stocks.

—The growers of Delaware and Maryland unite in the statement that the peach crop this year will be the largest ever known, and that Philadelphians will be able to regale themselves at very moderate prices. It is estimated by good judges that the crop on the peninsula will reach 10,000,000 baskets, and naturally, a greater part will come to Philadelphia. Through the efforts of J. P. R. Polk, of Wilmington, an extensive peach-grower, an organization called "The Fruit-Growers' Bureau of Information and Distribution," was formed to supplement the work of the Fruit Exchange. Owners of nearly a million trees are now represented in the bureau, and they are looking ahead to a profitable season. Arrangements have been made with the railroads to ship direct to the smaller cities throughout the Middle and Eastern States. Western cities, as far as Chicago will be supplied direct from the peninsula. So wide a system of distribution has never before been undertaken, and it is thought great benefit will result to the growers therefrom.—*Exchange.*

—An example of how completely self-sustaining the United States is capable of becoming, when its resources are fully developed, is furnished in the reported discovery of perfect lithographic stone in large sheets within a hundred miles of Austin, Texas. The only source of supply of these stones heretofore has been Bavaria, where the mines have long been worked and where it is believed the supply is gradually becoming exhausted. If the reports from Texas should be confirmed by the production of large and perfect sheets of stone, another important industry will add to the prosperity and development of the New South.

—The *Quarterly Journal of Inebriety* for April says: "The medicinal value of alcohol is slowly vanishing. Here are facts from England and Wales. There are twenty-seven workhouses where intoxicants are not at all allowed. The experience of doctors in these has proved the use of alcohol unnecessary. In 1871 the total cost of intoxicants used in workhouses and infirmaries amounted to £82,554; in 1881 it amounted to £60,303; and in 1885 it was reduced to £44,820. The most marked feature of progress toward so-

TEA AND COFFEE.

If $3.00 is sent to me I will send 2lb real good Tea, Black, Green, Japan, or mixed, and 8lb of fine Coffee, roasted. Express charges prepaid in the following states: Pa., New York, New Jersey, Del., Md, Va., W. Va., D. C., Ohio, Ill., Wis., Ind. And I will refund the cost of registered letters when the goods are shipped.

WM. S. INGRAM, 31 N. SECOND ST., PHILADELPHIA, PA. ESTABLISHED —1856.—

MILK, CREAM, AND BUTTER ALWAYS ON HAND.

LUKENS WEBSTER,

120 S. FIFTEENTH ST.

Butter delivered twice a week to all parts of the city and surrounding country. We are dealing with the most reliable dairies. Orders by mail solicited and promptly filled.

LARD OF THE VERY BEST QUALITY A SPECIALTY.

Are you going to have any Paper Hanging Done this Spring? If so, observe these prices for newest patterns, perfect, full length.

Lustres or Mica Papers, . . 6 Cts. Roll.
Beautiful Gold Papers, . . 15 Cts. Roll.
Felt or Cartridge Papers, . 20 Cts. Roll.
Heavy Embossed Golds, . . 35 Cts. Roll.

We'll send free to any address in the country, a full line of samples with borders to match.

A. L. DIAMENT & CO., - 1206 MARKET STREET.

DARLINGTON SEMINARY FOR YOUNG LADIES. WEST CHESTER, PENNA.

The Thirty-third School Year will commence on the 17th of Ninth month next. Location healthy and beautiful; Grounds extensive; Course of Study thorough and full; Diplomas granted.

TERMS; $180.00 PER SCHOOL YEAR.

For Catalogue, giving full particulars, address the Principal.
RICHARD DARLINGTON, PH. D.

ABINGTON FRIENDS' BOARDING AND DAY SCHOOL,

Near Jenkintown, Pa., North Penn and Bound Brook R. R. Ten miles from Philadelphia.

Next school year begins Ninth month 10th, 1888. Courses of study arranged to furnish a thorough English education and to prepare for college.

Board and tuition $145 to $175 per school year. Tuition alone $25 to $55. For further information address,

ARTHUR H. TOMLINSON, Principal, Jenkintown, Pa.
Or CYNTHIA G. BOSLER, Sec., Shoemakertown, Pa.

SWARTHMORE COLLEGE

OPENS NINTH MONTH ELEVENTH.

Thirty minutes from Broad Street Station, Philadelphia.
Under the care of Friends, but all others admitted.
Full college course for both sexes; Classical, Scientific, and Literary.
Also a Manual Training and a Preparatory School.
Healthful location, large grounds, new and extensive buildings and apparatus.

For Catalogue and full particulars, address
EDWARD H. MAGILL, LL. D., President,
Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.

NEWTOWN SQUARE, PA.

Terms, $150 to $175 per year.

Apply to HANNA R. CALEY, Principal, address, during vacation), Media, Pa.
Or to
THOMAS P. BARTRAM, Newtown Square, Pa.,
CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,

A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 13th, 1887. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,

FREDERICK E. WILLITS, Sec.,
Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—

A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hour from New York city. For catalogue and particulars, address,

SAMUEL C. COLLINS, A. M., Prin.,
Chappaqua Institute, N. Y.

QUEEN & CO. 924 CHESTNUT ST.

HIS WAY.

By cross and by loss our God leads us
Along a mysterious way;
By loss and by cross he reveals it,
As wisest and best, day by day.

By storm and by sunshine he mellows
Our hearts, that his seed may take root.
By sunshine and storm he develops
The beauty and bloom of our fruit.

By gift and by grace he rewards us,
E'en here, with the "finest of wheat;"
By grace and by gift in his kingdom,
At last will receive us, complete.

All praise unto him we would render,
His way leads to holy estate,
His clouds drop the dews of rejoicing,
His gentleness maketh us great.

—*Hannah Coddington, in S. S. Times.*

SERMON BY S. P. GARDNER.[1]

THE mission of Jesus was to the people of the Jews, to raise them to a higher spiritual plane than they were under the law of Moses, and he showed them the highest possible condition by setting before them his own example. In order to distinguish between the religion under the Jewish dispensation and that which he came to promulgate he makes use of the expression, "except your righteousness shall exceed the righteousness of the Scribes and the Pharisees ye shall in no case enter into the kingdom of heaven." And what was the righteousness of the Pharisees and Jews? It was simply founded upon the letter, and laid restraint only upon outward action. It dealt not with the heart. If the man did not commit an outward act it could not reach him. But that which Jesus called to was deeper.

If he did not have the love in the heart, even though he did not commit the act still he was guilty. By the religion of the Jews they could carry out the natural disposition in all its cruelties.

It is a common idea that the Scriptures afford a saving knowledge. To refute this I may bring up the instance of Paul, who was learned in the Scriptures and knew all that Moses had said of God and was zealous in his faith and yet it is evident that he was not acquainted with God or he would not have pursued the course of persecution he did. He was not possessed of the tenderness and brotherly kindness nor fellow feeling that true righteousness inspires, or he would not have destroyed or put to disadvantage his fellow men. In examining the life of Paul we find him going on in the persecuting spirit justified by the law, which admitted of retaliation and the taking of an "eye for an eye, a tooth for a tooth." He was no doubt sincere, but it is not enough to be sincere when the action affects another to his injury. There must be a higher source. On his way of persecution a light shone around him above the brightness of the sun. It was sufficient to show him the condition of his heart as the outward sun could not. He was confounded and fell to the ground. He was acting without Divine authority but when God was revealed to him by the visitations of the Son of Righteousness, which showed him his state, then was he filled with truth and made willing to suffer for the cause which he had persecuted. It is plain that it was not an outward man, but the Son of God which was sent into the world that whosoever should believe on him should have everlasting life. This Son never armed man with authority to destroy his fellowmen.

We can see a parallel case in Job. He was naturally just and benevolent, and directed his steps according to his views of God as he had heard of them through history. But when it came to the proving, it pleased God to reveal himself in his true nature; and Job was made to declare, "I have heard of Thee by the hearing of the ear but now mine eye seeth Thee, wherefore I abhor myself and repent in dust and ashes." Here was the first true and saving knowledge he had of God. Here we must notice the difference in their dispositions, Job had never persecuted his fellowmen yet he had said and done things that he should not say and do. But when the light of divine truth came to his mind he saw his true condition as did Paul. He saw his former course had been wrong, as there is no need of repentance where there was no error. History never gave and never does give a saving knowledge of God as was shown by the course of Paul and Job before their conversions.

Should not those of us who are making a profession carefully examine our faith and see whether we have taken it from tradition, creeds of church and history, or whether we have really witnessed its revelation in our hearts. I do not allude to any profession in particular. I am convinced there are Christians among all denominations. God is not partial. He visits all peoples, instructing them in the way of life and salvation. Our Heavenly Father does not call for any faith further than we are led by the evidence which springs from the manifestations of his own divine nature in our hearts—and that love by which we may overcome the world—working by

[1]Delivered at Genesee Yearly Meeting, at Bloomfield, Ontario, Sixth month 10, 1888. [Report in *Young Friends' Review.*]

faith to the purifying of the heart, and showing the result by our works.

It is widely taught that our good works are as filthy rags. This is a mistake. God commanded us to work. Jesus said, "not everyone that sayeth unto me, Lord, Lord, shall enter into the kingdom of heaven, but he that doeth the will of the Father which is in heaven." *Do* means *to work*. Work and we shall be judged by our works. Jesus makes mention of righteous works and moral works.

Why is it that the sermon on the mount is so lightly touched upon? Because it taught nothing but morality which is worthless in the sight of many, still in my mind it is all important, embracing true principles of religion. Jesus came to teach morality and summed up in this saying: "Therefore all things whatsoever ye would that men should do to you do ye even so to them, for this is the law and the prophets." If men would adopt this rule of life it would do for this generation and all to come. It would do for man what all religion has failed to accomplish. Jesus forbade war, but how is the state of Christendom to-day? As the result of being founded on historical systems is it not going hand in hand with the spirit of the world? Do we not witness our fellowman slain on the field of battle all sanctioned by the authority of Christian nations? Is this a religion of love? Love is the true and native element of living man, and the soul that dwells in God must dwell in love. The office of the Gospel is to restore to that heavenly condition in which we enter the world.

I would not be understood to mean that we suffer from the sin of Adam. We awake to find our passions established in our system of which we had no part or choice. Are we to suppose the natural corruption of man when Jesus calls them unto Him and said, "Suffer little children to come unto me and forbid them not, for of such is the kingdom of God." "Take heed that ye despise not one of these little ones, for I say unto you that in heaven their angels do always behold the face of my Father which is in heaven," which could not be if tainted with the sins of Adam. We come into this world pure and innocent, in a heavenly state and condition, and remain so until the law arises in our souls, when our Heavenly Father gives us the choice, and we may continue in this path, and he will lead us if we will follow the dictates of truth, or we are free to turn away to gratify the demands of our lower natures. If we fall from this primordial condition of purity, we need restoring. And in this condition what relation do we sustain with God? We are told God is angry with the wicked every day. This is not the relation given in the New Testament. "God is love," and those who dwell in Him dwell in love. That which is to be known of God is manifest in man. Jesus was made and tempted at all points just as we are, yet without sin. This purity he kept through obedience and was made perfect through suffering, which cannot be said of a being higher than man. There was the divine in Jesus, and being obedient to this he overcame the world. We have the privilege to walk in the same path. We came for the same purpose as he to bear witness to the truth. He was faithful to the end and testifies by saying, "I have finished the work that Thou gavest me to do." They say, "Jesus, you are mistaken, you have not suffered or shed your blood on the cross to let us go free, you have not redeemed the world." They tell us if we do not believe we cannot be saved. Examining this doctrine we find it cuts off three-fourths of the human family from the hope of salvation. Jesus never taught any such doctrine. He said man should enter into the work for himself. They wait not for the reward; they are recompensed for each act of obedience, as also for each sin and transgression they can not escape the results.

I am a full believer in the testimony of Jesus; he was annointed of the Father, He had it not naturrally nor by study, for at thirty years of age he said: "The spirit of the Lord is upon me because He hath annointed me to preach the Gospel," and closing the book, he turned to the people and said, "This day is this Scripture fulfilled in your ears," and further: "This day is this fulfilled before you." And he began to declare the will of God to men. God spake through him, and that constitutes the divinity that dwelt in him. The greatest evidence of the Supreme Being is not to be found in history or study, or to be gained from men, but from the fact that when we do wrong we feel something which disapproves, giving pain and sorrow and grief, and when we do right we feel something which approves, giving peace and joy. My friends, we have it within us; it is the inspeaking word of God. It will even lead us in the path of safety as it did Jesus, even to the overcoming of the world.

What did he mean when he said, "I will give my flesh for the life of the world?" They could not hear the saying in that day. They did not see the deeper spiritual meaning underlying the figure. And again, "Except ye eat the flesh of the Son of Man, and drink his blood ye have no life in you." A little further on he says in explanation, "It is the spirit that quickens, the flesh profiteth nothing, the words that I speak unto you they are spirit and they are life." But we are told to wholly depend upon its merits. Whose testimony must we believe? I will believe in that of Jesus as it agrees with right common sense, and the living evidence in my own heart. Nothing of an external nature can suffice. "Other foundations can no man lay than that is laid, which is Jesus Christ." And for this we must give up the world. What world? Why the hardness of heart, the indifference and carelessness with which we follow our Maker, our wrong preferences, all our unjust dealings with our fellowmen, and all this for the Spirit of God, the Christ. And what constitutes the Christ? Paul says, "when it pleased God to reveal His Son to me," this means no outward man, his attention was turned away from the outward, and he adds, "I conferred not with flesh and blood," and further on he declares that this "Christ which we preach was a stumbling block unto the Jew, and unto the Greeks foolishness, for the Jews required a sign and the Greeks sought after wisdom, but unto them which are called, both Jews and Greeks, Christ the power of God and the wisdom of God." This,

then, is the Christ we preach, the power of God, and the wisdom of God, which is revealed in the soul, and this never was crucified, never could be nailed to the cross. We can reject its counsels, and refuse to receive it, but we cannot destroy it.

Jesus used many parables and figures of speech that were familiar to his hearers to teach them truths that were hidden, and people have come to take the figure for the fact. Thus we wrong the Master. He did not address them to our credulity, but to our reason. And properly used they lighten up the truth in a wonderful manner.

I have often been lead to review that important parable of the Prodigal Son. It is universally applicable to the human need. It starts with the child in the Father's house, meaning as I understand it a heavenly state, a state of innocence ; it sets before us his departure—the result of a free-will choice after the years of judgment come; it follows his wanderings farther and farther from his home, lower and lower into degradation and sin, till it seems all is lost. In this lowest state he comes to his sense of his condition, he feels an aching void within, he finds that sensual things cannot satisfy the spirit, and remembering, not fearing the wrath to come, but remembering the good things in the father's house he said from his aching but repentent soul, I will arise and go to him, and will confess unto him that I have sinned against heaven and before thee. Mark the humility. He came into a condition to meet his father. Do we hear the father saying as some suppose, that before a restoration is made some innocent being must satisfy His honor by bearing the sins and suffering on the cross. No! he knew his suffering, he knew the state of his heart that his repentence was sincere, and the father ran to meet him while yet a great way off, and fell upon his neck; he clothed him with his best robe which was his own spirit, his overflowing love, and there was great rejoicing. And why? Because this my son was dead, and is alive again; he was lost, and is found. He had become dead to everything good as the result of sin. He had dug his own grave in the lusts of the flesh and had buried himself in it, yet after all he experienced a resurrection—the most important that can concern man. It shows a way to come forth even from the lowest depths. I was taught that the wicked would suffer in perpetual fire. I am now otherwise convinced. I believe our hell is a suffering in this life for the wrong done in it.

David was a man after God's own heart as all are in our primordial state. He was afterwards tempted. He fell. He sank down into the lowest hell. Did he remain there? No. "I waited patiently for the Lord and he inclined unto me and heard my cry. He brought me up also out of an horrible pit, out of the miry clay, and set my feet upon a rock, and established my goings, and he put a new song in my mouth, even praise unto our God." Here was a resurrection experienced by David; and how? "Sacrifice and offering thou didst not desire, burnt offering and *sin offering* hast thou not required." What *was* required? The Psalmist gives us to know. "I delight to do Thy will, O my God; yea, Thy law is within my heart." That, my friends, is the right ground. To desire to be strictly obedient to that which is written by the finger of God upon the tablet of the heart. The will of God and his laws are manifested inseparably, and as we act or refuse to act up to it, judgment passes upon us here in this life.

Some are looking to the far distant future for a "great day of judgment." This is not an expression of gospel truth. John says, "I saw an angel fly in the midst of heaven, having the everlasting gospel to preach unto them that dwell on the earth, and to every nation, kindred, tongue, and people, (mark the universality of it), saying with a loud voice, fear God, and give glory to him; for the hour of his judgment *is* come. It is set in every heart and we may know how our account stands. Our own consciences have kept the record. And we need not *wait* to merit the Kingdom of Heaven, for it may be enjoyed in this life. "It is not meat and drink; but righteousness, and peace, and joy in the Holy Ghost." It is a condition of the soul that can be experienced now and here. It is the blessed privilege of each one, and to be gained by governing our propensities, appetites, and desires, which are all right and good in their proper places. Wrong, on the other hand, is an abuse of some blessing that God has given, and through this door sin came and still comes into the world. We cannot trace wrong to any other source. It is maintained by some that once an angel rebelled in heaven and led astray all the rational creation. Now this is not my experience. And what say the Scriptures? "Let no man say when he is tempted, I am tempted of God; for God cannot be tempted with evil, neither tempteth he any man; but every man is tempted, when he is drawn away of his own lust, and enticed, then when lust hath conceived it bringeth forth sin!" It is a total giving up to do wrong. This was the condition the prodigal found himself in. And from this condition there is certainly need of a resurrection, a returning home.

Jesus, after he was taken from the world, had a message to be sent back. Coming thus, we might suppose it to be something that most deeply concerns man in this state of being. What was this final all-important message? "To him that overcometh will I grant to sit with me in my throne, even as I also overcame, and am set down with my Father on his throne." Overcoming as he overcame entitles us to the same privilege. And it is possible. But if the other theory is true, that Jesus came to suffer death, to shed his blood in order that men might be saved by it, then there was no need for this after message laying such stress upon individual labor. My friends, banish that erroneous idea from your minds that all is done for you. We must enter into the work ourselves, and work out our own salvation; we must cultivate the Eden of God. And as we are obedient the Spirit itself will bear witness with our spirit that we are the children of God; and if children, then heirs; heirs of God and joint heirs with Christ; if so be that we suffer with him, that we may be also glorified together.

You, my young friends, you must form your own

character; I entreat you to form it rightly. Be one of the innumerable multitude which John saw, gathered of all the nations and kindreds and people and tongues, which stood before the throne, and before the Lamb clothed with white robes and palms in their hands. "These are they which came out of great tribulation, and have washed their robes, and made them white in the blood of the Lamb." These are they who have succeeded in keeping their characters pure, which is your privilege and mine, and is accomplished by means that God has placed within our reach. But we can reject it. We have the freedom of choice. Let us not trifle with error lest ere we know it will bind us down in darkness with adamantine chains. Let us rather take up the cross. It will not be a hard task nor take away from you one pleasure, but will crown you with the blessings of God. Taking the cross is but to lay a proper restraint on your passions that might otherwise become abused and perverted and thus lead to wrong acts. You will find this to be to your advantage and you will become a pillar of truth for God. This is the spring time of your lives, and you know if there are no blossoms in the spring there can be no fruit in the autumn. I know the temptations that may beset you for I traveled the same path; but be faithful to your Divine Master; then you will pass between venomous serpents and they shall not harm you, through the fire and it shall not kindle upon you, and through the waters and they shall not overflow you.

Editorial Correspondence Friends' Intelligencer and Journal.

NEBRASKA LETTERS.—NO. VII.

In this small but ambitious town of less than 800 inhabitants there is little transpiring that affords material of sufficient interest to repay the reading; yet Creighton, in its growth and its resources is a fair index of what enterprise and a little capital can do for the rich prairies west of the Missouri, and in this respect some value attaches to its history, as the history of a multitude of other towns that are springing up with amazing rapidity, pushing out farther and farther westward, till in the near future the wave-washed shores of the Atlantic will be joined to the sunny slopes of the Pacific by a tide of human life surging from the east to the west, as they have already been bound together by the Railway and the Telegraph.

The opening of Nebraska to settlement is of itself a matter of great interest in the development of this vast western land. Any one whose birth dates back to the first quarter of the present century, and who was familiar with the geography of that period, can recall the boundaries of civilization, beyond which lay an "unexplored country, roamed over by immense herds of buffalo, and by tribes of wild and hostile Indians, who lived by the chase and by cultivating small patches of maize." How the imagination of the young aspirant after knowledge and adventure, delighted in filling out this brief picture, is best known by the few who still remember the impressions it left upon the mind.

Yet it was not then an undiscovered country. The feet of the white man had trodden in the trail of the Indian and crossed in his canoe the broad, shining waters of the Platte more than three-quarters of a century before the "Pilgrim Fathers" landed on Plymouth Rock; so it is stated in the "History of Nebraska,"—a folio volume of 1,500 pages, which I find in Dr. R's library. The data is taken from documents edited by M. Margry, in Paris, and now in possession of the United States Government. It was while searching for the mysterious "seven cities of Cibola," in the land of Quivera, that Coronado, a Spanish leader, with a few chosen men well mounted, and some foot soldiers, penetratedthe country to the "fortieth parallel of latitude." Copying from his report to the king: "The inhabitants," he says, "are good hunters, cultivate corn, and exhibit a friendly disposition. The men are large and the women well-formed. The soil is the best it is possible to see for all kinds of Spanish fruits. Besides being strong and black, it is very well watered by creeks, fountains, and rivers. Here I found plums such as I have seen in Spain, walnuts, and excellent ripe grapes." One of Coronado's lieutenants writes: "For a grazing country experience proves that it is admirably adapted, when we consider that herds of bisons and other wild animals, vast as the imagination can conceive, find sustenance here."

This expedition was made in the year 1541. They reached, it is believed, the Platte river in August, where a cross was set up, and the explorers turned their faces southward again. The narrative of this journey is intensely interesting; the pious zeal of the friars who accompanied the army is recorded in the usual extravagant language of those times. One, writing of the country says: "America is a school where one learns perfectly to seek nothing but God, to desire nothing but God, to have his whole thoughts upon God, and to rely only upon the paternal providence of God.

"To live among the missions of the New World is to live in the bosom of the Almighty, and to breathe only the air of his divine conduct. How fragrant this atmosphere; How fine the holy horrors of these forests; What lights in the thick darkness of this barbarism; The joy of having baptised one savage, who, dying soon after, may go straight to heaven, surpasses all which one can imagine of joy in this world. . . . One never encounters the cross, the clouds, and the thorns, but he finds Jesus in the midst of them."

All that is now the State of Nebraska, was included in the French province of Louisiana. It was ceded to Spain, and afterward, by a treaty between France and Spain it again became French territory. In the year 1803 France ceded Louisiana to the United States, and the whole valley of the Missouri even to the Rocky Mountains came under the jurisdiction of our government.

It was not until 1854 that what constitutes Nebraska was organized under a territorial government, which was continued until 1867, when it was admitted into the Union as a State. The geological history of the State is of even greater interest than its settlement, but there is less in it for the general reader, who finds more to satisfy him in the development

and progress of the present, than in all that can be said of this old planet from its first existence as a burning satelite through all the cycles of time inconceivable, to the age in which it became fitted for the abode of the human family.

But to return to the now and here, Nebraska occupies a central position in the family of States. It is a high table land from 1,700 to 3,500 feet above the sea level, and with an acreage of productive soil of the greatest fertility, having less waste land for its size, perhaps, than any other State in the Union. The wild grasses are abundant and most nutritious, the cows feeding entirely upon them give quantities of milk unsurpassed for richness, and where butter is made by one who is painstaking, it equals the best that is brought to our Philadelphia markets.

The town of Creighton, where I am spending a few weeks of restful leisure, is very prettily situated on a plateau overlooking a branch of the Bazile creek. A colony comprising twenty families made the first settlement of the town in the spring of 1871. It is laid out with broad streets, crossing each other at right angles, and has broad sidewalks. Some of the residences are embowered in trees that have been planted and grown into their present size within the last ten years. Seven religious organizations have places of worship. Most of the congregations are small, two worship in the same house, they are German and English speaking Methodists. One cannot but feel how the Church is weakened and its influence for good circumscribed by such petty subdivisions, especially in a newly settled community, where money is scarce and the rates of interest exorbitant. Pastoral support in such cases must be burdensome. Dr. R's is the only family belonging to the Society of Friends within many miles, though several persons here claim descent from Friends. I fully realize the difficulty that our members, who have growing families and live entirely away from any meeting, encounter. The children, as they come to an age to be influenced from the outside, can see no reason why they may not associate with others of their own age in the Sunday-school, the singing-classes, and in religious worship. They have had no training in the customs and usages of our forms of worship and more than all else there is in the youthful mind a sense of obligation to the Heavenly Father that prompts even a very young child to go to meeting when he sees others going, and unless the parents are under the divine influence, and feel so strong a desire to keep their children within the fold, that it will enable them to set apart a time of worship in their own family circle and strictly adhere to it, they had far better go with them to the church that comes the nearest to our faith, than take the risks of their choosing for themselves while they are too immature to choose wisely and well.

I believe that Friends would not find family worship a hard duty to take upon themselves were they fully brought under the discipline of the truth as we understand it. The lessons for First-day School, and the pure and simple precepts of the New Testament, offer material for study and conversation, and the training that a time of quiet waiting, however brief, would give, could not fail to make a deeper impression on the minds of the children than all they might hear from the pulpit. It is family religion after all, that moves and influences our lives. It is because in the home circle we realize and put into practice the precepts of truth that our hearts go out to our neighbors and friends, and we enjoy meeting with them in the public assembly. If I could go to every isolated family in our broad land, my message to them would be set up your altar at your own fireside, gather there with your chileren, and, like the pious Hebrew of the long, long ago, tell them of the Heavenly Father, the Jehovah of the ancient time, who cared for and protected little children then, and is the same loving Father now, who will hear and answer the desires of all who seek his guidance, and help us every one to be strong and true and brave to withstand every temptation.

May our Heavenly Father so touch our hearts with his abounding love, that our chief desire will be to glorify him in all that our hands find to do.

L. J. R.

Creighton, Neb., Seventh month 20, 1888.

From the Sunday School Times.

LIFE MEASURED BY ITS PURPOSES.

It was a rabbinical saying that the perfection of life consists in the attainment of purposes. The sentiment is a profound one. It makes the goal at which life is aimed the test and measure of its quality. No life will ever rise above its aim; it may fall far below it, but it cannot rise above it. The purposes of life form the upper limit of life; and all experience proves that, when they are strong and steady, they lift the whole life more and more into their own sphere and sweep, and thus become the measure of life, determining its attainments, on the one side, and protecting it from unworthy action on the other. The fixed purposes of life hold every energy to its right direction, as the polar attraction holds every magnetic needle to its unvarying position.

Aristotle analyzed the idea of cause into four elements, which he called the formal, the material, the efficient, and the final cause, respectively. The formal cause of a house would be the plan of the building as shaped in the builder's mind; the material cause would be the wood, stone, and other elements which are built into the structure; the efficient cause would be the skill and force of the workmen who put together the materials according to a given plan; and the final cause would be the end which the building was designed and adopted to serve,—the cause which is both cause and end. Every true work of industry and skill involves these four elements in its construction. And of the four causes, the final is the most important, because it is determining for the others. The plan cannot be completed until the end is determined. The materials cannot be chosen except in the light of the purpose which the building is to serve, much less can the workmen proceed with the building. Logically, therefore, the final cause stands before all the others, and decides what they must be.

With equal appropriateness might this analysis

be applied to human life. The plans which are formed, and the ways and means which are devised to execute them, may be called the formal cause. The opportunities of life, its wealth, knowledge, and other resources, correspond to the material which is to be built into the structure. The active powers, vigor of mind, and energy of will, are the efficient cause which combines the materials according to the plans adopted. But what comes last in the order of enumeration comes first in importance. The end which it is proposed to secure in life, is the final cause which guides the working energies, determines the material, and gives character to the plan. Take the case of a life whose aim is ambition, the pursuit of power, or wealth. All the plans of life must be formed in accordance with this end. All lines of action which do not bear upon personal self-advancement must be carefully ruled out. If any are chosen which seem inconsistent with this aim, they must be so bent and turned as to be made to contribute to the great end to which life is devoted. Unselfish efforts must be professed and the impression of disinterestedness produced in order that it may be turned to account in furthering the ends which lie coiled up like a spring within the machinery of every action. This ambition will also make its own use of materials. It requires those which are tractable to its purpose. It will use men of little uprightness because they are such. It will eagerly avail itself of men of strict integrity from whom it can succeed in concealing its true character, in order, thereby, to lend the appearance of virtue to its ends. It has a different language for different men, according to the ways by which it hopes to further its ends with them. This final cause determines what efficient causes it will call into its service. It will have large use for shrewd foresight and small use for conscience. It will employ with great service energy of will, but will make little account of depth or tenderness of feeling. But even these powers of the moral nature it can use indirectly for its ends, for it draws from them ideas and words wherewith to disguise its real purposes. The moral nature thus becomes a great convenience as a wardrobe from which may be derived a fair livery under which the most selfish life may parade before men with great profession of virtue and honor.

The final cause governs all the rest. Purposes determine plans, materials, efforts. The dignity and energy of life rise in proportion to the nobleness of the ends to which life is devoted. Hence the great importance for every life of some worthy fixed purpose which shall lay its strong hand upon every plan, energy, and talent. There need be little fear of men going seriously astray in individual actions, if the great ends of their lives are clearly chosen. These aims tend more and more strongly to determine all individual choices and acts into the line of their own direction and action. It is the man who has no fixed aim in life, who has no settled conception of what he is determined to become, who is in constant peril. There is a deep, underlying consistency in human life, despite all that is said to the contrary. Those lives which are called inconsistent are doubtless consistent with their inconstancy of purpose. They act variably, because they are variable. Men cannot calculate their actions because they cannot calculate them themselves. Their morality depends on varying moods, not on unvarying purposes. They are double-minded,—theoretically right-minded, perhaps, or in some conditions noble-minded; practically weak and vacillating, the sport of passion and temptation,—"unstable in all their ways."

Every observant student of life must find accumulating proof of the truth that the meaning of life is measured by its end. It is obvious that this principle carries our thoughts beyond this present world; for we can never find the utmost limit of our life within the narrow boundaries of time. Here lies one of the deepest meanings of our belief of immortality. It gives range and sweep to life. If these few years were all of life, the most aspiring souls would be but as birds which beat the bars of their prison-house, longing for a larger liberty, a greater sphere for life's growth and perfection. The hope of immortality gives range and sweep to all the noblest purposes which men form and attain in this world. It assures the soul that the shining way of growth and service upon which it longs to enter does not terminate at the tomb, but that it leads through its portal into a larger, freer realm of spiritual life and growth, where the worthy purposes of life, so imperfectly attained here, shall find their full completion. As the purposes for this life which terminate upon character, nobleness, and usefulness, crown and elevate all the activities and employments of life, so does the assumed hope of an immortal life crown and complete all the purposes of this lower life, disclosing their promise and possibilities, and assuring their realization.

The conception of life which is involved in the idea of its perfection as consisting in the attainment of purposes, is a suggestive one. According to this conception, life is an achievement. Its perfection is not found in its conditions, but in its struggles; not in its comforts and enjoyments, but in its conquests and acquisitions. This conception of life banishes at once all maudlin sentimentality about life, all pessimistic praise of unconsciousness as the goal of life, all apology for ennui as life's normal condition. It brands all such conceptions of life as perversions unworthy of our moral nature and noblest aspirations. Its keynote is *achievement*. It says: Have something to do. Do it. Life is heroic; the world is a sphere for training the powers, for subduing the lower and developing the higher. Life is not a meaningless play, nor a stupid farce; it is a reality, an opportunity, a strife for real rewards.

This conception of life cannot be maintained unless it is held in relation to God. The sickly and despairing view of life which declares that it is not worth living is the offspring of a philosophy which has no living sense of God. Instead of the reason, love, and energy of God, "the unconscious" is set forth as the basis and end of the universe. No world that is worth living in, and no life which means anything noble or good, can be based upon such a deification of negation and nonsense. If our modern life is to be strong and healthy, it must be true to faith in a living God who rules the world in

righteousness and love, and who is working out in human life his purposes of blessing for men who are solemnly called to coöperate with him, and to find their true welfare and happiness in the line of his designs for them. The word "life" will mean to men, in the long run, what the word "God" means to them. We cannot long hold our purposes to any very high mark except by holding them in relation to a great divine purpose for the world which embraces, elevates, and gives dignity and meaning to all the truest ends and highest aims of human life. Our lives will lose their greatest strength and inspiration if they are cut off from those high principles and truths which are mingled with the name of God. To know that our feeble plans fit into the plan of the world, to be assured that our purposes are embraced in that great purpose of God which sweeps through time and rules eternity, is the only adequate inspiration to our noblest thought and best endeavor.

SCRIPTURE LESSON, No. .

EIGHTH MONTH 5, 1888.

TOPIC: BURNT OFFERINGS.

GOLDEN TEXT: He hath shewed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God? Micah 6 : 8.

Read Leviticus 1 : 1-9.

THE sense of duty and obligation to a Supreme Being, to whom offerings must be made in acknowledgment of dependence, or through fear; or that his favor may be secured, or from whatever cause the human mind may be influenced, is as wide and universal as are the needs of man. In the earliest records of the race, we find this sense of dependence upon an unseen Power. Cain and Abel made their offerings. Noah built an altar when he came forth from the ark and offered burnt offerings. (Gen. 8: 20.) This would indicate that this form of sacrifice was observed before the flood. When Abraham went into the land of Canaan, he found not only a religion that called for animal burnt offerings, but the worship of Moloch, which required human sacrifices.

The burnt offering was wholly consumed by fire on the altar; nothing was left but that which was unconsumable. The smoke went up or ascended to God in some way, it was believed, as an expiation for sin. An emblem of the offering by the sacrifice of himself, soul and body, to God,—the submission of his will to the Divine will. This thought was paramount in the ritual that Moses established. Very slowly the people, through the teachings of the prophets, came to a truer idea of the sacrifice that our Heavenly Father requires, yet it was not until long after it was declared (Isaiah 1 : 11), "I am full of the burnt offerings of rams, * * * and I delight not in the blood of bullocks or of lambs or of he-goats," that the daily offerings ceased, not indeed until the temple was destroyed, and the beautiful city of Jerusalem laid in ruins.

The new commandment of Jesus, "That ye love one another," called for sacrifice for offering, but it was the sacrifice of every selfish desire, the offering of ourselves for love's sake, that the good of all may be secured. It is only as we rise to the conception of sacrifice and offering in this diviner sense, that we realize the blessedness of self-sacrifice.

If we carefully study any of the religious observances of the ancient Hebrews, we shall discover that they are founded on truth. They were, in many cases, crude comprehensions of the truth, as naturally such primitive conceptions would be; but yet they were the results of intuitive perceptions of the Divine Law that ever has had its influence in the souls of men. In fact, religion is the voluntary obedience of man to the Law of God as it is revealed to him, and its observances are founded upon some perception of that Law. Thus the custom of making offerings, as *sin offerings*, *peace offerings*, indicated a recognition of an *obligation* to God, as well as the necessity of giving up something valuable to *self* for the benefit of another.

There was, indeed, but a glimmering perception of the real nature of the duty that came to the Israelites, who made burnt offerings a service to their God, but it was the beginning of the recognition of a truth that yet remains appreciated *but in part* by the most enlightened and the most spiritually-minded of our race.

The record of the Hebrew Scriptures shows clearly the development of this phase of truth. Under Moses was perfected the most rigid system of rules for making sacrifices, involving some outward token of value, but this was followed by the clearer discernment of the Prophets and Psalmist of the nature of the offering that is most pleasing to the Divine Father. (Please open your Bibles and read Isaiah 1st chapter, 11th to 18th verses, in this connection.) Note the culmination of the prophetic enunciation therein given, "Wash you, make you clean; put away the evil of your doings from before mine eyes; cease to do evil: learn to do well; seek judgment, relieve the oppressed, judge the fatherless, plead for the widow.' Again, turn to the 5th chapter of Amos, 21st to 24th verses, and note its allusion to the insufficiency of the outward observances, and the substitution of the nobler thought, "Let judgment roll down as waters, and righteousness as a mighty stream." The words of our Golden Text, too, with its preceding 6th and 7th verses (which should be read to gain the full significance of the lesson), show to what higher levels of truth over the earlier faith of their people the minds of the Prophets had reached.

Contemplating the immense advance in their perception of truth these Prophets had made, to the clear recognition of the duty that man should make his religion consist in his spiritual obedience to God, in his implicit reliance upon the Law of God in his soul, one cannot help feeling humbled at the thought of the little advancement in spiritual understanding the world's best teachers now display. How few in the world to-day seem to have reached the clear perception of truth enunciated by the prophet Micah: "He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?"

RELIGIOUS FELLOWSHIP.

FELLOWSHIP is a necessity of our human existence; we are set in families to meet and satisfy this want of the natural life. The first bonds that knit the race together were those that grew out of, and were developed by the parental relations. How early the feelings and emotions that recognize a bond outside the family, were brought into action, we have no means of knowing. But at a very early age in the history of man he must have felt the impulse of worship, and while solitary and alone he prostrated himself before some visible object that symbolized his Deity, there could not fail to come to him a sense of relationship to the Power to whom his worship was offered, even in the very beginning of conscious existence. In the Scriptural record it is coëval with human history.

With the spread of intelligence, this relationship came to be better understood, and a fellowship was awakened, that, as civilization progressed, led men to form associations based upon unity of feeling in regard to worship, and a fixed belief concerning their obligations to the Being worshipped and to one another.

And this bond was the beginning of the social compact which united families into tribes, and laid the foundation for civil government, each recognizing its own special Deity and prescribing the form of worship to be observed.

It does not detract from the sincerity or devotion of those remote ages, that their great leaders, —the bravest and most honored among them,— represented the God of their worship. The Supreme Being whom we of to-day worship, is our highest ideal of perfection,—of a wholeness, an entirety in which every attribute that exalts and ennobles humanity is represented in its perfectness and without limitation, the Omnipotent, Omnipresent, and Eternal One.

The Christian world worships Jesus as the one being in whom the fullness of the Divine was bodily represented, the greater part, indeed, bestowing upon him the honor and endowing him with the attributes that belong to God. And this must continue until the more exalted idea of worship, which it was his mission to proclaim, gains the ascendency, and men come into a truer conception of the significance of his declaration, "God is a spirit and they that worship him must worship in spirit and truth."

It is an evidence that the spirit and *power* of his teaching is ruling in the hearts of those who bear his name, when they can come together in the fellowship of the gospel, and work in unity and forbearing love, for the well-being of the human family, without regard to race or creed. In this is foreshadowed the nearness of that second advent which "cometh not with observation," because it is within the soul that its manifestation is to be experienced. Every advance towards the kingdom of God, is to be witnessed in the souls of believers, and the second coming, without sin, unto salvation, is *now* and *here* whenever the soul-life rises into the condition typified by the Revelator, "Behold I make all things new!" What is possible for one, is possible for every other individual, who seeks for newness of life with the same earnestness.

And in this newness of life, as it comes to be the individual experience, there is a going forth of feeling and desire towards others, a reaching after these best things for all, and an inviting to a participation thereof that none may fail of his portion but have his share in the "bread that cometh from God out of heaven, the heaven of his peace, that will satisfy the hunger of all his children."

Herein is realized the experience of that little company who met in an upper chamber. They had come together in oneness of spirit without regard to birth or worldly condition. The one desire was communion, the realization of the Pentecostal blessing; and how wonderfully it was vouchsafed! What encouragement it affords to all the after ages! That similar results have so seldom been witnessed since the day of the apostles is doubtless due to the want of the same fervency of spirit, and to an insistance upon the things that scatter and divide, rather than the unity of the spirit that "gathers into one, the whole heritage of God."

ERRATUM.—On page 451, second column, 14th line from the top, read *received* for *conceived.*

THE attention of Philadelphia Friends is directed to the notice elsewhere given of the arrangements made for reaching Valley Meeting, on the occasion of the sitting of Philadelphia Quarterly Meeting. In order to secure the best railroad rate, it is necessary that at least one hundred tickets should be sold.

UNHEARD no burdened heart's appeal
Moans up to God's inclining ear.

DEATHS.

CORSON.—On the 25th of Sixth month, 1888, Ann J. Foulke, wife of Dr. Hiram Corson, of Plymouth, Montgomery county, Pa., in her 77th year.

DEACON.—On Sixth-day, Seventh month 20th, 1888, Anna C., wife of Howard R. Deacon, and daughter of Joseph Tomlinson, in her 43d year; a member of the Monthly Meeting of Friends of Philadelphia.

MULLINEAUX.—At her residence, Mount Holly, N. J., Seventh month 20th, 1888, Rachel Shourds, widow of Thomas Mullineaux, of New Paltz, Ulster county, N. Y.; a member of Mount Holly Monthly Meeting. Interment, Fair Hill, Phila.

PRATT.—At New Garden, Chester county, Pa., suddenly, Seventh month 13th, 1888, in her 29th year, Ellen Janney Worley, wife of Franklin Pratt, and daughter of Hannah M. (now of Media, Pa.) and the late Lewis D. Worley, formerly of Loudoun county, Va.; a member of the Monthly Meeting of Friends of Philadelphia. She leaves a large circle of relatives and friends to mourn her untimely death. Interment from Newtown Friends' Meeting-house, Delaware Co., Pa.

For Friends' Intelligencer and Journal.

NOTES OF A TRIP TO THE PACIFIC COAST.—I.

THE Phœnix tourists, a party composed mostly of Philadelphians, left on the 2d of Seventh month for an extended journey throughout the West, the objective place being San Francisco. Arriving in Chicago *via* Pennsylvania railroad, in due time, a day was spent there viewing points of interest, riding to the parks, etc. Leaving Chicago on the Chicago and Northwestern railway, the ride to Council Bluffs gave the opportunity of a pleasant trip through the fertile State of Iowa. At Omaha we boarded the Union Pacific cars for Denver, which we reached on the 7th. This city of recent note is only twenty years old, and to our astonishment has grown so rapidly in this period that it is far in advance of eastern towns of the same population. Its altitude is 5,364 feet, making a delightful climate; we were told a hot night is unknown there. A few hours ride the next day brings us to Manitou, the so-called Saratoga of the West. The town is nestled in among the Rocky mountains, with Pike's Peak boldly standing out in view from the Cliff House, where our party remained four days. Horseback and carriage riding to many points is universally indulged in by tourists who visit these celebrated springs, and at early morning hours horses are equipped for Pike's Peak trail and other jaunts. We rode through the Garden of the Gods, to Crystal Lake Park, ascended Cheyenne mountains to stand by the burial place of the noted writer Helen Hunt Jackson, and also spent an afternoon in her attractive home at Colorado Springs. From here we take the Denver and Rio Grande railroad again, and pass through the Royal Gorge and Grand Cañon of the Arkansas. The grandeur of this wonderful chasm extends eight miles. The best view can be obtained from the famous hanging bridge, where the walls of the cañon rise to a perpendicular height of 2,600 feet above the track. On approaching Salida, toward the western end, a break in the walls gives us fine pictures of the Sangre de Cristo peaks. Collegiate Peaks, Harvard, Yale, and Princeton are plainly seen from the vicinity of Salida, (where we leave our train for the night.) All of these are over 14,000 feet high, and covered with snow. Much detention of the heavy trains going westward with teachers *en route* to the National Educational Convention in San Francisco, is experienced here. Marshall Pass begins eight miles from Salida. The summit of the Pass has an altitude of 10,852 feet. This is a scenic and scientific wonder; grades of 211 feet to the mile are frequent, and the ascent and descent are made by a series of remarkable curves. The streams of the Pacific flow westward from this summit. Cañons, cliffs, tunnels, falls, mountains, and valleys follow us as we go down this descent to Salt Lake City, and before we reach it off to the right the famous Mormon Temple and Tabernacle come distinctly into view. This city is 735 miles from Denver, and the great objects of interest are Temple Square, Tabernacle and Assembly Hall, etc. Several days could be spent here with pleasure and profit.

Salt Lake City, Seventh month 14.

FIRST-DAY SCHOOL GENERAL CONFERENCE.

Editors INTELLIGENCER AND JOURNAL:

I HAD hoped, by this time, to be able to send a full notice to the INTELLIGENCER regarding the First-day School General Conference, but have not yet heard from the Railroad Trunk Line Commissioners in regard to my application for reduced fares. Still, as there are many inquiries coming in regarding the General Conference, I think it would be best to have the following notice inserted in the INTELLIGENCER this week.

JOSEPH A. BOGARDUS.

New York, Seventh month, 23d.

The Friends' First-day School General Conference will hold its next session at Yarmouth, Ontario, Canada, on the 20th and 21st of Eighth month, at the time of Canada Half Yearly Meeting. Friends desiring to attend will purchase their railroad tickets to St. Thomas, on the Michigan Central Railroad, where they will be met by Friends and conveyed to Yarmouth. Arrangements are being made to obtain reduced rates of fare, due notice of which will be given.

OHIO YEARLY MEETING.

Editors INTELLIGENCER AND JOURNAL:

OHIO Yearly Meeting. The members of this meeting desire to extend a cordial invitation to Friends residing within the limits of the different yearly meetings, east and west, to meet with us in our annual assembly to be held at Mt. Pleasant the last week in Eighth month, and any wishing information in relation to the various routes may receive particulars by addressing E. G. Evans, J. E. Carpenter, R. E. Roberts, or W. R. Clark, Emerson, Jefferson county, Ohio.

Emerson, Ohio, Seventh month 23.

COMMUNICATIONS.

REGARDING MEMORIALS.

Editors INTELLIGENCER AND JOURNAL:

I FEEL willing to speak of my concurrence with your remarks in some one of the past issues of the INTELLIGENCER AND JOURNAL, concerning obituary notices, and that the same care suggested, perhaps might be extended to memorials; for in either case too much cannot well be observed in defense of the requirements of truth. The too common inclination in the preparation of either is to embrace occurrences and incidents incidental to all moral lives of whatever people.

The object which the Society primitively had in memorializing a member, and which should be the one alone now, was for a tribute considered due to the memory of the departed, and to encourage and influence to renewed strength, the "Burthen bearers" in their search after truth. To this end, then, it would seem that we should only commemorate the lives of the righteous, those whose minds have been awakened to a sense of their condition, and in whom living desires have been raised for admission into the Kingdom of Heaven. In this there is an incentive to the living, to follow after their virtues, seeing that others who have gone before them, by turning in all sincerity to that grace which only can convince them of their sin, and by closely following its guidance, become enabled to obtain true faith in Christ with a sense of union and acceptance with him.

Hoopeston, Ill.

EDUCATIONAL.

THE TRUE PROVINCE OF OUR COLLEGES.

["The College Association of Pennsylvania," which was organized last year, held its second annual meeting this month, at the University of Pennsylvania, in this city. The name of the new Association was changed to "The College Association of the Middle States and Maryland." Upon the first evening of the sessions this year an address was delivered by President Magill, of Swarthmore upon "The True Province of Our Colleges." From this address we make the following extracts, which will be of interest to our readers as vindicating the spirit in which the affairs of our own College are directed.—EDS. INTELLIGENCER AND JOURNAL.]

WE have met as the representatives of the Colleges of the Middle States and Maryland, to confer together as to the most effectual means of advancing, not only the individual interests of the various colleges which we represent, but also the general interests of education, of all grades, throughout these commonwealths, and throughout the country at large. There is no surer way to secure this result than by the proper organization and mutual coöperation of the literary institutions of the various grades. Our educational system must ever be fragmentary and incomplete, until the specific work of each and every grade is clearly understood, and distinctly defined, and so completely organized that no one grade is permitted to trench upon the province of another, and thus disturb the general harmony. I propose, therefore, to touch briefly, to-night, upon the true province of the *College* in contradistinction from the universities, on the one hand, and the academies, high schools, seminaries, and all institutions for secondary instruction, on the other. Let us each understand the province in which *we* are to labor, and let us all remember that those will do their allotted work most effectually, always, who confine their efforts to their own proper sphere. We are frequently asked, "What facilities do you offer, in Swarthmore College, or propose to offer, for post-graduate work?" In our earlier years we were, like others, ambitious to offer such facilities, and did it more or less imperfectly, and at the expense, sometimes, of our regular college work. Added experience has corrected this error. For a number of years we have taken pleasure in saying: "We offer no such facilities, nor do we propose to do so. But we always endeavor to inspire, in the minds of our best students, a desire for higher work, and encourage them to pursue it elsewhere, after graduation with us." Thus we escape the interruption to college work, inseparable from any attempt to carry on an extensive course of post-graduate study; and we avoid trenching upon the duties which should be relegated to the University; and what is perhaps more than all, we ensure the placing of our students under new influences, in contact with different minds, and amid other surroundings, for the completion of their studies.

They thus acquire a wider range of thought, and a broader culture than would have been possible had they pursued their post-graduate work within the walls of their Alma Mater. In pursuance of this thought, in the selection of our instructors and professors from among our own graduates, we are more and more careful to secure those who, after graduation, have pursued more advanced work elsewhere, and who consequently bring back their broader views, and thus infuse new life into the departments over which they are to preside.

And while, on the one hand, we should carefully observe the lines of demarcation between the College and the University, we should, on the other hand, keep equally clear the separating line between the College and the fitting or preparatory school. As I would encourage the Colleges to confine their attention strictly to their own line of work, in the courses which they have marked out, and never mar that work by an ambitious attempt to incorporate with it what should belong to the Universities; so I would have our Academies, and our High, and other fitting schools,—(Mark me: I do not include Normal schools, which are an anomaly in our system, as at present conducted, and which, like other professional and technical schools, and even *more* than others, should, whenever practicable, *follow* and not *precede* a college course), I say, I would have our Academies, and our High, and other fitting schools, equally solicitous not to attempt to enter upon College work, nor be ambitious of the name of colleges, but to do well and most thoroughly, the work given them to do in the secondary education. Let me say, in this connection, that those Preparatory schools are doing an irreparable wrong to their students, as a rule, which encourage them to remain beyond the time needed for preparation, and, upon entering college, to

attempt to omit the Freshman Class. I venture to say that, in every well organized college, there is no year so important as the Freshman year; and that, as a rule, students who enter as Sophomores experience a loss for which no subsequent study can ever fully compensate. The fitting schools surely have enough of their own legitimate work to do, compelled, as they must be, to carry on a double course at best,—one a so-called practical and business course, and the other, the course necessary as a preparation for entrance into any of our colleges. All honor to that High School, or Academy, or Seminary, which does not yield to the temptation to superficiality incident to entering upon proper college work, and the conferring of regular College degrees. Pardon a home illustration, which I cannot well omit in this connection with many others,—I have watched with deep and painful interest, the unworthy controversy now pending, with reference to the peculiar and somewhat anomalous position of long standing, of your own Philadelphia High School, in this respect.

I do not, for one moment, admit the lowering of the standard of that excellent school, which has recently been charged upon it.

It is more and more inclined to recognize the true relations of a High School in a system of public education; and more and more disposed to acknowledge its own proper position, as an important feeder to the collegiate part of this University. And this modesty and willingness to occupy its normal place in the educational system is the best possible evidence of growth, of progress, and of development, and should not be assumed as any indication of a lowering of its standard of scholarship in the past forty years. A careful examination and comparison of its work now with what was then attempted, will convince every reasonable person that the progress has been sure and substantial, and such as these times demand. I trust that the time is not far distant when your High School will find its exact place in a well-ordered system of education for your city, intermediate between the grammar schools on the one hand and the collegiate department of this University on the other. The labors of your learned and able superintendent of public instruction, in this city, ever since his accession to his difficult and responsible position, are worthy of all praise, and are daily more and more recognized as such by the most intelligent and thoughtful portion of this community.

You will pardon this seeming digression. The case is so admirable an illustration of my point in favor of keeping the various grades of our educational institutions distinct, that they may accomplish the best result, that I could not well forbear referring to it in this connection.

But, assuming that the Common Schools, the High Schools, Academies, and Seminaries, and the Colleges and Universities, all do their proper work; no one grade interfering with any other; the question still naturally arises for us at this time—what *is* the proper work of the Colleges, during the four years' course. This is too large a question for me even to enter upon at this hour; and it is one upon which we may expect much light to be thrown by the proceedings of this convention before we separate. I may, however, refer very briefly, to the position, which in my own judgment, is demanded of the colleges of to-day. The time was when a comparatively small number of young persons looked forward to a college course, and those, chiefly the future candidates for what were called the learned professions. All of this is now changing, and it is coming to be more and more common to include a college training in the course of every well educated young person, whatever future occupation they may have in view. It is therefore now manifestly necessary to introduce into our curricula more elective studies, holding certain disciplinary ones as required of all. Especially is this addition advisable toward the latter part of the course, allowing such a selection of studies as would have *some* direct bearing upon the student's probable profession or occupation, without, however, interfering with the province of the strictly professional schools. It is clear that the old curriculum, with its invariable round of Latin, Greek, and Mathematics, can no longer meet the modern demand. But its wonderful disciplinary power can admit of no question, and I would be far from setting it aside; but would always make it *one*, and an important one of the courses among which the student might exercise a choice. In our search for the new, therefore, and in yielding to the demands of this modern age, I would not advocate too wide a departure from the ancient landmarks. Truth is more likely to be found between great extremes—

"Medius tutissimus ibis"

is as true now, as in the days of Horace; and Pope, whose polished lines so often contain more wisdom than poetry, expresses well the thought which I would impress to-night, when he says:

"Be not the *first* by whom the new are tried,
Nor yet the *last* to lay the old aside."

ORTHODOX FRIENDS.

[The following article is from *The Friend*, (Philadelphia), of Seventh month 21.]

We have received a copy of the "Friends' Church Directory," of Emporia Monthly Meeting, Kansas, containing a list of the members and officers, and the times for holding the different meetings connected with it. It was prepared, as appears by a card published in it, by a person in the station of a "pastor" to the congregation; and as might have been expected under the circumstances, discards the numerical names of the days and months in general use in our Society.

The Friend who forwarded the pamphlet says in an accompanying letter:

"I understand they are to pay their pastor $600 a year; they have an organ in their meeting-house; they have formal prayer and singing as do other Protestant churches; but few use the plain Scripture language, and but few have any conscientious scruples in taking or administering an oath, or in the use of the heathen names of the days of the week or months; and at the same time they claim that they are reviving 'George Fox Quakerism.' What I have said of Emporia Monthly Meeting, will apply in a

great measure to all of the Progressive meetings in the West.

"I do not send this to thee because it is any satisfaction, for it has weighed my soul down for a number of years; but because I thought it would be right to let thee know more perfectly how innovations are advancing in the West."

Who can be surprised at the disunion and disintegration which have affected some portions of our Society, when such things as are depicted above are becoming widely prevalent? We sincerely desire that Friends *everywhere*, who believe in the principles originally held by this people, may faithfully bear their testimony against such departures therefrom; and that in those places where these changes have not been introduced, none may be tempted by the hope of making their profession more attractive to the world, to imitate the methods of others, whose views on the subject of Divine worship differ from our own. A letter from a Friend in Illinois, dated the 1st of the present month, speaks of those sound Friends who have been staggered at the large apparent results achieved by this "modern activity" of the Church and says:

"It has seemed to me that this has been the first temptation which the enemy presents to such as these; and that when they are ready to accept those apparent results as a solution of the matter, it is not long before they are also prepared to accept any and everything which their human leaders (unto whom they have turned) may propose.

"It has been almost astounding to me to see the rapid ity with which some of my own intimate friends and associates have been carried down this 'stream of ritualism,' when once they have allowed this question of results to take the place of 'the leading of the Holy Spirit."

NFLUENCE.

I DROPPED a pebble in the stream,
It sunk forever from my sight;
A moment in the sun's warm beam
A diamond sparkled pure and bright,
Reflecting far its radiant light.
A circle, small indeed, at first,
Widened, e'en mid the tempest's roar,
Until at last it faintly burst
And vanished on the farther shore.

A frown, a scowl, an angry glance,
A hasty or unguarded word,
A formal bow, a look askance--
These, quicker than a swift-winged bird,
Pierce to the heart like two-edged sword.
Spreading a baleful influence wide,
They cast a murksome shade and gloom
Across life's rough and troubled tide,
And reach unto the silent tomb.

A word, a look of sympathy,
A penny generously bestowed,
A simple act of courtesy,
A kindly influence shed abroad,
And from the soul lift many a load.
These angel-deeds, grand and sublime,
Like ripples on the restless sea,
Sweep o'er the fretful stream of time
And reach unto eternity.

—*Paul Clayton, in Boston Transcript.*

THE STATE OF TULAIT.

IN spite of mamma's reproachful eyes
She was always, always late to rise;
And late at breakfast, and dinner, and tea,
And late at school, and at church was she;
Till at last after going too late to bed
A wonderful dream came into her head,
With stories weird
And with warning great,
Of a place to be feared;
'Twas the State of Tulait,
O dear!
How crazy and queer
Was the careless State of Tulait.

She thought she had strangely and suddenly come
To King Bizzibe in the land of Hum,
Who eyed her gravely, and said "Alas!
She rose too late to look in the glass;
Her buttons are wrong, and her collar is gone,
And, worst of all, there's her night-cap on!
By this I know
Of her horrible fate;
She is bound to go
To the State of Tulait,
Ah, me!
'Tis sad to see
Fair maids in the State of Tulait.

"Would you like to know what the farmers do
In the State of Tulait? I'll tell you true—
They dally and dream in the spring-time sweet,
They plant their crops in the harvest heat,
They hoe their corn in the frosty fall,
And winter finds them with nothing at all.
You'll hunger and thirst,
And want and wait,
And that isn't the worst,
In the State of Tulait,
Oh, no!
And yet you'll go
To the desolate State of Tulait.

"Would you like to know what your fate will be
In the State of Tulait? Ah, listen to me:
You will long in vain for your native land:
Your speedy return will oft be planned;
You'll hurry and strive with might and main,
But you'll never be able to catch the train!
So you'll sob and cry,
And worry and wait,
And you'll live and die
In the State of Tulait.
For nevermore
Can you leave the shore
Of the terrible State of Tulait."

At this she woke, so great was her fright,
And she saw the gleam of the morning light;
'Twas the first pale gleam, but she bravely rose;
And quickly and carefully donned her clothes;
"For oh," she said, "I could never endure
To live in that horrible place, I'm sure!
No longer I'm bound
For the State of Tulait;
And I'd never be found
In the State of Tulait.
No! No!
I never will go
One step to the State of Tulait."

—*Eudora S. Bumstead, in Youth's Companion.*

RACHEL L. BODLEY, M. D.: SOME PERSONAL RECOLLECTIONS.

Many years ago the late Isaac Barton brought to my parents' home a young lady whose acquaintance he had made on a Western tour, and who had come to Philadelphia as a special student of Microscopy and Analytical Chemistry. Mr. Barton wished to introduce his brilliant young friend to a few Philadelphia family circles in which her character and talent would be appreciated and her presence heartily welcomed. Who knew her then recall the dark beaming eyes, the clear complexion, the ruddy hue of health, the brilliant teeth, the rosy lips, the refined mouth, the intelligent lighting up of the face, the delicately formed hands and feet of the stranger from Ohio. To me her incoming was a joy, and from that evening to this fatal June her friendship has been of inestimable value, whilst with the exception of three or four years her residence, since 1860, has been in Philadelphia.

On rare spring days we wandered together along the hill sides on the Schuylkill, or through the forest and swamps of New Jersey. One season we botanized in the vicinity of the Natural Bridge, climbed to the summit of the Peaks of Otter, and visited the springs and valleys of Virginia. Sometimes the plants were examined as we sat on a fallen tree in the forest—sometimes in the assembly room of the Natural History Club of which she was a prominent member. One by one death has taken from that Club Dr. A. Preston, Dr. Emmeline Cleveland, Martha Shoemaker, Susan Roberts and Dr. Rachel L. Bodley—but death cannot destroy the happy memories of the past. The practical results of her earnest studies were shown in the very able and novel Lectures on Cryptogamous Plants of land and ocean and their careful classification, and a popular course on Household Chemistry, explaining the chemical processes taking place in the kitchen, and playing their part in domestic economy. Her fitness for teaching could not long remain unknown, and in 1865 she was elected to the chair of Chemistry and Toxicology in the Woman's Medical College, of which she was Dean from 1874 to 1888. To her work her time and talents were wholly dedicated, so that personal preferences and the delights of social life were often set aside when she deemed that by so doing she could promote the interests of the College. The State Historical Society of Wisconsin, the Academy of Natural Sciences, the Cincinnati Society of Natural History, the New York Academy of Sciences, the American Chemical Society of New York, the Franklin Institute of Philadelphia, elected her to membership. Beyond and above all the charms of History, Philosophy, and Science, the love of God and man led her to heights where her view extended over the whole earth. Her vocation was to benefit, as far as in her lay, the race by elevating woman. In this work she displayed such prudence, such grace, such purity, such devotion, that the reviler, the objector, the prejudiced stood abashed, refuted, converted. Others, better informed, will write her college history, graduates scattered over the whole earth, remember her counsels and her example, the far-off missionary recalls her sympathy, as in the spirit of the Master she endeavors to heal the wounds of the body and the soul.

Her spirit of hospitality knew no bounds. Women of many nations sought her home. As a tender mother she watched over the young Brahmin who was willing to live among strangers in a strange land with a strange religion in order to learn the art of healing. Dr. Bodley was strongly individual, and with a delicate refinement respected the individuality of her guest and so won the love of Mrs. Joshee, whose early death she was soon called to mourn.

Her intercourse with missionaries caused her to grasp warmly the hand of the Pundita Ramabai, and enter with enthusiasm into the effort to educate the girls of India. For and with Ramabai she labored and prayed—she besought the aid of the philanthropic and Christian. Success has so far crowned the effort that Ramabai has turned her face homeward to begin her work of education.

After Dr. Bodley stood in the gallery of the church on Washington Square, when the sermon was preached to the Presbyterian Centennial Assembly in May last we sat together in the quiet of the lecture room of the church and talked of the regeneration of India. Earnestly she deplored the chilling doubts, the narrow conceptions of many professed Christians—the possible unfavorable influence that might arise in the soul of the heroic woman who pleads for her oppressed sisters and asks the prayers of Americans for the outpouring of the Spirit of the Lord upon India. Her remarks suggested the vision of Peter on the house-top at Joppa, the refusal to receive Saul when he came to the disciples at Jerusalem, and the reproof of our Lord when his narrow disciples would send away unblessed those who were seeking Jesus. Thus our last conversation passed away. The bright young friend of early days had matured into the white-haired, ever-busy woman; but love and sympathy only strengthened with her years and kindled anew as she accosted those dear to her.

Once more her path crossed mine. There was somewhat in the tones of the voice in the few words spoken at the Reception of the Assemblies given at the Academy of Fine Arts that seemed like a premonition—a pallor of the face, a weariness of manner that told of physical debility. As my eyes looked upon her for the last time, I little realized that only a few days more were allotted to one so beloved and so useful. What she has done for the medical education of women is a matter of history—what her efforts may lead to in the great land of India the future may reveal.—*C. A. B., in Faith and Works.*

Lake Mohonk, June 22, 1888.

If our heart condemn us not, God is greater than our heart, and knoweth all things. Beloved, if our heart condemn us not, then have we confidence toward God; and whatsoever we ask, we receive of him, because we keep his commandments and do those things that are pleasing in his sight.—*John the Apostle.*

The costliest thing in the world is sin. It costs purity of conscience, and costs the favor of God. It will cost at the last the loss of heaven.

A NEW ERA IN UTAH.

EASTERN friends often ask us, in a tone half inquiring, half incredulous, what we find in Salt Lake City to make life endurable. I am not in the least surprised at this. Utah in general, and Salt Lake City in particular, have been so long associated with Sodom and Gomorrah in the minds of civilized people that the mere mention of them as a place of permanent residence is apt to be received with elevated eyebrow and upturned nose. I well remember how, in 1884, when I was about to leave a staid old town, one of the ancient strongholds of Puritanism in Connecticut, and take up my abode in the Mormon capital, one of my friends wished me "joy of my neighbors."

Salt Lake has hitherto received a vast amount of gratuitous advertisement, but of a very unfavorable kind. Its "peculiar institution" has for forty years been a stench in the nostrils of all Christendom. The domination of the Mormon hierarchy over all other local institutions, the entire union of Church and State, the social, political, and commercial ostracism of "Gentiles" on the part of the "Saints," the almost universal impossibility of obtaining and cultivating land in rural districts without priestly interference with water supply or violence done to person and property, the numerous atrocities which have in by-gone years been committed within this Territory in the name of religion, and the continual reiteration of these things by press and pulpit, had caused this land, as fair and promising as the sun shines on, to be avoided as a plague-spot by the home-seeker, and by almost everybody else except the miner, the speculator, the government official, the adventurer, the curiosity-hunter, and the missionary. There is no region too forbidding for the above classes to penetrate. The worst of it was that many of these reports could not truthfully be denied. Even to day, in this new era of commercial expectation for Utah, when the most radical and outspoken anti-Mormon can journey as safely from Logan to St. George armed with a toothpick as with an arsenal, it must not be supposed that the "irrepressible conflict" between the United States Government and the domination of the Mormon priesthood is a thing of the past, or that the war against polygamy should be abandoned. Even in these halcyon days when leading Mormons and leading Gentiles unite in maintaining a Chamber of Commerce, and invite the enterprise and capital of "the States" to come hither and help develop our resources, it would not do to throw the ægis of Statehood over the existing condition of things. The hope for Utah's final regeneration is based now, as heretofore, on the expectation that polygamy will be crushed out by Federal law, that the hold of the Church upon all civil institutions will be wrenched apart, and that a Territorial system of free common schools will be early established under the watch and ward of the national government.

But let the government do its part, and the signs are increasingly abundant that the natural forces of civilization, together with the great natural attractions of Utah, will rapidly accomplish the rest; that the ancient feud between Mormons and Americans will soon disappear, that advanced ideas and customs will win a peaceful victory, and that this Territory will assume the position in the great inter-mountain region of the New West for which it was destined by the Creator when he uplifted these health-giving and wealth-producing mountains, poured forth this wonderful inland sea and these fresh-water lakes, and spread abroad these charmingly peaceful and fertile valleys.

Much can now be said in favor of Salt Lake City that could not have been said a year or two ago. Until within two years non-Mormons had never succeeded in electing a representative to the Legislature. Last year they elected five, and the salutary measures which these men introduced, some of which were enacted, are in earnest of what may be accomplished when increased loyal immigration, or the disfranchisement of irreconcilables, shall give to American ideas the supreme voice. Two years ago the Mormons had exclusive control of the so-called public schools in each of the twenty-one wards of this city, and no Gentile sent his children to these schools. Last year the non-Mormons obtained the minority representation in two of these wards, and the control of a third. Two of the trustees of the latter, are members of the Congregational Church, the Principal is a Presbyterian, one of the teachers is a daughter of Chief-Justice Zane, and fully half the pupils are of non Mormon parentage. Up to one year ago the non-Mormon tax-payers of this city had never been represented in the Municipal Council. Last winter the concurrence of business Mormons gave them four strong representatives, two of them leading bankers, and one of them the President of the Chamber of Commerce.

Until within a few years it was difficult for a non-Mormon to purchase title to real estate directly from a good Mormon, and the number of real estate transactions was almost inappreciably small. A conservative estimate of the amount of *bone fide* real estate transactions during the last three months in this city is five millions of dollars, and by far the larger number of these transfers have been from Mormons to Gentiles. Two years ago the ostracism of non-Mormons by Mormons extended to a system of commercial boycotting. Now Mormon capitalists are among the most liberal contributors to a fund of ten thousand dollars for advertising the attractions of this city, and a week or two ago an exposition car was finished at the Utah Central (Mormon) Railroad shops, decorated (in part) by Mormon artists with representations of Utah scenery and products, filled with specimens of native ores, building materials, and fabrics, and started over the Union Pacific on a missionary tour through the Middle-West and the New England States. May it prove to be the most successful missionary that has ever been sent abroad to secure converts for Utah!

Excursions from Kansas City, Omaha, Denver, Los Angeles, and San Francisco have, within the last two days, filled our hotels full of real estate speculators, and persons eager to see for themselves the "beauties and commercial advantages of the City by the Inland Sea." That is a promising advertisement,

surely! Full of secularity and indications of commercial prosperity! When these Western "boomers" once take possession of the City of the Saints, let "Zion's Coöperative Mercantile Institution" look to its laurels! Salt Lake has hitherto been regarded as a kind of govermental infirmary by our politicians, and as a big curiosity shop by transcontinental tourists. Even the city hack-drivers have sometimes favored the latter view by interpreting to strangers the cabalistic characters Z. C. M. I. on the big "Coöp Store" as meaning "Zion's Collection of Mormon Imbeciles." But to-day many of the inquiries from abroad concerning Salt Lake are from business men asking as to the chances of investment, and are generally referred to the Secretary of the Chamber of Commerce, whose business it is to furnish full information on such topics, while the first question of the tourist on reaching his hotel is apt to be concerning the prices of real estate.

Straws show which way the wind blows, and these facts, however unimportant in themselves, are of great significance as showing that even the heart of Mormondom, obdurate though it be, can be moved by the common forces of civilization, if only these forces can be brought to bear upon it in sufficient number and power.—*J. Bernard Thrall, in Christian Union.*

ONE SECRET OF STRENGTH.

The interest which men have always taken in the lives of those whom they call great is almost pathetic in its intensity. Carlyle amply justified by facts the great significance which he attached to hero worship. There is often an element of vulgarity in the mere following of great leaders; but that which gives them such attractive power is, after all, something very noble in its appeal. For that which men love in the lives of great men is the realization in these lives of their own ideals; the perception that these great ones have discovered the mastery of the soul over all its circumstances and accidents, and have made it clear that, no matter how many fail to work out their lives to some great end, that possibility always exists.

Great men stand, therefore, for the working out of the ideals of lesser men, and this is the secret of the unfailing and really noble interest which great lives arouse. The services of Paul, for instance, were many and various, but none of them exceeds in value the sense of completeness and conquest which his career furnishes. No other life has more completely demonstrated the essential superiority of the soul over all obstacles, limitations, and sorrows; no other life has more completely proven the unconquerable quality which resides in the will. Paul remains forever an unanswerable witness against those who declare that man is the creature of circumstances and the victim of his age. That which gives Paul's life its magnificent superiority, and which makes it fairly glow with the consciousness of victory, is not the greatness of the man intellectually, although his intellectual power contributes to the general result; it is his moral greatness, and the secret of this greatness is to be found in the tremendous concentration of will which shaped his whole career and made it a coherent whole. We cannot write Paul's epistles, nor preach Paul's sermons, but it lies within the reach of us to catch something of the fire of Paul's purpose. Our lives are half failures simply because our minds are half made up. We intend to make the most of ourselves, but we are not equal to the toil of an aspiring life. Our activity is spasmodic; it burns up brightly at times, and then sinks so low that nothing appears to remain but a bed of ashes. Some stronger nature must impart its impulse to us before the fire rises again. Paul, like all other great men, did not look to other men for his impulse; he was in the habit of giving rather than of receiving. He did not look to the church to sustain and strengthen him, although he was not unmindful that the church could help his weakness. He thought of the church rather as something into which he could pour his own life, to which he could give his own strength. It would be well for church life generally if Paul's spirit could become contagious; if, instead of sitting in the pews and waiting to have our energies lighted by the pulpit, we should realize that our highest joy is to light them for ourselves, and our highest service to contribute to the fire of zeal and of faith, which is the motive power of the church.

In the end that which seems hardest in life is really easiest. There was more of comfort, rest, and peace in Paul's life, laborious, turbulent, and tempestuous as it was, than in the lives of most of the men around him. It requires a great deal of courage to take an advanced position in a time of danger; but when the first act of courage has been performed al the rest is comparatively easy. One escapes on the instant all the pains and perplexities of indecision and cowardice; one gets on the instant all the inspiration of a perfectly defined purpose and a mood which fits it. Most of us suffer constantly the discontent which comes from the consciousness that we are not doing all we ought; that our lives are only half consecrated to duty and action. It would be far easier as a matter of mere comfort, to add the strength and courage necessary to give them completeness, than it is to carry about continually a sense of remorse and disappointment in ourselves. Great responsibilities develop great strength, and great work calls out great powers. The man who sits at his ease, or does only half the work allotted to him, does not really know what his powers are. He is torn by the two-fold feeling of duty and of the sense of failure to respond. Recoiling from what seems to him the impossible work of a really great life, he suffers more from discontent and dissatisfaction with himself than all the added toil necessary to make his life a consistent whole would bring to him.

Moreover, there is in a life that is set to do one thing, and gives all its energies to the doing of it, an impetus which is a mighty consolation in sorrow, loss, and suffering. Paul's career is well worth the study of those who are striving to find some refuge from the sorrows of the world. Most men make an ineffectual effort in some way to avoid the painful things that lie in their paths. It is this vain endeavor which has filled monasteries and driven thousands into self-

chosen exile. But the experiment has never yet succeeded, and never can succeed; no man can escape from himself, and until some man can, this method of escaping from the world will never be successful. The true way to meet the sorrows of life is to have some purpose which lifts one above them, and to make that purpose so engrossing and controlling that it will sustain one as the inspiration of battle carries one almost indifferent to danger and death. Paul did not attempt to elude the troubles of life. On the contrary, he met them face to face; rather, he marched in front of them, so swift and sure was his progress. He felt them as keenly as any other man of his time; there was no insensibility in him: but he was not conquered by them. Life had for him the unfailing strength and the mighty consolation of a purpose which death itself could not defeat or even overcloud. And this is one secret of strength and consolation in a world which shelters no man, but leaves us all open to storm and calamity.—*Christian Union.*

GOING DOWN THE CALEDONIAN CANAL.

At last, as day began to wane, we passed through Loch Aber and the Corran Narrows into Loch Linnhe. And here the mighty spirit of the lakes and mountains took possession of us all, and held that boat-load of merry people silent and spellbound. It was as if we were being borne onward, swiftly and noiselessly, into the inmost holy of holies. Even the captain and the very deck-hands stood like men entranced, overwhelmed by the surpassing splendor. Anything so grand, so weird, so magical, can hardly be imagined, much less described. The rain of two hours before had left the air heavy with vapor, through which the sun now shone gloriously, producing the most marvelous effects. "You might make this trip a hundred times, ladies," said the captain, as he stood uncovered, "and not get the half of what you are getting to-day,—no, nor the tenth of it."

I quote this, lest some of our dear wandering kinsfolk, who have been "down the Caledonian Canal" on some dull, gray day, when the Scotch mists hemmed them in on all sides, and they could scarcely see beyond the decks, should cry out, "how that woman exaggerates!" But we have all seen transformation scenes on the stage, where the effect of light and color, of rapidly dissolving views, and of seemingly supernatural revelations filled us with wordless awe. Now make the stage one vast panorama of shining, sparkling water, as still as a sheet of silver. Dot the surface with islands, dark masses of verdure rising out of the depths, and often picturesquely beautiful with ivy-grown, mouldering towers, broken arches, and here and there a stately monument. Let the nearer hills, sloping upwards from the shores, be cultivated and clothed with living green more than half-way up; make them gentle and homelike by building stately mansions on the broad terraces, and letting small gray cottages, like bird's nests, perch on the sightly cliffs; then, stretching far above these human habitations, let the purple of the wild heather, blending with the soft olives of ferns and mosses, climb to their very tops. Beyond them, tier on tier, not in regular ranges, but jutting out edgewise, and crosswise, and *all*wise, let the mightier hills stretch upwards and onwards, appearing and disappearing; now looming up out of the vapor in cold, blue splendor, then suddenly vanishing like pallid ghosts; changing every moment; presenting constantly new vistas, new cloud marvels, and new openings into far, radiant reaches, through which you seem to see heaven itself. Throw over all this light veils of mist, that soften rather than obscure,—pale gray, dazzling silver, soft rose, translucent amber, purple amethyst,—veils that float, and lift, and waver with every breath and with every motion of the boat, and you will have some faint idea of what our eyes beheld that August evening as we crossed Loch Linnhe and passed into Loch Leven, pausing for a few moments at Ballachulish, and then, turning into Linnhe again, swept on our downward way towards Oban. But you must do still more. You must imagine all this magnificence of cloud and mountain and island so perfectly mirrored in the clear, still waters of the lake that even the changing splendor of color was duplicated and heaven was below as well as above us.

It grew dark and chill at last. The overpowering glory died, and earth was earth once more, but the effect remained. Young men and maidens, old men and children were content to sit in silence, or to speak in subdued whispers, as we watched for the first gleam of the semi-circular cordon of lights that guard the bay of Oban.—*Julia C. R. Dorr, in Atlantic Monthly.*

CAUSES OF INTEMPERANCE.

Before Theodore Parker died he wrote a letter expressing his views on the temperance question. He took the ground that in this country (for he died in Switzerland) we did not understand the management of the question. Judging from experience he was correct.

The real bottom cause of the desire for stimulants lies deeper down and further back than the most of the temperance people are willing to admit.

Thousands of business men as well as women live a life of excitement, exhausting their vitality faster than it is made, thereby cultivating a constant thirst for a stimulant. This also lies at the foundation of the use of tobacco, because it is a sedative and quiets the system. Others drink to drown remorse from the failure of business, and still a larger number of day laborers drink as a gratifying recreation caused by the dull, monotonous drudgery of their lives; and until there is a more enlightened mode of living, the evil and passion for drinking will never be overcome.—*Exchange.*

It is not what a man outwardly has or wants that constitutes his happiness or misery. Nakedness, hunger, distress of all kinds have been cheerfully endured, and even death itself. It is the feeling of injustice that is insupportable to all men. No man can bear it or ought to bear it.—*Carlyle.*

Vain show and noise intoxicate the brain,
Begin with giddiness and end in pain.
—*Young.*

THE LISTENER'S YOUNG FRIENDS.

About a year ago the writer was on her way to catch a train on the Erie road, when she met a young friend who had just left school. The young lady was on her way to the same station, where she expected to meet two friends of her own age. After we entered the train the two friends joined us, and the writer adjusted her cap, spectacles, and cane, hoping she could forget the years that separated her from this bright, interesting trio of girls, and that for the hour she would pass in their company she would be one of them. How the tongues rattled! The old ears of the listener were hardly able to distinguish the words that tumbled over each other. All three talked at once, and yet they understood and answered each other. How happy, how merry they looked! Eyes sparkled, dimples came and went with every word. One was late because she lost her trunk key, and the other "could not get away from 'Fido,' he cried so every time she came out of the room, so at last mamma had to take him for a walk." Then the tribulations and anxieties of those girls! The writer smiles at them now, but when hearing of them she is glad to testify her heart ached in sympathy. One had a pet dress that came home from the dressmaker's with tight sleeves when the order was left for loose ones. How the lines deepened under the golden bang at this misfortune! Another had a blister on her heel, and "could not wear those lovely bronze slippers to-morrow night," and the appeal for sympathy from a pair of lovely brown eyes was irresistible, and the impossibility of wearing those slippers on that particular occasion became a calamity. And the third member "never could keep her hair curled when she danced in summer, and she knew she would look like a fright," and the tremulous lines formed about the sensitive mouth. How the gay little party quieted down for five minutes under the weight of their combined misfortunes! The writer rejoices that the box of Huyler's candy designed for another assuaged their woes and lightened their cares, bringing back the dimples and the sunshine. Again the brook of conversation bubbled on, diverted from self and its trials. A school friend was to be married the next week, and the wedding and all its preparations was a delightful source of conversation. There was a romance connected with the principals in this wedding that was very interesting to the bride's friends. The bride was the daughter of a very wealthy man, and a special favorite with her father. She had been thrown in companionship with a boy about a year older than herself when almost an infant, and declared to these friends that there had never been in her life a moment, that she could remember, in which she had not loved him. The object of this love was poor, and was not a welcome guest at the bride's home after the elders discovered that there was danger of an attachment. The bride evidently had been very frank in discussing her feelings with her friends. "No amount of persuasion could make her change her mind—marry Ned she would." When discussing the matter one day with her friends, she told them quite calmly that she had decided not to wait for anybody's consent, but marry Ned, and live on what he earned. "He gets a thousand dollars a year, and lots of people had no more than that," and the young lady looked about and nodded her head sagely at her companions. "But, Crissy, what would a thousand dollars be for you to live on, brought up as you have been?" "Why, I could do splendidly. Six hundred dollars a year for my clothes, and three hundred a year for board, and that leaves one hundred dollars a year for other things. Of course we could live," and the bright head nodded triumphantly. "But, Crissy, where are Ned's clothes coming from?" A shade passed over the sunny face as she answered, "True enough, where would they?" As the story was told you could see the group, with its love for Crissy and interest in her romance, and now all were rejoicing that Crissy's father had settled money enough on her for Ned and her to set up housekeeping in a style never dreamed of when her mother, at her age, gave her hand to her father in the little village in Pennsylvania. How rich she would have felt if she knew that her Ned would ever have a thousand dollars a year! Crissy did not know the story of the two-roomed, unpainted house, and the struggle of those early years. All was carefully hidden. If Crissy wondered sometimes why she did not have grandfathers and their homes to visit, she was not allowed to question about the mystery.

Was it the memory of the bliss of those early days that made the rich man remove the thorns from the pathway of the loving, headstrong girl, who knew so little of life and its demands that she saw no difficulty in living on one thousand a year, allowing six-tenths of it for her own clothes? She did not know that her father and mother had lived the first five years of their married life on less. All these thoughts ran through the listener's mind as she looked out of the car window, while the chatter in front and beside her ran on. The listener could not help wondering if her young friends would not be happier in the coming years if they had clearer ideas of the value of money. Would not Ned's chances of happiness with Crissy have been greater if she had remembered his share in the spending of the money he earned?

The listener kept her moralizing to herself, and when she had parted with the gay group, and was driving in the early evening along the country road, she startled the driver by saying, "You old hypocrite, you would not say one word, because you did not want to shadow their faces; you are no better than the fathers and mothers you criticise."

"What did you say, mem?" asked the driver, and with shame and confusion the listener had to acknowledge that she was talking to herself. And to this day that man treats her as if she were feeble-minded.—*Selected.*

James Freeman Clarke was once asked what was the secret of his tireless energy, and great accomplishment. He replied: "I have never been in a hurry; I have always taken a plenty of exercise; I have always tried to be cheerful; and I have taken all the sleep that I needed."

AN INSTANCE OF WAR'S SEVERITY.

THE biography of General Skobeleff, a distinguished Russian general, has been written by an enthusiastic admirer, Madam Novikoff, one of his own countrywomen, under the title of "Skobeleff and the Sclavonic Cause," by "O. K." (London: Longmans.) This work contains some things which are not without interest and instruction for the friends of Peace.

For example, one incident quoted by the authoress as a proof of good military discipline, illustrates, on the contrary, the cruelty and injustice of what is termed martial "law." Skobeleff, during a campaign, had been carefully examining the mechanism of a soldier's rifle. He then walked a few paces to another soldier who was on sentry duty, and said to the latter, "And let me see your rifle." The man saluted, but replied, "I cannot, your Excellency." "But I want to see if it is clean," said Skobeleff. "I cannot, your Excellency," again replied the sentry. The General smiled, and passed on. A visitor to the camp, observing this incident, asked Skobeleff what would have happened to the sentry if he had obeyed the seemingly serious order of his General to deliver up his rifle. "He would have been shot," answered Skobeleff, "for disobedience to a previous order." But how terribly embarrassing and confusing such a mode of procedure must be to an ordinary soldier. And how savage and brutal would be the infliction of fatal punishment, or indeed of any punishment at all, upon a poor soldier, for his inability to distinguish between the comparative claims of general orders and special verbal requests, as in this instance, from a high commanding officer. But Madam Novikoff merely sees in this disgraceful confession by Skobeleff of the intrinsic cruelty of militarism, "a grim little trait of the discipline which he maintained in all his campaigns!"

Yet in Russia, as in other countries, the private soldiers, whose lives are thus held so cheap by their Governments and Generals, include many noble fellows of the true martyr spirit. The authoress again remarks: "For the sake of their oppressed brethren, Russians do not mind dying; it is part of our life—of our very soul." There are, indeed, many specially self-sacrificing and heroic men and women, both amongst the soldiery and civil population of that vast Empire. They deserve far better treatment than to be rendered, by wholesale, the victims of military despotism and the poor pawns in the game of war played heartlessly by snug and cowardly diplomatists, at a safe distance from all danger.—*Herald of Peace, (London.)*

EVERY person is, in one way or another, changed by his accidental or his proposed contact with external forms of evil. If he resists or rebukes them, he is purified, strengthened, and ennobled. If he countenances or yields himself to them, he is weakened and degraded. It is not the stone in our pathway that throws us down; but it is our own blindness to it or our disregard of it that causes us to stumble, for the stumbling is only a part of our own motion. We would do well to consider that external evils do not harm us, but that we harm ourselves by our attitude toward and our conduct with relation to them.—*Sunday School Times.*

PETTY PRINCIPLES AND SMALL AFFAIRS.

THERE are men voluntarily delivered over to the work of mere livelihood and gain,—men who, without the sad necessities and redeeming inspiration of affection, dwarf their whole nature to the scale of retail trade; who, instead of withstanding by a noble spirit the littleness of life, fall into it with glee and relish. . . . To such a man all the depth and beauty of life are closed. . . . There is no hell so far from God, no exile so total, as the cares of sordid self-interest. . . . Friends, there is nothing degrading in the humblest and the hardest fate; nothing much nobler in this world than a meek, true soul struggling against the narrow bounds of the sphere assigned it, and faithful to cherish the light of God in the inglorious darkness of a bitter lot. But to find the smallness of affairs a relief from any higher strain, to hug the degradation and make ourselves at home with it, to plead it in excuse for the unresisting meanness of our nature, to preach from its low platform a crusade of blind unbelief against the visions of prophets and the breathings of the devout,—this is a direct betrayal of the post of life, and treason against the holy Providence of all.—*Martineau.*

REST for weary hands is good,
And love for hearts that pine.—*Whittier.*

NEWS AND OTHER GLEANINGS.

—A Kansas maiden of eighteen years has broken the ground and planted forty-five acres of corn this season, which is now growing finely.

—In Finland's system of public schools, manual training is universal. Boys learn to sew as well as girls, and girls also learn carpentry.

—The Committee of the French Chamber of Deputies, on the 14th of Sixth month, passed a resolution, on the motion of Frederick Passy, to enter into a perpetual treaty with the United States for the settlement, by arbitration, of disputes that may arise between that country and France. F. Passy is President of the International League of Peace.

—Among recent railway projects of importance is one to build a line from Scutari, opposite Constantinople, to Bagdad through the heart of Asia Minor. Besides the value of the mineral and grain resources thus made available, the proposed road shortens the time between Europe and India by some nine or ten days, and will render Eastern travelers independent of the Suez canal.—*The American.*

—Governor Oglesby has made an innovation in the educational affairs of Illinois by the appointment of Ella F. Young as assistant superintendent of the city schools of Chicago, to fill the vacancy on the State Board of Education caused by the death of B. Groots, of Tamaroa; and Mary F. Feitchans, of Springfield, to succeed Isaac Lesem, of Quincy, resigned from the same board. These are the first women ever appointed to the Board of Education of the State.

—The death of Henry Carvill Lewis, Professor of Mineralogy at the Academy of Natural Sciences and Professor of Natural Sciences at Haverford College, is announced in a cablegram from Manchester, England. He was in his 35th year, and sailed for Europe with his family on the 3d inst.

—The will of Rachel L. Bodley, late dean of the Woman's Medical College, which has been admitted to probate, bequeathed to the Woman's Medical College all her scientific books, and her herbarium of dried plants, and

FRIENDS' BOARDING SCHOOL.

NEWTOWN SQUARE, PA.

Terms, $150 to $225 per year.

Apply to HANNA R. CALEY, Principal, address, during vacation), Media, Pa.

Or to
THOMAS P. BARTRAM, Newtown Square, Pa.,
CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,

A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 11th, 1888. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,

FREDERICK E. WILLITS, Sec.,
Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—

A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hour from New York city. For catalogue and particulars, address,

SAMUEL C. COLLINS, A. M., Prin.,
Chappaqua Institute, N. Y.

GOD LEADS.

JUST as God leads me, I would go;
I would not ask to choose my way;
Content with what He will bestow,
Assured He will not let me stray.
So, as He leads, my path I make,
And step by step I gladly take—
A child in Him confiding.

Just as God leads me, I abide,
In faith, in hope, in suffering, true;
His strength is ever by my side;
Can ought my hold on Him undo?
I hold me firm in patience, knowing
That God my life is still bestowing,
The best in kindness sending.

Just as God leads, I onward go,
Oft amid thorns and briers keen;
God does not yet his guidance show,
But in the end it shall be seen,
How, by a loving Father's will,
Faithful and true He leads me still,
My trembling footsteps guiding.

—*Lampertius.*

NEBRASKA LETTERS.—NO. VIII.

A RIDE of fifteen miles northwest from Creighton brings us to a little Bohemian settlement on the Verdigris, a small tributary of the Missouri. The town is called Verdigris, and has about a dozen houses, three of which are drinking saloons. A Catholic church calls the faithful of that persuasion from the country around to their devotions twice in the month. Everything indicates a low moral status; some of the farmers in the immediate neighborhood have built themselves good frame houses, but the most still occupy the sod-cabins, which being mostly dug out of the side of a hill, are to an inexperienced eye only to be distinguished from the rest of the hill by the stove pipe that rises several feet above the surface. As one enters the houses of even the best of these settlers, the careless, untidy condition of everything about them is not reassuring as to the value of such people in the building up of a great State. The question arises, "How many generations must come and go before the best civilization they are capable of will be attained?" and the response is found in the little school-houses that dot the prairie, and the well-bred, resolute young women who come into their midst as white-winged angels, bringing the blessed evangel of a better day for the little ones cradled in the low atmosphere of poverty and squalor out of which these rough sons and daughters of toil have just emerged. Contrasted with their former condition in the heart of Europe, these men are princes here. With fields forty acres in extent, covered with waving corn and ripening grains waiting the huge machine that cuts and binds with marvelous rapidity, and a ready market for all that is gathered, it seems enough to turn the heads of the staidest of these Bohemians, as his eye takes in the value of his possessions, increased by the horses, and cattle, and swine that, as he gives his attention to their comfort, add to his worldly prosperity.

There is a marked difference in the appearance of things where the settlers are Americans or Protestant Germans of the better class. A ride of seven miles in another direction, where the farmers are mostly Americans, afforded a most pleasing contrast. Here groves of trees offered delightful shade, lawns planted with evergreen and other trees, and flower-beds arranged with taste and an eye to beauty, invited the visitor to a closer acquaintance with the factors in this work wrought out in a few years from the sod of the centuries. Another ride of seven miles to the north was even more attractive, nearly the whole way being through fields under the highest state of cultivation, and groves that but for the regularity of growth and freedom from underbrush might well pass for original woodland. Sometimes the road was bordered by these groves, and long lanes planted on either side with trees led up to the neat white home of the settler, which by his thrift and prudence has taken the place of the rough cabin that now serves a more humble, but still very useful purpose in the farm economy.

This might be called the very garden spot of Northeastern Nebraska, and the farmers, many of whom have 320 acres, are among the most successful and prosperous in the State.

The floral beauty of the prairie has been spoken of in former papers. There is here as elsewhere a succession of plant life, few of the earlier blooms continuing through the later summer months. Nebraska seems to be the meeting place of two somewhat diverse floras. Plants indigenous to dry regions, and those that flourish best in a humid atmosphere, here come together. The best manuals of our schools give but an imperfect idea of the extent and variety to be found, and it takes a whole season spent in this region to get acquainted with all the forms of plant life and their habitat. From a catalogue published by the State University in 1875, we learn that 2,300 species and varieties are found in the State. To these may be added between two and three hundred that

have been identified since then. The crowfoot family is represented by over forty species. Among these are anemones, larkspurs, and columbine in many varieties; some of the mallows are of delicate, beautiful forms; one especially is a pure yellow and salmon color. Violets are abundant. The wild pea is very beautiful and grows with great luxuriance; the pulse family is said to be rich in species and individuals. Over the hills between which the Verdigris winds its tortuous length, a very pretty mimosa is just now coming into bloom, and a large showy convolvulus, different in foliage from our eastern varieties, lifts its rich purple corollas above the wild grass in a profusion of beauty. The evening primrose corresponds with our own, so does the ironweed, introduced from the East, which covers many of the pastures in such abundance that they seem a mass of blossoms. There is another plant found in profusion where the soil is richest; the foliage resembles the mimosa, and the inflorescence is a tuft of spikes, each bearing a multitude of wiry, dull purple flowers, which as they open are covered with a rich, yellow pollen dust. In this stage the plant is quite pretty. I have not found its botanical name; it is here called the "shoestring" because of the long tough roots that are so strong that they interfere with plowing, often throwing the plow entirely out of the ground. Among the legumes is a plant that is very poisonous to cattle, though the beans are used by some of the settlers for pickles. It is believed by scientists to contain an active medicinal property, and is to be tested by the scientific department of the State University.

The compositæ are very numerous and are just coming into flower. A small plant that bears a head about the size of our bachelor's button and grows four to six inches in height, is delicate and pretty enough for the flower garden. It is in white and pink and purple. The milkweeds are particularly rich in the number of species; the same may be said of the polemoniums; the most universally diffused, the phlox, in many places, so covers the prairies that they become scarlet from its presence.

Among the fruits indigenous to the state, the plum is the most conspicuous. There are several varieties. Some are large and fine flavored, but all are improved by cultivation. It is believed that the best varieties were introduced by the Spaniards in their early explorations. Grapes are also abundant in the ravines where the native woods are found; the small fruits are found in the same locations.

Of the birds the meadow lark

"The bird that soars on highest wing"

is seen everywhere; building its nest in the grass, it is at home on these broad p iries, and in the multitudinous insect life around finds an abundance of food. The quails are also abundant; they run along the roads before the horses and only take to the grass, or rise on the wing as the swift-trotting half-breed Indian ponies gain upon them. Since the timber tracts have increased in number and the trees attained a good growth, many varieties of song-birds heretofore seldom or never seen are quite numerous. Among the starlings is the red-winged black-bird, just now in the perfection of beauty.

All over the State, the interest in temperance work is unabated, and the Prohibition cause seems to be the prominent topic of conversation in all social gatherings. There is an intensity of feeling manifested on this question that promises well for the sobriety of the State. In none of the towns and cities is a bar allowed in the hotels. All liquors that are consumed are sold in saloons and drinking houses. The traveling public is protected by law, and town boards are prompt in rooting out everything that can debase or lower the standard of morality. Yet with all the precautions taken, the remaining saloons are alleged to be undoing much that the abstinent citizens are laboring to build up and sustain.

The weather for the last two weeks has been intensely hot, the thermometer ranging among the nineties through the day, yet there is always a good breeze that on the shady side tempers the heat, and after sun down, gives most delightful evenings and nights that afford refreshing slumber. L. J. R.

AN ALLEGORY.

A TRAVELLER, footsore and weary, was ascending the brow of a great hill as twilight was approaching. Cold and hunger had overtaken him, and it was with rising hope and a joyful flutter of the heart that he espied through the gathering gloom and chilling rain a beautiful mansion, grand and spacious, with lighted windows and open door. Hurrying forward he approached the entrance, sure that here at last he should find rest, refreshment, warmth, comfort; for there seemed to be merry-making within, and the lights shone brilliantly. What was his surprise and disappointment to see the great hall doors close slowly in his face, and to find that repeated knockings and calls for admittance gained no response. He rang, knocked, cried aloud; but the music within drowned his voice, and if any heard the bell or knocker, none heeded. He went to a window and gazed in, but the curtain was hastily drawn before his eyes and the light hidden. From one to another he passed, but always with the same result, though to the right and left windows and doors alike were open, and merry voices and gay laughter fell upon the dismal atmosphere. If he gained an open door or window in time to ask admittance of a gay group standing just within, a cold, unconcerned glance and the closing of the aperture were his only reply. Finally, one by one the lights were extinguished, until the one shining through the main door was all that could be seen. Faint and sick at heart he struggled once more toward it and put all his remaining strength into the knocker's blow. It resounded through the empty halls and apartments. In a moment a stately gentleman appeared coming toward him. "Ah," he thought, "now my troubles are ended. Here is the owner himself come to admit me to his hospitable dwelling." But before he had

time to proffer his request for shelter the owner of the house, with an indignant glance at having been aroused from repose, closed, locked, and barred the door, leaving him to the outer darkness and chilling rain now turned to cutting sleet.

He sank upon the threshold and buried his face in his hands. Bitter thoughts pursued one another through his tired brain. "If I were a beggar, tramp, outcast,—if I were not an intelligent, wealthy, law-abiding citizen, it would not seem so strange. But I am in no wise inferior to this man, neither in education, position, morality, riches, nor culture. How dares he shut me out in my need, separated from my guide, and in great want of what he can give me at an inappreciable cost, if he would! If I die from exposure and fatigue at his door—for I can go no farther—he will not care. Oh! if I were not so wearied and spent how I could hate him!"

A silence fell which seemed to extend to his very heart and brain; a deep, pulseless silence in which his ear, though still consciously acute, could catch no stir. After a long time a low, clear, quiet voice spoke out of the stillness:

"The time has come in thy life when wealth, education, culture, worldly position, self-complacency, and hate avail thee nothing. What hast thou more? Hast thou trust, humility, obedience? What master hast thou served, God or Mammon? Mammon cannot help thee now; God can. Thou hast wandered far; hast heeded the desires of thine own heart rather than the voice of thy Guide. See unto what they have led thee! Thou hast followed after selfishness all thy life, and at last it has recoiled upon thee. This mansion is but a dream of thyself. How many care-burdened, life-weary hearts hast thou relieved, comforted, healed, and strengthened for their journey? When hast thou shown sympathy for suffering, kindness to distressed, forlorn or unknown? When hast thou permitted the Light within thee to shine for the hope and delight of others? When hast thou admitted the outcast and friendless into the halls of thine inner heart? When hast thou not rather avoided the disagreeables of life than remedied or endured them for the sake of others? When hast thou humbly bowed the head and heart before the beauty of the lowliness of Christ? If at this moment thou should'st die, what hast thou gained in this life from the use of many gifts to return to thy Maker his loans with interest? But one hope remains: arise and follow me, and though the way be long and toilsome, I will lead thee to better things."

The traveler slowly found his feet once more, and led by the voice which, from time to time, uttered words of encouragement and wisdom, traversed many a brake and thicket, fording swift streams and surmounting rocky heights, but in spite of the difficulties of the way found himself taking renewed interest in motion and exertion. When again he reached a highroad where many were striving, fretting, pushing, hurrying, he stopped to raise a child which had fallen. Like magic his strength returned and with it a longing to pray. He fell upon his knees amidst the jeers of the pushing crowd, and with bowed head confessed in his heart: "Great is thy mercy, O Lord, my God!" He was overthrown and trampled upon, but felt no pain; and when there was a slight break in the torrent, regained his feet and stepped aside to where the current was less strong; where the feeble, the aged, and the very young had gathered to avoid some of the jostling. The voice still whispered in his heart words of hope, consolation, and strength, and these he uttered in gladness to all about him, raising, cheering, helping, carrying, as opportunity offered; pressing boldly forward as way opened, yet careful never to interfere with the progress of others. To his unending surprise and delight he gained new strength and fresh abilities at every step; and when the next evening closed upon the throng he found to his astonishment that all about him looked to him for help, strength, guidance. But it was not strange; for around his brow there shone a halo of light, a shining crown of glory, which served great numbers as a guiding star.

When once again he reached his home he threw open his house and heart to all alike; and since the well-to-do would not abide with the ill and unfortunate, weak, poor, and unhappy, these latter filled his halls and were entertained, fed, rested, clothed, and provided for their further journey in great numbers. To them he gave of the spirit of truth and kindliness as it had been given to him by his Guide; and the more he gave away the more he had, since, unlike Mammon's wealth, God's wealth grows by giving.

He had only conquered self, and become a true subject of that Kingdom which is not of this world.

A.

THE SEARCH FOR GOD.

[An aged Friend, in Chester county, Pa., who has been deeply interested in reading the books kindly sent from England by Katherine Backhouse, from the seclusion of his country home—where he has been an intelligent reader and observer during a lifetime of nearly 84 years—writes as follows to a friend in Philadelphia.—EDS. INTELLIGENCER AND JOURNAL.]

I AM much obliged for the care thou hast taken to gratify my desire to see "Early Church History." I have read it with much interest, and from my point of view can agree with what appear to be the sentiments of the compiler, and I trust the work may be of use in its tendency to turn the attention of the readers from the conflicting opinions of those who have viewed this important question (the so-called Christian religion) from their widely different standpoints, and lead them to search for the nature of GOD, and the duties of MAN within the secret workings of their own *minds*, as I have long been of the opinion that there is much of *truth* in that expression of Paul when he says, "That which may be known of GOD is manifest in them (men); for God hath shown it unto them. For the invisible things of him from the creation of the world are clearly seen, being understood by the things that are made."

> But still I find what far surpasses
> These wonders seen 'mongst things of time,
> I find within a silent movement,
> With swaying force upon my mind.

Something unnoted by my senses—
By eye unseen, by ear unheard,
By nerve unfelt, by lips untasted,
To sense of sound an idle word.

Yet plainly on my mind impressing
Its notes of warning when I slide;
Or commending in fond caressings,
When in its love I firm confide.

It is the fact of these impressions
That brings belief of something there,
A something on my spirit acting
To clothe with joy, or cloud with fear.

The will of God and man coalescing
In ever peaceful currents flow;
While in the adverse tidal surging,
The strife of angry billows show.

The waves the same—'tis adverse channels
That mar the beauty of the stream,
'Tis greed for self, or passion's sallies
That dim the light of friendly beam.

Our spirit part displays its willings
In drift of thought, revealed by deeds
Of kindness 'mongst our fellow creatures,
To give relief or fill some needs.

This shows an ever close relation,
Between the fountain and the rill,
The one its benefits dispensing,
The other still the cisterns fill.

The mind of man's the bubbling fountain,
Filled with cheer for its fellow man,
The great supply, the circling ocean,
Embracing all things in its span.

So spirit life, forever coursing,
In essence still remains the same,
Jehovah called—through systems reeling—
The soul, when of man we'd name.

Each part, as well as whole, retaining
The primal essence of free-will,
The greater tho' the less controlling,
In what his great designs fulfill.

While on these varied themes I've pondered,
Ranging upward through the whole,
For some sure foundation searching,
Whereon to place the human soul,

Tho' weak my skill and oft bewildered,
Amongst the varying creeds I see,
I came at last to this conclusion,
My search for GOD *in man should be.*

Seventh month, 1888.

For Friends' Intelligencer and Journal.

LIFE'S TRIFLES.

NOT trifles, but a careful attention even to these make perfection; yet we too often forget this and allow the veriest leak to let into our lives by little and little that which will prove a flood of misery, destroying the precious freight and adding a burden which tends to sink us in despair. A semblance of discontent, a careless word, a chafing spirit, bring their sure yield of unrest and make life's pathway to echo with sighs instead of reverberating with cheerful, heartfelt sounds of contentment.

We do not grasp the idea that happiness, the real gem untarnished, is not peculiar to place, position, or abundant possessions, but is, or should be, a part of our every day existence, a subtle something that we carry with us, journey where we may, which not only buoys us up but constantly diffuses its sparkling, refreshing influence. Here and there are rests amid life's toil, wayside couches spread to restore our failing strength, but we miss them or mar their intended use; perhaps it was but a moment pause, yet that would have refreshed us had it been enjoyed. Maybe but a change of work and scene allowing the overwearied muscles to relax, and opening to the eyes, dimmed with intense gazing, a new vista.

Cares throng our lives and we come to look upon them as a dense, shadowy mass, unmindful of the pleasures and bits of blessing which the days have brought us as well, or which would have been ours for the mere seeking. The aggregate looks dark and we fail to notice the brightness gleaming ever and anon, yet these tiny joys among the deeper pleasures bear the same relation to the sum total of our happiness that the gnawing cares do to our miseries. We neglect to contribute our mite toward the entirety of felicity, fail to bend with grace to the small burdens of care, and then wonder at the jar and jostle which we feel.

The warp of life is spread for our weaving, the pattern checkered o'er with light and shade, yet chosen by one wise to select and gracious to bestow; and from the woof we may cast aside the worthless and unseemly thread and weave in those which will endure and brighten, make perfect, and serve some useful purpose in its construction; may gather from broken shreds bright, rich hues which will relieve the duller shades; may borrow the tintings of past joys and future hope to brighten the darker lines that come unfailingly to our hands, and, plying our shuttle with willing, cheerful hand and beaming face, the web will ofttimes catch its hue from the weaver's brightness.

Labor we on then with care and trustful confidence in Him who has appointed us the task, winning each day added skill with fresh grace and zest for our work, until, by and by, our toils are forgotten when the Master gazing compassionately upon our humanly wrought fabric, greets our ears with the welcome plaudit "Well done, thou faithful in little things."

M. ALICE BROWN.

Seventh month 27, 1888.

"Those whom many a land divides,
Many mountains, many tides,
Each with other may have part,
May have fellowship in heart.

"And the holy dead have still
Part in all our joy and ill,
One in thought and one in love,
We below and they above."

IF you tell your troubles to God, you put them into the grave; they will never rise again when you have committed them to Him. If you roll your burden anywhere else, it will roll back again like the stone of Sisyphus.—*Spurgeon.*

SCRIPTURE LESSON, No. 31.

EIGHTH MONTH 12, 1888.

TOPIC: ATONEMENT.

GOLDEN TEXT.—If the wicked turn from all his sins that he hath committed, and keep all my statutes, and do that which is lawful and right, he shall surely live, he shall not die.—Ezekiel 18: 21.

READ LEVITICUS 16: 1-16.

Atonement implies a sense of wrong-doing, of sinfulness and the need of reconciliation. The day of Atonement and humiliation of all the people before the Lord was not set apart, as such, until after the two sons of Aaron—Nadab and Abihu—had made unholy offerings "before the Lord," and come to their death. It was the only fast-day kept by the whole people. We gather from the brief account given in Leviticus 10th, that the Divine will as communicated from Moses to Aaron, declared, "I will be sanctified in them that come nigh me, and before all the people I will be glorified." This was followed by the prohibition of wine and strong drink when Aaron and his sons went into the "tent of meeting," —a statute that was to be observed forever. From this we infer that the sin of these young men was in some way connected with wine or strong drink.

He shall put on the holy linen coat, etc. The washings and purifyings, and the white garments, all symbolize the condition in which he who presents himself before the Lord must appear if he offers acceptable worship; it implies a preparation for the service: "Wash you, make you clean," was the cry of the prophet.

The offerings were first for Aaron and his house, as they were set apart to the service of the Tabernacle. Then for all the people, two goats, one to be offered as a sin-offering, one to be sent into the wilderness for Azazel. This was called the *scape-goat.* It is not agreed as to whom this goat was sent, the phrase being one of unusual difficulty [Smith.] May we not believe it was to meet the need of some wanderers in the wilderness not included in the other offerings? The mercy of God is so wide, and the great soul of Moses was so in harmony with the Divine, that it could not set a limit to the Divine compassion.

The atonement that Jesus taught was "being *at one* with God," through the washing of regeneration and the renewing of the Holy Spirit, and this he illustrated in his own life of dedication and obedience to the will of his Heavenly Father.

In the religious world there are two distinct lines of thought regarding the character of the atonement, or the necessary reparation that must be made to the Divine Father for sin, or transgression against his will. The ancient Hebrew idea was that of reconciliation through sacrifice, or expiation by sufferance of penalty. With them the thought was that the wrong-doing of man so outraged God that nothing short of the most dire retribution could appease his anger; in fact, no penalty of suffering that he could impose upon himself, no sacrifice he could make possibly of pleasure, of comfort, of life even, could suffice to reconcile God to him. Long and painful fasts, the giving up of cherished possessions, the sacrifice of the most beloved objects, were endeavors that might find some favor in the sight of an offended Deity, but nothing in man himself, in their view, was sufficient to atone for his degradation. Hence grew up the idea of the offering of a life of some pure and spotless object as a propitiation, or a vicarious atonement by which the soul, too guilty for forgiveness in its own self, might be ransomed through the suffering of the sinless and pure. An illustration of this religious conviction of the Hebrews of ancient times may be found in the willingness of Abraham to sacrifice his son to Jehovah; and, again, in the sacrifice upon a great religious occasion of a scapegoat that should bear the penalty for the transgressions of the guilty. We shall find in the Scriptures this idea running through the record, again and again referred to and revived in various forms.

The other and the opposite idea is, that atonement is not the reconciliation of God to man, but, rather, the reconciliation of man to God by an assimilation of the human to the Divine. This also means sacrifice of self; it means self-denial; it means the restriction of all evil inclinations, the control of all feelings, all thoughts that are contrary to the best spiritual instincts of our natures. It means constant self-inspection and self-restraint. The demand this makes are "to keep the Law he has written in the heart, to be good, to do good, to love men, to love God."

Our Divine Father needs no reconciliation: his love toward man is everywhere shown; unto the most sinful and depraved it is abundantly extended; his forgiveness is unbounded. The great Teacher represented this in the parables of the lost sheep, the lost piece of money, and the prodigal son. It is man alone that needs to come into sympathy with God, to be *at one* with him even as Jesus prayed his disciples might be: "That they may be one, even as we are one; I in them, and Thou in me."

This atonement is made not through the crucifixion and death of Jesus, by the sacrifice of his pure and holy life for the sins of guilty mankind, but the true atonement consists in following the example of Jesus as expressed in his declaration (John 4; 34), "My meat is to do the will of him that sent me, and to accomplish his work."

Down through the ages this nobler thought of the the atonement ran parallel with the prevalent idea among the Hebrews of vicarious atonement, gradually supplanting it, until to-day we find a growing tendency among professors of all creeds to put their trust in the love of God, and accept his unceasing ministrations in the soul as the means by which man may acquire a knowledge of the highest good and a realization of Divine acceptance.

THE end of prayer is to get into a spirit of trust. When you have come to say, Now let me do my best, and, let matters come out as they may, I will smile and be not broken down—you are getting the answer of prayer. Prayer looks up and says, not teasingly to some power, Lord, give, give, give; but—In this world, this Father's house, I will be happy with what is allotted me.—*E. P. Powell.*

THE BOOK OF LEVITICUS.

ENTERING this book of Leviticus is like coming into the enclosure that more than thirty-three hundred years ago surrounded the Tent of Meeting in the wilderness. Why are we here? What is the value of the things we see about us here, we who have the broad sunshine of Christ's own word? What can we get here that is good for our spirit?

The things we see here are good to prepare us the better to understand, for instance, the Epistle to the Hebrews. That Epistle says of these things: "There is a disannulling of a foregoing commandment bebause of its weakness and unprofitableness, . . . and a bringing in thereupon of a better hope, through which we draw nigh unto God." It studies these things on the side of their poverty and inadequacy, and the necessity of their abrogation in times that, by their very aid, had outgrown them. It treats the Levitical forms and symbols as a pilot treats the guide-marks in a harbor, which are generally of two kinds, some showing where, and others where not, to steer.

In the lifting of man from earth heavenward there are two movements. Man draws nigh to God; but in order to his drawing nigh there comes before it a great, tender, indulgent drawing nigh of God unto man, a condescension of divine method to human imperfections. . . . . .

Even the Ten Commandments are not—as we well know—final, at least not in their letter, but are designed "as a schoolmaster," says the apostle, to graduate us into that higher life in Christ where we shall no longer need to be commanded, but where the inner condition may safely be trusted to shape the outer life, and not the outer life have to be prescribed by law to shape the inner condition. But, as we have seen, this is only the beginning of God's condescension; and as in the Mosaic civil law we find another and a subordinate teacher leading toward tne perfect outward performance of the Ten Commandments, in the Levitical we see still another, leading up to the spiritual understanding of the Decalogue with its implication of sin and the necessities of repentance and grace.

Now it is profitable to note this: that when it pleased God in his wisdom and compassion to keep his true worship in such a very earthen vessel as the Levitical ceremonial, and allowed it to look so much like false worship as to require, in the mind of many a devout believer to-day, a careful explanation; it was withal as different from heathen worship as light from darkness. For always behind the burnt offering stood the tabernacle of an almighty, holy, merciful God, testifying his personal presence and care, and offering within its curtains a way through penitence, faith and grace, into the Holy of Holies, the heavenly perfection of God's own ideal of divine rule and human duty.

This Hebrew ritual teaches us, then, that God's religion is not one thing in one age and another in another, but is in its inner spirit forever unchangeable, however violent may be from age to age the contrasts of its ceremonial forms. Thus it helps us to define to our souls more clearly than otherwise we might, the few, simple, eternal essentials of religion and worship.

Another thing to notice is, that God does not condescend to human forms of worship only. Every rite and ceremony, every form, stands for an idea from which it springs; and when God condescends to the form, he condescends to the idea also; but only to distil from it into men's slow understandings the dew of his perfect truth, and, that being done, then, and only then, to cast the rest away. We need, therefore, to take care how we fasten ourself inextricably to every idea attaching to those ancient and worn-out forms, as though there could not be a residuum of human misconception for us to cast aside, as the sons of Aaron rejected from the altar not the outer skin alone, but (v. 16) the inner uncleanness as well, of the burnt offering. So when we turn from this study of the tabernacle's ordinances, as we should, to the study of the Epistle to the Hebrews, we need not make the mistake of explaining Hebrews by Leviticus, instead of explaining Leviticus by Hebrews.—*George W. Cable, in S. S. Times.*

THE VALUE OF SOLITUDE.

EVERY one readily admits without a question the blessings and happiness which flow from our social relations. The influence of family and friends, the friction of mind upon mind, the comfort and sympathy and help which we are continually giving and receiving, the breadth of mind and the larger outlooks to be gained by mingling freely with other people, are advantages which no one is disposed to depreciate. But that solitude also has an excellence all its own is a truth seldom emphasized in the social age in which we live. It is commonly deemed a gloomy condition, mentally associated with prisons and penalties, and one which all except melancholy misanthropes would do their best to avoid. When, at times, it is enforced by circumstances, it is endured with much or little patience, as the case may be, and its conclusion is hailed with unfeigned pleasure.

Of course there are exceptions. Some people are by nature unsocial, or even anti-social, and to them solitude is more congenial than the society of their fellow men. They prefer to be alone, not because of any benefit which may accrue, but simply because their own company is less objectionable than that of other people. There may be some, also, who court solitude because they dread lest the eye of another may penetrate into their secret thoughts, and bring to light what they wish to be forever hidden. They have that within them which makes them the victims of shame or fear, and which causes them to shun the presence even of their friends. None of these various classes of people have fathomed the true valne of solitude, or have any idea of its real meaning.

There can be no adequate comparison between society and solitude. Though most persons will prefer the former and a few, perhaps, the latter, no wise person will choose either as a permanent state. It is

together, or rather in alternate action, that both yield their richest benefits. Society stimulates the the thoughts, invigorates the purposes, gladdens the heart and brightens life. Solitude strengthens, confirms and matures all these results. Or rather this is what each *may* do for him who uses them aright. For it is not the simple condition of being alone, or with others, that will produce any good effect. Much social life, so called, merely fritters away the time, fills the mind with puerilities and the life with folly. Much of the solitude endured on compulsion is only productive of restlessness and ennui, or only serves to nourish envious thoughts and bitter memories. But whoever has learned so to live in society as to bless and be blessed will feel the need of certain seasons of perfect solitude. Then it is that he may gather up his forces, strengthen his resolves, review his past, and prepare for his future. Just as perfect and well-earned rest and sleep repair the waste of the body, and restore the tone and power of the system, so the quiet hour of solitude may to the earnest heart and the loving soul bring renewed powers and re-invigorated faculties, with which again to go forth on errands of good to mankind.

It is well that men should influence one another in their business and their homes, in the intercourse of chance acquaintance, and the close ties of friendship. This it is that keeps them from growing narrow and bigoted in their own opinions, and draws them together in love, in friendship, in a common patriotism, and a human brotherhood. But this constant influence needs to be balanced by a firm individuality, a manly self-respect, and a steady adherence to the principles that appeal to each one's sense of right. Unless there are times when the man retires voluntarily from all human sight, where no public or private pressure can sway him, and where his own thoughts, his own feelings, his own conscience may assert themselves unrebuked and unassisted, he can never preserve that personality which is or should be the core of his being. Many a man has been drawn into snares that have proved his ruin, simply from not having pondered over the matter in solitude. Offers have been made and opportunities presented that looked specious and plausible enough, while the glow of enthusiasm illuminated them, and which have been first eagerly embraced and then bitterly regretted. A quiet hour of solitude might have cooled the heated imagination, discovered the weak spot in the enterprise and averted the catastrophe. Or a strong temptation to some questionable action or some doubtful indulgence is presented to the social man, and he yields and sinks in the moral scale; when, had he retired alone and listened to the still small voice that would have spoken to him there, he might have been saved from the fatal step. So there are afflictions that must be wrestled with in secret, or they will triumph over manhood; and there are even joys with which no stranger may intermeddle.

The best good of *society* itself cannot be attained unless each man learn to stand alone. In the one matter of the *vote*, all the interests of the country demand that every citizen use his own intelligence and his own conscience in determining what name he shall drop into the ballot-box. Using all the light that he can gain from every source, it must at last come to his own decision and his own act, if the principles of our Government are to be upheld. After all the questioning and answering, the reading and listening he can do, he may well pause a little and commune with his own heart before he discharge so serious an obligation. So every circle of people met together for any object will prosper largely in proportion to the individuality which each member of it gains in his solitary hours. He must be a *man* among men, and true manhood can never be fully developed without the influence of society and solitude, interacting and mutually benefiting each other.—*Philadelphia Ledger.*

PRAYER.

Prayer gives intensity to the consciousness of our connection with God,—lifts us out of our narrowness into communion with the Infinite,—teaches us to regard our interests as embraced within the immense designs of Providence,—opens to us a view of our relations to the universe and all spirits. We come to Him who has the well-being of all creatures in his control, in whom the whole good of the universe is concentrated: can we approach him absorbed in selfish wants? We come to the Spiritual Father, who desires our perfection, whose law of rectitude is immutable, whose will of goodness is supreme, who abhors evil: must not every desire become purified in such a presence? God always regards us in our connections with other beings; every gift bestowed upon us, or withheld from us, will affect them as well as us: should not our petition be, then, to receive only what the Universal Father sees to be best for all as for ourselves? The true spirit of prayer is a submission of ourselves to the good of the whole, to the purposes of Infinite Love.—*Channing.*

HIGH HEARTS.

High hearts are never long without hearing some new call, some distant clarion of God, even in their dreams; and soon they are observed to break up the camp of ease, and start on some fresh march of faithful service. And, looking higher still, we find those who never wait till their moral work accumulates, and who reward resolution with no rest; with whom, therefore, the alternation is instantaneous and constant; who do the good only to see the better, and see the better only to achieve it; who are too meek for transport, too faithful for remorse, too earnest for repose; whose worship is action, and whose action ceaseless aspiration.—*Martineau.*

What sort of clothes are you making for your children, O mother? Is their vesture wisdom or folly? Is it the true beauty of goodness or a poor imitation from the draper's? Something you did yesterday becomes a part of a garment your child must wear many years. Make the garments, O mother, so that they will be robes of dignity and esteem in the world, and spotless and bright in the Kingdom of Heaven forever.—*Sylvester Judd.*

HELPING OTHERS.

IT is almost an instinct with some people to be perpetually on the alert to see a chance to help others. These at once observe when any difficulty occurs where a word or an act can be used to the advantage of those in trouble. They are found in every station of life ready to help or to make the world brighter. Their help is usually of the quiet, unobtrusive kind, and does not get heralded abroad. Hence the conclusion reached by so many, that the world grows worse because we see so much in the public press of wrong and crime and comparatively few of the good deeds recorded. Such helpers as these are sure to win hosts of friends, not that these friends desire to profit by this element in their characters, but because so much of mercy, pity, love, and peace dwell in their hearts, that love returns to them spontaneously. They recognize the strong bond that binds humanity together, and the heart is touched ere the brain begins to operate and reason asserts her claim to be heard; they are those of whom the poet writes,

> "It is the heart and not the brain
> That to the highest doth attain."

It is from ranks like these are recruited our charity workers, for it is the souls made rich by duty in a narrow field, that are so valuable when occasion calls them to step forth into broader pathways. Having sanctified an humble lot they are ready to enrich a larger sphere. 'Tis true there are amongst them those whose tenderness of heart unbalances their better judgment, and such will ofttimes bring distress upon themselves and those who depend upon them for support. Such should be labored with by their better balanced fellows, and strengthened on the other side, but not crushed, for the world has none too much of pity, nor too many whose "failings lean towards mercy's side."

The age in which we live is brightened by the many projects that helpful people have devised to benefit the afflicted, and our land is dotted over with asylums, with homes, with schools, where the weak and the suffering are sheltered and cared for, where the ignorant are taught to battle with a life that might otherwise be to them a burden, if not a curse. And how often it is that the visitation of sorrow is the agency by which the tender fountains of the heart are unlocked and made to pour forth ministrations that carry blessings to so many! And who but such as let reason get undue control, could say aught against such heart promptings as result in so much of good to others? The bereaved one who lately in our midst had constructed a large boat and gave it to be used to carry daily the sick and the helpless to where they could breathe the fresh air, and feel the invigorating influence of breezes forbidden to them in close rooms and crowded streets, obeyed the divine impulse of a heart touched by sorrow, and paid a more loving and lasting tribute to a helpful life, than could ever have been expressed by pages of written words, however eloquent; or by columns of monumental marble, however beautiful! Let us rejoice at the growing tendency of the times to use money to benefit humanity rather than to have it squandered on vanity and luxury. Let us encourage by our approval the giving of means, or the leaving of it, to be used for the wise advancement of the many, rather than the amassing of wealth to give luxuries to the few: and where any have within them this grace that enables them to be helpers to others, let them not suppress it but use it wisely, having a care that in helping they do not destroy self-respect in those helped by making them subject to their own strong wills, but strive to arouse the dormant courage, the hidden strength that will lift them to an independent place where they can feel their own ability and responsibility, as children of One who takes delight in the up-lifting of all of his children.

THE attention of Philadelphia Friends designing to attend the quarterly meeting at Valley is directed to the notice elsewhere, as some change in the arrangements has been made since last week.

DEATHS.

WHINNERY.—At her home, in Iowa Falls, Hardin county, Iowa, on the 24th of Seventh month, 1888, of bronchial affection, Rachel A., wife of Gerald L. Whinnery, and daughter of William Hilles, aged 39 years, 4 months, and 12 days. She had a birthright membership in the Society of Friends, and was a Friend in principle and in practice. Gentle, and unassuming in manner, affectionate, and amiable in disposition, patient and hopeful during a tedious and prostrating illness, she endeared herself to all around her; and in prospect of the approaching change which she felt was near at hand, she manifested a cheerful resignation and peaceful serenity that was most beautiful to contemplate, and which lent a soothing influence to those about her. She was a devoted wife, a tender, loving mother, and a kind friend. She leaves an affectionate husband and a sweet little daughter to mourn her loss, who will have the deep-felt sympathy of a wide circle of friends.

> "Gone! and the home is so lonely:
> Gone! and our hearts are so rent.
> Gone from the path that she brightened

Always with tranquil content.
Now young with a freshness immortal,
Blest with a rapture untold,
Strong with a life never ending,
Home in the heavenly fold."

LETTERS FROM EUROPE.—XXII. OBSERVATIONS OF RELIGIOUS THOUGHT.

London, July 1, 1888.

It would be difficult to attach any practical meaning to the promise given to the apostles of the coming of the Holy Spirit to lead them into all truth, without understanding that changes in religious views must from time to time take place. New truths must necessarily supersede old truths, and it is not at all inconsistent with the eternal character of religious truth that we find "creeds out-worn," discarded and scattered along the path of its progress. There was a time when good men thought it behooved them to maintain the honor of the Almighty by putting his enemies to death, and who never for a moment doubted that those who did not hold their creed were his enemies. Very few now in the whole extent of Christendom entertain such views of duty, or such confidence in their own infallibility. And what has wrought this change? The law is the same to-day as it was in the days of persecution. Every obligation that rested upon the men of that day is acknowledged by the men of this; and how is it that what was then understood in one sense is now understood in another? Our intellects are no better than those of our fathers, nor are we any more earnest in the search of truth. It is because we have been guided into new truth, and I believe that this guidance is still operative, and is working changes which are manifest to the observing mind.

When on our arrival in London we began to frequent the churches, we all became conscious of a tone in the sermons to which we were not accustomed, and after a short time on comparing notes we agreed that the change was in the absence of doctrinal disquisition and in the practical character of the teaching. The sufferings of Jesus, his agony and sacrifice were rarely if at all mentioned. No allusion was made but incidentally and remotely to his supernatural character, while his deeds and teachings furnished almost the only matter of the various discourses we heard. This tone seems to pervade all the pulpits, not only so far as we heard, but so far as we read in the various religious papers which here publish a large assortment of the sermons preached on Sundays. In fact I heard "doctrines" denounced from a church pulpit as having been a hinderance to Christianity.

There has been also a wide expression of toleration, which if not new is certainly more prominent than it has heretofore been in my experience. I reported in an earlier letter the words of the Pope on receiving an American lady who was presented to him as a Protestant: "No matter; she is a Christian and I am a Christian priest." The same sentiment was uttered by Cardinal Manning in a sermon we heard from him on Trinity Sunday. But such sentiments from Catholics are not surprising, since one of their great theologians long since said: "There are thousands of saints who never heard of Christ." It is in the Calvinistic denominations that intolerance has in modern times been most stubborn. Yet I have recently seen a notice of some meeting in which Methodists and Baptists joined Unitarians in some good church work, one of the Methodists saying that while in matters of doctrine they would probably be separated by irreconcilable differences, the platform of good works was broad enough for all to stand on.

In the English Church pulpits occasion for the airing of such views has been given by the great Council of Anglican bishops from all points of the world, which is now in session. It is really a very imposing assembly. In opening the first session the Archbishop of Canterbury "invoked a blessing upon all believers, be they churchmen or no, who love the Lord." And in a fine sermon in the Abbey, Archdeacon Farrar protested against the narrow spirit that "would exclude from the one flock of the Good Shepherd, any sheep that are not of this flock." But this tolerant spirit finds difficulties almost too great to cope with.

The progress of science and scientific methods gives renewed force to the objections to miracles, first urged by Didymus and in every age since by people like him. It has been conceded by the authorities that a great many wonderful occurrences narrated both in the Old Testament and the New may lawfully be attributed to natural causes, if natural causes are competent to account for them, or may be held to have been natural if the inquirer's mind is thereby satisfied. Such are the receding of the Red Sea waters, the supply of manna and quails in the wilderness, the famines and plagues that punished disobedient nations, and the miraculous draught of fishes, but this line of inquiry, if carried too far, assails the miracles on which the Christian faith is founded, and leads up straight to Unitarianism. It is indeed asserted that the English Church is widely affected with that heresy, and there have been some prominent secessions from the Church on that ground. One of these seceders, Mr. Voysey, left the Church under ecclesiastical censure, and being an able man, carried a large congregation with him in founding what he calls the Theistic Church. Another, Stopford Brooke, took offense at the terms of the judgment condemning Mr Voysey, and also retired, like him taking the congregation with him. He also has great powers as a preacher. A third, Mr. Haweis, is supposed to hold the same views, but has not felt called on to leave the Church: nor are the ecclesiastical authorities at all anxious to meddle with him, so long as he gives no occasion for open scandal. But the allowance of latitude in this respect necessitates equal liberality in the opposite direction, and the practices in some ritualistic or high Churches in the reverence paid to the cross and sacrimental bread, fall little short of those of the Roman church. And the Anglican churchman, who is not satisfied with the plain and reasonable forms observed in the great majority of English churches

may, in the ritualistic, feast their senses and narrow their devotion by the sight of rich vestments, gaudy banners, processions, prostrations, and crossings, by the smell of incense and by charming music. But the ritualistic movement is but a protest, a reaction, against the advance of rationalism.

A sober writer on this subject has said it was a veritable misfortune for Christianity that its authority should ever have been rested upon a basis of physical miracles, so that the inconsistency of these with scientific truth should necessarily bring religious truth also in conflict with it.

A controversy on this subject has been going on since the days of Voltaire, but of late years has passed from the literary stage to the scientific. It has recently, however, assumed the old form in a well written novel called "Robert Elsmere," which Mr. Gladstone has deemed worthy of his notice in an extended review. The hero is a clergyman of the Church of England who is led to reject the miraculous portion of the Christian system, but holds fast to the moral portion and is made out a pure and elevated character, and doer of all good works.

Mr. Gladstone discusses the subject with great learning and in his clear and persuasive style. He has no doubt that one who has been brought up in the orthodox faith may reject it and yet preserve his lofty principles, because his character was formed under the influence of Christian doctrine: but he doubts that such will be the case in the second and third generations. In other words he does not believe that the principles of Christianity can long exist dissevered from their miraculous frame-work, and thinks that without it, men cannot fail to relapse into paganism. This view is supported, I think, by the condition of religious thought in France. As displayed by a recent magazine writer, I think I may say that the present school refers all virtues to utility and considers all indulgence lawful that is not followed by its consequences. Renan, the apostle of rationalism, who has given expression to many pure and elevated sentiments, has recently written a play which carries out this idea to a painful and repulsive extreme, picturing the downfall (though he doesn't deem it such) of a noble character, for want of hope in the next world. The same writer notices as a consequence of the want of religious faith, the extension of the sentiment that draws man and woman together in marriage. And he suggests that the stationary condition of population in France is due to this cause as evidenced by comparing the provinces of Normandy and Brittany. In the former where the population have cast off the church, the births are only 19 in the 1000. In the latter which is still Catholic, the births are 33 in the 1000.

It seems certainly true that the vigor of a nation bears a certain relation to the elevation of its religious faith and the sincerity with which it is held. The subject is a most interesting one, but we have not perhaps the means of arriving at satisfactory conclusions.

NOTES BY THE WAY: THE CHRISTIANA RIOT OF 1851.

A few days ago I was visiting Levi Scarlett, of Christiana, brother of Joseph P. Scarlett, a member of the Society of Friends; who in the year 1851 lay several months in the Moyamensing jail in Philadelphia, waiting a trial for high treason. Levi Scarlett now owns the farm on which the celebrated Christiana riot occurred, and he was so kind as to take me to the place.

In 1851 the farming people in that neighborhood were in a considerable degree members among Friends, and some of them strongly anti-slavery. They belonged to Caln Quarterly meeting, not a large and wealthy one, but regarded as the strongest anti-slavery quarter of the Yearly Meeting. A considerable number of colored people lived here also, of whom some at least were fugitives from slavery, the Maryland line being only about thirty-five miles distant. The Pennsylvania Railroad cuts near here through a range of hills at a place called the Gap, and the neighborhood was then infested by a band of desperate characters, called "the Gap gang," including thieves and "kidnappers," as the colored people called those who seized them to take them South. Thus, at evening, in a farm-house about two miles from Christiana, the family saw their hired man seized; he was knocked down, gagged and bound, put into a two-horse wagon, and carried off without any form of law. By such things the colored people were put into great fear, (for free people *might* be carried off as well as runaways). They became greatly excited; provided themselves to some extent with arms, and on one occasion were seen "training" on a public road, by James Jackson, a minister of our Society. James asked them to go to their work and invited them to come at a future time to his house where he endeavored to persuade those who came that peaceable measures were for their interest. Levi Pownall, a Friend, and not a member of an anti-slavery society, owned two farms in the neighborhood, one of which was that which I visited, now belonging to Levi Scarlett. On this farm stands a strong, two-story stone tenant house, then occupied by two colored families, the heads of which were probably all from Virginia. One of these was William Parker, who was employed by Levi Pownall's nephew, Joseph P. Scarlett, to go 'round with his threshing machine. (This is the Joseph, Scarlett who lay three months in Moyamensing prison.) It was the fall of the year, in corn-cutting time, and there had been at night an apple-butter boiling in the stone tenant house; two or three men of the party had remained over night. About daybreak, as they were leaving, they came running back, crying "kidnappers!"

There was a party of men outside, from Maryland in search of fugitives. (But the men living in the house, as I have said, were from Virginia.) The apparent leader of the party, he who lost his life in the affray, was named Gorsuch; said to be a good man at home, one who worked in the field with his men, and a member of the Methodist church. With him

were his son, his nephew, and a United States Deputy Marshal from Philadelphia, named Kline, and others. (C. C. Burleigh, in an account of the affair in William Still's "Underground Railroad," calls Kline "a notorious slave-catching constable.") It was afterwards stated that young Gorsuch had lately returned from Europe and found that some of the neighbors had been trying to persuade his father to come to Pennsylvania for runaways, and had succeeded; and as his father was a determined man, he could not dissuade him from the trip.

The presence of a deputy marshal of the United States upon the scene is one of the striking incidents in the affair. There was, it appears, an unusual amount of preparation upon both sides, and the skirmish was the outcome of deliberate plans. The presence of the marshal was in accordance with the newly enacted Fugitive Slave Law, so odious in many of its features. The party from Maryland did not make an immediate attack upon the stone house (it was stronger than most southern cabins, I fancy.) The two apple-butter boilers ran back to the house, and up stairs, crying "kidnappers!" The women went above and blew the horn from a garret window. Parker tried to defend the staircase with a fish-gig, a corn cutter, and a gun that would not go off.

The news flew rapidly: to Georgetown, three miles; Christiana, two; and Penningtonville, (now Atglen) three, where gangs of colored men were at work making brick. These promptly came to the scene. Several of the white neighbors also came upon the ground, among them Castner Hanway, Elijah Lewis, and Joseph Scarlett.

George Pownall, son of Levi, who owned the farm, hearing a noise at the tenant house in the morning, went over to Christiana for help, and then came upon the ground. When Joseph Scarlett, (the brother of my guide, the other morning), arrived, the elder Gorsuch was lying in a short lane about 35 yards from the house. He had been shot, but was not dead; he breathed perhaps two or three times after Joseph's arrival. Joseph also saw his son lying wounded, and put him into the vehicle of an acquaintance and took him about a quarter of a mile to Levi Pownall's house; thus he thought it probable that he saved the young man's life.

Levi Pownall was a well known Friend. The wounded man lay about three weeks in the airy parlor, down stairs. They (the Gorsuchs) seemed like very nice people, says Eleanor Pownall, Levi's daughter, (who was so kind as to give me reminiscences of the time). Young Gorsuch's sister came on from Maryland after her father's funeral, and attended the wounded brother.

Levi Pownall's wife had often told the Parker family, their tenants, that it was better for them to try to save themselves peacefully and quietly, if any one tried to take them up, but Parker answered: "If you hear any disturbance at my house, I don't want you to come over."

We have found that one person was killed in this affray; and another, seriously wounded. Parker came over to Pownall's after the skirmish, looking pretty wild, with a mark above his forehead where a bullet had grazed his hair. He escaped to Canada.

The mark of the bullet still showed when he came back here about 1872. Gorsuch's own slaves were also near Christiana, doubtless, when he came on to retake them, but they escaped.

Hanway, Lewis, and Scarlett, and a number of colored men were apprehended and lodged in jail; and the first named passed through an exciting trial on the charge of treason. One of the counsel called in on his behalf was Thaddeus Stevens. When he was at length acquitted the others were all released. It may seem strange that they should have been charged with treason, when the Constitution expressly says that "Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort." But a case was attempted to be made against them, constructively. By the Fugitive Slave Law authority was given to the U. S. Commissioners and those appointed by them, to summon and call to their aid the bystanders, to arrest or hold a fugitive. Hanway and Lewis, having come upon the ground, were ordered by Kline to help seize the colored men, which they declined to do.

The motive of the persecution, says Levi Scarlett, was to break down the Abolitionists in their opposition to the Fugitive Slave Law. Men, however, who had taken those strangers, the runaway slaves, into their own houses, for years, were not prepared to yield a ready submission to a law which made it a punishable act to receive a runaway slave, and which, when he was tried for his freedom before a Commissioner, gave the Commissioner ten dollars if he was sent into slavery, but only five if he was set free.

P. E. GIBBONS.

Lancaster Co., Pa., Seventh month 14.

NEWS OF FRIENDS.

CALN, PA., QUARTERLY MEETING.

A SMALL body assembled at this, one of our most beautifully situated places for social worship, on the 26th ultimo. But few are left to gather here, where in former years many gladly assembled on such occasions. But this should not discourage, for the blessing is to the few as well as the many; the faithful standard bearers of the past having passed on to their reward, many of those who should follow in their leading are scattered far and wide over our land, bearing their share of life's burdens and perchance carrying forward the testimonies of truth. Some members of the yearly meeting's visiting committee were in attendance to their comfort, Watson Tomlinson and Joseph Powell encouraging to faithfulness in loving Gospel messages.

—Western Quarterly Meeting, held at [illegible]adon Grove, Pa., on the 24th ultimo, was much larger than usual, many visitors being present, amongst them were Watson Tomlinson, Lydia H. Price, and F. J. Newlin, who were concerned in the ministry, as were also some of their resident ministers. The day was very pleasant, and the religious opportunity one of favor, and the social commingling valuable.

—At Birmingham Monthly Meeting, held at West

Chester, Pa., on the 28th ultimo, Lydia H. Price was granted a minute to attend Ohio and Illinois Yearly Meetings, and some meetings going and returning. At the same time Phebe Griffith received a minute as her companion to Ohio, and further, if way should open for it.

EDUCATIONAL.

FRIENDS' EDUCATIONAL CONFERENCE (O.) AT HAVERFORD COLLEGE.

[A Conference of teachers, professors, etc., of the several educational institutions maintained by Orthodox Friends, was held at Haverford College, on the 3d and 4th of last month. The following is the essential part of the report given by *Friends' Review*.]

On the opening day, Seventh month 3d, at 3 p. m., in Alumni Hall, James Wood, President of the Association, opened the meeting with reading a portion of Scripture, followed by a time of reverential silence and vocal prayer. Each of the succeeding days' proceedings began in the same manner; vocal prayer being sometimes offered. President Sharpless, of Haverford, Secretary of the Association, read a very interesting report of the educational progress made in the Society of Friends during the last five years, since the last meeting of the Association at Earlham College, Indiana. Among the evidences of that progress, a total of about a million dollars has been given to various institutions belonging to Friends within that period; besides the legacy of Jacob Jones to Haverford College, valued at $500,000 not yet received.

James Wood addressed the Conference on "The Influence of Colleges on the Progress of Religious Thought." As Moses and Paul were learned in all the wisdom of their time, "university men," so, through all the Christian centuries, great movements of reform have been led by men of learning, bred in, or working in, the universities. Wycliffe, Huss, Jerome, Luther, Erasmus, Calvin, Colet, Penn, Penington, Barclay, Wesley, and Whitefield have been examples of such leadership. If sometimes, as in the Tractarian movement at Oxford, we do not find unmixed good in the religious agitations among men of learning, immense power must be recognized as belonging to their influence upon religious thought. It is true that this influence may be either positive or negative. Hence it is of very great importance that, in all our institutions a devout spirit may prevail; that culture of the heart may accompany that of the intellect, and that every college may be a centre of instruction, first of all, in the faith and love of our Lord Jesus Christ.

A brief discussion followed this address; emphasizing the conclusions brought forward in it.

At 7.30 p. m., a lively and suggestive paper was read by Prof. D. W. Dennis, of Earlham College, on "Scholarship and School-teaching." He especially urged fit preparation for the work he undertakes, on the part of every teacher. He should know, on his subject, all that is known about it. Then, if he is a born teacher, one who can convey what he knows, and can arouse enthusiasm for fresh knowledge in his pupils, they will work with a will and with success.

Charles H. Jones, Principal of Friends' School at Vassalboro, Maine, spoke impressively on essentially the same theme, "The Proper Qualifications of an Educator." Professor Fellow, of Tonganoxie, Kansas, opened the discussion on the subject of these papers. All the discussions of the Conference were taken down by a stenographer, and they, with most of the papers read, are to be printed in an official report of the Conference.

Fourth-day, Seventh mo., 4th, President James E. Rhoads, of Bryn Mawr College, read a paper descriptive of the plan, progress, and present condition of that institution. A discussion followed, especially in regard to the religious life of the College. Abundant evidence was given of the faithfulness of the President in promoting its Christian life. Worship after the manner of Friends is held every morning and one evening in the week; and voluntary prayer meetings are held every week by a number of the students. The influence of the ladies presiding, as "house mothers," over the two families in Radnor Hall and Merion Hall, was said to be excellent and important. The correctness of an account of the College recently given in a widely circulated weekly paper, unfavorable to its religious condition, was denied by several of those closely acquainted with it. The purpose of the Trustees and President of the College was announced, to endeavor to fill vacancies occurring in its faculty with Friends, as soon as entirely competent professors in membership with the Society can be obtained. The action of the Trustees in their appointments hitherto was explained, as being governed by their construction of that clause in Dr. Taylor's will, which asserts his design to provide an institution for the higher education of women.

President Hobbs, of Guilford College, N. C., read a paper on that college, giving briefly the history of the development of Friends' New Garden Boarding School, and the demand for such an institution which has led its managers to obtain its conversion into a college. The prospect of usefulness and success for this college is very encouraging, and it meets with sympathy and welcome from the already existing Friends' colleges.

John Bright University, at Wichita, Kansas, was spoken of by Absalom Rosenberger. A property amounting to 250 acres of land, valued at $400 an acre, has been presented to Kansas Friends, on condition of $100,000 being raised and the buildings erected within a certain time. Counsel as well as aid was invited from Eastern Friends, in order that such an opportunity for establishing a centre of educational usefulness may not be lost.

Reuben Haines Hartley spoke on behalf of the Friends' College at Whittier, California. This is the only collegiate institution now proposed for Friends near the Pacific. Newberg Academy, Oregon, is very distant from it, and is not organized as a college. A building has been partly erected at Whittier, and work has begun with a preparatory department. Much interest was expressed in regard to both of these enterprises: the vastness of our country, and

the Jonah's gourd-like evolution of institutions in the West, being strikingly brought out in the discussion.

Dean Stanley, in his life of Arnold, of Rugby, thus describes his method of teaching: "His whole method was founded on the principle of awakening the intellect of every individual boy. Hence it was his practice to teach by questioning. As a general rule, he never gave information, except as a kind of reward for an answer, and often withheld it altogether, or checked himself in the very act of uttering it, from a sense that those whom he was addressing had not sufficient interest or sympathy to entitle them to receive it. His explanations were as short as possible—enough to dispose of the difficulty, and no more; and his questions were of a kind to call the attention of the boys to the real point of every subject, and to disclose to them the exact boundaries of what they knew or did not know. With regard to younger boys, he said: 'It is a great mistake to think that they should understand all they learn; for God has ordered that in youth the memory should act vigorously, independent of the understanding—whereas a man cannot usually recollect a thing unless he understands it.' But in proportion to the advance in school he tried to cultivate in them a habit of not only collecting facts, but of expressing themselves with facility, and of understanding principles on which their facts rested. 'You come here,' he said, 'not to read, but to learn how to read.'"

—That is the best governed school which is governed through its activities. The problem in school government is, how to keep the children busy. A busy school governs itself, and an idle school nobody can govern. A frequent use of "thou shalt not" is an unfailing sign of weakness on the part of the teacher. Remember that "substitution" is the only proper method of "elimination" in the problem of school government. Give the better method, the better thought, the better ideal, and the bad must give place.—*Aaron Gove.*

—The highest honor in the London University has this year for the first time fallen to a woman, Mary Louisa Worley, of the North London Collegiate School for Girls, and Girton College, Cambridge, who has gained the gold medal in classics at the annual examination for the M. A. degree. No other woman was successful in classics, but there were in all sixteen candidates in this branch, of whom ten have passed.

—One of the most serious dangers of much of modern teaching is the remarkably loose discipline to which it leads. We have lately visited a school in which the teacher talks and the pupils talk, and both talk too much. The teacher becomes intensely interested in his subject and talks incessantly to his class; the pupils who do the talking are not those who are in the recitation but those who ought to be studying at their desks. The truth is that your-*over*-interested, talkative teacher is rarely a good disciplinarian, and the pupils at the study desk do much as they please, and not only destroy the good order of the school but also waste much valuable time, and make but little real progress. This is not theory. The actual truth may be observed in every school where there is a talkative teacher.—*Educational News.*

A WESTERN EXCURSION.[1]

We went out with the Raymond excursion party, which left Philadelphia the 25th of Seventh month, 1887, and were gone just four weeks. The route taken was by the Philad'a & Reading, Lehigh Valley, and N. Y., Lake Erie & Western Railroads, to Niagara Falls, thence through a portion of Canada to Port Huron, and across Michigan to Chicago, by Chicago & Grand Trunk Railway, and to Milwaukee, St. Paul, and Minneapolis by Chicago, Milwaukee & St. Paul Railway, and the remainder of the distance by the Northern Pacific Railroad. At each of the cities named we stopped over one or two days, and had carriage rides of ten or twelve miles each, through and around them, which was a very pleasant feature of the trip, and visited the famed falls of Minnehaha on the ride from Mineapolis. We also had a very pleasant and romantic steamboat ride of ten miles through the Delta of the Wisconsin river, and another of three miles on Lake Minnetonka, a noted pleasure resort, about ten miles from St. Paul. These are all included in the excursion ticket, and add greatly to the pleasure and enjoyment of the trip. There were forty-four of us in the party, from different parts of the country, about an equal number of each sex, several of the ladies without any particular companions. Traveling in this way is very convenient, the arrangements being all made beforehand, so there need be no anxiety about finding accommodations at any of the stopping places. The company were all very social, friendly people, though there were but two (J. Shoemaker and wife from Jenkintown) that we knew personally, but we soon got acquainted, so that we seemed almost like one large family. We had two very elegant sleeping cars,to which we soon got accustomed, and when traveling at night rested very comfortably. At Minneapolis our cars were attached to the regular through train on the Northern Pacific railroad, the distance from there to the Park being about 1,070 miles, through Dakota and part of Montana. The train consisted of thirteen cars, including two baggage, one mail, and one dining car. We left Minneapolis at 4.30 p. m., on the 3d of Eighth month, and arrived at Livingston about the same time on the 5th, forty-eight hours. This is the junction with the branch line leading to the Park. There are a number of thriving towns and villages on the railroad. At Bismarck the train crosses the Missouri river on a substantial iron bridge, and at Glendive we approach the Yellowstone river, and ascend its banks 400 miles. From Livingston to Cinnabar the terminus of the branch road, is fifty-one miles. Here coaches were awaiting thearrival of the train, to convey the party to the Mammoth Hot Springs Hotel, about seven miles within

[1] A brief description of an excursion trip through some parts of the western country, and the Yellowstone National Park, in the summer of 1887.

the limits of the Park, where we all safely arrived at about 7 p. m.

The Yellowstone National Park is situated in the north west corner of Wyoming Territory, in the region of the Rocky Mountains, and has an extent of 65 miles north and south, by 55 east and west, an area of about 3,575 square miles, and an average altitude of 7,000 feet above sea level, and contains within its limits some of the grandest and most sublime displays of the operations of Nature to be found in this or any other country. One writer has beautifully and truthfully described it as a region of wonders, terror, and delight; here tremendous geysers shoot up their mighty fountains of boiling water and steam, numerous hot and boiling springs and pools of seething mud, present a strange and singular beauty. The scenery too is ever varying; there are snow-mantled mountains, grand canyons, mighty cataracts, majestic forests, verdant valleys, sylvan streams, and beautiful lakes.

The regular tour of the Park, about 160 miles, is made in comfortable four horse coaches, carrying eight or ten persons besides the driver, and occupies ten days, which affords ample time for sight seeing as well as intervals of rest. Leaving the Hotel on the morning after our arrival, traveling the Golden Gate road, and by Obsydian cliffs, stopping at Norris Basin for dinner, which was served in tents, the Hotel at this place having been recently burned, arrived at the Falls Hotel before night (distance 33 miles). Next day being First-day the 7th of Eighth month, was spent in viewing the great falls and Canyon of the Yellowstone. The river here is from 80 to 90 feet wide; the upper fall has about the descent of Niagara, while the lower or great fall half a mile below, is nearly double, being 300 feet in one perpendicular pitch. Standing on the brink of this fall, and looking down into the fearful abyss beneath, half filled with mist, spray, and the rush and roar of the water, produces sensations of awe and amazement that neither pen or tongue can describe, and must be seen to be realized; and the sublime beauty and grandeur of the Canyon below the falls, 1,200 to 1,500 feet deep, draped in all the different shades of coloring, completes the wondrous scene. The following day we had a very pleasant ride of 15 miles to Yellowstone Lake, passing by Sulphur Mountain, and some boiling springs and a curious looking mud geyser, returning to the falls in the afternoon. Next day the 9th we left the Falls Hotel early for a ride of 29 miles to lower geyser basin at the forks of the Firehole river, crossing a high and rugged mountain on the way, dined there, then 10 miles further to upper geyser basin, arriving there about 6 p. m. Here we remained till Fifth day, 11th; the greatest number and most noted of the geysers and boiling springs is located here on an area of perhaps 15 or 20 acres. Among the most prominent of the geysers are Old Faithful, the Castle, the Grand, the Giant, the Giantess, Bee Hive, Splendid, and a number of others less powerful. Old Faithful is the most noted geyser in the Park, so named on account of the frequency and regularity of its eruptions, which occur hourly. It is situated on a mound of geyserite ten or twelve feet high, on the top of which are the cone or crater, about four feet high, and the throat two by six feet. Through this aperture the boiling water and steam are ejected with great force and noise, 150 to 200 feet high, lasting from four to five minutes. Some of the others are in action daily, and others at intervals of several days. We saw a number of them erupting while there, some still more powerful. Next to the geysers in interest are the hot springs, which are pools or basins of clear blue tinted water, from four to thirty feet in diameter, some boiling gently, and others violently.

Leaving the upper basin and its wonders at 1 p. m. on the 11th, and halting on the way to see a fearful looking pit of colored boiling water strongly impregnated with sulphur, called Hell's Half-acre, and the Paint Pots, which are pools containing a substance resembling colored paint in a boiling state, we arrived at the Lower Basin Hotel before night, distance ten miles.

Next morning, the 12th, resumed our journey, reaching Norris Hotel at noon, passing several boiling springs and geysers on the way. In the afternoon continued on, arriving at Mammoth hot springs towards evening, traveling that day 40 miles. The next day was spent in climbing the terraces nearly 200 feet above the surrounding level, on the top of which are large and beautiful springs of boiling water and many other novel and interesting objects, as Cupid's cave, Orange Geyser, etc. The tour of the Park is now completed.

First-day, the 14th, was mostly spent in rest and retirement, writing letters home, etc.

On Second-day morning, the 15th, we left the Park on our return, taking the cars at Cinnabar and traveling over the same route, first-class meals being served on the dining car, we arrived at Niagara Falls about 9 a. m. on Sixth-day the 19th. Here we were allowed six or seven hours time, which we spent to the best advantage in viewing the great cataract from the different points of observation. It is indeed a grand and sublime sight, but not to be compared to the wonders of the Yellowstone. In the afternoon we resumed our journey, and reached home at the appointed time without accident or mishap, having been favored with good health and pleasant weather the entire journey of over 5,000 miles.

So we, and I think I may say all of the party, feel well satisfied and repaid, and thankful for the opportunity and privilege of beholding those astonishing displays of the operations of Nature under the control of the Great Ruler of the universe.

In conclusion, we would advise those who feel an interest and have a desire to see those great natural curiosities and wonders of our country, and are comfortably situated as to leaving their homes, etc., to go with the Raymond party, as traveling in that way is rendered very pleasant and agreeable, being freed from the care and anxiety of ordinary traveling; and the party accompanied with careful and obliging conductors, they are everywhere received and treated as expected guests, for whose comfort every arrangement has been made beforehand.

L. WALTON AND WIFE.

Johnsville, Bucks County, Pa.

TEMPERANCE NOTES.

THE All-day Temperance meeting held at Goshen, Pa., on Seventh month 26th was one of much interest. The house was well filled and the speaking evidenced deep concern and earnestness. High license and prohibition were the phases of the subject occupying the most attention. Theodore K. Stubbs and other speakers were present. Elizabeth Darlington appealed to the young to make their social and literary gatherings valuable by introducing information relative to our laws on temperance and kindred subjects, so that when the time came for them to speak and act on public matters they could do so intelligently. The meeting was harmonious and was felt to be one of value to the cause in which so many are deeply interested.

[These lines were composed during a serious illness of the writer, when she was shut up in a dark room, and unable to use her eyes.]

WAITING.

"They also serve who only stand and wait."—MILTON.

"THE fields are whitening 'neath the ripening grain;
I long to toil amid the reapers there;
What full, ripe sheaves, I'll gather ere the rain,
To prove my gratitude for God's dear care!"

Thus saying, proud and resolute I stood
Amid the ever busy, hurrying throng,
Waiting to see, in somewhat anxious mood,
The Lord and Master as he passed along.

He came. Quick pressing through the eager throng,
I stood beside him near the open gate:
"Master, what shall I do? My soul is strong"—
He turned and softly said, "Here stand and wait."

The hot blood to my brow and temples flew;
I struggled fiercely with my hapless fate:
"O, Master, have you naught for me to do?"
"Yes," he replied at once; "here stand and wait."

He passed along; and through the weary hours
I stood with restless hands and aching heart;
I would not even pluck the fragrant flowers
Beneath my feet while thus I stood apart.

Again he passed; and, in my grief, I said,
"I'd rather die than only stand and wait!"
One look of sad rebuke; no word he said,
But left me weeping by the open gate.

The weary, weary hours come and pass;
I watch the reapers cut the bearded grain;
I see their heavy sheaves, and sigh, alas!
That I may only wrestle with my pain.

The night draws near; I seek him once again:
"O Master, see! 'tis growing dark and late!
I have no sheaves." His sweet voice soothes my pain:
"They serve me best who patient stand and wait!"

So patiently I strive to stand and wait
Through all the glories of the changing years,—
Wait till his hand shall lead me through the gate,
And change my "sighs to songs"—to smiles and tears.

—*Rebecca Ruter Springer.*

UNDER THE LIGHTHOUSE.

BENEATH the tall, white lighthouse strayed the children
In the May morning sweet;
About the steep and rough gray rocks they wandered
With hesitating feet;
For scattered far and wide the birds were lying,
Quiet, and cold, and dead,
That met, while they were swiftly winging northward,
The fierce light overhead;
And, as the frail moths in the summer evenings
Fly to the candle's blaze,
Rushed wildly at the splendor, finding only
Death in those blinding rays.

And here were bobolink, and wren, and sparrow,
Veery and oriole,
And purple finch, and rosy grosbeak, swallows,
And king birds, quaint and droll;
Gay soldier blackbirds, wearing on their shoulders
Red, gold-edged epaulets,
And many a homely, brown, red-breasted robin,
Whose voice no child forgets.
And yellowbirds, what shapes of perfect beauty!
What silence after song!
And mingled with them, unfamiliar warblers
That to far woods belong.
Clothing the gray rocks with a mournful beauty
By scores the dead forms lay,
That, dashed against the tall tower's cruel windows,
Dropped like the spent sea-spray.

How many an old and sun-steeped barn, far inland,
Should miss about its eaves
The twitter and the gleam of these swift swallows!
And, swinging 'mid the leaves,
The oriole's nest, all empty in the elm tree,
Would cold and silent be,
And never more these robins make the meadows
Ring with their ecstasy.
Would not the gay swamp-border miss the blackbirds,
Whistling so loud and clear?
Would not the bobolinks' delicious music
Lose something of its cheer?

"Yet," thought the wistful children, gazing landward,
"The birds will not be missed;
Others will take their place in field and forest,
Others will keep their tryst;
And we, we only, know how death has met them,
We wonder and we mourn
That from their innocent and bright existence
Thus roughly they are torn."
And so they laid the sweet, dead shapes together,
Smoothing each ruffled wing,
Perplexed and sorrowful, and pondering deeply
The meaning of this thing.
(Too hard to fathom for the wisest nature
Crowned with the snows of age!)
And all the beauty of the fair May morning
Seemed like a blotted page.
They bore them down from the rough cliffs of granite
To where the grass grew green,
And laid them 'neath the soft turf, all together,
With many a flower between;
And, looking up with wet eyes, saw how brightly
Upon the summer sea
Lay the clear sunlight, how white sails were shining,
And small waves laughed in glee:
And somehow, comfort grew to check their grieving,
A sense of brooding care,

As if, in spite of death, a loving presence
Filled all the viewless air.
"What should we fear?" whispered the little children,
"There is no thing so small
But God will care for it in earth or heaven;
He sees the sparrows fall!"

—*Celia Thaxter.*

AGRICULTURE IN NORTH CHINA.

Agriculture among the Chinese was the invention, according to their own statements, of the Emperor Shen Neng, who, succeeding Fuh-hi the first Emperor of China, ascended the throne 2,737 years B. C. It was he who "first fashioned timber into plows and taught the people the art of husbandry." He also discovered the medicinal virtues of plants and instituted the custom of holding periodical markets for the barter of commodities.

The Chinese from that legendary time to the present have always been an agricultural people, and their Emperors, without regard to race, whether native, Mongol, or Manchee, have encouraged this habit, doubtless seeing in it the greatest safeguard of the throne. The present dynasty has continued all the ceremonies instituted in ancient times tending to ennoble the occupation of the farmer. Even now the Emperor makes his annual visit, at the vernal equinox, to the Temple of Agriculture, and, after plowing with his own hands a few furrows, offers sacrifices at the four altars of the gods of heaven, the gods of earth, the planet Jupiter, and the Emperor Shen Neng. Notwithstanding the great antiquity of this art among them, and the great respect in which it is held, the Chinese have failed to make any great progress in it. Their system of cultivation is very careful and marked by attention to details, but shows ignorance of the principles of rotation of crops, adaptation of soils to particular grains, and an extremely primitive knowledge of agricultural implements. Their fields are treated like immense gardens. They are subjected to the most constant and watchful care, both at time of planting and during the growth of the grain. When ripe, the crop is gathered by hand with the utmost completeness; not a straw or leaf, scarcely even a root, being allowed to remain.

In threshing grain the Chinese spread it out on a smooth clay floor in the open air, there being such a threshing floor adjoining every farm-house, and either by threshing with flails or by rolling a stone roller drawn by a donkey over it, detach the grain. The chaff is removed by tossing the grain into the air in a slight breeze, the kernels of grain falling straight to the ground, the chaff and dust being blown aside.

The two most characteristic features of Chinese agriculture are the use of manure and the systems of irrigation. Manure is gathered from all conceivable sources. In the cities the night-soil deposited on the sides of streets and alleys is gathered by men and boys in buckets and mixed with clay, dried in the sun, and sold to farmers. On country roads boys, and often girls and women, are seen at places where large numbers of pack-horses, camels, and mules pass, gathering into baskets the material which is afterwards, with such beneficial effects, spread upon their fields. Earth from the canals, rivers, and city streets is also carted away for the same purpose. "Other substances are diligently collected," says Williams, "as hair from barber shops, exploded fire crackers, and sweepings from the streets, lime and plaster from kitchens and old buildings, soot, bones, fish, and animal remains." The quantity of these fertilizers used and the importance the Chinese attach to them are proved by the number of people whose livelihood is gained in their collection.

In irrigating his land the farmer uses many devices. Where running water is at hand he turns it to advantage by directing it over his fields in large channels, banked in with clay, and subdivided into smaller and smaller streamlets, until every part of the ground has been reached. If no running water is found, wells are dug and water drawn up by hand and poured into the main ditches, which are subdivided into numerous smaller ones. Holes are dug in which rain water accumulates, which is baled out when needed. The raising of this water is in most cases, especially in the vicinity of Peking, done very laboriously by hand. Windmills, of which there is not one around Peking (if anywhere in China) might be used for this purpose with great increase of efficiency and saving of human labor.

In a crowded country like China, where population crowds, in spite of the utmost frugality and diligence, close upon the means of subsistence, any improvement in agricultural methods, increase in the production of old crops, or introduction of new ones from abroad are matters of great importance.

Chinese agricultural implements are of the rudest character. They are, chiefly, the plow, the hoe, the harrow, the rake, and the stone roller. The plow is simply a broad blade fastened to a rough handle, guided by a man and drawn by teams of the most miscellaneous description; it cuts a furrow never more than 6 inches deep, and frequently only 2 or 3. The teams are made up of horses, donkeys, mules, bullocks, and human beings, it being not unusual to see a man or boy and any one or more of the animals above named drawing the same plow. Chinese farmers measure the depth of the furrows by the fingers, and frequently speak of plowing only 2 or 3 fingers deep. The reason of this seems to lie in the difficulty of making a deeper furrow with their plows, and not because they are unaware of the advantage of it. The hoe is a much more effective tool, and it is with this that they work between the furrows of grain after it has sprouted.

Foreign agricultural implements, especially plows, might be introduced with good effect among the Chinese, except that the price would deter all but very few from buying them. A Chinese plow can be bought for the equivalent of two or three Mexican dollars, and smaller tools in proportion. There are no great stores devoted to the sale of agricultural implements as with us, they being made by hand, either by a neighboring blacksmith or by the farmer himself, as occasion demands.

ADVANCEMENT OF ASTRONOMY.

It is claimed that astronomical science has made greater progress during the past two years than it has made during any previous ten years on record. The next two years promise to be more marvelous in results than ever. This will be accomplished largely by the great telescope in the Lick observatory, which is now in use. Already many extraordinary stellar discoveries have been made with it.

The capacity of the great telescope is, a local astronomer affirms, far in excess of the expectations of many of the most sanguine observers. Illustrative of its great power, it is alleged that the comet which recently attracted a great deal of attention, but which passed out of the range of other large telescopes several weeks ago, is still within easy range of the Lick telescope. The later ephemeris of this comet thus obtained, has accurately determined its orbit which is entirely different to that previously given it. The misty cluster in Hercules is separated so that each star in it stands apart from its nearest neighbor. The giant planet Jupiter is an object of marvelous beauty, "full of strange and interesting detail from pole to pole, and the mottings on it standing out like cobble-stones," is the testimony of a local observer who recently explored the face of the planet under a power of 1,200. The markings on Mars—its seas and continents, if such they be—are defined with wonderful clearness through the glass. Among the many new discoveries already made through the agency of this instrument, but not yet officially reported, are a great number of new stars and double stars not before listed.

The clear and steady atmosphere and extraordinary elevation of Mount Hamilton observatory are invaluable adjuncts to the great telescope, broadening the field of observation and extending the possibilities of astronomical discovery. The bank of fog which frequently settles over the Santa Clara valley at night, seldom if ever, ascends the summit of the mountain. It prevents the ascent of the hot air from below to disturb the upper atmosphere. It is, therefore, possible to use a power of 2,000, although the definition of the object thus observed is not as sharp as it is with the use of a lower power. But anything stands out sharply outlined with a power of 1,200 or more.—*San Francisco Bulletin.*

HENRY CARVILL LEWIS.

The recent death of Henry Carvill Lewis must cause a feeling of very great bereavement to many thousands of people in this community who could not be reckoned as his personal friends or acquaintances. Every man or woman departing this life should leave some monument behind them to tell why they lived here. His monument consists in part in the real knowledge which his industrious investigations in the domain of science have added to the accumulated stock of the world. Particularly so is his Report on the Terminal Moraine of the Glacial Period, which makes part of the very valuable and yet uncompleted Geological Survey of the State of Pennsylvania. His part of the work on this branch of the subject was done with scientific judgment, and is exhaustive and convincing. Other work he did also, and it is sad to think that a life which promised so much of future usefulness should be so soon ended.

A community owes it to itself that a good and useful man's or woman's memory is not left to die for want of proper appreciation for those who survive. Memorials are given many outward forms. Monuments of bronze or marble, windows of beautiful design and material, and many other modes of loving appreciation are suggestions of every day application. I suggest as a fitting memorial for our friend the formation of a scientific society (in which our community is sadly deficient), around which, as a nucleus, seekers after knowledge could gather for more extended work and investigation. This may lead to the formation of a cabinet of natural history or a museum in which to spend usefully and pleasantly the time not otherwise occupied. Germantown has many good and useful institutions; it has no school for scientific study.—*Joseph Fussell in Public Ledger.*

BOYS AND TOBACCO.

To many of our readers it may be news that, as a result of careful scientific investigations, the Emperor Napoleon, in 1862, prohibited the use of tobacco in the government schools of France. Later investigations in the same country have fully established the fact that physical and mental weakness follow the use of tobacco by boys, and that the younger the boys the worse the effects. Germany has partly followed in the same line. In this country Congress has forbidden the use of tobacco among the cadets in the Naval Academy at Annapolis. This order was based purely on the ground of the injurious effects of tobacco upon the physical and mental powers of growing boys. New Jersey and Massachusetts, and, we believe, some other States and Territories, have passed laws to prohibit the sale of tobacco to minors under sixteen years of age—*Woman.*

THE CARE OF BOOKS.

With regard to the cleaning of books, Mr. Blades says: "Each book should be cleansed and wiped separately, and gently rubbed with a soft cloth." How cleansed? With soap, Bristol brick, and scrubbing brush? Perhaps there is no domestic service so badly done as the cleaning of books in private libraries. The work is usually given over to ignorant servants, who do more damage to fine books than their miserable services for five years are worth. Such books often come to sale; and it is obvious on a moment's inspection that they have been in a private library, and that their bindings have been wellnigh ruined by ignorant servants in cleaning. The leather is discolored, and the remnant of gilt on the tops and backs is dulled and broken. They have been treated with cloths—sometimes wet—with brushes and feather dusters.

The proper way to clean books is to take two of about the same size and strike their sides smartly together several times until all the dust is expelled;

and not apply cloth, brush, or duster, under any circumstances, to the gilt or leather. If treated in this way, books will retain their original freshness for years. Books in cases without glass fronts retain their freshness longer than when put in closed cases. More dust will collect upon books exposed ; but it is a dust which comes off readily. When put behind glass doors, or in cupboards, less dust settles upon them, but in localities where soft coal is used, it is a fine sooty dust, which, when treated with a cloth, brush, or duster, acts like a black oily paint, discolors the leather and dulls the gilt. On books which are openly exposed, this sooty dust mixes with an innoxious and coarser dust and it all comes off together. These facts explain what seems at first paradoxical—that the more we try to keep books away from dust, and the more we clean them, the dirtier they become.—*W. F. Poole, in The Dial, (Chicago).*

GREAT PRINCIPLES AND SMALL DUTIES.

A soul occupied with great ideas best performs small duties; the divinest views of life penetrate most clearly into the meanest emergencies. . . . Nothing less than the majesty of God, and the powers of the world to come, can maintain the peace and sanctity of our homes,the order and serenity of our minds, the spirit of patience, and tender mercy in our hearts Then only shall we wisely economize moments when we anticipate for ourselves an eternity. . . . Then will even the merest drudgery of duty cease to humble us, when we transfigure it by the glory of our own spirit.—*Martineau.*

"*RELIGION.*"

"If we want to know what Religion is, we must study Jesus. Are my duties as a member of the Heavenly Father's family fulfilled when I have done my duty by my own flesh and blood religiously ? We may be clannish in the King's palace. To make us realize that any human being in real need and suffering is our brother, so that the selfishness natural to our lower natures shall be rebuked by the springing sympathy of blood for blood—this is the sacred function of the religion of the child in the Father's house. There is no right of primogeniture in His household. Privilege, as we now see, means responsibility ; power is a trust ; wealth is very literally a social stewardship."—*R. Heber Newton.*

Properly situated shade and ornamental trees have a commercial value that is often lost sight of. Fourteen hundred dollars, the price recently paid for a half acre building lot in Glastonbury, is thought by many to be a high price for country property, yet a friend suggests "$400 for the lot and $1,000 for the beautiful elms in front is a very reasonable price," and any lover of nature will say, Amen. A friend of mine in Massachusetts, not yet past seventy, has during his life time sold out, (at a good profit) nine homes to people who were attracted to them by the trees and plants he had planted on each, when first taking possession—it being almost a passion with him to buy neglected places, and attempt to make perfect homes out of them, by the aid of the art of horticulture.—*Hartford Courant.*

NEWS AND OTHER GLEANINGS.

—It is stated that a severed nerve in the thumb of a surgeon, who suffered injury while performing an operation, has been mended, and it is believed successfully, by the insertion of a nerve taken, with every antiseptic precaution, from the thigh of a rabbit. The sense of touch has already, two months after the operation, returned in a measure to the injured thumb.

—The Nicaragua Canal surveying party, under Civil Engineer Menocal, have discovered that a new route, which they call the " upper one," is much more favorable for the line of the canal than the one recommended in 1885. By this new route it is said that the total length of the excavation from Ochoa to Greytown will not exceed nineteen miles, and will consist of several short embankments instead of one long one. The cost, it is said, will be greatly reduced, and the engineering difficulties much less.

—A practical method of promoting forest growth is advocated by L. D. Watkins, of Michigan, by covering the waste places on the farm with trees. Besides making the land of use and being commercially valuable, they would serve a good immediate purpose as screens. The author recommends the common locust for steep hillsides, where nothing else can be grown ; black walnut and white oak for such spots as may be fertile, and cedar and tamarack (larch) for damp, springy places.

William Walter Phelps has introduced into Congress a bill to purchase from Stephen Vail, of Morristown, N. J., the original telegraphic instrument, or recording receiver, invented by his father, Alfred Vail, and used upon the first telegraphic line ever constructed--that between Washington and Baltimore—and to transmit the first message ever sent : " What hath God wrought ? " The purchase of this instrument is strongly recommended by the officers of the Smithsonian Institution. The price is ten thousand dollars.

—The area of dry land of the world is estimated at 55,000,000 square miles, the area of the ocean 137,200,000 square miles. The bulk of the dry land above the level of the sea is 23,450,000 cubic miles, and the volume of the waters of the ocean is 323,800,000 cubic miles. The mean height of the land is 2,250 feet. The mean depth of the whole ocean is 12,480 feet.

—The recent movement toward the study of social reform among the students of Harvard College is not only one of considable significance, but very interesting as a test of what larger work might be done in the same direction. Professor Peabody gives a system of instruction in charities and social reform, and these classes, originally formed for the benefit of young men preparing for the ministry, have proven so popular that they have been opened to undergraduates, and young men devoted to other professions have become profoundly interested. This is the very best possible preparation for that general improvement of the world to which earnest young men and women should feel themselves called. We should like to see a similar course of instruction, if thoughtfully conducted, in every American college and university.—*Unity.*

—The King of Denmark will celebrate the twenty-fifth anniversary of his reign on November 15th next. Recently he learned that a subscription was being promoted among all classes of Danes to present to him a magnificent jubilee gift in the shape of a country-seat in Jutland. He has written a letter in which he states that when he looks

upon the existing economical conditions of Denmark, and sees the hard struggle for existence which his people are carrying on, he feels obliged in conscience to refuse to accept any gift so costly.

CURRENT EVENTS.

THE conferences between the Sioux Indian chiefs, on the great reservation in Dakota, and the United States Commissioners appointed to explain to them the proposed law by which the reservation is to be divided up, have been in progress for several days at the Standing Rock Agency, and at this writing, (Seventh month 31), are not closed. The chiefs present, however, have informed the Commissioners that they will not sign the agreement under the bill. They declare that they have been cheated, heretofore, by the Government, in all such transactions, and will not be again deceived. Red Cloud and Sitting Bull, both of whom have been absent from the conferences, (the former at his agency, Pine Ridge), are said to be opposed, also, to the consent.

A BILL granting aid for a Colored National Industrial Exhibition is expected to come up for action in the Senate in a short time.

OVER 3,000 Icelander immigrants arrived in Winnipeg, Manitoba, on the 12th of the present month, and over 400 others are expected within two weeks. The people in the north of Iceland are threatened with starvation owing to the unusual rigor of the season. On Sixth month 5th all but three of the harbors on the coast were still blocked by ice, a thing which has not occurred before for nearly a century.

THE National Parliament of Italy has abolished capital punishment throughout the kingdom of thirty millions of people. This has not been done hastily, but after years of careful investigation and deliberation by her ablest jurists. The long trial of noncapital punishment in Tuscany, the most advanced and cultured portion of what now constitutes the Italian kingdom, has served to convince the most sagacious and thoughtful of the statesmen of that classic land that the penalty of death is not the most effective and safe method of punishing convicted criminals.

THE expedition which has set out for the relief of Henry M. Stanley under the command of Prof. Jamieson, the English naturalist, is about to make the start into the interior from Kasodgo, on the Congo river. The company comprises 900 men, and all are reported in good health.

THE Pope has sent Cardinal Lavigerie of Rome to London to arouse English public opinion against the slave trade as still carried on by the Arabs along the east coast of Africa. The movement is not confined to the Catholic church, but is meant to include all Christian people.

LATE reports from Western Kansas state that the corn crop is being literally burned by hot winds. Rain in plenty fell in the early part of the season, causing the roots to spread close to the surface instead of sinking deep into the soil. The plants are consequently unable to endure the hot winds.

NOTICES.

*** An all-day Children's Temperance Meeting, under the auspices of the Friends' Temperance Committee, will be held at Wrightstown meeting-house, Bucks county, Pa., Third-day, Eighth month 14th. Addresses, essays, and other exercises upon the subject will be contributed by the different First-day schools in the country.

Meetings to commence at 10.30 a. m., and 2 p. m. Basket lunch. All are cordially invited to attend.

By order of Committee.

*** PHILADELPHIA, Seventh month 30, 1888.

To FRIENDS' INTELLIGENCER AND JOURNAL:

We have received additional contributions for the Children's Country Week Association from

M. K. Tomlinson,	$ 5.00
J. S. L. W.	15.00
Howe,	5.00
Previously acknowledged,	$172.00
Total,	$197.00

FRIENDS' BOOK ASSOCIATION,
John Comly, Superintendent.

*** Friends wishing to send books snd papers to the Indian School at Genoa, Nebraska, can do so either by express or freight. Direct to Professor Whitmore Hess, Industrial School for Indians, Genoa, Neb. All packages must have the charges prepaid.

*** Friends' First-day School General Conference will meet at Yarmouth, Ontario, Canada, on the 20th and 21st of Eighth month.

The several Yearly Meeting First-day School Associations are requested to forward their reports and papers, together with their list of delegates to the undersigned as early as possible.

Friends desiring to attend will please purchase their tickets to St. Thomas, on the Michigan Central R. R., at which point they will be met by Canada Friends and conveyed to the place of meeting.

The Railroad Trunk Line Commissioners having declined to make any concessions in rates of fare, Friends will be obliged to make the best terms possible in each case. Special arrangements have been made so that Friends going by way of New York can stop over and visit Niagara on their round trip tickets. All who desire to take advantage of this should notify the undersigned at once.

JOSEPH A. BOGARDUS, Clerk General Conference.
177 West street, New York City.

*** Quarterly meetings will occur Seventh and Eighth months as follows:

9. Abington, Gwynedd, Pa.
10. Stanford, Ghent, N. Y.
11. Salem, Salem, O.
11. Miami, Waynesville, O.
16. Shrewsbury and Rahway, Plainfield, N. J.
17. Pelham, Yarmouth, Ont.
18. Short Creek, near Mt. Pleasant, O.
20. Fairfax, Goose Creek, Va.
23. Stillwater, Plainfield, O.
27. Warrington, Menallen, Pa.
27. *Ohio Yearly Meeting, Mt. Pleasant.*
28. Burlington, Mt. Holly, N. J.
29. Southern, Easton, Md.
29. Easton and Saratoga, Granville, N. Y.
30. Bucks, Falls, Pa.
31. Nottingham, East Nottingham, Md.

*** Philadelphia Quarterly Meeting will be held on Third-day, Eighth month 7th, 1888, at 10 o'clock a. m., at Valley Meeting-house. Special arrangements have been made to convey Friends to Maple Station, on the Chester Valley Railroad, three-quarters of a mile from the meeting-house.

Trains will leave both the Reading Depot, Thirteenth and Callowhill streets, and Wayne Junction at 7.45 o'clock a. m., on Third-day.

Members of the Select Meeting can take the 1.40 p. m. train from Thirteenth and Callowhill streets, or the 1.13 p. m. train from Wayne Junction, on Second-day, for Maple Station, where Friends will meet them,

The return train will leave Maple Station at 4.30 p. m. Tickets good going on Second- and Third-days and returning on Third-day both from and to Thirteenth and Callowhill streets and Wayne Junction, will be issued at 60 cents the trip.

Tickets also good to Friends desiring to return to the City on Second-day afternoon, who will take the 7.47 train from Port Kennedy.

Ask for Quarterly Meeting tickets.

The committee would earnestly encourage Friends to

avail themselves of the facilities thus offered, otherwise the reduced rate of fares is liable to be withdrawn.

CHARLES E. THOMAS,
S. ROBINSON COALE,
JOSEPH R. WALKER,
} Committee.

*** The Friends at Roaring Creek have decided to hold meetings for worship at that place on the First-days following their Monthly Meetings, at 2 p. m.

The first one was held on the 15th inst., and was well attended. Perry John and others spoke.

There are many Friendly people in that vicinity and it is hoped that concerned Friends will bear them in mind.

The next Monthly Meeting will be held at Bear Gap on the 18th of Eighth month, and conveyance will be had for Roaring Creek the next day. H. T. C.

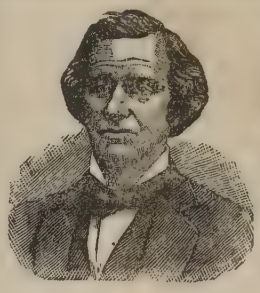
PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also to help avoid mistakes.

*** As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.



This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

THE DEEPER THINGS.

CHILDREN of men! the unseen Power whose eye
Forever doth accompany mankind,
Hath look'd on no religion scornfully
That men did ever find.

Which hath not taught weak wills how much they can?
Which has not fallen on the dry heart like rain?
Which has not cried to sunk, self-weary man,
"Thou must be born again?"

Children of men, not that your age excels
In pride of life the ages of your sires,
But that you think clear, feel deep, bear fruit well
The Friend of Man desires.

—*Matthew Arnold.*

Editorial Correspondence Friends' Intelligencer and Journal.

NEBRASKA LETTERS.—NO. IX.

IN our intercourse with the world we meet those whom we have never met before, whose lives only touch our own, and they are gone; yet, by some alchemy of the spirit the touch remains and we are wiser, better, perhaps nobler, for the brief interchange of thought and the awakening of feeling the interview has inspired. The remembrance of such occasions is among the jewels of our inner life, that never lose their luster, and are as imperishable as the soul in which they are enshrined.

Many such memorials are ours, and many more we might gather to sweeten and make glad our lives, if we were but willing to open our hearts to receive them.

The other day at a dinner company, where your correspondent was a guest, the conversation turned upon the "Second Coming of Christ," one lady remarking that a prominent theologian of the East had recently expressed his belief that this event is near at hand. It was said in the remarks that followed that the great epochs of the world's history have been periods of two thousand years, as marked by Hebrew chronology, and as we are soon to enter upon the twentieth century of the Christian era, some important development may confidently be looked for. It was said that the unity and fellowship that are so apparent among the religious sects, on all humanitarian questions, and the increasing liberality in judging of the differences in creed and worship,—that the mingling together in the work for the well-being of all which this is bringing about is full of promise, and betokens the dawn of that better time foretold by prophet and seer, when "Nation shalt not lift up sword against nation, neither shall men learn war any more," and this will certainly fulfill the promise of his coming. "Do not you Friends believe in the second coming?" was the query addressed to your correspondent. "Yes" was the reply; "but not as other Christian denominations believe it. This as a doctrine is not made a question with us. We believe Christ, the Spiritual Saviour and Redeemer, is ever coming to the souls of men who are ready to receive him in the way of his coming. Such as are brought under the controlling influence of his spirit, whose lives are in accord with the precepts of the Gospel, have experienced his second coming, and as this condition is attained by us individually, we shall realize what he is able to do for the whole family of men." "But," queried one, "was it not said to the disciples who witnessed the Ascension, "He shall so come in like manner as ye beheld him going into heaven?"

It seemed a hopeless task to endeavor to lead the mind that receives these declarations of Scripture in an outward and literal sense, to the higher meaning they are intended to convey, and I ventured to say, "It is this literal rendering of the metaphors and illustrations used by Jesus in the enforcement of the spiritual lessons contained in his precepts that is so confusing, and leads to so much unnecessary and unprofitable controversy between those who claim to take him for their leader—their Saviour."

As the conversation took a wider range, there were many views presented in relation to Scripture truths, which are familiar to Friends, but which had never been understood as having a spiritual application by these sweet christian spirits, who had always regarded them as referring to the outward only. Reflecting much upon this conversation, carried on with the utmost candor and courtesy, there seems to present to my mind the work that lies before us, as believers in "the truth as it is in Jesus." Friends in their exclusiveness and reticence upon those vital principles that distinguish us from other sects, have failed to use their opportunity for the spreading abroad of these principles. Satisfied themselves, to hold the tradition of the fathers, they have not allowed the spirit which animated *their* lives, and enabled them to do the work of evangelists, to overflow to others outside their own borders. Contented if their own "holy places" were not invaded by teachers who "preach for hire and divine for money," they have left the broad field of the world to teachers and preachers of a righteousness that rests upon what has been done for them by another, rather than what they must do for themselves in working out their own salvation. Forgetting the divine word,

"Let your light shine among men that they may see your good works and glorify your Father which is in heaven,"—forgetting that this light if it give light to others must not be hidden under a bushel,—forgetting the deeper truth to which these illustrations point, that no man liveth to himself or dieth to himself, but whether living or dying we are the Lord's, the work so well and worthily begun has been allowed to fall into other hands, or wait the coming of more faithful stewards.

Our lives as social beings are so interwoven, and our duty to be helpful to one another is so plainly set forth and established by the circumstances of our daily intercourse, that no one of us should feel excused for withholding the word, any more than the deed, when by saying the word we may awaken thought, and it become as the good seed of the kingdom, yielding a full harvest of spiritual blessing.

It is a fact often witnessed in the experience of the dedicated exponent of the divine word, that those who hold the religion of Jesus as it is formulated in creeds and confessions of faith, who are spiritually minded and seekers after truth, receive with gladness the simple word of his gospel as understood by us, and where their lives are cast among those of our own profession they rarely fail to become convinced of the principle which is the ground work of that profession.

Is it not time that we arise in our strength and come back to the example of the first exponents of the Gospel, who "went everywhere preaching the word?"—to the example of every later apostle of this glorious Gospel, whose dedication and unselfish devotion to the work it calls for has made it easier for us of to-day to go forth on this same mission of love and good will?

Our own apostles, whose lives and teaching beyond others come nearer the example of the Great Teacher,—those men and women who counted not their lives dear unto them, if they might but know Christ and be found in him, made it their life-work to declare to others what this Christ Power would do for them if they were willing to become obedient thereto.

And this is not the greatest of their work, for they were bold defenders of liberty of conscience, and the right of private interpretation of that which had been written, and of that still more sacred testimony,—"What is to be known of God is manifested in man." These stand as memorial stones for all future generations of the work for God and for humanity wrought out by the patient, persistent labor of these whom we call our fathers in the Church. And this work, great as it was, and faithfully as they performed it, will not be completed while a single soul is left to see as through a glass darkly, and one soul is trammeled by the swaddling clothes of human tradition. To your tents, O Israel! To the place of waiting in the secret chamber of the soul, that you may know what the great Head of the Church has for you to do, and receive grace and ability to perform his bidding,

L. J. R.

Creighton, Neb., Seventh month 31.

GEORGE FOX, THE FIRST OF THE QUAKERS.

[A friend in Baltimore has directed our attention to a sermon of Wayland D. Ball, of the Associate Reform Church of that city, delivered Fourth month 1, 1888, and we give the first half of it below. As an appreciative review of the character and work of George Fox it is noticeable, as coming from one quite outside the Society of Friends.—EDS. INTELLIGENCER AND JOURNAL.]

MATT. 5:39. "I say unto you, that ye resist not evil."

To the popular mind the word Quaker suggests little else than a man with a clean shaven face, who dresses in suits of gray or black, with coats cut swallow tail, who wears a high and broad-rimmed hat, who Thou's and Thee's the people that he meets; or a woman in a dress of gray or black whose skirts and waist bear not a finger's length of useless cloth, with bonnet of black or gray without bird or bead, who like her brother Friend Thee's and Thou's people. To the popular mind Quakers represent a religious class made up of clean looking, inoffensive, honest men; of sweet and virtuous women, who for some strange cause have been marvelously faithful in their adherence to peculiarities of costume and speech, and this in spite of great and protracted suffering. But to measure those whom we call Quakers, who call themselves Friends, by either their speech or dress is quite like judging the inner nature of a cocoanut from its rough exterior when first plucked. For suits of gray and Thee's and Thou's, no matter how faithfully the first be worn or how steadfastly the second be used, are not of themselves sufficient to account for the origin and perpetuity of this religious society, nor for the equable tempers and actions of its members. For if it be true that a costume so inexpensive and so easily aped, and a speech so simple and so soon to be acquired, of themselves will work such transformations, let philanthropists, preachers, social reformers straightway take up the cry for gray cloth and shakers. Father, if you have an obstreperous son, dress him in a coat of swallow-tailed gray, put on his head a stiff hat broad of brim: Mother, if you have a wild and giddy daughter, off with her flounces and jewels, on with the gray skirts and shaker, and behold what will be wrought for father and for mother! Son will now be meek as they say Moses was, daughter become a second Ruth. Ah, the Quaker is not thus easily put on. That dress and speech are but symbols of an inner dress and an inner speech, that may be put on, but not so easily as the outer symbols. To these has the Quaker clung through death and through persecution, not because they were talismans, but because they were the simple outward expression of a pure and simple inward life, to which they were bound by ties that neither opprobrium nor martyrdom could sever.

That these outward peculiarities are the merest incidents and externals of the Quaker's creed and life is shown by the fact that though in these times there is a disposition to relax these outward distinctions marking the Quaker sect, the essential Quaker remains the same, and it is in him that we are inter-

ested, his history we meet to learn, that we may see what great principles lie behind and beneath this modest and peculiar demonstration, and what these principles involve and have cost.

In view of the fact that such supreme notice is taken of the dress of the Quaker it will be interesting to remark at the outset that this dress is of unintentional and all but accidental origin, if we have rightfully informed ourselves, and it is the outgrowth of one of the principles of the founder of the Society of Friends.

George Fox set himself against the social spirit of his day, present with us as well, which was bent upon following fashion to the point of abject slavery. He accordingly forbade such observance to his followers. As a result the men and women of his time arrayed themselves modestly in the approved garments of the day. When the fashion changed they did not change, so they at once became marked for their peculiarity of dress. To this sameness of style which at once classified them, there gradually succeeded a greater uniformity as regards material and color of dress. All was, however, voluntary. Modesty and neatness of apparel, avoidance of the fashionable follies and vacillations of the hour, but not uniformity of color and cut and thread, were and are enjoined upon the followers of Fox.

The origin of the name Quaker may also be mentioned in this connection. It is not a name that was chosen by those whom it is meant to represent, but said to have been first accorded them by a Justice of England, named George Bennet, and given them because he observed that Fox was ever bidding them tremble before the Lord. Peculiar manifestations of trembling and quaking occurred very frequently in Quaker assemblies in those early days. The name of Friends is the preferred and chosen name of this body of believers, taken from the words of Jesus, when he says "I have called you Friends. Ye are my friends, if ye do whatsoever I command you."

When we consider the complete toleration granted in this day to the Society of Friends, both in this country and in England, and the actual esteem in which they are all but universally held by all people, whether Christian or infidel, in America and in Great Britain, it seems quite impossible that there should have been a time not only in the history of our Mother country, but also in our own annals when these people were proscribed, hunted down like wild beasts, and put to death without mercy. But we are compelled to confess that a history of this Society brings us face to face with a period in the religious history of two great countries, the one purporting to be the asylum of Protestants, and the other an asylum for those fleeing from tyranny, and seeking toleration in religion, which we may name the History of the Protestant Inquisition in England and America. Here too, is a point where we lose patience with those who are never done quoting the intolerance of Rome, as though such practices were peculiar to her, or the necessary outcome of her beliefs. The Inquisition practiced against the Quakers and Witchcraft by Protestants must forever shut our mouths to any wholesale arraignment of Rome on the score of persecution. The bitter reflection too that our fathers, who fled from tyranny, were in turn more violent in their persecutions against the inoffensive Quaker than was the Church of England and Catholics against them, how humiliating! To read those rude trials and heartless condemnations makes one's heart bleed and one's cheek burn that such records stain our annals.

At their annual meeting in September, 1656, the Commissioners of the United Colonies resolved to "propose to the several general courts, that all Quakers, Ranters, and other notorious heretics should be prohibited coming into the United Colonies."

Laws to this effect were enacted in the four Confederated colonies of New England, but proving ineffectual, a more rigorous resolution or recommendation was adopted by the same commission which, under the presidency of Endicott, "seriously commended to the several General Courts, to make a law that all such Quakers, formerly convicted and punished as such, shall (if they return again) be imprisoned and forthwith banished or expelled out of the said Jurisdiction under pain of death; and if afterward they presume to come again into that Jurisdiction, then to be put to death as presumptuously incorrigible, unless they shall plainly and publicly renounce their cursed opinions." "To Massachusetts," says the editor of volume five of the "Narragansett Club," which contains a work entitled "George Fox digg'd out of his Burrowes" printed in 1676—"to Massachusetts belongs the distinction of being the only one of the United Colonies to carry this advice into full effect. It was under a statute passed by the General Court in compliance with the foregoing recommendation, that William Robinson, Marmaduke Stevenson, Mary Dyer, and William Leddra were hung on Boston Common." We hear the victims of this Inquisition pleading against the severity of a law which commanded them to be publicly flogged, to have their tongues bored through, their ears cropped, and their brows branded, and they be vilely imprisoned, all because they could not take oath in court and would wear their hats in public assemblies.

We must however look for something back of all this persecution and prosecution on such technical grounds to some deeper reason for all this trouble and turmoil wrought by the Quaker; and in seeking out this deeper reason we will reach the occasion of the rise of this body and the principles actuating its propagandism. The Quaker movement arose as did the Catholic Reaction out of the defects and shortcomings of the Reformation, the latter however conservative and retrogressive in its spirit and movement, the former not more radical and progressive than the Reformation, but the continuance of its original and true spirit. We have already noted the relapses in the Reformation, relapses from primitive Christian simplicity into Catholic forms of worship, from liberty into toleration, from union into divisions. The Reformation under Luther had begun with a proclamation of free speech and free action in religion, of a return to the Word of God and to the simplicity of its faith. This Reformation ended by its parent himself, and many of his principal follow-

ers, practising intolerance equal to that of Rome, and introducing almost all of the Catholic forms into their worship. Such had taken place in the Lutheran Church of Germany, such by an act of Conformity under Queen Elizabeth had taken place in the Established Church in England. In England at this time, 1654, it seemed to many that the Established Church was nothing short of Popery, only that it had not the advantage of the presidency of the real Pope, and suffered from the popish spirit of Elizabeth, a pope in petticoats. Before this however there was being born in the midst of civil strife and religious commotion and persecution of sect by sect, a spirit of peace, and of complete religious liberty. A spirit which not only was to preach peace and good will, but inviolably practise these; a spirit that was not to preach liberty to captives only again to enchain them, but liberty indeed and to the end. This spirit found its strongest and most representative if not first embodiment in the person of George Fox, the Quaker, and in point of fact from him sprang that remarkable set of men and women whose influence has been so widespread and so fundamental. They have ever been, so far as numbers go, a feeble folk, but there is no measuring their influence. George Fox like Swedenborg was a cosmopolite, not a doctrinaire, not the possession of a sect. He however stood for a principle which has meant all to civil institutions what Swedenborg's system meant to theology. Swedenborg leavened fundamental theology, George Fox the constitutions of England and America. He stood for liberty of conscience in religion. And indeed standing for so great and radical a boon about which others had prated, and pretended to believe, but of whose logical issues they had no appreciation, neither would endure but scouted; for this grand principle, clear cut, he stood, determined not to swerve to the right or left until this principle was thoroughly established in the consciences of men and the laws of civil governments. George Fox's religion was civil religion in its logical results. It was severely Christian, but for that reason none the less civil. He started out to mould individuals souls; he moulded nations. The rise of the Quakers, says Bancroft, "marks the moment when intellectual freedom was claimed unconditionally by the people, as an inalienable birthright. It was the consequence of a great moral war against corruption; the aspiration of the human mind after perfect emancipation from the long reign of bigotry and superstition." "One of the most remarkable events in the history of mankind" does this venerable historian call this movement.

We may thus appreciate, and yet better as we proceed, the bitter antagonism that rose against the Quakers, as we consider how fundamental was the reform they in spirit espoused. Fox doubtless did not foresee how far-reaching in its issues his position was bound to be if maintained, and yet he was but practising himself and enjoining others to practice to the end the fundamental spirit of the Reformation, liberty of thought and speech. The Reformation fed itself meat it could not digest. Fox came as a doctor who was to tone up the stomach of Reform until it could eat the furnishment of its own table and really digest it.

Of this man's life we get a most graphic and entertaining history in his own journal, of which Sir James Mackintosh says, "It is one of the most extraordinary and instructive narratives in the world." Coleridge, too, declares that in "many a simple page" of the journals a fullness of heart and intellect bursts forth that many folios of repute on the nature and understanding of man might well wish for.

In person he (Fox) was large; his eyes bright and piercing; his voice powerful to command the attention of the most tumultuous assemblage. According to the testimony of Thomas Ellwood, who did not meet him till the year 1660, but who from that time till the time of his death knew him well, he was grateful in countenance, manly in personage, grave in gesture, courteous in conversation, weighty in communication, instructive in discourse, free from affectation in speech or carriage."

William Penn who knew Fox personally pays the following beautiful tribute to him in the preface of Fox's Journal, which he (Penn) edited: "He was a man that God endowed with a clear and wonderful depth, a discerner of others' spirits and very much a master of his own. He had an extraordinary gift in opening the Scriptures, he would go to the marrow of things, show the mind, harmony and feeling of them with much plainness and to great comfort and edification. But above all he excelled in prayer. The inwardness and weight of his spirit, the reverence and solemnity of his address and behavior, and the fulness and fewness of his words, have often struck even strangers with admiration, as they used to reach others with consolation. The most awful living reverent frame I ever felt or beheld I must say was in his prayer. His was of an innocent life, no busy-body or self-seeker, neither touchy, nor critical, what fell from him was very inoffensive, if not very edifying, so meek, contented, modest, easy, tender, it was a pleasure to be in his company. A most merciful man, as ready to forgive as unapt to take or to give offense.

"I write my knowledge and not report and my witness is true, having been with him for weeks and months together on divers occasions and those of the nearest and most excessive nature, and that by night and day, by sea and land, in this and in foreign countries; and I can say I never saw him out of his place or not a match for any service or occasion. For in all things he acquitted himself like a man, yea a strong man, a new and heavenly minded man, a divine, and a naturalist, and all of God Almighty's making. I have been surprised at his questions and answers on natural things; that whilst he was ignorant of useless and sophistical science, he had in him the foundation of useful and commendable knowledge and cherished it everywhere. Civil beyond all forms of breeding in his behavior, very temperate, eating little and sleeping less, though a bulky person. Thus he lived and sojourned among us, and as he lived so he died; feeling the same eternal power that had raised and preserved him in his last moments."

In view of the animated and complete character of the journals of George Fox, I am sure you will be better suited with his account of himself whenever

given, for thereby you will get an idea of the temper of the man, such as we could not communicate in language of our own framing. His style is fervent and full of sly humor. Of his birth and early life he says: "I was born in the month called July, 1624, at Drayton-in-the-Clay, in Leicestershire. My father's name was Christopher Fox; he was by profession a weaver, an honest man; and there was a seed of God in him. The neighbors called him 'righteous Christer.' My mother was an upright woman; her maiden name was Mary Lago, of the family of Lagos and of the stock of martyrs. In my very young years I had a gravity and stayedness of mind and spirits, not usual in children; insomuch that when I saw old men behave lightly and wantonly toward each other I had a dislike thereof raised in my heart, and said within myself, 'If I ever come to be a man, surely I shall not do so, nor be so wanton.'

"When I came to eleven years of age, I knew pureness and righteousness, for while a child I was taught how to walk to be kept pure. The Lord taught me to be faithful in all things and to act faithfully in two ways, viz: inwardly to God, and outwardly to man, and to keep yea and nay in all things.

"Afterwards as I grew up, my relations thought to make me a priest, but others persuaded me to the contrary, whereupon I was put to a man, a shoemaker by trade, but who dealt in wood and coal, a grazier and sold cattle, and a great deal went through my hands. While I was with him, he was blessed; but after I left him he broke and came to nothing. While I was in that service I used in my dealings the word verily, and it was a common saying among people who knew me, 'If George says verily, there is no altering him.'"

When nineteen years of age he became convinced that his life must be absolutely given up to God, and the world of sin and folly abandoned of him. The circumstance bringing about this determination was this: George, with his cousin Bradford, a professor, in company with another professor, entered a drinking place in Drayton. Beer was ordered, a keg full of it, and George being thirsty drank once. His cousin and companion, growing hilarious, declared that he who would not drink must pay for the beer. George, being grieved at their boisterousness, upon this paid for the drink, and left them with a rebuke. He thus describes his after feelings: "So I went away. I returned home, but did not go to bed that night, nor could I sleep, but sometimes walked up and down and sometimes prayed and cried unto the Lord, who said unto me 'Thou seest how young people go together to vanity and old people unto the earth; thou must forsake all, both young and old, and keep out of all, and be stranger to all." This was in 1643. Thereupon as the Lord commanded, he left home and began to wander hither and thither, seeking instruction and peace. Enduring furious temptations and often reduced to spiritual despair, he spent the time in fasting and prayer, and in a careful study of the Scriptures. He would shut himself up for days together, again stroll through wood and field, often sleeping out under the open sky. This conduct drew upon him the notice of religious people, some sympathizing with him, others sneering at him. He went from priest to priest seeking instruction. How vain were those visits we will let him tell in his droll and sometimes very amusing way: "The priest of Drayton, Nathaniel Stevens, came often to me, and I went often to him. At that time, he would applaud and speak highly of me to others, and what I said in discourse to him on the week days, he would preach on the First-days, for which I did not like him. This priest afterward became my great persecutor.

"After this I went to another ancient priest at Manchester, in Warwickshire, and reasoned with him about the ground of despair and temptations; but he was ignorant of my condition; he bade me take tobacco and sing psalms. Tobacco was a thing that I did not love and psalms I was not in a state to sing; I could not sing. He told my sorrows, troubles and griefs to his servants, which grieved me that I had opened my mind to such a one. . . .

"I heard also of one Dr. Cradock, of Coventry, and went to him. . . . . Now as we were walking together in his garden, the alley being narrow I chanced in turning to set my foot on the side of a bed, at which the man was in a rage as though his house had been on fire. Thus all our discourse was lost and I went away in sorrow, worse than I was when I came.

"Then I heard of a priest about Tamworth, who was accounted an experienced man and I went seven miles to him, but found him only like an empty hollow cask. . . . After this I went to another, one Marcham, a priest in high account, he would needs give me some physic, and I was to have been let blood: but they could not get one drop of blood from me, my body being as it were dried up with sorrows, griefs, and troubles. . . . I saw they were all miserable comforters." Fox's unsatisfactory experience with priests was not unlike that of Job with his comforters, indeed not unlike the experience of most of us, when, seeking God, all the advice and consolation we can get seem of small avail. Fortunate are we if we conclude at last to do as did this seeker after God; he says:

"When all my hopes in all men were gone so that I had nothing outwardly to help me, nor could I tell what to do, then, O then, I heard a voice which said, 'There is one, even Christ Jesus, that can speak to thy condition,' and when I heard it my heart did leap for joy. Then did the Lord let me see why there was none upon the earth that could speak to my condition, namely that I might give Him all the glory, for all are concluded under sin and shut up in unbelief, as I had been, that Jesus Christ might have the preëminence who enlightens and gives grace, faith, and power. Thus God doth work, who shall hinder it? and this I know experimentally."

This new experience marked a definite period in his life. He henceforth preaches boldly from place to place. He while wandering through the fields concludes that God's true temple is not made with hands, so he abandons the churches; he becomes reputed to be a young man with a discerning spirit; he preaches perfection through Christ, which carries many with him and consequently enrages the clergy.

He seizes upon every opportunity to speak and pray, and curious manifestations accompany his ministry.

He says: (1648–1649) "I went to Mansfield, where was a great meeting of professors and people. Here I was moved to pray, and the Lord's power was so great that the house seemed to be shaken. When I was done, some of the professors said it was now as in the days of the Apostles, when the house was shaken where they were." At a meeting in Leicestershire of Presbyterians, Independents, and Baptists, common prayer men, for dispute, a woman asked a question but was put down. Fox thus speaks of his actions and feelings: "Whereupon I was wrapped up as in a rapture, in the Lord's power; and I stepped up to the priest and asked, 'Dost thou call this (the steeple-house) a church? or dost thou call this mixed multitude a church?' But instead of answering me, he asked me what a church was. I told him 'The church was the ground and pillars of truth, made up of living stones, living members, a spiritual household, which Christ was the head of, but he was not the head of a mixed multitude or of an old house made up of lime, stones and wood.' This set them all on fire, but I maintained the true church and the true head thereof, One the head of them all, till they all gave out and fled away."

It was about this time between his 23d and 25th years that he fell into a trance which lasted for the space of fourteen days, during which he lay as white and breathless as though dead. His Journal does not speak of this experience as a trance, but mentions his recovery from this all but inanimate state. He thus describes his experience during this state: "I saw into that which was without end, and things that cannot be uttered, and of the greatness and infiniteness of God, which cannot be expressed by words, for I had been through the very ocean of darkness and death and through and over the power of Satan by the eternal and glorious power of Christ . . . . And I saw the harvest white and the seed of God lying thick on the ground as ever wheat did, that was sown outwardly, and none to gather it, and for that I mourned with tears."

[*Conclusion next week.*]

For Friends' Intelligencer and Journal.

THOUGHTS.

"Forgive and ye shall be forgiven." May all be awakened on this subject before it be too late. While hatred or a desire to revenge a wrong is cherished within, we are not in a condition to ask for, or to ask, forgiveness. Where Christ reigns, there peace and good-will abounds. The command "Thou shalt not covet" becomes obsolete: what a world this would be under such rule!

The way is open to mould our lives by the pattern set by him who was meek and lowly, and went about doing good, perfecting holiness in the fear of the Lord. Let us reverently adore the Majesty on high for the manifold blessings showered down upon us.

The Society of Friends above all others has abundant reason to thank God and take courage that He has led them through manifold difficulties, and borne them as on eagles' wings. He has done all this in mercy by the right hand of His power. Oh, that we may not take our flight as in the winter, should coldness enter, or on the Sabbath when ease and tranquillity pervades the camp. Then is the time to stand firm with our armor on, maintaining our testimonies as to plainness of speech, to simplicity of living, to peace principles, with temperance, moderation, and a quiet deportment becoming Christians.

Sarah Hunt.

THE RIGHT ATTITUDE OF THE MIND TOWARD MYSTERIES.

It is one of the privileges of the mind to believe in mysteries because it believes in itself. We encounter no profounder mystery than that which we find when we turn in upon ourselves and try to discover the cause and manner of our own mental operations. This fact takes away all reasonable presumption against believing in mysterious things. When the mind cannot tell the secret of its own thought, or trace to its source the simplest feeling, or explain the mode of its commonest action, it cannot reasonably refuse to accept mysteries which meet it in the worlds of matter and spirit. Who can tell how the various faculties are related to each other, or how it is that the mind has control and directing power over the body? A distinguished scientist who has given his life to physical researches states that the transition from the mental to the physical in man is absolutely "unthinkable;" that is, we can have no idea and conception of the relation and interaction of mind and body. Yet we know that this interaction is a fact. We believe in it, and constantly act upon it. We talk about it in a matter-of-fact way as if we understood it. We know *that* it is, but not *how* it is. In one view, it is the most familiar fact of life; in another, it is an impenetrable mystery.

It is plain, then, that fact and mystery may lie very close together, nay, that they may be identical. It is an erroneous assumption that the things with which we are most familiar are all plain, and that mystery belongs only to what is distant and unfamiliar. We carry about with us in our own personalities as many and as profound mysteries as we meet in the world without us. For the greatest mysteries are the mysteries of mind. The astronomer may calculate the movements of heavenly bodies; the physicist may explain the operation of physical forces according to laws which he has discovered, but neither of these men can explain what is that mysterious power of calculation and thought which he employs, nor how it operates. The explaining and interpreting mind he can neither explain nor interpret.

It is certain that mysteriousness creates no presumption against fact. If there are innumerable facts, like thought, life, and growth, which are utterly mysterious, why may there not be other mysteries of a different kind which are still *facts*? That a thing is mysterious means that we cannot explain it, not that we cannot know it to exist. Mystery pertains to the explanations, not to the existence of things. When we say that a thing is mysterious, we do not

mean that there is doubt of its existence; we imply that it certainly exists, but assert that we cannot comprehend it. There is no inconsistency, then, between mystery and certainty; for many of the things which are most certainly true are among the deepest mysteries. It follows that a mystery is not something about which nothing can be known; it is something of which the reality is known, although the mode of its being or action cannot be understood.

We may carry our reflection one step farther, and maintain that everything we know has an insoluble mystery in it. The reason why so many things seem plain, while others are difficult, is not so much due to difference in the things themselves as to the ways in which we think of them. That which falls in with our customary ideas we call simple, and think we can explain. Our confidence is begotten simply of our superficial thought concerning it. We say that when a ball is thrown into the air we understand its rise and fall. Muscular power explains the one, and gravitation the other. But how is it that the muscular power is set in motion? By an act of the will. But what is a *mental* act. How can a mental act initiate motion, or cause the exertion of physical force? All the wisdom in the world cannot explain how it is done. And what is the gravitation? The attraction of the earth. But attraction is a force. Why does the earth attract or exercise force? How can inanimate matter exert force? Not to pursue the subject farther, we find in this simple phenomenon the two great mysteries of the action of mind upon matter; and of the exertion of force by bodies of matter upon each other. Concerning these mysseries it is as certain that we do *not* know the manner or explanation, as it is that we do know the fact.

It appears, then, that we not only may believe, but that we must believe, in mysteries. All our life is shrouded in mystery. The things to which we are accustomed are not less mysterious than others, when we really think about them. We are mysteries to each other, yet we believe in each other. We are mysteries to ourselves, yet we do not doubt our own existence or activities. The popular distinction between the plain and the mysterious, is really nothing more than the distinction between the familiar and the unfamiliar. It is natural for us to suppose that what we know is simple, and what lies beyond our common experience is specially mysterious. There is no ground whatever for this supposition. The familiar is as mysterious as the unfamiliar. To know a thing does not mean the same as to be able to explain it, and the fact that we cannot explain it does not furnish the least barrier to our knowing it.

How evident it is that mysteries are not confined to religion! Many popular objections to religion on account of its mysteriousness would be equally valid against science, or even against common experience. If we believed only what has no mystery in it, we should believe nothing. If we knew only what we could fully comprehend and explain, we should know nothing. Many mysteries belong to human thought, whether the mind think religiously or not. Man finds himself in this wondrous world, living amid manifold forms of life and being, acted upon by a thousand forces, capable of exercising various powers of thought and knowledge. So soon as he begins to think, he must raise the questions: What and whence is this world, and what and whence am I? Who established this wonderful system of beauty, order, force, and law, or has it no explanation beyond itself? These are not questions peculiar to religious thought. In fact, the problems concerning God, man, and the world, do not meet us first in religion, but in philosophy. Religion is not the special province of mystery, while philosophy and science deal only with simple and explicable data. The question of God's existence is primarily a philosophical question, as all the systems of philosophy which the world has produced abundantly testify. The relation of the will and action of finite man to the will and action of the infinite God, is not a problem of religion alone. It is simply a problem which presses upon all human thought as soon as real thought concerning God and man begins. Thus many of the mysteries which are connected with religion and theology are identical with those to which philosophy and science give rise, and cannot be escaped by abjuring religion. Moreover, those mysteries which are peculiar to religion are easily matched by those which are equally great in science. If the theologian cannot explain spiritual life, no more can the scientists explain physical life. If religion has the mystery of regeneration, science has that of reproduction and growth. If theology cannot explain the union of the divine and human in Jesus, no more can science explain the union of the mental and material in man. If the religious man persists in believing, with all its mysteriousness, in a tri-personality in the one divine Being, the psychologist is equally persistent in holding a threefold endowment of intellect, sensibility, and will in man. Mysteries in religion! Yes, plenty of them, but not more than in science, or even in common life. All things are mysterious, and if they were to be doubted for this reason, we should end in intellectual despair. The reasonable course is not to doubt in proportion to mystery, but to accept in proportion to the evidences of fact which an alleged truth presents, and to test it by its adaptation to meet the deepest, truest wants of the soul. Why not gather up all our mysteries into that one deepest and most glorious mystery—God? The best faith is that which holds that as God embraces all other mysteries, so he at length will solve all.—*Sunday School Times.*

The late Emperor of Germany disliked to hear any one speak slightingly of women. When he was Crown Prince an officer once remarked of a wounded comrade that he was "weeping like a woman." "Never make that comparison," said the Crown Prince with a frown. "Crying like an unweaned child would be better. Women have more fortitude than men."

It is impossible for that man to despair who remembers that his helper is Omnipotent—*Jeremy Taylor.*

OUR NEGLECTED BURIAL GROUNDS.

THE place of a critic is never an enviable one, and when the object of criticism lies so near as to be within one's own household of religious faith, it becomes very undesirable; nevertheless we hold to a belief in the quaint, old adage that "it is our best friend that tells us of our faults," so we are emboldened once again, for it is not long since that we presented a similar concern, to call the attention of Friends to the condition of many of the burial grounds of our Society.

We do not apprehend that in their testimony to simplicity, and consequent departure from adherence to ostentatious show, that characterized the actions of our forefathers, that it was ever designed to let our places of sepulchre fall into neglect and decay. They who acted so wisely in so many particulars surely did not fall short here. And cannot we who so reverently love to follow act with wisdom in this regard?

However we may exalt the spirit, it is incumbent upon us to well care for the "temples" containing it, and when that spirit from these "temples" has fled respect is still due them, insomuch that they have a neat and well kept abiding place, where living spirits may sometimes go and learn valuable lessons from these silent witnesses as to the uncertainty of time.

Irving beautifully says, "at the grave of those we love is the place for meditation. . . . Weave thy chaplet of flowers and strew the beauties of nature about the grave—there meditate—and henceforth be more faithful and affectionate in the discharge of thy duties to the living." Mark the inference: not from neglected graves are we to draw lessons to aid us in life's duties, but where love has made beautiful the spot, not by art, but by aiding nature are we to adorn the tomb. And it is not with any feeling of comfort that we sometimes wander into burial places, and tread with uncertain steps over weeds and briars, to find perchance the last resting place on earth of some loved form, so covered with rank growth of poison ivy that even the modest stone that marked the spot was inapproachable, (the touch of this plant being to most persons so injurious). The same obnoxious growth festooned the entrance to the grounds. A sense of sorrow fills the heart, not so much that we are separated from these loved ones, as that our care has been so largely bestowed upon our homes and ourselves as to lead to the neglect of their tombs. Just how much is enjoined by that clause in our discipline which says "that our burial grounds are to be properly enclosed and kept in decent order" we know not, but it certainly can be interpreted to mean freedom from all that will injure the visitor thereto, or offend that tender sense of respect for the dead which is compatible with our testimonies.

We do not at all recommend any return to the expensive adornments that are so often prompted by vanity and the desire for display, but we do plead for these burial grounds, that they be as neat and tasteful as the well kept lawns that surround our own dwellings. And this can be done when we come to hold them in the same esteem. That there is a hope of this we doubt not, as we notice with feelings of gratitude the bequests that are from time to time being made for care and attention on this point. But why wait, if we have means to spare, till the spirit life is freed from the body? Could it not share in the present enjoyment of good done and comfort given, not to the dead but to the living, when clothed upon with mortality and be witness of an influence that will tender, and strengthen, and open the way for better things? A spirit of self-sacrifice could too in this matter be brought to bear that would endear to us these "acres of the dead." Trusting our few words may be sufficient as unto the wise, we cannot but think the subject one to commend itself to the better judgment of all true Friends and arouse them to action, each locality observing wherein there is need of it.

IN sending notices of deaths we would respectfully ask that they,—especially the names,—be written very distinctly, as we are sometimes at a loss to decipher them, and mistakes will occur in spite of care.

UNDER the heading of "Notices" will be found the programme of the proposed exercises at the centenary celebration of the establishment of the meeting at Plainfield, N. J., on the 20th instant. It will no doubt be a very interesting occasion.

DEATHS.

BURGESS.—Seventh month 30th, 1888, Mahlon W., son of Dr. Aaron H. and Elizabeth W. Burgess, in his 21st year; a member of the Monthly Meeting of Friends held at Green street, Philadelphia.

COMLY.—Seventh month 29th, 1888, Hannah R. Comly, formerly of Philadelphia, in her 86th year. Interment at Horsham, Pa.

EDWARDS.—Near New Lexington, Ohio, Seventh month 5th, 1888, Elizabeth Edwards, in her 86th year; a member of New Clear Creek Meeting of Friends.

This aged Friend, with her husband and several small children removed to Ohio, from Chester county, Pa., nearly fifty years ago. They were the first of a number of families of Friends from Pennsylvania to settle in Highland county, and of which she was wont to speak as "my Colony."

"God calls our loved ones, but we lose not wholly
What He has given;
They live on earth, in thought and deed, as truly
As in his Heaven."

ELY.—On Fourth-day, Eighth month 1st, 1888, Sarah C., wife of Gilbert W. Ely, of Horsham, in the 80th year of her age.

FURMAN.—Suddenly, at the residence of Elias E. Paxson, Bucks county, on Fifth-day, Eighth month, 1888, David Furman, of Philadelphia, in his 72d year; a member of the Monthly Meeting of Friends of Philadelphia.

HALLOWELL.—At the residence of his niece, Lucretia M. Clothier, Eighth month 3d, 1888, Charles F. Hallowell, in his 83d year, a member of the Monthly Meeting of Friends of Philadelphia.

McILVAIN.—Eighth month 1st, 1888, at his residence, West Philadelphia, John Humphreys McIlvain, in his 80th year; for more than thirty-four years an esteemed elder of the Monthly Meeting of Friends of Philadelphia.

He was the son of Richard and Susannah McIlvain, concerned Friends (his father for several years being an elder) and was livingly interested in the principles and testimonies of our religious Society. He was very conscientious and careful to live constantly with his profession. During the rebellion, having received a considerable sum from the sale of property, it remained in bank a long while uninvested lest he should in some way balk his testimony on the subject of war. Willing to aid in the relief of suffering, he was averse to publicity, endeavoring to carry out the Gospel idea of doing alms in secret, and avoiding self-exaltation. For a number of years past he was deprived of sight, which affliction was borne with true Christian resignation. J. M. T., JR.

OGDEN.—On Eighth month 4th, 1888, at Swarthmore, Pa., J. Henry Ogden, in his 74th year.

STEMPLE.—At Conshohocken, Pa., Eighth month 4th, 1888, Elizabeth Hornketh, wife of William Stemple, in her 77th year. Interment at Plymouth Meeting.

SAVERY.—Suddenly, Eighth month 1st, 1888, at the residence of his brother, Winona, Iowa, John Cresson Savery, of Philadelphia, in his 58th year.

SHOEMAKER.—At Mullica Hill, N. J., Eighth month 3d, 1888, William K. Shoemaker, in his 77th year. Interment, Fair Hill, Philadelphia.

WHITE.—In Philadelphia, of membranous croup, Eighth month 2d, 1888, T. Allan, eldest son of Horace G., and Ella K. White, and grandchild of the late Alan W. Holt in his 5th year.

CORRECTION.—In our issue of Seventh month 14th, 1888 in the notice of the death of Susanna Brown please read wife of *Jehu* Brown, in place of *John* Brown.

MIX religion and morality thoroughly in all affairs; and, though wealth may fail, there will be no shrinkage of character. This is that treasure which, laid up in Heaven, Jesus said should endure unto everlasting life.—*B. F. McDaniel.*

THE tissue of the Life to be
We weave with colors all our own.

SCRIPTURE LESSON, No. 32.

EIGHTH MONTH 19, 1888.

TOPIC: THANKSGIVING.

GOLDEN TEXT.—Enter into his gates with thanksgiving, and into his courts with praise: give thanks unto him, and bless his name. For the Lord is good; his mercy endureth for ever; and his faithfulness unto all generations.—Ps. 100: 4–5.

READ LEVITICUS 23: 33–44.

THE Feast of Tabernacles was one of the great festivals instituted under Divine direction by Moses. The Passover was first in order and in importance. The Feast of Pentecost, called also the feast of weeks, of wheat harvest, or of the first-fruits, came next, and the Feast of Tabernacles, which celebrated the ingathering of the crops, was last. Besides these there were festivals in connection with the institution of the Sabbath as the Feast of Trumpets, the seventh or Sabbatical year, and the fiftieth or Jubilee year.

We have already considered the day of atonement, the institution of which succeeded the great historical festival of the Passover. On all these occasions, every male Israelite was required to "come before the Lord," at the tent of meeting, and each "to make his offering with a joyful heart" (Deut. 27: 7.) Women were left free to attend or not, but the zealous and religious-minded went with their husbands, as we read Mary the mother of Jesus, went every year with her husband to Jerusalem, to the feast of the Passover (Luke 2: 5). The times of these festivals were wisely ordered so as not to greatly interfere with the agricultural and other interests of the people.

The value of these festivals is mainly found in the religious unity they encouraged; they were constant reminders of the deliverance wrought out for them by Jehovah, and increased the gratitude of the people, testifying of their reverence for the God of their fathers, and a willingness to be obedient to the laws divinely ordained for their best welfare.

It is well to cultivate a habit of happiness and a spirit of thanksgiving, which will help to increase our sense of our nearness to God. So many of our blessings are so common, that we often forget the source whence they come. The pure air, the bright sunshine, the rain that "falls upon the just and the unjust alike," the change of seasons, seem to us sometimes as things that belong to us by right, and for these things we seldom pause to return thanks.

But how much stronger is our spiritual life when we regard all these ordinary blessings as wonderful manifestations of Divine love, and allow our hearts to warm with gratitude to Him for all these mercies. These are good gifts which he gives alike to all. Added to these, he has bestowed upon us the almost priceless blessing to be born in this enlightened age, and in this land of liberty. Let us give thanks unto the Lord for all these good gifts.

And in thanksgiving, as in all other ways in which we try to please our Heavenly Father, let us show our desires by our works. By a cheerful enjoyment of what is given us, and a glad sharing with oth-

ers, we show that we are truly grateful for God's "loving kindness." Let us seek out some one not so well off as ourselves, whom we can make happier, and bring thanksgiving to other homes, so shall we broaden our own lives and deepen our joy. No one is truly thankful who does not try to do this; also let us avoid the fault-finding spirit that sees little troubles among the joy, that neglects the sweetness of the rose for the sharpness of the thorn, that forgets the hour of sunshine, and remembers only the thunder-storm.

The thorn, the storm, and the sorrow of life also have their uses, and it is a blessed condition when we can even be able to give thanks for suffering. It is a high condition in Christian experience when every vicissitude adds strength and sweetness to the character. It is something for which we must all strive to retain our spirit of thanksgiving, even in times of great sorrow. We know that God is good, and "doeth all things well," and if we make a happy, thankful spirit a habit, the time will come when we can exclaim with joy, "Though He slay me, yet will I trust in him."

For Friends' Intelligencer and Journal.

LETTERS FROM EUROPE.—XXIII. RELIGIOUS AND ETHICAL MOVEMENTS.

London, July, 1888.

I notice a curious tendency to revive the old idea of the Stoics that virtue was not to be promoted by holding out rewards and punishments, as Plato did. They objected that no wages could be offered to virtue, because virtue was in itself more precious than any reward that could be promised. The objection now is that rewards and punishments appeal to the purely selfish part of our nature, and that the hope of reward, or fear of punishment, in the next world can no more make a true Christian than can the offer of wealth or threat of the rack in this.

Indeed, advanced thinkers hold that the mental peace and the tortures of conscience which are respectively promised or threatened in this world are equally objectionable as motive powers for the advancement of Christ's kingdom. Such persons preach *altruism*, that is the good motive of action divested of any selfish attribute,—in other words, acting like Christ solely with reference to others, to God obedience, to man benevolence. And those of this school further contend that as the hope of reward and the fear of punishment are wholly unnecessary, so they are also insufficient to keep men in the path of virtue, or to incite them to good deeds; and that the only effectual way to form a virtuous and generous character is to develop and cultivate the natural instincts which the Creator has implanted in every heart. I am sure that every one who will tax his memory can call to mind some kind act done without the least idea of reward or benefit of any kind, and must therefore admit there is some truth in the altruistic theory. It is, indeed, nothing new; what is new, I think, is its influence on the pulpit.

As I have said, the missionaries have also been in council here and their sayings and doings have been reported in the religious papers. The societies have raised and expended immense sums and sent into remote regions great numbers of ardent and devoted men, but from all I can gather, I am inclined to think they are simply repeating on a small scale the stupendous error of the mediæval Crusades—an expenditure of money and a sacrifice of life with no compensating result. In upper Egypt in thirteen years fifteen missionaries labored and died, without making a single convert. In equatorial Africa, Moffat, the pioneer, labored twenty-five years and died without making a convert, and two others have worked and died there with the same ill success.

In India more progress has been made for several reasons. First and principally, Christianity is the religion of the governing class, and colleges and schools teach it, though not compulsorily. Then much the larger proportion of the missionary fund is spent in India. Then again many ardent youth from England have formed ascetic and celibate societies there, and work with prudence and zeal. And finally the native Hindu teachers in the schools established by government are as far as possible Christians. So that the conversion of India is rather a national than a missionary work. But then there are peculiar disadvantages, as well as peculiar advantages. The author of an article in this month's *Nineteenth Century*, who claims to have known India from his youth, says that the trinity and incarnation of Christianity is so similar to the Hindu head and incarnation of Krishna as to constitute a veritable difficulty in making conversions; that the excellent gentleman, the missionary who is such a kind neighbor and drives out his wife and little ones in a pony carriage is the furthest possible removed from the Hindu or Mussulman idea of one who comes bearing a heavenly message; and finally he quotes a distinguished professor of Chinese as holding "that as long as Christianity presents itself infested with the bitter internal animosities of the sects, and associated with the habits of drunkenness and the social evil conspicuous among Christian nations, it will not do its work because it does not deserve to do its work in the non-Christian world." But if, as seems pretty certain, the peace which under British rule has succeeded to centuries of wholesale plunder and massacre, and the extension of education and Christianity have overbalanced the one evil of drunkenness which the English have introduced in India, in China, on the other hand, the opium which was forced into that unhappy kingdom by the brute force of British arms has done ten thousand times as much harm as the missionrries would do good if they converted the whole population into such Christians as those Asiatics ordinarily make. For, as a missionary at Pekin testifies, the opium habit has spread through the whole kingdom, and has enveloped in its toils an entire fifth of the people, and that not including only the lowest class, but embracing the highest and best classes. But if the missionaries were as successful as their zeal deserves, still it seems to me the enterprise is a mistaken one. The same men with the same support could do vastly more good in this city of London, where there is a harvest ripe and few laborers comparatively, and

where the money that is spent in sending them to the other side of the world and maintaining them there, would rescue tens of thousands of men and women from the life of crime to which they are drawn by chronic starvation. Since I touched on this subject in a late letter I have learned facts that redouble my horror and amazement that such things can be in a civilized land. I do not believe they exist in heathendom.

The writer last quoted notices the hopes that have been intimated respecting the influence of Mohammedanism in checking the spread of intemperance in heathen lands, and says that the subject was among those set down for discussion in a missionary meeting to which many present would have contributed the results of their long experience, but when it was reached in due order, "certain zealous persons in the body of the hall insisted on interrupting the proceedings by a resolution demanding an interval for prayer," and as this was taken out of the time allotted for the discussion little was said and that little coldly received. It is truly to be regretted. But whatever may be the good done by Islam in checking intemperance—and the Archbishop of Canterbury is one of those who looks with favor on its work in that direction—I am convinced that it will never serve as a stepping stone from any other form of religion to Christianity, and in this opinion concurs a medical gentleman whom I met here and who for many years was attached professionally to Asiatic missions. The Mohammedans never abandon their faith, and they inspire their converts with their own invincible fanaticism. And then Christianity and Islam lie in different directions, so that there is no passing from one to the other. The gentleness and purity of Christianity are directly opposed to the ferocity and licentiousness of Islam. And if in nothing else, than their treatment of women the two systems are irreconcilable. What is the place Christianity assigns to women I need not mention. With the Mohammedan polygamist his numerous wives are simply the slaves of his pleasure, and when he dies he ascends to a paradise where they can never come, and where he renews his life of sensuality with a score of women infinitely more lovely than those he left behind. One who has imbibed that poison can never be a Christian.

J. D. McPherson.

For Friends' Intelligencer and Journal.

THE SACRIFICE.

"Through hard and stony paths he wends his way,
With head low bowed, and eyes bent on the ground;
And though the noisy crowd revile and mock,
He heeds no taunt, he answers with no word.
In all the well-springs of his life, no thought
Of self had place. The sins, the burdens,—yea
The grief of others were his only care;
His griefs,—the sins he could not comprehend,
Yet well he knew the sacrifice was his,
And that he bore the burden of their sins;
For he was guiltless as the spotless lamb—
The emblem of the sacrifice of yore.
On to the mount of Calvary he toiled
Still blessing and forgiving as he passed.

"Oh! ye who deem that through your sacrifice
A nobler life for others will be won,
Press on; your sacrifice is not in vain.

"Bear still, Oh woman's heart! your saddest grief;
Break not, though hopes and selfish joys be slain;
And though the rabble shout and hurl their scorn,
And though for praise your meed be bitter gall
Faint not, for others is your burden borne.
Thus through the ling'ring line of ages past
The sacrifice for mankind has been made,
And met with idle jeers and scoffs and scorn,
With heavy crosses, and with crowns of thorn.

"But right must triumph, and the crown of thorns,
Which no brave hand did lift to ward off pain,
Has turned to glittering gold; and he who had
Not where to lay his head, sits on a throne."

The above, which if we mistake not, appeared several months since in the Intelligencer and Journal, is again offered as the best expression of the love, sympathy, and encouragement of its author, our beloved friend Esther J. Trimble Lippincott, for the "burden-bearers" she left behind her. Her heroic endeavors, in spite of mortal illness, to win by personal sacrifice a nobler life for others, will long be remembered by those who knew of them. They will remain as a potent example to all who feel as she felt, the sins and the sorrows of her kind, and who, in the strength and wisdom of Truth go forth on errands of mercy, in the hope of aiding, by patient toil, the destruction of the evils of their time. Few can go with a deeper sense of consecration to the work; few can be more ardent and devoted, or more self-exacting. She believed that they who would illumine darkness with light must themselves glow with the white radiance of a divine purpose, must call no man master, but must reverently obey the revelations of their own souls, answering only to the "light within, which enlighteneth every man who cometh into the world." She was obedient and she had her reward.

In her early youth she became interested in literature and at length chose its study as the work of her life. From that time onward she fed on the noblest thoughts of a wide range of writers, including the sacred historians of the Hebrew and other nations. The past brought her only its good, for with the delicate discrimination of an elevated nature she rejected the evil as foreign to her aspirations. By these studies she became singularly well fitted to occupy the position of instructor, and there are many who will bear witness to the power of her influence in the moulding of character, and to the ennobling stimulus which she constantly exerted. It was a rare privilege to share in these instructions, and those who were blessed by them have a right to be permanently grateful.

She prolonged the influence of school and college by the publication of several works on literature which remain to testify of her remarkable ability both as a teacher and writer. These works are amongst the most precious memorials of her, and are an attestation of the successful endeavors of her life. They may be placed in the hands of the young, not only

without fear of moral taint, but with the certainty of encouraging all that is noblest in the human mind, since her chastity of thought, her wise judgment, and her true poetic insight, presided over the selections. They are amongst the recognized educational agencies in the field of literature.

As her health failed and she neared the boundaries of the unseen world, she grew more and more earnest to call the brothers and sisters whom she must soon leave to a life consistent with the grandeur of the destiny of man. With keen mental vision she beheld the perfection attainable here, and with profound grief compared it with the actual life of humanity. She was thus urged to renewed effort, and often, in great bodily weakness, she went wherever summoned, to speak in favor of temperance, purity, equality, and right-living, before the Eternal Goodness.

That she might further the end she had in view, she wrote a paper entitled "Law versus License." This was read to a few audiences, but it should be scattered broadcast over the land.

During her last illness, she expressed her earnest wish to recover if she could have strength to accomplish what she felt should yet be done; but she added "I am in my Heavenly Father's keeping and he knows what is best. Death has no terrors for me. I am ready to go." Thus confidingly she laid down her earthly life with all its joys and sorrows, its toils and its rewards, exchanging it for the wider sphere and the undimmed vision which await us all in the life of eternity.

They who loved her will keep her memory and will gratefully belive that her mission of blessing is not ended. They know that

> Sweeter than any song
> Her songs which found no tongue;
> Nobler than any fact
> Her wish that failed to act—

and, estimating her aright, they will remember, not alone what she did, but that towards which she aspired. Possibly the wish to coöperate with her, and with the Inspirer of all good, may be strengthened in those who most tenderly cherish the memory of such as she. L.

Media, Pa., Eighth month 1.

SWARTHMORE NOTES.

THE quiet summer vacation is passing uneventfully on the pleasant Swarthmore grounds. The Superintendent is overseeing the needed changes to prepare for the comfort of the occupants of the College for the coming year. Prof. S. J. Cunningham is watching the progress of her new house, which is going up adjoining the observatory, and is busily engaged upon her course of lectures on Astronomy. Prof. Gerrit E. H. Weaver is pursuing his studies in French and German, occupying the pleasant apartments of Prof. Appleton, on the College grounds. Prof. F. W. Price is at home, and is making carefully annotated readings of Terence and Plautus. Prof. W. P. Holcomb is also at home, and is making a study of the latest development of History and Political Economy. Prof. A. Beardsley, after a brief visit to New York, is now at home, keeping informed in the latest advances of the department of mechanical and civil engineering. Prof. C. Herschel Koyl is busily engaged in preparing for the introduction of his new and widely patented semaphore upon the various railroads of the country.

—Of those who are not spending the summer at Swarthmore, Dr. Wm. C. Day is in Washington, writing up his annual statistics upon "The Building Material of the United States," for the Report of the Geological Survey. Prof. W. H. Appleton is spending a few weeks at the Sauveur Summer School of Languages, at Burlington, Vt. Dr. Spencer Trotter, who has just been appointed to the chair of Natural History, is pursuing his Biological researches at the well equipped government station at Wood's Holl, Mass. Prof. Milton H. Bancroft, after exhibiting the work of his department of Drawing at the Teachers' Convention in San Francisco, is at present traveling in New Mexico. The Matron, Elizabeth Powell Bond, is seeking needed change and rest in her home in Florence, Mass.

—The weekly programme of exercises for the coming year has been arranged, and printed for the use of the students, authorities, and friends of the College. It presents a wide range of required and elective studies in the four departments of Arts, Letters, Science, and Engineering. No paper hitherto printed shows more clearly the progress of the College during the past few years.

—A new circular is being sent out on the Department of Manual Training (which will be found in another column), and will be of interest to all friends of the college.

COMMUNICATIONS.

SUMMER MORNING MEETINGS.

Editors INTELLIGENCER AND JOURNAL:

WHY is it that we Friends continue to have our meetings for worship to commence at either eleven o'clock, or at half past ten, or even at ten o'clock, during the *summer season?* This, as a general rule, is embraced in the *warmest* part of the day, and for some three months is very trying and enervating, especially to aged, infirm, and delicate people, even when surrounded with their home comforts.

I am not in favor of making changes, unless with a prospect, or hope at least, of improvement; but are we doing the best thing by adhering to the eleventh or to the tenth hour, for gathering? Would it not be far better to have our morning meetings to begin at a much earlier hour; say from six to half past seven o'clock? taking advantage of the possible cool and freshness of the early morning; and, after mingling together the usual hour or hour and a half, return home before the extreme heat of the day?

Eighth month 5, 1888. EMMOR COMLY.

FIRST-DAY SCHOOL GENERAL CONFERENCE.

Editors INTELLIGENCER AND JOURNAL:

FRIENDS coming from the East to attend First-day School General Conference, to be held in Yarmouth, Ont., Eighth month 20th and 21st, 1888, will find it

most convenient to come by way of Buffalo, or Niagara Falls, there take the Michigan Central for St. Thomas, arriving near 12 o'clock noon and 6 p. m. Those from the West by way of Detroit, on the Michigan Central to St. Thomas, arriving about the same time. Our Monthly Meeting and Meeting for Ministers and Elders will be held on Sixth-day 17th, Half-Yearly Meeting on Seventh-day 18th. Trains will be met on Fifth-day, and Friends coming later will be met if they forward information beforehand when they will arrive, as St. Thomas is 11 miles from meeting-house, and 6 to 8 from Friends' homes. For further particulars address,

ASA L. SCHOOLEY,
Sparta, Ontario

Eighth month 1, 1888.

FREEDOM IN BRAZIL.

[Written to commemorate the law of 1871, which gave freedom to all the children of slaves in Brazil born after that date. Distributed by the *Rio News* in commemoration of the final extinction of slavery in Brazil, Fifth month 13th, 1888.]

WITH clearer light, Cross of the South, shine forth
In blue Brazilian skies;
And thou, O river, cleaving half the earth
From sunset to sunrise,
From the great mountains to the Atlantic waves
Thy joy's long anthem pour.
Yet a few days (GOD make them less!) and slaves
Shall shame thy pride no more;
No fettered feet thy shaded margins press;
But all men shall walk free
Where thou, the high-priest of the wilderness,
Hast wedded sea to sea.

And thou, great-hearted ruler, through whose mouth
The word of God is said
Once more, "Let there be light!"—Son of the South,
Lift up thy honored head,
Wear unshamed a crown by thy desert
More than by birth thy own,
Careless of watch and ward; thou art begirt
By grateful hearts alone.
The moated wall and battle-ship may fail,
But safe shall justice prove;
Stronger than greaves of brass or iron mail
The panoply of love.

Crowned doubly by man's blessing and God's grace,
The future is secure;
Who frees a people makes his statue's place
In Time's Valhalla sure.
Lo! from his Neva's banks the Scythian Czar
Stretches to thee his hand,
Who, with the pencil of the Northern Star,
Wrote Freedom on his land.
And he whose grave is holy by our calm
And prairied Sangamon,
From his gaunt hand shall drop the martyr's palm
To greet thee with "Well done!"

And thou, O Earth, with smiles thy face make sweet,
And let thy wail be stilled,
To hear the Muse of prophecy repeat
Her promise half fulfilled.
The voice that spake at Nazareth speaks still,
No sound thereof hath died;
Alike thy hope and Heaven's eternal will
Shall yet be satisfied.
The years are slow, the vision tarrieth long,
And far the end may be;
But, one by one, the fiends of ancient wrong
Go out and leave thee free.

—*John G. Whittier.*

THE FORTUNATE ISLES.

YOU sail and you seek for the Fortunate Isles?
The old Greek Isles of the yellow bird's song?
Then steer straight on through the watery miles,
Straight on, straight on, and you can't go wrong.

Nay, not to the left; nay, not to the right;
But on, straight on, and the isles are in sight;
The Fortunate Isles where the yellow birds sing
And life lies girt with a golden ring.

These Fortunate Isles they are not so far;
They lie within reach of the lowliest door;
You can see them gleam by the twilight star;
You can hear them sing by the moon's white shore—

Nay, never look back! Those levelled gravestones
They were landing steps; they were steps unto thrones
Of glory for souls that have sailed before
And have set white feet on the fortunate shore.

And what are the names of the Fortunate Isles?
Why, Duty and Love and a large content.
Lo! These are the isles of the watery miles
That God let down from the firmament.

So Duty and Love and a true man's Trust;
Your forehead to God, though your feet in the dust
So Duty and Love and a child's sweet smiles,
And these O friend, are the Fortunate Isles.

—*Joaquin Miller.*

OUR DAILY RECKONING.

IF you sit down at set of sun,
And count the acts that you have done;
And counting, find
One self-denying act, one word
That eased the heart of him who heard;
One glance most kind,
That fell like sunshine where it went,
Then you may count that day well-spent.

But, if through all the livelong day
You've cheered no heart by yea or nay;
If through it all
You've nothing done that you can trace,
That brought the sunshine to one face;
No act most small,
That helped some soul, and nothing cost,
Then count that day as worse than lost.

—*Anonymous.*

SONNET TO ——

THOU art but in life's morning, and as yet
The world looks witchingly: its fruits and flowers
Are fair and fragrant, and its beauteous bowers
Seem haunts of happiness, before thee set,
All lovely as a landscape freshly wet
With dew, or bright with sunshine after showers;
Where pleasure dwells, and Flora's magic powers
Woo thee to pluck joy's peerless coronet.
Thus be it ever: wouldst thou have it so,
Preserve thy present openness of heart,

Cherish those generous feelings which now start
At base dissimulation, and that glow
Of native love for ties which home endears,
And thou wilt find the world no vale of tears.
—*Benard Barton.*

PROFESSOR HEILPRIN'S EXCUSION TO BERMUDA.

Professor Angelo Heilprin and party have returned from Bermuda, where they have been engaged in making scientific investigations with relation to the island group. Besides the Professor the party consisted of Mr. J. E. Ives and Mr. Wilfred Stone, assistants at the Academy of Natural Sciences; Mr. Robert LeBoutellier, Miss Emma Walter, teacher of geology in Friends' Central School; Miss Mary Schively, teacher of zoölogy in Friends' Central School; Miss Emily G. Hunt, formerly teacher of zoölogy in Friends' Central School; Miss Ella Hunt and Miss Virginia Maitland.

In speaking of the trip and its results, Professor Heilprin said yesterday: "Our object was, in the first place, to study the nature and formation of the coral island, with special reference to the determination of certain points in its history which have quite recently been brought into discussion, and to determine whether the views of Darwin as to the formation of coral structures of this kind, formulated some forty years ago, and which were based upon the assumption of subsidence of land, were still tenable, or whether the more recent views expressed by Semper, Alexander Agassiz, and Mr. Murray, of the Challenger expedition, affirming that no subsidence is necessary for their formation, was the correct one. A secondary object was the collection of specimens, principally by means of dredging, for the double purpose of making a zoölogical survey of the island group and the determination of the zo-geographical position which the island group holds with regard to its fauna. It may be said here that no systematic study of the fauna had thus far been attempted, except in one or two departments.

"Our headquarters were located at Flatts, at the entrance to Harrington sound. A systematic examination of this sound, as well as of Castle Harbor and the various inlets and islands that belong to these bodies of water, was made by means of dredging, and records taken of the depths, which were found by soundings. Visits to the southern and outer northern reefs were made, and the methods of their formation as far as possible, closely observed. The animal life, especially on the growing reef, was found to be very profuse, and the collections obtained indicate a considerable number of forms that have not hitherto been credited to the Bermuda Islands and that are, entirely new to science. The examination of these will begin almost immediately, the material being now in transit, and a systematic report will be prepared as soon as they shall have been studied by specialists.

"As far as the structure of the island is concerned, it was found that the earlier determinations of Lieutenant Nelson, made some fifty years ago were, in the main, correct—that is, that all that portion of the island rising above the water, the greatest height being 260 feet, was formed as wind-drift accumulation. The coral masses growing to the surface, being battered by the surf, afford means for the formation of lime sand beaches, the materials of which are then drifted up by the wind into dunes, and these, carried still further inward, form the hills of the country.

"As an example of this inward blowing sand mass may be cited what has been termed the 'sand glacier' of Elbow Bay, which is still moving steadily forward, and which has reached an elevation of some 150 feet above the level of the sea. Its rapid motion has necessitated the planting in its path of the giant reed and the oleander as a bar to further progress. The whole may, therefore, be described as an æolian formation. At the present time there can be no doubt that the islands are undergoing destruction from the wash of the sea, which is making breaches on all sides, cutting out the interior lagoons and harbors, and, in a general way, breaking up the entire land mass into disjointed islands and island groups.

"With regard to the theory of subsidence, as required by Mr. Darwin to account for the formation of these circular, coral islands known as atolls, the evidence, such as was obtained, appears to be distinctly in its favor. The whole configuration of the country, as viewed from an elevation, presented the general appearances that belong to submerged areas. In addition to this we found that excavations made in the island show the same kind of wind-drift rock that is now found on the surface at the depth of some fifty feet or more beneath it. We found likewise that cedar stumps are frequently hauled up by the anchors of ships from depths of twenty or more feet within the anchoring harbors. Also, in one of the caves—Island Cave—near Joyce's docks, the occurrence of a stout stalagmite, rising from a cave lake, having a depth of some twenty or thirty feet, likewise conclusively points to subsidence, inasmuch as the stalagmites could only be formed on a dry surface. While, therefore, the evidence brought forward may not be sufficient to prove in all cases the correctness of Mr. Darwin's hypothesis, it yet largely substantiates it, so far as this one group of islands is concerned, and seems to lend but little support to the views more recently enunciated by the naturalists before mentioned.

"Contrary to general supposition, the temperature was found to be mild rather than extreme, at no time rising above 84° F., while falling at the lowest point to about 76° in early morning. The night temperature, as a rule, varied but three or four degrees from the temperature of mid-day. The climate appeared to be clearly salubrious, although generally asserted to be the contrary during the summer months. The character of the soil—porous limestone—immediately absorbs all surface water, and does not permit of the formation of malarial or noxious swamps; hence fevers are practically absent, except in so far as they may have at long intervals been introduced from distant countries. There are no bodies of fresh water in the island group, neither pond nor flowing streams. Only at one or two points was non-saline water found to issue from the rocks or soil.

"Probably the most interesting feature of the island group is the growing reef of coral, where animal life presents itself in its greatest profusion. A point of special interest visited was the North Rock, a disjointed mass of limestone pinnacles rising some ten to fifteen feet out of the water, at a distance of nine miles from the mainland of the island and planted on the margin of the growing reef. These rocks, by their winddrift character, clearly indicated the former existence of an extensive patch of land at that locality, they standing as the final indices of destruction.

"A wealth of animal forms at this rarely visited spot on the growing reef is almost indescribable, and equally so is the variety of form and coloring which they assume. Practically all the colors of the painter's pallet are here mingled indiscriminately together, as the expression of the coloring of the different forms of coral, such as the huge brain corals (Meandrina), the incrusting porites, millepores, sea fans, etc., sponges, sea urchins, crabs, sea anemones, and the still lower forms of life. Even the fishes were found to partake of the same brilliant coloring, which in their case, as well as in that of nearly all of the other animal forms, was adapted as a means of self-protection through the harmonizing of this coloring with that of the boundaries of their habitations."—*Philadelphia Ledger.*

REST: SUGGESTIONS FOR THE BUSY WIFE AND MOTHER.

Yes, weary, overworked mother, rest! I am sure you need it. You say you have no time. Take time! Every one has time to rest; and why not you? You owe it to yourself and family to be bright and cheerful at all times, and how can you be cheerful if you are weary in mind and body? No one can be cheerful when mind and body are tired, weary, and almost faint from hard labor. Your work must be done you say, and it will remain undone unless you do it. Very well; I think you can do your work and still find time to rest if you will only manage, for the labor of life may be lessened if only good management take hold of affairs.

You can rest often while working. Many women get the idea that they must always be on their feet when at work, or they are not working, or nothing will be done; that it is only lazy people who sit down while at work. Such is not the case, and is only another of fast disappearing relics of barbarism.

I will try to tell you some of the ways in which you can find that physical rest which is so much needed by the busy housewife. Every woman should have in her kitchen a high stool, such as is used in offices by book-keepers, etc., and sit on this stool while washing dishes, and doing those things which require an elevation above the work. You can then rest while at work. Never stand up to pare anything, such as apples, potatoes, or other fruit or vegetables. All this will seem awkward to you at first; but a little practice will enable you to do such work as rapidly as before, and you will not be tired, either. Making the poor feet stand the burden of the whole body the long day through is poor policy and hardly fair to that part of your anatomy. That which makes housework so wearing on mind and body is being constantly on the feet, and more than half the aches and pains of womankind come from this very habit, or necessity, as some would have it.

You should have a couch in the kitchen or in the room adjoining the kitchen, and, whenever possible, stretch the body at full length upon it, even if you cannot remain for more than a minute "by the clock." In the course of a day such minutes count, and you will notice quite a perceptible difference in your weariness when the day is done. When you have an extra busy day and find a moment to sit down, instead lie down. Lying down rests all the muscles of the body, and five minutes of such rest is of more use to the body and mind than a half hour of sitting in a chair would be.

Then you can save yourself many steps daily by having a shelf above your moulding-board, and on that shelf have all your baking powders, spices, pepper, salt, etc., and not be running from cupboard to kitchen and back to pantry again.

Get over that old idea that it is an indication of laziness to lie down or to sit down while at work. It is an indication of thoughtfulness and good common sense to spare the body all we can. Physical organizations, though the very strongest, will wear out, and people who ought to have lived to fourscore years and ten do not reach half that number of years, because having a strong body, they thought it would stand everything; but tired nature has her revenge and lays the weary body to rest in the grave. I know of a woman who said she never got tired and laughed at those who complained of hard work. Yet this same woman died before she was thirty years of age, from carelessness and overwork of that same body that never got tired.

Farm work is hard on all women, especially in this country of hills and mountains, with houses of a step up and a step down in every room in the house. "I would rather my wife would go up and down a long flight of stairs several times a day than to jolt herself over a step between rooms," said a prominent physician. In living here one must put up with discomforts that we may have the beauty of hill and mountain, of glen and brooklet; but you can make work as easy as possible by taking care of yourself, by resting whenever it is possible, and by insisting on having those conveniences which help you so much and do not hinder others.

Another thing which women are apt to do is to carry a child while working. This is nonsense. You are wearing yourself out and spoiling the child as well. If you have taught the child such a habit, better let it cry now than by and by to have it cry for the loss of a mother. Your child will need your protecting care more through childhood than in babyhood. Now most anyone can take care of it, attend to its physical wants; but who but a mother can care for and see to the moral and intellectual development of the child? As I said in the beginning, you owe it to yourself and your little family, to your husband, to take that care of your body which is possi-

ble by making the work which you have to do wear and tear your physical organization as little as possible by resting as I have suggested, and do not consider it "too much bother" to lie down when you have a moment to do so. A lack of rest brings on that too common disease—nervous prostration.

If you will follow these simple directions and others which your good sense will teach you are practicable, you will be surprised at the amount of work you can do in a day and not be "all tired out" when night approaches.—*Bedford, Pa., Inquirer.*

CITY AND FARM LIFE.

WHAT is life on the farm compared with that of city life? As a farmer, I should like to say a word on this subject, because I think farmers themselves very often make a mistake with regard to the value of their homes. Now, to illustrate what I mean, I will take two young men born in the country on the farm. They are educated just alike, and they are started out in life under similar conditions. One young man gets a position as book-keeper or salesman in one of our large stores; gradually he works himself into a position that commands the confidence of the firm, and they give him a first-class position and a salary of $2,000. You will admit it is a good salary for a book-keeper or salesman. He marries and rents a house; a man with that salary must live in pretty good style. He must rent a house and furnish it in accordance with his position. He must entertain somewhat, not much, for he cannot afford it. He also takes a pew in one of our fashionable churches, attends a concert once in a while with his wife, occasionally takes her to ride; goes to the stable and hires a horse at say five or six dollars; at the end of the year he finds he has spent every dollar of his salary, especially if he has sickness in his family, without he has means aside from his salary. He has not lived extravagantly, simply in accordance with his means.

Now, take the young man in the country. He goes to work on the farm, and spends about the same time preparatory. The young farmer marries, takes his father's farm, or rents one. He is an industrious prudent, temperate young man, is respected in the town by all. He works hard, sleeps well, and has a good appetite. He lives in a good, comfortable home, and his farm furnishes his fuel and much of his provisions. If his wife wants to take a ride his carriage is in readiness. He rides whenever he chooses, attends church in his own carriage, sets a better table than his city friend can possibly do. At the end of the year he has $300 or $500, and perhaps he says, "I have only $200 or $300, while my friend who has gone to the city has a salary of $2,000. How much better off I should be had I gone to the city." That is the way it is generally looked upon. I understand he has gained more. He has lived better, realized more than the other man in the city, and got something to show for it. Let us carry it a little further. Our book-keeper in the city remains in his position, and as a matter of fact they generally do. They have a good salary and they remain there, and he becomes sess fitted for any other poition than that he holds. After awhile other young men are working up, and our friend is growing older and older, and the firm thinks it best to change. This is frequent.

Take the instance in our custom houses; old gray-headed men that had been in for years were displaced when the time came to cut down $40,000 in that one instance. Many gray-headed men were then turned out who had done their duty all their lives, because old. They have no means, because they have lived on the salary they have earned, and not been able to save anything. He cannot live in the city, and he and his family go back and live on the farm, and are befriended there and aided in the support of his family.

Our friend on the farm meanwhile has supported his family. If he has rented his farm he is now able to buy it; he owns his place, has educated his children well, and lived a comfortable life all his day. I have drawn this picture faithfully, I think it is not overdrawn, to show how little value is placed upon it in actual money cost. This, I think, illustrates it fully, so that we farmers in speaking of the hard lot we have, ought to take that into consideration. We are receiving on the farm a living, as good a living in many respects, more comfortable than an income of $2,000 a year would allow.—*American Farmer.*

A MAGAZINE published in Philadelphia in 1818 gave the following as an item of news: "In the course of the twelve months of 1817, 12,000 wagons passed the Alleghany Mountains from Philadelphia and Baltimore, each with from four to six horses, carrying from thirty-five to forty hundredweight. The cost of carriage was about $7 per hundredweight, in some cases as high as $10, to Philadelphia. The aggregate sum paid for the conveyance of goods exceeded $1,500,000." To move a ton of freight between Pittsburg and Philadelphia, therefore, cost not less than $140, and took probably two weeks' time. In 1886, the average amount received by the Pennsylvania Railroad for the carriage of freight was three-quarters of a cent per ton per mile. The distance from Philadelphia to Pittsburg is 385 miles, so that the ton which cost $140 in 1817 was carried in 1886 for $2.87. At the former time, the workingman in Philadelphia had to pay $14 for moving a barrel of flour from Pittsburg, against twenty-eight cents now. The Pittsburg consumer paid $7 freight upon every 100 pounds of dry goods brought from Philadelphia, which 100 pounds is now hauled in two days at a cost of fourteen cents.—*Exchange.*

WE should hold fast to principles at all cost, and work directly in the line of our best ideals; thus will our consciences be clear, our characters pure and our lives will be fruitful in the best results.

"For Mercy has a human heart,
Pity a human face,
And Love the human form divine,
And Peace the human dress.

"Then every man of every clime,
Who prays in his distress,
Prays to the human form divine,
Love, Mercy, Pity, Peace."

SWARTHMORE COLLEGE.

SWARTHMORE, DELAWARE COUNTY, PENNA.

DEPARTMENT OF MANUAL TRAINING.

Now that technical education and manual training have become fixed elements in the educational systems of the country, in the higher as well as in the lower and intermediate grades, and that the practical value of this work has been proved, it seems well that we should look back and note the progress made in this department of the college course and make a few explanations of the arrangement of the work as now laid out, together with a few remarks upon its possible outcome.

Many mistaken ideas are current regarding the whole system,—its aims, its methods, its results. People often forget, or do not understand, that what is aimed at is not altogether the ability to handle understandingly the various tools and materials connected with manual work. They frequently make the mistake of thinking that manual training, as given in the schools, means simply manual dexterity, and that mental training is entirely foreign to the subject. They consider such results as they see in the exhibition of the work of the student as simply crude attempts at what might much more easily and better be accomplished by an apprenticeship at any manufactory.

To those, however, who are intimately connected with the work, or who understand it thoroughly, these views are known to be, to say the least, narrow.

It is very true that manual training is well adapted for those students who may be unable to enter, or are unfitted for, professional life, and who have an aptitude for mechanical work; or for those who have no special inclination toward either professional or practical departments, but who wish for a general course which may fit them for entering any ordinary work. But it does not follow that the one-sided training of the hand alone is given, as is often assumed, thus making, in truth, a system no better than the present apprenticeship; but the course in the schools and colleges, if intelligently and systematically carried on in the class-room, the work-shop, and the draughting-room, the one dovetailing into the other, gives the manual dexterity, the habit of close, careful observation, clearness of thought and an ability to bring all the powers of mind and body into intelligent practical action, the hands helping out the head and *vice versa*.

This is the aim of the work, and this is what is accomplished to a great degree in the technical schools, colleges, and manual training schools all over the country. The movement is not a whim of the times, but is destined to be one of the broadest of educational systems; it has too many advantages, for the masses, to be thrown aside. No doubt there will be changes in the methods of presenting the subject as the requirements are changed, but as to its advantages to a large class of our people there can be no doubt. As to the results, some are disappointed if at the end of a year's work their young boy does not exhibit all the penetration of a man; they are not willing to allow time for complete development; but, if they could make the acquaintance of the graduates of our best technical schools all over the country, they would find that, though as a rule the age would be younger, for intelligence, mental acumen and practical information and ability, these graduates would not be surpassed by the graduates of any of our colleges. In addition to this, they have the ability to use and understand the operation of machinery of various kinds, and a practical knowledge of the best methods of doing the many things which come up in every man's work requiring mechanical skill. So for the boys without professional inclinations or ability, and for that large mass of boys who wish only for a general education, manual training presents a course which goes far toward giving what may make them intelligent, observant and practical citizens.

In the sketch below only the outlines of the work in the shop and draughting-room are given, the other work being in the younger classes similar to that given in college preparatory schools, and in the other classes of the usual scientific and engineering course.

The manual work begins in the second preparatory class—that is, two years before entering the college—and continues through the sophomore class, and from that class it is continued in higher technical work in the engineering department.

In the two preparatory classes the time given to the work amounts to eight periods of forty-five minutes each per week, four of these being given to the draughting and four to the shop practice.

In the second preparatory class the first work is very elementary, intended only to familiarize the student with his tools and some of the technicalities of the work. Insisting upon the utmost care, accuracy and neatness in all that is done, the instructors endeavor to give at the very start habits which are essential to any good work. This is done in the carpenter's shop by exercises in sharpening and cleaning the tools, and very simple exercises in sawing, planing, etc. In the draughting-room this is accomplished by exercises in lining, measuring, division of lines, inking, etc. As soon as the students are able to use their tools well enough, the regular work is begun in the shop. It consists of examples of joining, framing, and wood-turning. At the same time the regular draughting begins with practical working drawings for the exercises in the shop, each student being required to make his drawing before being allowed to construct the exercise, which has to be exactly of the same dimensions and shape indicated in the draft. At the same time constructive problems in elementary plane geometry are worked out accurately, and toward the end of the year careful free-hand sketches are made and measurements taken of machine details, and from these working draughts made. This completes the work of the year.

The first preparatory class has during the year work in blacksmithing, bringing in the various work in that department, consisting of bending, twisting, upsetting, tempering, and welding iron. For these exercises working drawings are made at the first of the year as in the other classes, and then the draughting continues in higher problems in plane geometry, and finishes with elementary work in projection.

The machine-shop practice begins in the freshman class, which receives six periods per week in both the shop and draughting-room. The work consists of exercises in chipping, filing, fitting, latch-work, etc., and toward the close of the year the students are encouraged to commence some small piece of machinery. The draughting begins with the shop drawings, soon bringing in, in connection with these, problems in theoretical projection, which are carried through intersections of solids and the development of surfaces. Then problems in theoretical shades and shadows are taken up. In order to prepare for the machine-work in the shop, drawings are made of machine details and entire machines from measurements and sketches taken in the shop, then the drawings are made for the machine projects, tracings and blue prints being also made for shop use. All of this is carried on at the same time with the theoretical work of projections and shadows.

The sophomore class has the same amount of time as

the freshman, and the work in the shop is entirely machine-work, using the milling-machine, lathes, shaper, etc., in constructing exercises bring out the various uses of each machine, and in completing the machine which each student is expected to make before leaving the class. In the draughing-room the shop drawings are made first, followed afterward by descriptive geometry, advanced shades and shadows and perspective together with machine-drawing from copy and measurement and a little India-ink tint-work. The machine-work brings in the construction of theoretical and approximate gear-tooth curves, screw-threads, and applications of the helical curve, also problems in belting and proportions of various machine details.

This completes the regular course in manual training, but the draughting is continued through the next two classes in connection with the engineering.

In the junior class the work consists of pen-and-ink and color topography and detail drawings, elevations, etc., of some good example of bridge construction from measurement.

The senior work is composed almost entirely of diagrams used for obtaining stress and strains in bridging and roofing, a topographical map from some plane table survey made by the class, and a topographical map of a railroad survey made also by the class.

In addition to these, special work in architectural draughting is carried on by special students. The work consists in making detail drawings of the constructive features of frame and stone buildings, also their plans, elevations and framing.

All of the work is made as thoroughly practical as possible, yet, at the same time, the student is not permitted to forget that his books are quite as essential as his tools, that a skilled hand is worthless without an active head, and that what he has to do is to combine the two, make them work together and thus accomplish the best results.

THE PINT OF ALE.

A MANCHESTER (England) calico printer was, on his wedding-day, asked by his wife to allow her two half-pints of ale a day as her share of extra comforts. He made the bargain, but not cheerfully; for, although a drinker himself (fancying, no doubt, that he could not well do without), he would have preferred a perfectly sober wife. They both worked hard. John loved his wife, but he could not break away from his old associations at the alehouse; and, when not in the factory or at his meals, he was with his boon companions. His wife made the small allowance meet her housekeeping expenses, keeping her cottage neat and tidy; and he could not complain that she insisted upon her daily pint of ale, while he, very likely, drank two or three quarts. They had been married a year, and the morning of their wedding anniversary John looked with real pride upon the neat and comely person of his wife; and with a touch of remorse in his look and tone, he said,—

"Mary, we've had no holiday since we were wed, and, only that I haven't a penny in the world, we'd take a jaunt to the village and see the mother."

"Would thee like to go, John, she asked?

There was a tear with her smile; for it touched her heart to hear him speak tenderly as in old times.

"If thee'd like to go, John, I'll stand treat."

"Thou stand treat, Mary! Hast got a fortin left thee?"

"Nay, but I've got the pint of ale," said she.

"Got what, wife?"

"The pint of ale," she repeated.

Thereupon, she went to the hearth, and from beneath one of the stone flags drew forth a stocking, from which she poured upon the table the sum of 365 threepences ($22.81), exclaiming,—

"See, John, thee can have the holiday."

"What is this?" he asked in amaze.

"It is my daily pint of ale, John."

He was conscience-stricken as well as amazed and charmed.

"Mary, hasn't thee had thy share? Then I'll have no more from this day."

And he was as good as his word. They had their holiday with the old mother; and Mary's little capital, saved from the "pint of ale," was the seed from which, as the years rolled on, grew shop, factory, warehouse, country-seat, and carriage, with health, happiness, peace, and honor.—*Selected.*

SOME time ago a Cambridge lady who was as remarkable for her dignified bearing as for her personal beauty and grace, entered a crowded horse-car where there were a number of Harvard undergraduates, all of whom arose to offer her a seat. She accepted one with thanks. Presently the car stopped, when a poor woman with a baby in her arms, entered it. Not a seat was offered her. The lady waited a few moments, and then finding that her young admirers took no notice of the woman, she rose and asked the woman to take her seat. At once a dozen young men sprang up and again tendered their seats to her, but she persisted in standing, and had full opportunity of noticing the confusion of the young collegians. It was a quiet but effective rebuke. A statement of the affair soon got over the college, and no undergraduate could be found to admit that he was in a horse-car that evening.—*Faith and Works.*

WERE half the wealth bestowed on camps and courts,
Given to redeem the human mind from error,
There were no need of arsenals or forts.—*Longfellow.*

NEWS AND OTHER GLEANINGS.

—The Commissioner of Fish and Fisheries has asked for an appropriation of $13,000 for the establishment and maintenance of a fish-cultural station, under the United States Fish Commission, in the Ozark region in southwestern Missouri. The Commissioner says that the neighborhood of Neosho, Newton county, Missouri, affords favorable conditions for the establishment of such a station.

—The will of Hiram Sibley, of Rochester, leaves thirty thousand dollars to Cornell University, to "endow a professorship of mechanic art of said University, the said sum to be invested and kept safely and securely invested upon interest, and the income thereof to be applied by said University to the maintenance of such professorship, and to no other purpose or object whatever. The principal is not to be diminished or any part of it diverted to any other purpose." This is the only bequest, excepting a few to servants and near relatives, made outside of the family circle.

EXECUTORS' SALE BY AUCTION

of a valuable homestead in the Centre of Sandy Spring neighborhood, Montgomery Co., Maryland.

The subscribers will offer at Public sale on the premises on Third-day, Ninth month 4th, 1888 at 2.30 o,clock P. M., the valuable Homestead of Mary L. Roberts deceased. Situated in the heart of Sandy Spring neighborhood, only ⅝ of a mile from the meeting-house—with good schools within sight. The farm contains about 40 acres of land, well fenced and in a high state of cultivation, is improved by a large 2 story brick Dwelling containing 11 rooms; frame barn, and all necessary outbuildings, all in a good state of repair. Terms of sale made known at the time.

THE HEART'S PRAYER.

As down in the sunless retreats of the ocean
Sweet flowers are springing no mortal can see;
So, deep in my soul, the still prayer of devotion,
Unheard by the world, rises silent to Thee,
My God! silent to Thee;
Pure, warm, silent to Thee.

As still to the star of its worship, though clouded,
The needle points faithfully o'er the dim sea;
So dark when I roam, in this wintry world shrouded,
The hope of my spirit turns trembling to Thee,
My God! trembling to Thee;
True, sure, trembling to Thee.

—*Thomas Moore.*

Editorial Correspondence Friends' Intelligencer and Journal.

NEBRASKA LETTERS.— X.

It is a matter of surprise that so many families and parts of families of Friends could be living in Omaha at the same time, and some of them residents for several years, and yet have made no acquaintance with one another outside the family limits. The names of thirty are on a list furnished me when I left home on this mission of love; some were added by Benj. F. Nichols on his recent visit here, and I have heard of others yet to be added that will further increase the number. I believe there could not be found in all this western land as large a body of members of any other Christian sect, who had not united in the organization of a meeting, and one is forced to the inquiry, Why should this state of things exist? A multitude of reasons present themselves, and each is worthy of consideration. First, perhaps, is the fact that many young men have come from the meetings east of here, believing there were better opportunities in the West for them to get a start in the world than the old home offered. Of these very few probably were more than nominal members of the Society of Friends. They had come to maturity when little was being done to instruct the young in the principles and testimonies of the Society, and while attending, it may be, the First-day meeting and the quarterly meeting, had not, either through reading what had been written by the early fathers, or what was preached from the galleries, imbibed any fixed or permanent ideas of duty and responsibility toward the organization, inhering in the privileges of birthright which it was theirs to enjoy. We are all traditional Friends until there is an awakening to a consciousness that our religion must be something more than a name, and unless we come into some sense of obligation to the church, and realize that it has claims upon us which as Friends we must acknowledge and be obedient to, our membership will be of small value to ourselves or to those about us. The life must be permeated, vitalized; must be raised into a condition in which the law of the spirit of life makes us new creatures in Christ Jesus; this is the "new birth," or the being born from above,—the meaning of the words of Jesus to Nicodemus. It is this experience that when realized individually enables us to take our part in the work of that branch of the church in which our lot has been cast.

In the intercourse had with Friends in Nebraska I have nowhere found truer or more loyal members of our Society than in this city; in this the whole life is permeated by the early training they received and their standing in the community is evidence of the honesty of purpose and integrity of character that this training had developed; but coming west and mingling in business with people who know nothing of our "peculiarities" in dress and address, they have gradually lost these distinctive marks and thus failed of recognition. Some have felt the need of religious fellowship, and not knowing that there were others like themselves yearning for the same helpful association, have united in membership with other denominations, yet holding still the principle of the Society as the foundation of their hope.

In the little company gathered through the effort of S. H. White and a few others at his home, on the afternoon of the 5th instant, there were several who had thus connected themselves, yet it was encouraging to find how cordially they united in welcoming those who came among them in the "name of a disciple" of the faith of their fathers. While the character of this meeting could scarcely place it among those which we class as meetings for worship, it was an opportunity for social religious intercourse, in which the distinctive features of our profession were freely presented, and the feeling prevailed that in the near future measures would be taken to bring Friends living in Omaha and its vicinity together in religious fellowship. As a preliminary step, your correspondent was instructed to ask the committee of Prairie Grove Quarterly Meeting, appointed to establish circular meetings, to set a time for holding such a meeting in Omaha, and promising to secure a hall and give due notice in the papers thereof. This is encouraging, and it seems now to rest with that committee to seek for that wisdom which will direct and make possible every proper effort for the advancement of the higher spiritual life among professing Christians.

Social visits followed, my limited stay making it impossible to call upon all the Friends at this time. In all these opportunities, the evidence of interest in the subject of establishing a meeting was manifested; one among the younger men whose wife and children are also members, assuring me that he "will hold up his end of the work," gives promise that it will not want for whole-hearted laborers, now that it is undertaken.

This paper will not be complete without some notice of the great industries that are here in active operation. The meat packing-houses are only excelled by those of Chicago and Kansas City, and are being extended so rapidly that they will soon be on a level with if not surpass every other enterprise of the kind in this country. The precision and rapidity with which every part of the work is performed is a marvel to the uninitiated. From the time the steer is placed in the closely fitting stall that allows no movement of any part of the body, (where there is a little opening above just over the proper place for the work of slaughtering to begin), until he passes under the manipulation of a corps of experts each ready in the twinkling of an eye to do his part as the animals come to his hands in rapid succession, until they are dehoofed, skinned, quartered, and landed in the refrigerators,—all this is wonderfully rapid, the whole operation taking scarcely more minutes than it did hours in the old way. The same is true in the pork packing houses. The handling is all done by machinery and as much of the other work as can be is also performed in that way.

The Smelting Works is a place of equal interest. We take the cable cars at their terminus north, and ride on Dodge street, a broad avenue that forms the dividing line between the north and south, much the same as Market street in our city, and ride two miles or more to the nearest point, which brings us near the brow of the first hill that rises from the river bank, and near the foot of the new bridge for wagon traffic in process of erection to connect Council Bluffs with Omaha. A walk of several blocks, not at all attractive, or one to be taken for the pleasure of it, brings us to the river bank and directly at the point where the immense iron cylinders, four in number, upon which the bridge on this side the river will rest, are placed. Turning to the left a very short walk brings us to the offices of the "Omaha and Grant Smelting and Refining Company." It is a stock company, having a branch in Denver, and employs over 500 operatives, mostly Bohemians, men of brawny muscle, but with leaden faces, stolid looking, and apparently having little if any knowledge of our language. We receive permission to go through the works, and are courteously conducted through the greater part by the Superintendent of the "gold and silver department." The "plant" covers half a mile of the river front. The ores are brought here from the mines of old and New Mexico, and from all the mineral regions of our own country west of the Missouri. They come in the rough ore, or pulverised and packed in small canvas sacks. We passed from one to another of the various departments, beginning with the furnaces where the process of roasting the ores is conducted, through all the manipulations by which the iron, the zinc, the lead and all the baser elements are eliminated, up to the final department, where the precious metals, in vast melting pans, undergo the last process of separation. As we look in upon the steaming bubbles of the boiling silver glowing with a lustre that indicates its purity, the illustration of the old prophet comes vividly to mind: "He shall sit as a refiner and purifier of silver," and the beauty and fitness of the figure was most fully realized.

It would take more space than your correspondent has the right to ask or the time to give to it, to enter into fuller details. The great vats in which by chemical process the precious metals are separated, after the refining is completed were indeed most wonderful evidences of the extent to which this work is carried on, and the value of the "plant," as it is called. We were told that they supply half the lead that is consumed in the world. L. J. R.

Omaha, Eighth month 8.

GEORGE FOX, THE FIRST OF THE QUAKERS.

[Sermon by W. D. Ball, Baltimore. Concluded from last week.]

It was in 1648 that the great experience of his life took place,—that is, the experience which finally decided his course and his doctrine. It was in the vale of Bevor, in Nottinghamshire. Here, after long, prayerful and solitary wanderings in the fields, there was inwardly revealed to him his ministry and its message. Then for the first time was uttered to completeness his system of belief. For the first time was enunciated that striking tenet of the Quakers, that the Christian Religion is solely spiritual and the Holy Spirit the one great authoritative teacher whose guidance is infallible and not less commanding than that of the written word of God. Fox got his system from the Holy Spirit, independent of the Scriptures. He found upon comparison that the two revelations harmonized. This was but a confirmation that the truth he received was of the Holy Spirit's dictation; for this Spirit was to lead into all the earth, and since truth was one, the inwardly revealed Will of God to him did not contradict the written Word. This is the spirit and part of the letter of his new gospel and revelation. "I was sent to turn the people from darkness into light. . . . I was to direct people to the Spirit that gave forth the Scriptures, by which they might be led into all truth, and so up to Christ and God. I saw that Christ died for all men, and was a propitiation for all. I saw that the grace of God which bringeth salvation had appeared to all men, and that the manifestation of the spirit of God was given to all men to profit withal. These things I did not see by the help of man, nor by the letter, though they are written in the letter, but I saw them in the light of the Lord Jesus Christ, and by his immediate Spirit and power as did the holy men of God by whom the holy Scriptures were written. Yet I had no slight esteem for the holy Scriptures, but they were very precious to me, for I was in that spirit by which they were given forth and what the Lord opened to me I afterwards found was agreeable to them. I could speak much of these things, but all

would prove too short to set forth the infinite love of God in letting me see the depths of Satan on the one hand and the opening to me on the other, the divine mysteries of his own everlasting kingdom."

Fox soon had occasion to test the acceptability of this new doctrine of the Scriptures. After this revelation he proceeded towards Nottingham and lifting up his eyes, he sees in the distance a steeple-house. Then the Lord said unto him "Thou must go and cry against yonder great idol."

More obedient than Jonah, he went. On entering the church he heard the preacher defending the supreme authority of the Scriptures in all questions of faith and conduct. Fox's convictions got the better of his judgment and manners, and he interrupted the preacher, questioning and even arraigning his position. The nature and issue of this affair we will allow Fox to narrate in his own vigorous style. "I could not hold, but was made to cry out and say, O no, it is not the Scriptures. I told them it is the Holy Spirit by which the holy men of God gave forth the Scriptures, whereby opinions, religions, and judgments are to be tried, for it led unto all truth. . . . The Jews had the Scriptures and yet resisted the Holy Ghost, rejected Christ, the bright morning star. They persecuted Christ and his apostles, and took upon them to try their doctrines by the Scriptures, but erred in judgment and did not try them aright, because they tried without the Holy Ghost. And as I spake thus amongst them, the officers came and took me away and put me into a nasty, stinking prison, the smell where of got into my nose and throat, that it very much annoyed me."

This was Fox's first imprisonment, but by no means his last. It was in fact the beginning of a life-long series of incarcerations, beatings, persecutions. Up to this time he had been unmolested. But from henceforth he is a branded man. This new attitude of the community toward him is to be accounted for by the persistent ministry and radical doctrines of Fox, now for the first time systematically entered upon and taught, all of which were the essential result of the inward revelations made to him while walking the fields beneath the sky and stars of Bevor vale. That we may appreciate his persecutions we must here inform ourselves of his peculiar tenets, not in their spiritual nature at this time, but with reference to those points where Fox came in contact with the Civil Courts, and out of which grew the external peculiarities of his followers, bringing down upon them the contempt of the Church of England and indeed of all Dissenters, and the judgment of the law. I am certain that we will consent to hear this statement of principles as set down by an eminent contemporary and countryman, William Penn. He names the following leading principles as actuating and controlling the Quakers:

"1. Communion and loving one another, whence it is so common to hear some say, 'Look how the Quakers love and take care of one another.'

"2. To love enemies; this they both taught and practiced, for they did not only refuse to be revenged for injuries done them, but they did freely forgive, yea, help and relieve those that were cruel to them.

"3. The sufficiency of truth speaking according to Christ's own form of words of yea, yea, and nay, nay, among Christians without swearing, both from Christ's express prohibition 'swear not at all' and for that being under the tie and bond of truth in themselves, there was no necessity for an oath, and it would be a reproach to their Christian veracity to assure their truth by such extraordinary way of speaking, but offering at the same time, to be punished to the full for false speaking as others for perjury, if ever guilty of it.

"4. Not fighting, but suffering is another testimony peculiar to this people; they affirm that Christianity teaches people to beat their swords into ploughshares and their spears into pruning hooks and to learn war no more. . . . Nor ought they for this to be obnoxious to civil government, since if if they cannot fight for it, neither can they fight against it, which is no mean security to the state.

"5. Another part of the character of this people is they refuse to pay tithes or maintenance to a national ministry and that for two reasons; the one is that they believe all compelled maintenance even to Gospel ministers to be unlawful, because expressed contrary to Christ's command, who said 'freely have ye received, freely give,' the other reason of their refusal is because these ministers are not Gospel ones, in that the Holy Ghost is not their foundation.

"6. Not to respect persons. They affirmed it to be sinful to give flattering titles or to use use vain gestures and compliments of respect. The Lord and Master Jesus Christ forbade his followers to call men Rabbi, which implies Lord or Master.

"7. They use the plain language Thou and Thee to a single person, whatever his degree among men.

"8. They recommend silence by their example, having very few words upon all occasions, they were at a word in dealings, nor could their customers with many words tempt them from it.

"9. For the same reason they forbore drinking to people, or pledging them, as it is a manner of the world, a practice that is not only unnecessary, but they thought evil in the tendencies of it; being a provocation to drinking more than did people good, as well as it was in itself vain and heathenish.

"10. Their way of marriage is peculiar to them. They say marriage is an ordinance of God, and God only can rightly join a man and a woman in marriage. Therefore they use neither priest nor magistrate, but the man and woman concerned take each other as husband and wife, in the presence of divers credible witnesses, promising unto each other with God's assistance to be loving and faithful in that relation till death shall separate them, etc., etc." Of all such proceedings, a narrative in the way of a certifi- is made (duly) signed (by parties and spectators).

"11. It may not be unfit to say something here of their births and burials which make up so much of the pomp and solemnity of too many called Christians. For births the parents name their own children, some days after they are born in presence of those present at the birth, who afterwards sign a certificate, which is recorded in a proper book in the Monthly Meeting.

"12. Their burials are performed with the same simplicity. If the corpse of the deceased be near any public meeting place, it is usually carried thither, and it so falls out sometimes that while the meeting is gathering for the burial, some or other have a word of exhortation for the sake of the people then met together, after which the body is borne away. The corpse being in a plain coffin without any covering upon it. At the ground sometimes they pause before they put the body into its grave, that if any there should have anything upon them to exhort people, they may not be disappointed. Otherwise they have no set rites or ceremonies on those occasions, neither do the kindred of the deceased ever wear mourning, looking upon it as a worldly ceremony and a piece of pomp, and what mourning is fit for a Christian to have at the departure of a beloved relation or friend should be worn in the mind which only is sensible of the loss."

We may then see how violently Fox was bound to come into collision with Courts in view of his principles regarding oath-making, taking up arms and contributing to the support of a state Church, and how he would excite the enmity of the clergy by his proclamation against a paid ministry from the standpoint of selfishness if not principle, and how extreme to many would seem his view of the authority of the Scriptures and to some his doctrines of Christian perfection. But in no case would he deviate in the least from his opinions either civil or religious, and on account of his fidelity to these arose his persecutions. To the Presbyterians was his doctrine of perfection peculiarly offensive.

To the Presbyterian ministers of Derby he writes from his prison into which they have been largely instrumental in putting him: "Friends, you do profess to be ministers of Jesus Christ in word but you show forth by your fruit what your ministry is. The ministry of Jesus is in mercy and love to unloose them that are bound and to bring out of bondage, and to let them that are imprisoned go free. Now friends where is your example (if the Scriptures be your rule) to imprison for religion? Have you any command for it from Christ? When envy, pride and hatred rule, the nature of the world doth rule, not the nature of Christ. I write with no hatred to you, but that you may well weigh yourselves and see how you pass on your time.

GEORGE FOX."

After or about the conclusion of a six months' imprisonment, Parliament, desiring to levy troops to fight against the king, offered Fox the captaincy in a newly levied regiment, the soldiers swearing that they would have no other captain, showing that he was not wholly without friends. But Fox determinedly refused to lead others into war, which he deemed at all times unrighteous. He was therefore imprisoned and confined with common thieves for six months more. And yet all the while his followers multiplied. The sheriff at Nottingham, his family and many citizens were converted by Fox's instruction during his first imprisonment, reminding us of the conversion of the jailer by Paul and Silas; but as the persecutions grew more and more severe, many fell away, others openly recanted, but Fox kept on in his even way. So repeated are his arraignments before the courts that to follow him through them all would be impossible. His conduct is always fearless and frequently brilliant. His defences of himself able, his ability to detect errors in the indictments brought against him at times astonishingly shrewd, sufficient many times to have acquitted him, had not the court and juries been dead set against him. We must content ourselves with one characteristic trial, that at Launceston, told by Fox himself in his own inimitable and graphic and not unamusing way:

"People came from far and near to hear the trial of the Quakers. Captain Braden lay with his troops of horse there, whose soldiers and sheriff's men guarded us up to the Court through the multitude of people, and much ado they had to get us through them. Besides, the windows and doors were filled with people looking at us. When we were brought into the court, we stood sometime with our hats on and all was quiet, and I was moved to say 'Peace be amongst you.' Judge Glynne, a Welshman, then Chief-Justice of England, said to the jailer, 'What be these men you have brought here into court?' 'Prissoners, my lord,' said he. 'Why do you not put off your hats?' said the Judge to us; we said nothing. Then said the Judge again, 'put off your hats;' still we said nothing. Then said the Judge, 'the court commands you to put off your hats;' then I spoke and said, 'when did ever any magistrate, king, or judge, from Moses to Daniel, command any to put off their hats, when they came before their courts, either amongst the Jews, the people of God, or amongst the heathen? and if the law of England doth command any such things show me that law either printed or written.' Then the Judge grew very angry and said, 'I do not carry my law books on my back.' But I said, 'tell me where it is printed in any statute book that I may read it.' Then said the Judge, 'take him away, prevaricator, ill ferk him.' So they took us away and put us among the thieves. Presently after he calls to the jailer to bring them up again. 'Come,' said he, 'when had they hats from Moses to Daniel, come answer me, I have you fast now,' said he. I replied, 'thou mayest read in the third of Daniel, that the three children were cast into the fiery furnace by Nebuchadnezzar's command, with their coats, their hose, and their hats on.' This plain instance stopped him, so he cried again, 'take them away, jailer.' In the afternoon we were had up again into the court by the jailer and the sheriff's men and troopers, who had a mighty toil to get us through the crowd of people. When we were in the court waiting to be called, I seeing both the jurymen and such a multitude of others swearing, it grieved my life that such as professed Christianity should so openly disobey and break the command of Christ and the apostle, and I was moved of the Lord to give forth a paper against swearing which I had about me to the grand and petty juries. . . . This paper passing among them, from the jury to the justices, they presented it to the Judge, so that when we were called before the judge, he bade the clerk give

me that paper, and then asked me whether that seditious paper was mine. I told him if they would read it up in open court that I might hear it, if it was mine I would stand by it and own it. He would have me to take it and look upon it in my own hand, but I again desired that it might be read, that all the court might hear it, and judge whether there was any sedition in it or not, for if there were I was willing to suffer for it; at last the clerk of the assize read it with an audible voice, and when he had done, I told them it was my paper, I would own it, so might they too, except they would deny the Scripture. Then they let fall that subject and the Judge fell upon us about our hats again, bidding the jailer take them off, which he did and gave them to us, and we put them on again. . . .When we asked wherefore we had lain in prison nine weeks seeing that they had nothing to accuse of us beyond wearing our hats." But alas, despite the boasted fairness of English courts, Fox and his companions were after this trial vilely imprisoned in a dungeon called Doomsdale, an under place, noisome and pestilential, being the common sewer of the prison. Here without fire or light they stood in mire over their shoe-tops unable to sit or lie down. However, friends brought them light, and a few handfuls of straw to purify the air. Upon the smoke arising through the chinks of the floor above, the prisoners there confined poured down upon them whatever filth they could lay their hands upon.

One time while at Drayton he was arrested upon a trumped up charge of plotting with other Quakers against the Protector, Oliver Cromwell. He was sent to Cromwell, but first having written a letter to the Protector declaring his innocence. When he in fact had come before Oliver, he was taken by the hands whilst with tears he was addressed in these words: "Come again to my house, for if thou and I were but for an hour a day together, we would be nearer one to the other." Shortly after leaving Cromwell's presence, Fox received an invitation to dine with the Protector. His answer was that he would neither eat of Cromwell's bread nor drink of his wine, whereupon Cromwell exclaimed: "Now I see there is a people arisen that I cannot move with gifts, kindness, offices, places, but all other people and sects I can."

It was perhaps while at the court of Cromwell mingling with its members and witnessing its gayeties that Fox saw some extremely fashionable men and women who were sufficient to draw forth the following caustic and characteristic epistle addressed "To such as follow the world's fashions:" "What a world is this! How doth the devil garnish himself! How obedient our people to do his will and mind! They are altogether carried away with fooleries and vanities. Both men and women, they have lost the hidden man of the heart, the meek and quiet spirit, which with the Lord is of great price. They have lost the adorning of Sarah, they are putting on gold and gay apparel, women plaiting the hair, men and women powdering it, making their backs look like bags of meal. They can scarcely look at one another, they are so lifted up with pride. Young and old, one puffs up another. If one have a store of ribbons hanging about his waist, at his knees and in his hat of divers colors, red, white, black or yellow, and his hair braided, then he is a brave man, then he is accepted, then he is no Quaker because he hath ribbons on his back, belly and knees, and his hair is powdered. Likewise the women having their gold, their patches on their faces [Who would have thought that black patch was so venerable?] noses, cheeks, foreheads, their rings of gold upon their fingers, their cuffs doubled under and above like a butcher with his white sleeves. Are not these that have got ribbons hanging about their arms, hands, waists, knees, and hats like fiddlers' boys, and stage players, quite out of the fashion of solid men? They say, if it be out of fashion it is worth nothing, and further if one get a pair of breeches like a coat and hang them about with points and up almost to the middle, a pair of double cuffs on his hands, a feather in his cap, here is a gentleman, bow before him, put off your hats, get a company of fiddlers, a set of music, women to dance! This is a brave fellow! Are these your fine Christians? Yea they say they are of Christians, but say the serious people they are out of Christ's life, out of the apostle's command, and out of the saint's ornament. . . . ."

When forty years of age Fox married a widow named Margaret Fell, ten years his senior, a fellow-sufferer in many vile imprisonments, out of which community of suffering there sprang a common love.

Between the years 1671 and 1673 Fox sailed for and journeyed to the Barbadoes and to America. After a visit to the former he came to America, landing in Maryland. Here for fifteen months throughout our State, New Jersey, Pennsylvania, New York, New England and Virginia, he journeyed, preaching and organizing, correcting extravagances of faith and conduct. In Rhode Island he found many of his mind, indeed those who under Roger Williams somewhat preceded himself in their ideas of religious liberty and sufferance for it. He sailed from Maryland after a great Quaker gathering, a season of "great refreshing" as he called it. New trials and imprisonment awaited him in England and continued until within four years of his death, when after a petition by the Quakers to King James II., a proclamation of liberation was declared. The fight for freedom had been long indeed, extending over forty years of incessant suffering and persecution, but it was well worth the cost. This boon came in the evening of Fox's life, but cheered his last hours and made jubilant his patient and beautiful followers. After a brief illness and a life full of labor, George Fox died in London November 13th, on the third day of the week (Tuesday) 1690, in the 67th year of his age.

His was a life full of thrilling incidents and good works. He had strange visions, he worked miracles, he at times exercised the gift of prophecy in an indifferent way. In his journals of 1653 we note the following incident of this last gift.

"Being one day in Swarthmore hall, when Judge Fell and Justice Benson were talking of the news of Parliament, then sitting which was called the Long Parliament, I was moved to tell them that before that day two weeks the Parliament should be broken up, and the speaker plucked out of his chair; and that

day two weeks Justice Benson coming thither again told Judge Fell that now he saw George Fox was a true prophet, for Oliver had broken up Parliament." His peculiar doctrine of christian perfection, he beautifully exemplified in his own life from his youth, which was one of innocence and unblemished purity. Thus does he defend this doctrine in a dialogue with a clergyman of the Established Church. The priest asks "If he was grown up in perfection?" Fox, "What I am, I am by the grace of God." Priest, "Is it a modest and civil answer? But if we say we have no sin, we deceive ourselves, and the truth is not in us." Fox, "The same apostle says, if we say we have not sinned, we make him a liar, and His truth is not in us, who came to destroy and take away sin. So there is a time to confess sin, and to forsake it, and to know the blood of Christ to cleanse from all sin." Priest, "We must be always strong." Fox, "It is sad and comfortless strong to strive with a belief that we shall never overcome. Paul who cried out of the body of death, did also thank God who gave him victory through the Lord Jesus Christ. So there is a time of crying out for want of victory and a time for praising God for the victory. Paul further said, 'There is no condemnation to them that are in Christ Jesus.'" Priest, "Job was not perfect." Fox, "God said Job was a perfect man." Priest, "Job said 'He chargeth his angels with folly and the heavens are not clean in his sight.'" Fox, "That is a mistake, it was not Job that said so, but Eliphaz, who contended against Job." Priest, "Well what say you to that scripture 'The justest man that is, sinneth seven times a day.'" Fox, "Why truly there is no such scripture." This position of Fox is that of the Quakers of to-day whose authoritive utterance runs: "The Lord is able to redeem from sin in this life; that he can cast out the strong man, cleanse the house and make it fit for him to dwell in; that he can finish transgression in the heart, and bring in everlasting righteousness."

Fox based his doctrine and created his following upon what he considered the distinguishing features of the Apostolic age:

"1. A pure spiritual worship. 2. A free gospel ministry. 3. Religious liberty. 4. A testimony against war and oppression. 5. A testimony against oaths. 6. A testimony against vain fashions, corrupting amusements, and flattering titles." He and his followers have been from the beginning singularly faithful to these great principles, coming without question nearer to the christian doctrine of non-resistance of evil than the mass of christians. Their position on this point is ideal. For if all were Quakers then indeed that day would have come when swords should be beaten into plough-shares and spears into pruning hooks, it would indeed be a true christian day. The readiness with which christian nations make war upon one another is a sad travesty upon the gospel they profess to follow.

We may close with a brief summary of the Quakers' distinguishing doctrines. As regards the Trinity, they say with John in his first epistle (v. 8) that "there are three that bear record in heaven, the Father, the Word, and the Holy Ghost, and these three are one."[1] That the three are distinct as three several beings or persons, the Quakers nowhere read in the Scriptures, but that they are one.

1. They acknowledge one God, the Father of Jesus Christ, witnessed within man by only the Spirit of truth and these three are one; and he who honors the Father honors the Son who proceeds from Him, and he who denies the Spirit denies both Father and Son.

2. They believe that Christ is both God and man in wonderful union. To the charge they do not believe in the divinity of Christ, William Penn answers: "A most untrue and uncharitable censure." Their great characteristic principle is that Christ is the Divine Word that lighteth all souls.

3. In worship they have neither liturgy nor form of prayer. All preaching and prayer must come from the direct inspiration of the Holy Spirit.

4. They believe not in the necessity of an educated ministry. The inward vocation with them is authoritative, and is granted to women as well as men.

5. They believe in one baptism, which is spiritual, the baptism of the Holy Ghost. They feel with Paul, "Christ sent not me to baptize but to preach the gospel." That water baptism was a rite John exercised in behalf of the Jews and Christ as well as in their behalf. . . . The water baptism having no efficacy, they do not practice it as a rite.

6. The sacrament they consider as simply a commemorative ordinance left to the option of the Disciples and not as an institution that Jesus meant to enjoin upon the church for all ages, any more than his example that he gave them of washing their feet was to be perpetuated. Hence the Quakers abstain from all ritual participation in the bread and wine, looking to it that they eat the only needful supper of the Lord, which is spiritual.

7. On the question of religious liberty the Quaker thus nobly utters his faith: that the civil magistrate has no right to interfere in religious matters, so as either to force any particular doctrine upon men, or to hinder them from worshipping God in their own way, provided that by their creeds and worship, they do no detriment to others—(this is a plea for religious liberty upon a true and safe basis, different from that made by the Mormons). "As religion is an affair solely between God and man, so it cannot be within the province of individual magistrates, or of government consisting of fallible men to fetter the consciences of those who may live under them."

In the life and doctrine of the Quakers we see and find much to admire and little to criticise. Their doctrine is ideal, and yet exemplified in their lives. They show the rest of mankind that war, malice and revenge need not be practiced in order that life, health and prosperity may be preserved, but that peace, purity and non-resistance can even in this century of unholy competition thrive. They are accused of driving sharp bargains, but mostly by those

[1 To avoid a break in the report, we print this as we find it, but must remark that the statements are not accurate as a representation of Friends' views. The text quoted is not in the Scriptures: it appears corrected in the Revised Version.—EDS. INTELLIGENCER AND JOURNAL.]

who have been outgeneraled at their own game of advantage.

They have shown us that Christ's law of peace is practical, and his injunctions to purify not beyond the reach of the citizen and the Christian.

For Friends' Intelligencer and Journal.

A SERMON BY ARCHDEACON FARRAR.

How little I thought when listening to the venerable Archdeacon Farrar, in my own city of Philadelphia, that I should ever hear him preach in Westminster Abbey, in London. It was a beautiful morning, and as I walked to the Abbey I could but recall that sermon, and wonder if the freedom and liberality of our country had tinged it, and if he would be as fearless in his expressions here. I need not have feared,—he gave no uncertain sound, but bravely his words rang out in the midst of royalty as in our own Republic. His text was: "Be ye doers of the word, not hearers only, deceiving your own selves." He said: The Scripture lessons for to-day in general emphasize one truth which runs throughout the whole Scripture: that truth is, that religion cannot be dissevered from morality; that the object of all religion and the test of all religion, is morality; that compared with obedience to the moral law of God, orthodoxy is nothing, and outward observances are nothing. Character is of infinitely more importance than correct opinions, and conduct is nine-tenths of life. "Is not my word a fire, saith the Lord, and like a hammer that breaketh the rock in pieces?" You who think yourselves religious, I would ask you to come down to-day from the empyreal air of your self-satisfaction in a nominal religion and to sit humbly in the dust, searching whether in spite of all your professions your heart is right with God. . . Hear him say: "Behold the hour cometh and now is, when the true worshippers shall worship the Father in *spirit* and in *truth*."

External service, therefore, is not religion, nor is orthodoxy or right opinion the essence of religion. Grievous indeed would it be if it were. Majorities of Christians have erred, and minorities have erred, empires and races and generations have erred, and fathers and councils, convocations and synods, have grievously and egregiously erred, and thousands of persecuting inquisitors and millions of anathematizing priests, when they were never so positive have erred, . . . and it is only a narrow and fanatical provincialism which, without charity, without humility, without toleration, claims infallibility in all points for its own opinions. . . Very plain, very simple, very general was the creed which sufficed for the early Christians; and it were well if ours were so, and it were still better if ours were as full of love. . . "If thou wilt enter into life"—what? Hold certain views or opinions? fast, scourge yourself, stand praying in churches and synagogues all day long? Nothing of that kind; not one single word about external observances, not one single word about theological opinions, but "If thou wilt enter into life," and our Lord says it as plainly to every man and woman in this cathedral to-day, as he said it to the young ruler then, "If thou wilt enter into life keep the commandments." And which commandments? "Love God with all thy heart, and love thy neighbor as thyself." This is the religion that before God and the Father is *pure* and *undefiled*. . . . To watch the door of our lips, to bring forth the fruits of the spirit, to love one another as he gave us commandment—that is religion. . . My friends, let us take home to ourselves these truths, for they are of tremendous importance to every one of us, and perhaps of the deepest importance to those who accept them least. . . Do not be deceived; if you are a bad son or daughter, if you are a sly intriguer, or a secret backbiter, if your mind is fermenting with unclean thoughts, if you are not kind in your words and innocent in your dealing, your worship is then no better than the clack of the Tartar's prayer mill, and your faith is of no more value than the tree which is rotted into grotesque resemblance of something else. . .

Men who claim to be religious ought to be the sweetest, the most trustworthy, the most amiable the most beloved—and alas! too often they are not. Men who are indeed holy raise the ideal, sweeten the atmosphere, enrich the blood of the world; we are better when we think of them we should like to stand bareheaded in their presence. They may be Jesuits like Francis Xavier, or Quakers like George Fox, or heathens like Marcus Aurelius. They may be all wrong, but it is their love, their goodness, their holiness, which moves the world. . Show me a man who is pure and happy, tender and true—not jealous, not envious, not an anonymous slanderer, not always judging and condemning others—and be he Romanist, or be he Dissenter, be he Ritualist or be he Plymouth Brother, I do not care one straw for his ecclesiastical orthodoxy or heterodoxy, or for his rubrical proprieties or improprieties, but will entreat him to help me also be like himself a child of God. . . Surely every one of us have known good men and good women; we have seen on human faces the glow of sympathy and the bloom of modesty. How do we rejoice to see written, as it were upon their faces, not only the Commandments, but the Beatitudes. What do we care whether such a man says "Shibboleth" or "Sibboleth" when to know him is a liberal education, and to be with him is to be filled with a longing to be with Christ!

Yet every true Christian should be such a man or such a woman, and men should take note of them, that they have been with Jesus. . . O Christian men and women do not deceive yourselves. Remember that God sees through shams; remember he does not care for anything except the heart. . . We do not want phrases we want goodness, we do not want symbols and rituals, we want simplicity and reality, we do not want tarnished gildings, we want beaten gold. Love your enemies;—be tolerant towards those from whom you differ; judge not; give generously; look at the beam in your own eye, not at the motes in the eyes of others; be humble and gentle; bring forth fruit, not of talk but of character. All of this is indeed a hard thing, and can only be achieved through the grace of God, sought and struggled for in many an hour of earnest prayer; and yet so and only so

shall ye be the sons of your Father which is in heaven.

—The great building was filled, and the attention given was the closest. We sat in the "Poet's Corner," and it seemed that inspiration indeed should come in such a place.

"AS THY DAYS, SO SHALL THY STRENGTH BE."

WITH what a feeling of comfort there come to some of us, and this not infrequently, expressions from the Old or New Testament, stored away in the mind in our youthful days to be brought forth illuminated by the light of years and experience till they seem as fresh creations for our present need! Thus when under great pressure of many things, there arises within us unexpected ability to continue in our labors, we hear, echoed from away down the ages repeated in the form of speech of the time of Moses, such grand and soothing expressions as these: "As thy days, so shall thy strength be . . . There is none like unto God. Who rideth upon the heavens for thy help . . . The eternal God is thy dwelling place. And underneath are his everlasting arms." However we may regard the figurative words used, or desire the thought clothed in more prosaic language, the effect is the same when we realize that they are indeed words of truth unto us. Working in any pathway where duty leads, there is ever felt to be, if we did but pause to consider it, a sustaining Power who is "riding the heavens" for our benefit, whose kingdom is "within" and not without us, and from whose presence we are unconsciously deriving the force that enables us to act.

How is it with the true mother who day by day, hour by hour, ministers to the ceaseless needs of her little ones in health, feeling that all of strength is given, every energy is spent? Suddenly disease comes and there springs into life for each new demand, fresh vigor and renewed ability to endure. These are miraculously supplied from within. Can we for one moment doubt that it is from the eternal dwelling place of God that the strength comes? And in multitudes of situations where humanity toils and struggles for the right, help comes from the power within, aided at times by a corresponding power at work in some other human form inspired to comfort and to bless. In this way we are brought to realize in their fullness the words of Jesus in reference to God's kingdom: "The kingdom of God cometh not with observation; neither shall they say, Lo, here! or, there! for lo, the kingdom of God is within you."

To those of us who have had the advantage of being trained in the faith of "a light within," it becomes easy to see the significance in the text "as thy days, so shall thy strength be," for do we not feel that the "days" whence we are conscious of receiving this strength are such as carry with them the illumination from this ever present "sun of righteousness"? But why do we so often lose courage in our journey through life? Because this Power within is to us as an "Unknown God." Seeking for evidence from without as to His abiding place, we have missed, it may be, the still, sweet intimations of his presence within; our "light" has been obscured and we grope along in the dark missing the warmth and cheer that ever follow the sunshine of his perceptible indwelling.

Let us cultivate this sacred faith of ours till we are so imbued with it that it shall become "a light unto our path!" Let us indoctrinate our children with the same blessed sentiment. Store their minds with passages from Scripture, both old and new, that embodies it and when age and experience come, that which once seemed but as *ideal words* will become *real living truths*.

MARRIAGES.

PENNELL—OWEN.—At the residence of the bride's parents, West Philadelphia, Eighth month 6th, 1888, by Friends' ceremony, Samuel F. Pennell and Maggie B. Owen, both of Philadelphia, Pa.

DEATHS.

CARPENTER.—On the 28th of Sixth month, 1888, near Marshfield, Coos county, Oregon, William S. Carpenter, aged 26. He was a graduate of the Oregon State Normal School, and a young man of much promise. He was formerly, as a lad, with his parents, a resident of Eatontown, New Jersey, where the memory of the scrupulous rectitude of his character, and gentle sympathetic spirit in his pure and innocent boyhood is held in loving regard. His parents and sister have our warmest sympathy in their overwhelming sorrow. L.

JEANES.—At the residence of his son-in-law, Watson K. Ely, Philadelphia, Eighth month 11th, 1888, Thomas Jeanes; a member of the Monthly Meeting of Friends of Philadelphia, in his 81st year. Interment at Plymouth Meeting, Pa.

KAY.—Eighth month 7th, 1888, at his residence, Westmont, N. J., Briggs Kay, in his 78th year.

KNOWLES.—At his residence, West Philadelphia, Eighth month 11th, 1888, Robert Knowles, in his 87th year.

KNOWLES.—At his residence, Woodbury, N. J., Eighth month 6th, 1888, Benjamin L. Knowles; a member of the

Monthly Meeting of Friends of Philadelphia, aged 40 years. Since 1876 he had been principal of the Boys Intermediate School at Race street, Philadelphia.

LIPPINCOTT.—On the evening of the 25th of Seventh month, 1888, Marianna, wife of Joseph Lippincott, in the 27th year of her age; a member of Chester Monthly Meeting of Friends, held at Moorestown, N. J.

MORRISON.—Suddenly, Seventh month 29th, 1888, at her home in Salem, N. J., Letitia Morrison. She was an estimable woman, not a member, but a regular attender of Friends' meetings.

PUSEY.—At her residence in Kennett Square, Seventh month 21st, 1888, Lydia Pusey, in her 78th year. She was next to the oldest of six sisters, who all survive her; three brothers, the eldest, Solomon Pusey of London Grove, having all been removed from earth-life several years ago.

She was the only sister unmarried, but nephews and nieces will treasure the memory of Aunt Lydia's loving kindness, and her sisters be comforted and strengthened in remembrance of her faithfulness to duty, her patience in suffering, her unselfish thought for the welfare of others, and the tie of sisterhood which ever bound them in sweet unity of spirit. May we all seek for a like influence to govern our lives, imbued with her simple faith in the goodness of God!

"Fold her, oh Father, in thine arms
And let us henceforth be
A messenger of love between
Our human hearts and thee."

L.

PASSMORE.—In West Chester, Pa., on Eighth month 8th, 1888, Abigail B., wife of R. Haines Passmore; an esteemed member of Birmingham Monthly Meeting.

SINN.—On Fifth-day, Eighth month 9th, 1888, Joel Hancock, aged 16 months, child of Howard and Susan R. Sinn, of Germantown, Pa.

WEBSTER.—Suddenly, Eighth month 5th, 1888, in Thornbury, Delaware county, Pa., Joseph Webster, Sr., in his 75th year.

ZIMMERMAN.—In Norristown, Pa., Eighth month 8th, 1888, Esther Zimmerman, in her 91st year.

SCRIPTURE LESSON, No. 33.

EIGHTH MONTH 26, 1888.

TOPIC: DIVINE ILLUMINATION.

GOLDEN TEXT.—"Thy word is a lamp unto my feet, and light unto my path."—Psalm 119: 105.

READ Numbers 9: 15–23.

THE first mention made of the pillar of cloud by day, and of fire by night, is on the journey from Succoth, the second place of encampment before the Hebrews had crossed the Red Sea. Exodus 13: 20–22. Fire is represented as the symbol of Jehovah's presence and the instrument of his power, in the way either of approval or of destruction; it being immaterial, mysterious, but visible, warming, cheering, and comforting, yet terrible and consuming in its destructive character.

There has always been associated with the pillar of cloud and of fire that led the march of the Children of Israel, a mysterious sacredness that placed it among the miraculous interpositions and occurrences which are associated with the history of the Hebrew children, more especially those connected with the exodus from Egypt. An eminent writer has said, "It can be proved that more than half the difficulties in the history of religious thought owe their origin to this constant misinterpretation of ancient language by modern laaguage, of ancient thought by modern thought." [Müller.] He says of this very point, "What we call divine guidance they speak of as a pillar of cloud to lead the way and a pillar of light (or fire) to give them light."

It was the custom to carry a flaming torch, or a brazen vessel in which a fire was kept burning in front of large armies, or when large numbers of people were migrating. It served to keep them together and lead the way. This in mid-day, as we all know, would appear as a cloud, and at night would flame up as a pillar of light.

This usage of the earlier times, may explain the material character of the appearance, and ought not in any way to lessen or detract from the beauty and significance of associating it with the thought of "divine guidance."

By this divine illumination our highest, greatest needs will be made known to us, and the spirit's eye will be opened, and if we are willing to receive light, it will come to us, and the language of inspiration, which is divine impression, will direct us when to move and when to remain in our tents—in other words, when to act or to go forward, and when to wait for our strength to be renewed. Our own preconceived opinions must be given up and supplanted by convictions of truth, which will come to us so clear and plain, if we do our part toward keeping our spirits in harmony with the divine spirit, that they cannot be doubted. If we look to the light which is divine illumination and are thus prepared, divine inspiration and intelligence will flow from spirit Father to spirit child, and thus guided by that which we can see and comprehend, comparable to a cloud by day and the pillar of fire by night, we will be prepared for our duties here or to go hence at the Father's call.

NEWS OF FRIENDS.

PHILADELPHIA QUARTERLY MEETING.

PHILADELPHIA Quarterly Meeting, held at the Valley on the 7th inst., was not so large as usual, owing somewhat to the weather of early morning, which however changed and we had a beautiful day. After getting into a quiet waiting state, the silence was broken by Henry T. Child: "Our Fathers, where are they? and the Prophets, do they live forever?" Every true Friend is known by example as well as by precept, and if we live up to the best knowledge of the Divine inspiration, we shall ask the Lord what he will have us to do, and thus fulfill the mission of our lives. Jesus said: "I came into the world to bear witness to the truth." What is truth? If we have a truth, and wrap it in a napkin, what profit is it to any? but as we gather in silence and endeavor to find the pearl of great price, Divine Inspiration, we shall find it, as it is the only safe guide of our lives. Robert Hatton thought that the inquiry, "Is it well with thee?" should mean, "Has there been

a growth in thy soul?" Can we say that God is our Father? for what dost thou know of this living God? Can we, the children of the Heavenly Father, as we answer the inquiry, "Art thou in health my brother, my sister?" say, "It is well"? If we are the children of God, we shall be brought into a oneness of feeling and spirit, thus bringing us into the unity which is the bond of peace.

John Haines spoke words of encouragement to all: "To do the work in the daytime, for the night cometh when no man can work." Frances Newlin said: "I have fought the good fight, I have kept the faith, and my soul has gone forth to each and every one that we may know that God is the teacher of his people himself, and then will we be fed with the bread that cometh down from Heaven, and we can go to the true fountain of life, ask and receive all that is needful, if we are in that condition of mind in which we can say 'Here Lord am I.' The Christian's life is a continued warfare. Submission to the will of God is the way of true religion."

Just at the close of the meeting, Lukens Webster expressed the conviction of his mind that the time for the closing of the shutters had been quite reached and hoped that the proposition of attending to the business of the meeting would be considered.

After settling again into silence, the business of the quarterly meeting was attended to. Some words of encouragement and advice, on the value of time, were spoken by Robert Hatton who felt a concern to come into women's meeting. Rachel Mather, in a few words, felt that we all have something to be thankful for,—health of the body, and the health of the soul.

I feel it right to say that the kind hospitality of those who so generously attended to the wants of those coming from a distance was fully appreciated.

K.

—Abington Quarterly Meeting, at Gwynedd, on the 9th instant, was well attended and a very satisfactory meeting. Watson Tomlinson, Joseph B. Livezey, David Newport, Jeremiah Hayhurst, Lydia H. Price, Rachel Bond, Edwin L. Pierce, and Nathaniel Richardson spoke before the closing of the shutters for business. The business claiming attention was of a routine character and did not cause a protracted sitting. Among those present were several members of the Yearly Meeting's committee to visit and encourage Friends, and it was announced that in the Tenth month the sub-committee desired to visit all the monthly meetings of the Quarter.

—Isaac Wilson and wife, of Bloomfield, Canada, are expected to attend Easton and Saratoga Quarterly Meeting to be held at Granville, Washington Co., New York, Eighth month 29.

—A friend, (R. E. E.), writes concerning the little meeting of Friends held in the parlor of M. F. Paschall, at Atlantic City, (171 South Carolina Avenue), every First-day morning at 10-30. The company on the 12th inst., though small, was convened in the true spirit,—that which Jesus promised to the "two or three" gathered in his name. Our correspondent says: "I commend our friend and the little meeting on First-day mornings to the kind remembrance of Friends visiting Atlantic City. We need more of this old-fashioned earnestness. Many of our meetings were established just in this way."

—The West Chester, Pa., *Republican*, of the 13th inst., says: "Thomas Jenkinson of this borough reached his 94th birthday on the 11th; a large number of his friends called upon him at his home on Washington street during the day to offer their congratulations upon his having attained this remarkable age. Friend Jenkinson continues to have a lively interest in public matters and enjoys greatly an opportunity for social intercourse with his acquaintances, while his faculties continue remarkably bright and yesterday he occupied his seat as usual in the gallery of the High Street Friends' Meeting."

THE MEETINGS AT YARMOUTH.

The first session of the First-day School General Conference, Yarmouth, Ontario, will be held probably on Seventh-day afternoon of this week, the 18th, and the remaining sessions on Second-day and Third-day. The *Young Friend's Review* says:

"Friends coming by train to attend Pelham Half-Yearly Meeting and the First-day School General Conference will be met at St. Thomas by our Friends of Yarmouth on Fifth-day, Eighth month, 16th. The meetings, so far as we know, will come in the following order, viz: On Sixth-day at 9 a. m., Monthly Meeting's select meeting; at 11 a. m., Norwich Monthly Meeting is held; and at 2 p. m., the Half-Yearly Meeting's select meeting; on Seventh-day at 11 a. m., Half-yearly, and, perhaps, the first session of the General Conference at 3 p. m.; on First-day, public meeting at 11 a. m., and, perhaps, Yarmouth First-day School will be held at 3 p. m.; on Second and Third-days the remaining sessions of General Conference will be held at the hours of 11 a. m. and 3 p. m.

"The Conference meets in Canada for the first time, or at least for the first time in many years, for when the writer of this was a mere boy he remembers the few Friends who came to Pickering to give encouragement to the First-day School work within the limits of Genesee Yearly Meeting. F. D. S. work was then in its infancy in our Society, and perhaps the large majority of our members were either opposed or indifferent to such work. But as the years passed and the faithful pioneers to the cause kept steadily to their work, the fruitful results of their labors have converted both opponents and the indifferent until all or nearly all are directly or indirectly helpers in the work; and the First-day School has become a powerful influence in the Society.

"The Associations belonging to the several Yearly Meetings, large and interesting as they have become, indicate the growing interest in the cause, and have been sources of much benefit in strengthening the bond which should ever bind the young and old in all religious societies.'

"They have been very helpful too in interesting our young people in the affairs of the Church; and in developing their faculties for future usfulness.

"The General Conference, which is an outgrowth and a combination of these Associations, has made rapid growth of late. Its object is to help and give encouragement to the work throughout our seven Yearly Meetings. 'In Unity is Strength.' By the united efforts of the best talent we have, much helpful work should be accomplished. Especially should these associatitns be of deep interest, and of great benefit to our young people."

For Friends' Intelligencer and Journal.

NOTES BY THE WAY.

Recently I was tarrying with James and Ruth Hood, at Atlantic City. James was formerly a farmer near Christiana, Lancaster coun !At the time of the riot there, (described in a recent letter), he had two colored men working for him; and they, having heard about sunrise the cry of "kidnappers at Parker's!" asked him for horses to ride over (about two or three miles). He consented, and when, later, arrests were made, a near blacksmith, who had recognized the horses, informed against James and he was arrested and bound over to appear to answer to the charge of treason! He went into Lancaster to consult Thaddeus Stevens, a great favorite with the anti-slavery men. When he told Stevens that he was indicted, for lending his horses, "Did they indict the horses too?" asked Thaddeus, sarcastically.

* * *

To assist in the labors of their house our friends Hood have seven young colored men, and their daughter who is at Longport, (with Elizabeth Newport) has ten. They are mostly students from Hampton, Va., and other institutions. Several expect to be preachers, one wishes to study medicine. All seem very studious, and none appear to use intoxicating drinks or tobacco in any form.

* * *

The student of Lyell's Geology will remember the instances mentioned how in places the sea gains upon the land; and again in others, the land upon the sea. The land is gaining much at this spot. Some years ago a hotel occupied the locality of this house, (the Pennhurst), but the land gained so much upon the sea that the owners removed the hotel nearer the ocean, and sold several thousand dollars worth of land, where houses are now erected. The opposite has been the case at Nantucket on its eastern coast. In some of his verses on Nantucket, the poet Whittier speaks of its "yielding land":

"And still that isle remaineth,
A shelter for the free,
As when true-hearted Macy
Beheld it from the sea.

"Free as the winds that winnow
Her shrubless hills of sand,
Free as the waves that batter
Around her yielding land."

Another writer on Nantucket, not so much of a poet however, begs the ocean god to spare them the village of Siasconset:

"Oh spare us our Sconset, great Neptune, we pray,
Salute it not rudely nor wash quite away;
The cliff that for ages has bounded thy wave,
From utter destruction, we pray thee to save."

* * *

James Hood has shown me the certificate of his parents, married at Sadsbury, Lancaster county, Pa. in 1810. This has brought to my mind another family in the same county, who are in possession, I think, of the certificates of five generations in a direct line, in the manner of Friends.

* * *

There was an error in the printed copy of my late article on the Christiana Riot of 1851. It was not C. C. Burleigh who sent the account of the situation printed in Wm. Still's "Underground Railroad"; it was his brother, C. M. Burleigh. Their native State was Counecticut, and at least three brothers became anti-slavery men. William, I think, was a lawyer, and published a volume of poems. Charles C. Burleigh was the noted anti-slavery lecturer. He married a Friend, Gertrude Kimber, youngest daughter of Emmor Kimber, of Kimberton, Chester county. Neither is now living. A third brother was Cyrus M. Burleigh. He married one born among "Orthodox" Friends, Margaret Jones, sister of Benjamin S. Jones, a writer for the *Pennsylvania Freeman*. Margaret is still living in Philadelphia.

P. E. Gibbons.

NOTES OF A TRIP TO THE PACIFIC COAST.—II.

We spent First-day, (7th mo. 15), in Salt Lake City, and visited various parts of the town. Our desire to learn more than hearsay about the religion of the Mormons, or "Latter Day Saints," as they term it, made us embrace this opportunity with pleasure. A short walk from the hotel led us to the Tithing House, the Temple, (still unfinished after thirty years of labor) and the Beehive, the homes of Brigham Young's wives; further on, we come to the cemetery where are interred his remains. In this enclosure also lie buried three of his wives, and the widow of Joseph Smith their "prophet" and founder. The services at the Tabernacle during the afternoon were attended with great curiosity and interest; and seated in an enormous building with the capacity of holding 12,000, hearing strains of music from the largest organ in the United States, and listening to an address in which the speaker endeavored to prove Joseph Smith a prophet, we were deeply impressed with the fact of this being a sect of great corruption, though some of their tenets may be of the Truth. Just as the sun is setting we go on to Ogden, where we take the train for San Francisco, and travel nearly eight hundred miles when we reach the Golden Gate city of the west. According to our itinerary we have but ten days here, including time for side trips which have been in our minds all the way along. Time is too limited to attend more than the opening session of the National Education Convention, which was held at Mechanics' Hall on the evening of the 17th, and attended by many thousand teachers from the East. On the 18th we start for Yosemite Valley, which lies 260 miles east, near the center of the

State. This is a two days journey, considerable of it staging and thought quite fatiguing. We spent two days in the valley, long enough to visit Mirror Lake, Yosemite, Bridal Veil, Vernal and Nevada Falls. The valley or gorge is about five miles long and half a mile wide, 4,000 feet above the sea level. The best view of it we get from Inspiration Point, as we enter. Cloud's Rest and Glacier Point are the highest peaks of rocks, being nearly 10,000 feet. Never before have we beheld such growth of beautiful wild flowers, which our meagre knowledge of botany could not describe. As were turn we take in the Mariposa grove of Big Trees, some of which are more than thirty feet in diameter and three or four hundred feet high; our stage coach with four horses finds no difficulty in passing through one of them. Monterey, with its Hotel Del Monte, is our next attraction, so we take the Southern Pacific Railroad, and go 125 miles due south through the beautiful Santa Clara valley, which is considered the most fertile in the world. This is a most popular and fashionable summer and winter resort, and almost equal climate all the year round, with bathing, driving, boating and fishing. Hotel Del Monte is palatial in its appointments and surroundings. Two or three days spent sight-seeing in San Francisco end our short but pleasant and profitable stay there.

S. B. F.

San Francisco, 7th mo. 27.

SWARTHMORE NOTES.

—Rachel Townsend, daughter-in-law of Edward Townsend of Philadelphia, has been appointed housekeeper.

—Superintendent Hall has taken a week's trip to Boston by sea. The plans for his new house, just north of the college grounds, are well advanced.

—New heating arrangements, by direct radiation, ought to make all of the class-rooms very comfortable during the coming winter.

SEARCHING FOR GOD.

The finite seeks the Infinite to know,
The thing contained to measure the container,
Beyond the veil of sense man fain would go.

How vain to solve earth's mysteries, and vainer
To reach through the wide universe the Cause
Of suns and systems. Man the proud disdainer

Of simple faith asserts his mighty laws,
That seem to him far reaching in their sweep.
Their operation ceaseless soon withdraws

The need of Godhead, as their movements keep
The worlds in balance and adjustment true.
Imperious thinkers thus rich harvests reap

Of philosophic structures ranging through
The varied forms of matter and of being,
Evolved in series and in order due.

And so not by believing but by seeing,
They do not humbly bow, but proudly soar,
And from faith's trammels grandly freeing

Their lordly souls, they thus explore
God's universe no Deity to find,
Learning the less e'en as they know the more.

—Prof. T. Whiting Bancroft, in S. S. Times.

LETTERS.

Such a little thing—a letter,
Yet so much it may contain:
Written thoughts and mute expressions,
Full of pleasure, fraught with pain.

When our hearts are sad at parting,
Comes a gleam of comfort bright
In the mutual promise given:
"We will not forget to write."

Plans and doings of the absent,
Scraps of news we like to hear,
All remind us, e'en though distant,
Kind remembrance keeps us near.

Yet sometimes a single letter
Turns the sunshine into shade;
Chills our efforts, clouds our prospects,
Blights our hopes and makes them fade.

Messengers of joy or sorrow,
Life or death, success, despair,
Bearers of affection's wishes,
Greeting kind, or loving prayer.

Prayer or greeting, were we present,
Would be felt but half unsaid;
We can write, because our letters—
Not our faces—will be read.

Who has not some treasured letters,
Fragments choice of others' lives—
Relics, some of friends departed,
Friends whose memory still survives?

Touched by neither time nor distance,
Will their words unspoken last;
Voiceless whispers of the present,
Silent echoes of the past!

—Chambers' Journal.

THE LESSON OF A LINDEN BLOOM.

Modern philosophy dreads the term "design." "Effort," so it is said, has modified the organs of animals, and the various parts of plants have become "adapted" to the "environment." The accepted theory is essentially a selfish one, and some good to the individual is generally looked for in any endeavor to account for a change of form.

My own view, as outlined in my address before the American Association for the Advancement of Science at the Montreal meeting, is the opposite of this. Self-sacrifice, not self-interest, is the order of nature. What the whole organic world is engaged in, is indeed a pleasure to the individual—life would be a burden were it not—but the result of the task in but a slight degree benefits the individual, though it may greatly benefit the whole. What one man does often affects thousands, in many instances millions yet unborn. This is not only true of mankind or of the higher order of animals, but is just as true of plants from the highest in organization to the lowest. What animals do, or how plants behave, has, in many in-

stances, some immediate relation to individual benefit; but in the larger number of cases the "adaptations" have no relation to any direct good. In the influence on the whole unit of creation, we can, however, trace a great and wonderful bearing. There need be no hesitation in saying that plants and animals are spending their lives in working out a grand, harmonious plan of the nature of which the wisest is profoundly ignorant, and in which the humblest, if it had sensation, could discern no part.

One might illuminate this point in numberless ways, but it is almost superfluous. The great sacrifice of the Founder of Christianity was made through infinite pain and suffering, yet who will say that the grand result following that sacrifice was not worth the price, though these results were of no individual benefit to him at all? The most pleasurable of all human actions, not to say of all organic beings, are those in inverse proportion to the individual good resulting. In a large number of instances, as zoölogists well know, death almost immediately follows agreeable occupations, and to die that a nation may live is universally classed as among the most worthy of all human actions.

Down amid vegetation the same law prevails. Mignonette and other plants will live for many years if the flowers are plucked as fast as they fade, but if the seed is allowed to perfect, they are but annuals—the plant dies. Annual plants, are therefore plants that have learned to die that others may live. If the "struggle for life" was the sole end and aim of their being, they would have "adapted" themselves to a less generous production. The "fittest to survive" would be the most selfish. The mother who works all day at the wash-tub, rocking the cradle with one foot, while her hands and wrists toil among the suds, crowning all by watching all night around the sick-bed of her beloved ones; dying early out of affection for her children, may have become "adapted" to just this sort of work—may have taken pleasure in the sacrifice; but it was sacrifice for all that.

As a student in botany I delight in watching the self-sacrificing behavior of plants, and noting how even these insensate things seem to take pleasure in the sacrifice. Near me, between my dwelling and my office, is a Hungarian silver linden (*Tilia argentea*). The leaves of this as of all lindens are arranged distichously in two horizontal rows. Those who tell us that all plant arrangements are "adapted" for the plant's own good, explain the various arrangements in phyllotaxy in the line of light. Plants have the leaves so arranged that each may have the best exposure to the light. But this cannot be true of the linden, where the leaves are distichously arranged; especially in this species where the leaves are so large and the internodes so small, for they over-lap just like shingles on a roof. One-fourth of the leaf surface is excluded from light in a great degree. On no theory of individual good can this arrangement be explained. Then as to the inflorescence. A cyme is produced from nearly every axil. I made an estimate and found 64,000 cymes on my tree. There are about ten flowers to a cyme, of which an average of half produced a seed, the others failing evidently from sheer want of nutrition to perfect them all. Thus we have 320,000 seeds from one young tree which is but three feet in circumference of trunk, and in the second year of blooming. Of what benefit to the plant is this immense abundance, so suddenly produced? Why should 320,000 flowers be brought to perfection, and fail of seeding in the end? Only once have I had an answer. An eminent naturalist and ex-president of the American Association did say, not of this tree, but of another—if I remember, the tulip tree—that superabundance was an "adaptation" to provide against total failure. But this would not be an effort for individual good. It is "sacrifice" for the good of individuals yet unborn, selfish only as it might be a sacrifice for our progeny, instead of for the general good. When we remember, however, that in the usual order of things, a few dozen seedlings at best are about all that any one forest tree could hope to see survive, supposing the effort in a plant to become "adapted" would admit of hope—the production of 640,000 flowers to accomplish this, with this object only—can scarcely be conceived.

Then there is fragrance—the delightful fragrance of the linden bloom; the honeyed secretion, all "adapted to attract insects, and insure cross-fertilization." But even this will not do. Darwin, the great prince of the "selfish" dynasty, avers that "pollen from the same plant is equally injurious or nearly so, as that from the same flower." (See "Cross and Self-Fertilization in Flowers," chapter ix, p. 345, Apleton's Edition). Anyone noting bees at work on one linden tree will see that they thoroughly clean that one, and go home with their stores before taking a fresh start. The linden tree is a self-fertilizer. The production of nectar and fragrance may be to attract insects, but not for cross-fertilization—for no good to the tree.

Now the common peduncle of the linden cyme has a broad wing attached to it. "This," says the adaptionist, "has been evolved for the purpose of aiding in the distribution of the seeds." Let us see in the autumn how they fly. Right under the trees we find myriads of seeds that have separated from the common stalk. The surface of the ground is as completely covered as if a wagon-load of gravel had been dumped thereon. Comparatively few are left on the tree attached to the winged peduncle. If they remain till a very high wind comes a few may be carried a hundred feet or so, but generally they are found down among where the wingless ones have already fallen. The wings are no material aid in distributing the seeds.

But let us look at these Linden blooms as the inflorescence advances from stage to stage. The wing is green like the leaf. It is formed on the same plan as a leaf. It acts as the leaf acts. It is attracted upward toward the light. It curves up right under the leaf from the axil out of which it springs. By this effort of growth the flowers are borne up under the leaf-blade, and out of the way of the neighboring cyme. Without this beautiful provision the cymes would hang down of their own weight, and seriously interfere with one another. The wonderful profusion all

admit exists, could not be but for the erecting power of these wing-growths from the peduncle. The "adaptation" is for profusion, and profusion is of no advantage to the individual, and of doubtful advantage to the race.

Recently we had a heavy rain-storm from morning till night. No winged insect could be seen at work anywhere. Passing under the linden tree hundreds of honey-bees were found as industrious as usual. The shingled leaves formed perfect shelter-tents, under which the winged petioles lifted the flowers high and dry. My neighbor has an extensive apiary. The bees had found a wet-day job, and they come an eighth of a mile to labor, through pouring rain, in their hard-working pursuits.

Modern teleology will not admit me into the fold with the load I am disposed to carry. It will be rank heresy to assert that "Nature," the great designer, deliberately thought of the bees in arranging this pretty plan in their interest. I can, at any rate, show that none of the "adaptations" of this silver linden tree could have been evolved under any theory based on innate selfishness, as the popular theories are based, while they are singularly consistent with my views that self-sacrifice—sacrifice for the good of the whole—is the great law of Nature. The "struggle for life" is in the interest of universal harmony, though those who struggle may not know. The "struggle for life"—the effort to get the best of another—under the lead of the accident of "environment," cannot be.

I fancy it is but the unwillingness of modern philosophy that refuses to admit that the "Unknowable" is but a weak substitute for Omniscience, and that it is not unscientific to speak of a Planner and Designer in Nature, that leaves me as lonely as I am. Variation is, of course, subject to law, and no variation occurs except under the operation of law. No one has succeeded in exposing that law to universal satisfaction. "Environment," like heat and water to a seed, may start the germ of variation on its growth, but to my mind has not the slightest influence on the character which that growth shall bear. All this is prearranged from the beginning, and planned for a purpose. Life, individual life, is the agent in this progress. What it does tends to that end so early planned, though, actor at it is, it can have not the slightest comprehension of what the struggle may be for, in which it is engaged.—*Thos. Meehan, in The Independent.*

A LESSON FROM MOSQUITOES.

MANY of us would like to imagine that our pests, and poisons, and various kinds of torments, are at least not designed; that, however they may come, they are only mysterious; or, that if they must be allowed to be in some sense from God, the Universal Creator, it must in reverence be held that he did not mean to have them as annoying and deadly as we find them to be. Then let any one dissect a talon, or a claw, or a carnivorous jaw, and decide whether there is any contrivance here for tearing and devouring flesh; and whether any preparation for scenting is deliberately contrived in the outspread nervous texture of the nostrils. Whence came that terrible vise in the mouth of a shark, and whose invention is it? That viper fang, both sharp and hollow, laid down flat upon the jaw when there is no occasion for it, but hung with pulleys of muscle to throw it up when attack is to be made, allowing it now, in the bite to be pressed directly down upon a bag of liquid venom deposited just under its roots,—whose invention is this? Is it not plainly a deliberate contrivance, as truly visibly deliberate as any injecting or ejecting engine in the world? And how many venomous creatures are there,—spiders, ants, ticks, scorpions, serpents, flies, mosquitoes, centipedes, that have their bags of poison made ready, as the fearful artillery of their otherwise contemptible life!

Let no one imagine that such kind of artillery is not meant; there is no other that is gotten up with a machinery more skilful, or with better ammunition. All that may be done with such tools is plainly meant to be done. Whatever else may be true, God has created venom, and we must not scruple to say it. If we have any conception of goodness that forbids this kind of possibility in God, then our God plainly enough does not exist, or the God that does exist is not he. The really existent God, as we can see with our eyes, is such a being as can use contrivance in adjusting the due apparatus, both of prey and of poison. And we need not scruple to confess a degree of satisfaction in this kind of discovery, showing that goodness is no such innocent, mawkishly insipid character, no such mollusc softness swimming in God's bosom as many effect to suppose; that it has resolve, purpose, thunder in it, able to contrive hard things when hard are wanted. No other impression is at all equal to the moral training for which we are sent hither. If we could not see distinctly that God is able to plan for suffering, and to prepare the machinery to produce it, what we call his goodness would only be a weak, emasculated virtue, which, if we should praise it, would not long keep our respect.

One of the first and most necessary conditions of a right moral government in souls, is vigor; a will that is visibly asserting itself everywhere in acts of sovereignty that do not ask our consent. It is better for us even to be shocked sometimes, than never to be impressed. Mere safe keeping is not rugged enough to answer the moral uses of our life. Elemental forces, grinding hard about us and upon us, are necessary to the due unfolding of our moral and religious ideas, and it is in just these severities of discipline that we afterward discover the deepest counsels of beneficence, and the highest culminations of eternal goodness itself.

We here perceive that not only dangerous and fierce animals are wanted as the necessary furniture of our discipline, but a large supply of annoyances, irritants and disgusting infestations. We laugh at these creatures many times, and try to amuse ourselves at their expense, and it might not be desirable to take them more seriously, but it is a very serious matter, nevertheless, that we have them to laugh at. Indeed, it is even a fair subject of doubt whether we get as much real discipline, after all, from all the beasts of prey together, as we do from any single one

of a half-dozen tribes of pests that infest the world—ants, mosquitoes, wood-flies, jiggers, and the like. A part of their value is, that they annoy us enough to keep us awake, and if they sometimes keep us awake, when we are really demanding sleep, it is not altogether ill. Unmolested sleep might settle us at length into lethargy. We want irritants to stir us up, and nettle us into vivacity, as truly as we do the lull of music and breeze to quiet us. Besides, we are always trying to get the world into a law of happiness, as if that were the main errand here, or as if God made it, and must needs take it to be the law of his will. How often do we say this, as sometimes we even set our speculation upon it, to show that so it must be.

It was very important, therefore, to keep us off this ground, and worry and sting us away from it. And to this end, doubtless, it is that God lets in upon us, on our face and hands and whole bodily skin, such numberless troops of hostile infestation. They come with bite and creeping feet, and slimy touch, and sting, and stinging voice. They break no bones, they stir in general no fear, they seem to have no errand that could not as well be dispensed with. And yet they do bring irritations, annoyances, disgusts upon us that have a considerable significance, and ought to have, must have, a considerable use. Not all the elephants, tigers, and hyenas, and crocodiles of the world have a thousandth part of the power exerted by these on our feeling and temperament. And it is a great thing they do, when they only keep us off the folly of conceiving that God is principally concerned with us here to make us happy. Therefore he shows us that he is not, by instrumentations most unremorseful, most deliberately contrived; leaving us nothing less or different to believe, than that he is shaping us to good, moral good, let the happiness and all the fine computations of pleasures fare as they may.—*Horace Bushnell, in his "Moral Use of Dark Things."*

VALUE OF THE LICK TELESCOPE.

Prof. Edward S. Holden of the Lick Observatory, in a letter dated July 22, says:

Our brief experience with the large telescope has already taught us that our duty is to prove all things anew—not to take any thing for granted. We have hardly looked at any object without finding something new and interesting and important. It may be worth while to give a few examples of what I mean by this. There is no object in the heavens which is better known to possessors of both large and small telescopes than the ring nebula in Lyra. It is the brightest of the nebulæ, and its wonderful shape makes it an interesting link between a planet with rings, like Saturn, and the primitive formless nebula which Laplace assumes as the starting point of his nebular hypothesis. It has important analogies to rings of stars and to star clusters also. This bright nebula has been looked at by every amateur and professional astromomer, by every large and small telescope in the world. Sir John Herschel describes it as a ring, and figures a small star following it. Lord Rosse with his 6-foot reflector, gave five small stars outside of it and none inside. Mr. Lassell, with his 4-foot reflector, figures it with thirteen faint stars in an oval outside, and one inside the ring. So I saw it with the Washington refractor of twenty-six inch aperture in 1875. Our first look at this nebula with the 36-inch telescope showed a great variety of new detail, and a careful examination has disclosed to us not only the single star inside, but likewise eleven others inside the inner oval or projected on the bright nebulosity between the outer and the inner ovals. Not only this, but it is obvious that the plan on which this nebula is built is that of a series of ellipses or ovals. There is first the ring of faint stars outside the nebula; then the outer and inner bounding ovals of the nebulosity; next a ring of faint stars around the edges of the interior ring, and finally a number of stars critically situated on the various parts of the nebulosity and outer oval. The object is entirely a new one in its appearance and in its suggestions as seen here. It is so with other objects likewise. For example, a transit of the shadow of one of Jupiter's satellites recently observed has given us quite new ideas on the subject of the refraction and density of the atmosphere of this planet, and so on with other objects. Our final conclusion is, therefore, that we have to use the large telescope in a new way. There is absolutely nothing to be taken for granted, and there is no object in the whole heavens which we must not observe as if viewed for the first time. Our duty is to prove all things—at the same time recollecting all things that have gone before. In this respect the position of the Lick Observatory is quite unique.

IMPORTANT TO FATHERS WHO SMOKE.

May I give you my recent experience of tobacco smoke? It may be a warning to others. I have one child—a little girl not yet two years old, a fair-haired, blue-eyed pet, who was as healthy as the birds when she was born. For more than a year past,—ever since she was old enough to be less in the nursery and more with her father and me,—she has ailed mysteriously. I could not say she was ill, yet she was hardly ever well. I was kept in a perpetual state of anxiety about her. The symptoms were absence of appetite, complaints of sickness, stomach and digestion altogether out of order. Last August, I took her to a country town, where we stayed two months. After the first week, she flourished like a young bay-tree, ate and drank and laughed and played and slept, and kept me forever busy enlarging her garments. I brought her home rosy and robust. In one week, all the old symptoms reappeared—loss of appetite, dark lines under the eyes, listless ways, restless nights. Some one suggested that the neighborhood did not suit her; and I was cogitating how to take her away again, when she caught a severe cold, and was confined entirely to one room for three weeks. She recovered her general health completely. Appetite, spirits, sleep, all returned. It could not be the neighborhood. After her cold, she joined us downstairs again, as usual, two or three times a day. In

less than a week sickness, etc., returned. I was in despair. For nearly three months, I racked my brains about drains, wall-papers, milk, water, sauce-pans, any and everything in vain,—the child slowly wasted. The weather was too severe to take her away. In an agony of mind, I noticed one day that, so far from outgrowing her clothes as I had expected, they were too large for her. The little thing was not eating enough to keep up her strength, and we could not coax her to eat. Yet she was not really ill: she ran about and played in a quiet way, and looked fairly well to those who had not seen her more robust. Suddenly, my husband was summoned into the country. A week after he went, the child began to eat with eager relish. In a fortnight, she was her own happy self, full of riotous, childish spirits. "Her father has never seen her like this," I remarked one evening, when she was particularly merry and mad; and then the truth flashed upon me. It was his tobacco that upset her. He has been away now for a month; and the child's limbs daily get firmer and rounder, and she is the merriest, healthiest little mortal possible. He always smoked after breakfast and after lunch, with her in the room, neither of us dreaming it was injurious to her. But for his providential absence this time, I doubt whether it would ever have occurred to me; and we might have lost our darling, for she was wasting sadly. It was acting like a slow poison upon her. This is a true, unvarnished statement, which my nurse can corroborate. When shall we have a Parliament that will dare to tax our slow poisons to the utmost? I enclose my card, and remain your obedient servant.—*E. H., in Pall Mall Gazette.*

CONVICT LABOR.

The National Prison Association, in session at Boston, adopted a resolution offered by Professor Wayland of Yale College, "that in the judgment of this Association productive prison labor is an indispensable factor in the work of prison reform, and that any scheme which has a tendency to permit or promote idleness of prisoners will inflict irreparable injury upon the prisoner, the workingman, and the State."

How there can be any doubt about such a matter is hard to understand. One proper function of any prison system should be to make the criminal not only self-supporting while under restraint, but capable of earning an honest living when his term of imprisonment has expired.

This is apart from any consideration of the cruelty of keeping able-bodied men in confinement without occupation, about which much might be said, but it is probable that no one is in favor of keeping the convicts in absolute idleness. But all the prison labor-systems are opposed on some ground or other as antagonistic to free labor. This is notably true in New York. The contract system of that State was repealed several years ago, and the State account plan was adopted. But the products of prison labor must still be offered for sale, and to a greater or less extent enter into competition with the products of free labor. The labor leaders are therefore now demanding that the State account system must go. The Legislature of the State is now being convened in extra session to provide some means of keeping the convicts at work, a measure neglected in the regular session.

The truth is that in this controversy the competition between prison-labor and free-labor is enormously exaggerated. It is ascertained that convict-labor is about *one-fifth of one per cent* of the total labor of this country, and that under any system whatever convict-labor is only one-half as productive as free-labor.

There was great applause in the Prison Association's meeting when Mr. R. H. Dawson, of Alabama, said, "the lease system must go where slavery has gone, and where the dram-shop must go. No man should have charge of convict-labor who has a nickkel's interest in it."—*Monthly Register.*

DETERMINED TO SUCCEED.

The following is one of the traditions of a manufacturing firm in Glasgow, Scotland. Thirty years ago a bare-foot, ragged urchin presented himself before the desk of the principal partner and asked for work as an errand-boy.

"There's a deal o' running to be dune," said Mr. Blank, jestingly, affecting a broad Scotch accent. "Your first qualification wud be a pair o' shoon."

The boy, with a grave nod, disappeared. He lived by doing odd jobs in the market, and slept under one of the stalls. Two months passed before he had saved enough money to buy the shoes. Then he presented himself before Mr. Blank one morning, and held out a package.

"I have the shoon, sir," he said quietly.

"Oh!" Mr. Blank with difficulty recalled the circumstances. "You want a place? Not in those rags, my lad. You would disgrace the house."

The boy hesitated a moment, and then went out without a word. Six months passed before he returned, decently clothed in coarse but new garments. Mr. Blank's interest was roused. For the first time, he looked at the boy attentively. His thin, bloodless face showed that he had stinted himself of food for months in order to buy these clothes. The manufacturer now questioned the boy carefully, and found to his regret that he could neither read nor write.

"It is necessary that you should do both before we could employ you in carrying home packages," he said. "We have no place for you."

The lad's face grew paler; but, without a word of complaint, he disappeared. He now went fifteen miles into the country, and found work in stables near to a night-school. At the end of the year, he again presented himself before Mr. Blank.

"I can read and write," he said briefly.

"I gave him the place," the employer said, years afterward, "with the conviction that, in process of time, he would take mine, if he made up his mind to do it. Men rise slowly in Scotch business houses, but he is our chief foreman."—*Western Record.*

Nothing is more sure to me, than that I ought to be as good and noble as I can.—*Plato.*

NOBLE AND TRUE WORDS.

[The extract here presented is the introduction of a discourse on the life and works of John Knox, the Scotch reformer, delivered recently in one of our western cities. The thought of the preacher, E. S. Ralston, is so in harmony with our own views relating to the dealings of God with his human children, that we offer it to our readers.—EDS.]

ONE who meditates upon himself only, is soul entombed; he whose thought is bounded by his business and social life is a soul imprisoned; a man who knows only his own nation or generation is a soul slumbering in the quiet of a village; but he who lives is in full communion with all lands, all ages, all men, touching all lives, taking from all lives. He who thinks God has slept in all these years is as one who has dozed into and through manhood and knows only his childhood. God spake through the holy men of old, and has he not spoken since? Has God slept and the world not heard his voice since those days? Peter and Paul thought not that they would be called the inspired ones. So of the workers of God's work everywhere. "I holy—alas, no; I inspired, no!" But here is a work for right, a word for truth, a life for God, and when the music of the voice has died into silence, the word still lives, an accomplished truth and hears the imprimatur, "God said." And when the flash of the eye has faded into night, the shattered ruin of error hears as truly as the tablets of stone, "Thou shalt have no other gods before me." The life moves on with stately simplicity and noble humility, and we say, "He was, and is not." Then every life is regenerated; every cruel wrong is destroyed; every joy made possible; the approaches to sin made difficult; the way to God cleared; worship purified; religion revived; a nation saved, and all ultimately chant the mighty proclamation, "A holy man hath spoken as though he was inspired of God."

Herein is our hope. God speaks, works, lives as He has ever done, through His mighty ones, and oftentimes through His weak ones. When a nation trembles, morals grow corrupt; the leaders become cowards and men cry out, "Lord, send thy prophet!" Some wise man like Abraham Lincoln rises up, takes hold of the helm of state and the way of the Lord is made plain. So long as man is, truth is and God is.

"DON'T! DON'T!"

"DON'T! don't!" a little voice seemed to say clear and strong in Harry's ear.

The two cents lay on the window-seat; some one had forgotten them. Two cents' worth of candy came right up before Harry's eyes, and in a moment he had put out his hand to take the cents.

But that "Don't! don't!" Who spoke?

He turned and looked. No one was in the room. The door was open, but no one was in the entry.

"Nobody can see," he said to himself.

"Thou God seest me," said the voice.

"Nobody will know where they've gone," said Harry.

"Thou shalt not steal," the voice said again.

Harry was frightened at himself, and ran away as fast as he could. He was saved from a great sin and trouble. If he had taken those two pennies he would most likely have taken more another time, and not been so frightened about it, either.

I knew a boy who stole a ten-cent piece once. He was so ashamed that he did not know what to do. Not long after he had a chance to steal again. He did, and that time it was not half so hard. So he went on and on, and at sixteen years of age he was in prison.

What voice was that which said, "Don't! don't!" That was conscience, God's voice in the soul. Always listen to that voice that bids you keep God's commandments.—*Sunday-School Evangelist.*

THE WORTH OF A MAN.

A FREE being; created to act from a spring in his own breast, to form himself and to decide his own destiny; connected intimately with nature, but not enslaved to it; connected still more strongly with God, yet not enslaved even to the Divinity, but having power to render or withhold the service due to his Creator; encompassed by a thousand warring forces, by physical elements which inflict pleasure and pain, by dangers seen and unseen, by the influences of a tempting, sinful world, yet endued by God with power to contend with all, to perfect himself by conflict with the very forces which threaten to overwhelm him. Such is the idea of a man.

W.

TWO LIVES.

EVERY young man has two lives before him. He may choose either. He may be a man with a man's powers and immunities, or a sham of a man—a whited sepulchre—conscious he carries with him his own dead bones and all uncleanliness. It is a matter entirely of choice. He knows the essential qualities and certain destiny of the other. The man who says he cannot control himself not only lies, but places his maker in blame. The sense of security and self-respect is worth more than the illicit pleasures of a world for all time. The pure in heart see God in everything, and they are supremely blest. There is just one way of safety, and only one; and a young man who stands at the beginning of his career can choose whether he will walk in it, or in the way that leads evermore downward.

ANGER makes a good servant but a very bad master. The question is, not how to crush it out utterly, but how to manage and control it so that good and not evil may result. Certainly, if this effort were sincerely and continuously made, very much of the anger that now runs riot would die a peaceful and natural death.

THE plain doctrine of integrity is rarely found purely practiced nowadays. It is easy to pick out plain men, geniuses, martyrs; but integrity is rare. "The gods approve the depth, and not the tumult of the soul."—*Emerson.*

Few Christians realize how largely their real spiritual progress depends upon adverse circumstances. Friction is as necessary an element in the progress of moving bodies as in their retarding. Everything depends upon where the friction is developed. If it is in the axles of the wheels of an engine, the progress is impeded; if it is between the wheels and the track, the progress is aided. So, when the wheels of the engine slip, the train fails to move forward; and then it is that the engineer drops sand upon the track to produce that friction which is the essential of progress. So, too, the track that is laid for our lives often proves too smooth for us, and our wheels slip; and then it is that God drops the rough sands of adversity and hardship upon the track we are pursuing, in order to produce that friction which is an essential of spiritual progress.

Let us rejoice when the wheels of our spirit run smoothly on their axles; but let us not regret nor repine when we hear the grating and feel the roughness between the wheels and the track that is laid for our life's highway.—*S. S. Times.*

"O Lord, I have a busy world around me; eye ear, and thought will be needed for all my work to be done in that busy world. Now, ere I enter upon it, I would commit eye, ear, and thought to thee. Do thou bless them and keep their work thine; that as, through thy natural laws, my heart beats and my blood flows without any thought of mine for them, so my spiritual life may hold on its course at these times, when my mind can not consciously turn to thee to commit each particular thought to thy service."—*Dr. Arnold, of Rugby.*

The whole bent of the spirits and testimony [of the Quakers] since God, by his grace, hath distinguished them, has been to promote the experimental and saving knowledge of Jesus Christ in the world, by turning the minds of all people from the darkness that is in them to the Light of Christ which is in them, as the great, the singular, and necessary agent and principle, by which only man is enlightened and enabled to see and do the will of God.—*William Penn.*

It is better to err by leaning to the side of mercy than by closing the heart against the appeals of suffering. But really the mercifully inclined are the least liable to err; for while justice is the medium of truest mercy, it should not be forgotten that mercy is the most unerring guide to justice.—*Exchange.*

Keep the atmosphere of the family as pure as possible, and fragrant with gentleness and charity.

The invariable mark of wisdom is to see the miraculous in the common. What is a day? What is a year? What is summer? What is woman? What is a child? What is sleep? To our blindness, these things seem unaffecting. We make fables to hide the baldness of the fact. . . . To the wise a fact is true poetry, and the most beautiful of fables.—*Emerson.*

When I see the heavenly sun buried under earth in the evening of the day, and in the morning to find a resurrection to his glory, why (think I) may not the sons of heaven, buried in the earth, in the evening of their days, expect the morning of their glorious resurrection? Each night is but the past day's funeral, and the morning his resurrection; why then should our funeral sleep be other than our sleep at night? Why should we not as well awake to our resurrection as in the morning? I see night is rather an intermission of day than a deprivation, and death rather borrows our life of us than robs us of it. Since, then, the glory of the sun finds a resurrection, why should not the sons of glory?

—*Warwick.*

Let us advise you to avoid all boastings and exaggerations, backbitings, abuse and evil speaking; slang phrases and oaths in conversation; depreciate no man's qualities and accept the hospitality of the humblest kind in a hearty and appreciative manner; avoid giving offense, and if you do offend, have the manliness to apologize.

If you believe that you are right in the religious opinions you hold, you should not support opinions that are contradictory to them; for the welfare of the world turns upon right thinking about God and man. Your first great duty is to be loyal to your faith.—*M. J. Savage.*

Crosses gall and grieve us in proportion to our self-consequence; and our need of them may probably be measured by the uneasiness they excite.

How is it possible to study deeply the lot of the great majority of men;—to see them ground down by toil; spending their years in bare self-continuation, and ending life without tasting of its fruits; filled to satiety with labor and starved to death within the mind;—how is it possible to see so much noble capability wasted, so much true blessedness lost, so many first created a little lower than the angels and then forced nearly to a level with the brutes,—without providing in our thoughts a future vindication of the Creator,—a life in which the fearful inequality will be compensated, and the suspended good at length born.—*Martineau.*

Nature has no promise for society, least of all, no remedy for sin.—*Horace Bushnell.*

NEWS AND OTHER GLEANINGS.

—Competition between two great English lines of railroad—the Great Northern, and the London and Northwestern—has resulted in the breaking of all previous records of high railwayspeed. The entire distance of a run on the 6th inst. was 400 miles, which was done in 7 hours and 25 minutes, an average of about 54 miles an hour. Much of the distance was made at a rate of 72 miles an hour, and occasionally the speed of 75 miles was attained (1 mile in 48 seconds.) The Great Northern express, which had left at the same time, arrived 7 minutes later, although that line is 8 miles shorter than the London and Northwestern Railway.

FOR DRY GOODS

—THE BEST PLACE IS—

STRAWBRIDGE & CLOTHIER'S,

MARKET, EIGHTH, FILBERT } STREETS.

One of the largest buildings in the city, and the largest Establishment in America devoted exclusively to

DRY GOODS.

The stock includes Silks, Dress Goods, Trimmings, Millinery, Hosiery, and Underwear, Gloves, House-Furnishing Goods, Carpets, Ready-Made Dresses and Wraps, and everything that may be needed either for dress or house-furnishing purposes. It is believed that unusual inducements are offered, as the stock is among the largest to be found in the American market, and the prices are guaranteed to be uniformly as low as elsewhere on similar qualities of goods.

SAFE INVESTMENTS

Capital, $750,000
Surplus, $355,016

Principal and interest both fully guaranteed by Capital and Surplus of $1,105,016. In seventeen years of business we have loaned $11,494,600, paying from 6% to 12% interest. $7,056,800 of interest and principal have been returned to investors without delay or the loss of a dollar. Real Estate First Mortgage and Debenture Bonds and Savings Certificates always on hand for sale—In Savings Departments, in amounts of $5 and upward; in the Mortgage Department, $300 and upward. DARLINGTON SEMINARY FOR YOUNG LADIES. WEST CHESTER, PENNA.

The Thirty-third School Year will commence on the 17th of Ninth month next. Location healthy and beautiful; Grounds extensive; Course of Study thorough and full; Diplomas granted.

TERMS; $180.00 PER SCHOOL YEAR.

For Catalogue, giving full particulars, address the Principal.
RICHARD DARLINGTON, PH. D.

ABINGTON FRIENDS' BOARDING AND DAY SCHOOL,

Near Jenkintown, Pa., North Penn and Bound Brook R. R Ten miles from Philadelphia.

Next school year begins Ninth month 10th, 1888. Courses of study arranged to furnish a thorough English education and to prepare for college.

Board and tuition $145 to $175 per school year. Tuition alone $25 to $55. For further information address,

ARTHUR H. TOMLINSON, Principal, Jenkintown, Pa.
Or CYNTHIA G. BOSLER, Sec., Shoemakertown, Pa.

SWARTHMORE COLLEGE

OPENS NINTH MONTH ELEVENTH.

Thirty minutes from Broad Street Station, Philadelphia.

Under the care of Friends, but all others admitted.

Full college course for both sexes; Classical, Scientific, and Literary.

Also a Manual Training and a Preparatory School.

Healthful location, large grounds, new and extensive buildings and apparatus.

For Catalogue and full particulars, address

EDWARD H. MAGILL, LL. D., President,
Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.

NEWTOWN SQUARE, PA.

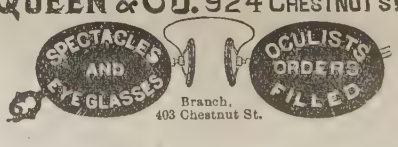
Terms, $150 to $225 per year.

Apply to HANNA R. CALEY, Principal, address, during vacation), Media, Pa.

Or to
THOMAS P. BARTRAM, Newtown Square, Pa.,
CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,

A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 11th, 1888. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,



FREDERICK E. WILLITS, Sec.,
Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—

A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hour from New York city. For catalogue and particulars, address,

SAMUEL C. COLLINS, A. M., Prin.,
Chappaqua Institute, N. Y.

DEEDS AND WORDS DIE NOT.

We scatter seeds with careless hand,
And dream we ne'er shall see them more:
But, for a thousand years,
Their fruit appears,
In weeds that mar the land,
Or healthful store.

The deeds we do, the words we say,—
Into still air they seem to fleet,
We count them ever past;
But they shall last:
In the dread judgment they
And we shall meet.

—*John Keble.*

DUTIES OF THE SOCIETY OF FRIENDS.[1]

By Wm. M. Jackson.

I enter upon the treatment of this subject with a feeling that it is almost presumptuous in me to attempt to point out the path of duty for a religious society whose history is so clustered with noble achievements among mankind, and whose record is so rich in example of men and women with lives "so calm and firm and true," that they "walked the dark earth through, unspotted by its wrong and crime" in their service to their God. It shall be my task, therefore, mainly to take a retrospect of their history, haply that I may be enabled to so set forth the work of ancient Friends as to create in us a desire to emulate their example in our work for God and our fellow men.

The prominent traits of character which every student of history must accord to early Friends are the purity of their lives, the steadfastness of their purpose, and the enthusiasm of their work among men. The Quaker of two hundred years ago was a constant agitator,—a persistent, untiring reformer. Inspired by the power of God, he felt that he had a *work* to do, and unyieldingly he did it. Was there an evil practice in society, however strongly entrenched it was in public sentiment, the voice of the Quaker and his example were brought to bear against it. Was there a social usage that tended to set up distinctions among men that would tend to crush out in some a just appreciation of the dignity of their manhood and the majesty of their Divine inheritance, to the Quaker the duty came and by him was the duty unflinchingly performed to publicly rebuke the promoters of the evil.

Courageous, devoted, disregarding all disdain and contumely, braving all threats of punishment, he went everywhere where duty called,—preaching of the sinfulness of war at a time when thus to speak was treason, the penalty for which was death,—and proclaiming the insufficiency and emptiness of the sacraments of the ruling church, when so to do aroused a public dissent and inspired a persecution that made the life of the preacher an almost unbroken career of suffering and disgrace.

The so-called nobility and those holding positions of trust or power among the people had adopted the rule of addressing one another with the plural pronoun "you," but when speaking to one inferior in power or wealth they addressed him with the singular "thou," intending thus to magnify the importance of the rich and powerful. The Quaker adopted the use of the singular pronoun, addressing thus not only the members of his own family, his associates and friends, but men of all positions, magistrates and potentates, even to the king upon his throne.

In society the custom prevailed of removing the hat when in presence of those superior in rank, a custom as imperative as that which obtains in our courts of law to-day. For the reason given for his peculiarity of speech, the Quaker refused to uncover in the presence of any man of high or low degree. When he appeared in supplication to his God alone did he bare his head. We cannot, at this distance in time, estimate the enormity of this offence, as it seemed to the people of two centuries ago. Outraged in feeling, as was haughty Admiral Penn in the contemplation of his frustrated plans for his son when he found the latter identifying himself with the Quakers, he offered to tolerate every disobedience in Willaim, if he would only agree to remove his hat when he came in the presence of his father, of the Duke of York and of the King. But this mark of reverence for men, simply because of their position, William Penn refused, and he was, therefore, at once turned out of doors by his angry father. Fox writes in his journal, "Oh, the storm, the heat and fury that arose, oh the blows, punchings, beatings and imprisonments that we underwent for not putting off our hats to men!"

Even the follies of fashion in dress demanded the rebuke of the stern reformer, and he adopted a style of garments plain and simple,—for no matter however small and apparently trivial the requirement might seem to other men, the Quaker must yield an absolute obedience to the Divine moving his soul. There was no iniquity, no injustice, no wrong action that did not receive his condemnation, his remedial efforts. His? ah, not less active, not less determined, not less courageous and devoted were

[1] A paper read at the meeting of Friends' Union for Philanthropic Labor, New York City, First mo. 2, 1888.

the women. Refined, gentle, delicate women, inspired by the love of God, were not one whit behind the men in their zeal and their achievement. Cast into dungeons, subjected to the most barbarous and inhuman treatment,—stripped to the waist, tied to cart-tails, and publicly whipped through the streets,—still, nothing daunted, they, as soon as liberated, again relinquished homes, families, all the usual enjoyments of existence, and devoted their lives to advocating the cause of Truth. Branding-irons, whipping-posts, ear-shears, dungeons, had not such terrors to them as to prevent them from following the paths into which duty called.

Is it any marvel that such devotion to principle found favor among their fellow men? Thousands flocked to their support and joined their ranks. No amount of persecution could deter them. Their meeting houses were torn down, their property was was destroyed, enormous fines were imposed upon them,—it mattered not,—they went steadily forward preaching, teaching, denouncing wrong and sinfulness everywhere and at all times, and thus they drew, not simply into their religious association, but into active service, men and women of the purest and best in character from all ranks in society. In one year four thousand of their number were cast into prison and at one time over a million pounds sterling were recorded as fines against them.

Such were the founders of the religious Society of Friends. They were not mere followers of one great leader, though George Fox was the first to voice the great reformation and was, during his life, a great teacher among them,—but every one convinced of the truths of his doctrine was in some way expected to become a promulgator of them. It was theirs to teach, not to profess, to show by their works, not by their opinions, that they were true followers of the Light "which lighteth every man coming into the world."

The religion of these founders of the Society of Friends was essential Christianity, and as such it implied a full and unbounded belief in the universal fatherhood of God and the brotherhood of man. Faith in the Divine Fatherhood carried with it the conviction that unto *all* men is revealed the Father's will concerning them, so that every man must seek within his own soul for that knowledge of Truth which is necessary for its best welfare. Faith in the brotherhood of man "joins the whole human race in the unity of equal rights"—thus the religion of the Quaker was a practical righteousness, that made in the highest degree important to its possessors that sincerity of character and conduct which mistaken zealots sometimes idly characterize as "mere morality," but which is attained only by those who have an unfaltering trust in the divine character of the inward promptings that call to labor. To them the voice of duty was indeed the voice of God.

Hence, "to rebuke falsehood, injustice and cruelty in whatever form they exhibited themselves and without respect to persons," to bear testimony against war, against oppression of every form, against oaths, judicial, or otherwise,—against every social distinction that tended to debase his fellow men, was as truly a religious requirement imposed upon the Quaker of the early day, as was that of calling mankind out form under the thralldom of prevailing theologies and creeds. And it was a duty that was as unflinchingly performed as it was unmistakably perceived.

It was this part of their work that brought upon them the many and cruel punishments, that, in not a few cases, terminated in martyrdom. They might have promulgated their peculiar religious views without provoking serious molestation from those that held different forms of faith; it was only when they exposed the hypocrisy and sinfulness of the clergy, the arrogance and the tyranny of the magistrates, the cruelty and oppression of the ruling classes, the injustice of existing legal methods, the iniquity of prevailing social customs, that they brought down upon their devoted heads ridicule, reproach, abuse, cruelty, martyrdom.

In our consideration of the duties of Friends as individuals to-day this is, in my opinion, a feature in the work of early Friends that should obtain our most earnest consideration. If I were called upon to state in what to-day the members of the Society of Friends differ most widely from the co-workers of Fox and Penn and Barclay, I should say it is in their failure to zealously labor in the so-called moral reforms. If I were asked to state why the Society of Friends, during the last fifty years, has steadily declined in the number of its membership, and, far worse than that, in its position as a power for good in the world, I should say it has been because they have ceased to properly estimate their duties toward the great brotherhood of humanity outside of their own particular organization. They are most careful inspectors of their own lives, of their own moral condition, but while they are zealous to provide safegaurds against their own lapse into evil habits, they are, as a body, derelict in their duty to labor as their forefathers never failed to labor,—continuously to bear a testimony *in public* against all moral and social evils that lead mankind away from the Divinity inherent in their nature, and from a recognition of their intimate relation with their Heavenly Father.

It is the public work of a religious organization, its work for the general good of mankind, that guages its usefulness in the world, and as surely measures its perpetuity, for in the Divine economy there is permanent existence only for the most fruitful and the best.

Let us again glance at the work of Friends in their earlier days and during the period when the society was the most prosperous, and see how well they fulfilled this condition of usefulness in the world. The work of the pioneer Friends in preaching their gospel of Truth in all lands where the English tongue was spoken, is too familiar a story to need narrating here. When the obstacles to travel were a hundred fold greater than they are to-day, when the dangers were a hundred times as great, no obstacle or danger deterred them from their journeys.

But the work for which they are still more widely remembered, that which was limited neither by na-

tion, nor tongue, nor people, is that by which they effected reforms in the governments of the nations, in their laws and in their social usages.

The work of Wm. Penn in the organization of the colony of Pennsylvania, its provisions for liberty of conscience, and for the development of the best system of morals and the most equitable laws among the people, has made his name time-honored and revered among all good men. Penn was eminently a public man. A noted historian has said of him: "Penn did not think that it was the duty of a Christain to withdraw himself from public affairs, but rather to strive in every way to promote the freedom, enlightenment and happiness of mankind."

In our day and land in which now exists so great a liberty of conscience, such equitable and beneficent laws, and so many refined moral and social influences, we can hardly imagine the condition of the people two hundred years ago. Reformation has been the field of labor that for two centuries has claimed the attention of the world's best men and women, and in this work members of the religious society of Friends during most of that time have stood in the van-guard.

In America, nearly a century before Wm. Lloyd Garrison wrote a line descriptive of the barbarity of negro slavery, the Society of Friends had adopted discipline forbidding their members, "either to hold slaves themselves or in any way to encourage that iniquitous practice in others." John Woolman may be truly called the first abolitionist, and in his work he had the sympathy and support of his Society. His "Considerations on the Keeping of Negroes," published in 1754, may be said to inaugurate the printed arguments against slavery in America. And so for nearly three-fourths of a century thereafter Friends were the pioneers in Anti-Slavery work. The first Anti-Slavery organization, "The Union Humane Society," was founded in 1815, by Benj. Lundy, a Friend, St. Clairville, Ohio. The first Anti-Slavery journal, the "Philanthropist," was started by Charles Osborn, a Friend, at Mt. Pleasant, Ohio. Next in order in this work—another Friend, Elihu Embree, established the "Emancipator," at Jonesboro, Tenn., for the sole purpose of representing the iniquity of slavery. This was in 1820. It was not until 1829 that Wm. Lloyd Garrison prominently entered upon what afterwards became his mission among men, by joining with Benj. Lundy in the publication in Baltimore, of the "Genius of Universal Emancipation," an Anti-Slavery paper that was founded by Lundy in 1821. Since then James and Lucretia Mott, Isaac T. Hopper, Dr. Bartholomew Fussell, John Needles, Thomas Garrett, John Greenleaf Whittier,—what a galaxy of noted names of Friends among those who were prominent in arousing the conscience of the American people against the iniquity of human slavery!

And in England, also, Friends were pioneers in Anti-Slavery work. Fame has forever associated the names of Thomas Clarkson and William Wilberforce with the overthrow of the African slave trade, yet as early as 1760, the year that Thomas Clarkson was born, the Society of Friends refused fellowship with all who took part in that "guilty traffic," or profited thereby, and it was Wm. Dilwynn, Geo. Harrison and a few other London Friends who, in 1783, brought Thomas Clarkson into their association for the prosecution of that work which made his name historical. It was not till 1789 that Wm. Wilberforce entered upon this labor, so that more than a quarter of a century before these two great men, whose names are immortalized by their agency in abolishing England's trade in slaves, had begun their work, the Society of Friends had stirred the conscience of the English nation to a recognition of the enormity of the crime of trading in human flesh.

The work of Friends among the Indians from the time when Wm. Penn made with them his famous treaty, "the only treaty," says Voltaire, "that was never sworn to and was never broken," down to the time when Gen. Grant's "Quaker policy" brought hope of humane treatment and justice to a long suffering and outraged people,—the Society of Friends were ever active in defending the cause of the cruelly defrauded red-men.

When the dark cloud of civil war brooded gloomily over England, when Cavalier and Round-head met in fierce battle array, and every man was called upon to take sides in the controversy either by oath of allegiance to the dominant party, or by feats of arms in the field, George Fox and his coadjutors, not only refused to take oaths, for which refusal they were dragged to prison, but even in this durance vile they wrote strong and convincing arguments to those power proclaiming the unrighteousness of war, and the sinfulness of those engaged in carrying in iu on. It is said that Cromwell was moved even to tears by the earnest pleadings of George Fox in his presentation of the principles of non-resistance, as being those that were taught by him, whose mission was to bring "Peace on earth, good will to men."

Thus I might continue enumerating the whole catalogue of different phases of philanthropic endeavors and show beyond dispute that Friends in nearly every instance were pioneers in pressing the the work to the favor of their fellow-men. There was no form of injustice, no wrong to human beings that early Friends did not feel impelled to combat. It was not a work for themselves that concerned them, it was for oppressed and suffering humanity everywhere.

But it is not for us to boast of the virtues of our forefathers—it matters little for us what the Friends of former days did in righteous works, if their good example does not bring to us an ambition to rival them in noble deeds, a determination to emulate them in them in those things that brought blessing to all mankind. Have we done so? Are we now doing so? Are we to-day standing in the foreground of philanthropic endeavor, leading the people to a recognition of their duties one to another, and to a realization of their intimate relationship with the Divine Father?

It is an ungracious task to set forth the shortcomings of one's own household, and I shall not enter into details in this direction. "Soul take thy rest" is a feeling that comes just as assuredly over

organized bodies of men and women as it does upon the individual. It is only to the ever alert, *acting* conscience that the Divine message comes with greatest power, and it remains only with those that are "always advancing, always looking for something better and higher" than their present condition. It remains with those only who are not content to save themselves, but who yearn to save all mankind from the debasing influences of this world. A soul at peace is not a soul inactive, for peace is in the contemplation only of something worthy done. Spiritual lassitude foreshadows death. It is only to those that give that the power to give remains. And so when we fold our arms and point with complacency to the record of our fathers we rank ourselves with those who said to Jesus, "Abraham is *our* father." And Jesus replied, "If ye were Abraham's children ye would do the *works* of Abraham."

Thus is my question answered, and herein do I find my task accomplished.

It is not for me to point out to any who have followed my line of thought wherein his or her duty lies. It is indicated in the active, dutiful lives of those who laid the foundations of our religious Society. It is indicated most decidedly in the life of him "who went about doing good," whose life "was spent to help and save mankind from the lowest evils and to raise the world to the highest plane."

"This," says an eminent writer, "is the sum and substance of personal religion. It is the steady purpose of doing what we can in the direction of duty, and the steady trust in God for power with which to do it. 'Either of the two alone is not enough.' Let us then as did early Friends—put our trust in God and seek this power, and receiving it, as assuredly we shall, let us never fail to behold in the afflicted, the weak, the poor, the ignorant, the debased everywhere, the representative of the Divine one to whom our service is due. 'Come, ye blessed of my Father,' saith the Spirit, 'Inasmuch as ye did it unto one of these my brethren, even these least, ye did it unto me.'"

Editorial Correspondence Friends' Intelligencer and Journal.

THROUGH IOWA AND EASTWARD.

At Crab Orchard, enjoying the luxury of Iowa farm life in the very centre of the State, one realizes the changes that modern inventions have wrought in the processes of cultivation and what wealth of resources this rich prairie land holds in store for the intelligent, industrious settler.

This is an exceptional summer in the West: rains have been seasonable and abundant, and if the present cool, wet weather does not reach the frost level, the corn crop will be enormous. In Marshall county many of the fields will average two ears to the stalk and a good proportion of the stalks have three perfect ears. The small grains are not so good, owing to a storm the first week in Seventh Month that beat down the oats and prevented the grain from filling in perfection. It is all cut, but the larger part lies in the fields waiting the hot sunshine. Some of the earliest cut has been threshed. The process as performed by the steam thresher is a marvel of rapidity and precision, yet I may recall the reaping and threshing in the early part of the present century. I see then the sturdy farmers two or more abreast swing the shining scythe with a rythmic grace that displays the very poetry of motion; and later, when with the patient oxen the golden sheaves were gathered into the barn, and later still, in the cool Autumn days, the measured sound of the flail on the threshing floor kept time to the cooing of the doves as they fluttered in and out among the eaves above. Those were the sights and sounds that gave inspiration to the poetry of the past. Alas for the poet of to-day! Not even the "gleaners" are left him. He must seek his theme amid other scenes than these huge fields where the whirr of the machinery has neither poetry nor music, but a note of defiant warning that may be the knell of him who fails to perform his part at the call of the monster.

The practice of dehorning the cattle is coming into favor here. It was spoken of farther west as a cruel and inhuman operation. As afterward explained, I am led to believe the removing of the horns is not very painful to the animal; it is done by sawing and and is scarcely more than the removal of a tooth. One who has a fine herd that has been dehorned gives his unqualified approval, not one of them having failed to take its feed, or manifested any signs of suffering except at the moment the operation was performed. When one thinks of the injuries inflicted by the horns, both upon one another, and those who care for them, it seems to be a kindness to remove these weapons, given for their defense and protection when roaming wild, but no longer needed in a state of domestication.

My last paper was written at Omaha. In recurring again to my visit there and the unsparing hospitality extended me by Friends who have united with other religious organizations equally with those who remain in membership, I cannot refrain from expressing the conviction, forced upon me by what I saw and was made acquainted with, that scattered and isolated members of our Society have not been kept in remembrance by the meetings from which they have gone nor has that watchful oversight been given them which our profession enjoins. The longings of heart, the struggles to keep alive the little flame of love for the birthright,—scarcely recognized as having any power over the feelings, until after the isolation,—these are known only to Him whose "tender mercies are over all," and whose loving care meets and satisfies the longing of every sincere soul. True as this is, it does not release us from our obligations to one another as professors of the religion of Jesus, or make the neglect of this duty less culpable in the sight of our Divine Father.

On Seventh day the 11th inst., Marietta Monthly Meeting was held. I accompanied B. F. and L. Nichols, with whom I was staying, and was glad to see so many of the younger people in attendance at this season of activity in farm-work. It gave evidence of an interest in the affairs of the church that promises usefulness in the future. The word spoken was heard with attention and the covering that over-

spread the little company was one of fellowship in the truth. There was very little business to transact except to consider a proposition to hold the business meetings once in three months instead of every month as is now the custom. It was thoughtfully discussed and the conclusion arrived at was not favorable to the change. Noticeably was this the case with those whose family cares and farm work often interfered with their attendance, many living several miles distant and finding it almost impossible in the extreme cold of the winter season to come with their little children, yet wanting to have the opportunity to gather with their friends as often as the circumstances of their surroundings permitted.

The result of these deliberations seemed to strengthen the bond of union, and expression was given to the satisfaction and hopefulness the consideration of the subject had produced upon the minds of those to whom the administration of the affairs of the meeting had been in a measure committed.

On First-day morning the house was well filled, and the occasion one of deep and searching exercise for the burden-bearers unto whom the "word of the Lord" had been committed; and of close attention on the part of those to whom it was handed forth. The First-day school was held after meeting, a large proportion of those present remaining to participate. The meeting-house, as many Friends know, is situated in a rural district, and not far from one belonging to Gurney Friends, who divide with them the religious interest of the surrounding country for several miles.

It having been by previous agreement announced that a lawn meeting would be held on the premises of B. F. Nichols, in the afternoon, a large company gathered near the hour, under the trees, with the blue canopy of a clear bright sky above them, waiting in that sweet silence so conducive of communion with Him to whom the worship we offer must be in spirit and in truth. It was indeed an inspiration to remember that "The groves were God's first temples," and that now, as in the far-away, earlier time, the voice of our Father is heard in the "midst of the garden," and that he talks with us as truly in spiritual converse as man talks with his fellow-man through the faculty of speech. This, and the duty of obedience to the message spoken to the understanding through soul intercourse with its Author, was the message to the assembled worshippers, who seemed with the testimony bearers to have caught the inspiration of the surroundings; and at the close, as the voice of prayer and thanksgiving arose to the Father of all our sure mercies, it bore the united petition of many,—may it not rather be said of every longing soul there gathered? May we who bear the message have many such opportunities of uniting in the love and fellowship of the gospel, and be willing to embrace every right opening that offers to proclaim the glad tidings of this gospel, that brings peace and joy to every soul willing to accept its message!

A ride of eight miles late in the afternoon, and a restful repose of a few hours, and your correspondent in the small hours of the early morning was again ready to take a seat with the few traveling eastward, and in due time and with little fatigue, is set down amid the throng and bustle of the great Northwestern station, thence to the quiet and comfort awaiting in the home circle of beloved relatives in this marvel of cities. L. J. R.

Chicago, Eighth month 14.

THE IMITATION OF CHRIST.

[Extract from a sermon of George A. Thayer.]

"THERE is a small, old-fashioned book," says George Eliot, "for which you need pay only sixpence, which works miracles to this day, turning bitter waters into sweetness. It was written down by a hand that waited for the heart's prompting; it is the chronicle of a solitary, hidden anguish, struggle, trust, and triumph. And so it remains to all time a lasting record of human needs and human consolation."

This book is "The Imitation of Christ," written in the fifteenth century, as is commonly supposed by Thomas a' Kempis, or Thomas of the town of Kempen, a monk of a monastery not far from the city of Cologne. It is one of the books which has had an amazing popularity, for it has been translated into almost as many languages as the Bible; and, in the days when it met a wide-spread need of the heart of Christendom, it was cherished as a precious guide to religious peace by multitudes of the wise and the lowly. . . . . .

"The Imitation of Christ" has been the watchword of nearly twenty centuries of religion. "Follow Christ," "Be disciples of Christ," "Love Christ," have been some of the ways of expressing men's thoughts that something in the actual experience of Jesus, not in the creeds concerning him, contained the secret of peace and safety, both for this world and for that which is to come. For a time, the current of Christendom's notions of the true imitation of Christ ran in the direction of asceticism. Jesus was poor, not having where to lay his head. He was unmarried. He seemed to be constantly expecting the end of earthly things. Therefore poverty, celibacy, and other worldliness were held to be the conditions of becoming his true disciples and sharing his beatific vision. But sensible people soon discovered that to live apart as solitary prisoners in their cells, and to add to the physical suffering and destitution of the world by voluntary idleness and torture, was, in truth, to increase human discontent, hatred and despair.

Within convents, and in the deserts, where men clad in sackcloth starved and scourged themselves and dwelt in filth, it was found that there was as much quarreling and bad temper, as much skepticism of God and duty, as in the busy stir of cities with their manifold temptations and vices.

The remedy, then, for sin and sorrow was not in the renunciation of the ties which bind man to man in the family and the State; not in killing the body, exterminating the appetites and passions, nor ceasing the work of creating and distributing wealth,—not in doing anything to the outward man, but in giving an inspiration to the inner man. And out of this experience sprang the religion of which Kempis's "Im-

itation" is a notable illustration,—the imitation by the discipline of the soul, by learning from the study of Jesus' career how to see God's love in to-day's life, even if that life be amid human distrust, and have its ending in a death of ignomininy and torment.

. . . . . .

There may be a formal Christianity which has little or no imitation of Christ,—no spirit of giving up, of helpfulness, of love. It costs its possessor nothing except his pew-rent and some scanty contributions to foreign missions, sometimes not even so much as that. Indeed, the great peril of laying such strong emphasis as many Christian teachers do upon going through a definite process of conversion, and saying that they believe thus and so about Christ, is that it creates the impression that the essence of imitation lies entirely in some crisis of emotion reached at a specific hour of a particular day, and that, this gone through with, it is all done. "When did you find Christ?" the attendants of evangelical prayer-meetings ask one another, as if there were no possible mistake about the finding. Beware of flippancy, self-conceit, and self-complacency, I would say to all such people. The chances are that, in comforting yourself with the notion that you have become one of the elect of God, you have no respectable opinion as to what the word "God" means. For I should think that the very last possible frame of mind, in one who is sincerely desirous of making everything in his soul subordinate to duty and holiness, is the conceit that he has reached perfection and is entitled to look down upon other men. I notice that genuine attainment of any sort is exceedingly diffident and self-distrustful. It is not the philosopher of sixty, but the school-boy of sixteen, who thinks he has touched the bottom of the sciences.

And the mastery of self, the mastery of circumstance, is a process so laborious, so slow, so full of discouragements and backslidings, that few honest men and women ever dare boast of its accomplishment; and the few great souls in history who, in the judgment of mankind, have come nearest to it are those whose account of themselves is full of humility.

Yet this sort of mastery is what the true imitation of Christ means, if it has a meaning worthy of teaching the latest generations. It is not fashioning your and my conduct by a few set rules, and being able to say that we have attended so many religious services, uttered so many prayers, gone to confession so many times, and performed certain prescribed penances. It is rather doing for spiritual character what a high-minded person does in his trade or business,—the striving to acquire the best that can be known of it, and to keep the mind always open to find something new that is an improvement upon the old. What a contempt an ambitious man has for those hand-to-mouth mechanics whose absorbing thought is to get through their day's work, and secure their pay, whose hammer or spade drops at the first stroke of the clock, and who never enter into the interest of their employer, and have not an atom's pride in their work. . . . .

Whatever enters into good housekeeping, good workmanship, good citizenship, is, in a certain degree, religious; for it is both an expression of the person's earnest, faithful character, and it sets a good example for others to do fine work, whatever they undertake.

The religious character is the *whole* character,—not your Sunday morning's thoughts about sacred books and sacred beings, but your service of God's world of matter and of man, your spirit for making the very best results out of whatsoever materials are put into your hands for use. *Religion*, without faithful workmanship, without keeping your temper, without doing your part to make other people cheerful, without bearing your share in the neighborhood's joys and anxieties,—that is not religion, but only the possible possession of certain rudiments or A, B, C of religion. If the imitation of Christ means only setting so many thousands of men and women apart from the concerns of the rest of mankind into a huge church,—much as certain Second Adventists have from time to time sold all their goods, and gathered on the banks of a river waiting for the Lord to come, and caring nothing for what becomes of governments, business and humanities,—I think there might be something more profitable for the world to think about. But, surely, that cannot be the meaning of giving up the lower life to the higher life. The higher life is everywhere among earnest people where patience and courage are, where souls spend themselves for the love of other souls, where men, women and children vie in denying themselves of some pleasure that they may enrich the other's happiness. The sunny face resolutely substituted for the sour look, the knowing how to bear your aches and ills without needlessly overwhelming your friends in sorrow, the going about your business of book-keeping, teaching, selling dry goods, or mending shoes with a simple integrity which gives assurance that your place of occupation will be as well filled as you know how to fill it—such are the things that go far toward sweetening the human lot, and preparing a soil in the minds of men for faith in the eternal goodness.

The best imitation of Christ is undoubtedly that which sets before the world a high standard of faith and duty, and never loses sight of it amid whatsoever depression and darkness. But there has always been in the world much noble service of the right and the good, which the man did not know was patterned after any model, but was the outcome of a repeated habit of unselfishness. And God and man may recognize as consecration to them the unplanned goodness and the unconscious love just as well as the unpremeditated. For the great thing is not to be fine souls after one creed or another, but to be souls which are faithful to their light and eager for more light.

When thou art obliged to speak, be sure to speak the truth; for equivocation is half way to lying, and lying is the whole way to hell.—*Penn.*

If you will be as pleasant and as anxious to please in your home as you are in the company of your neighbors, you may have one of the happiest homes in the world.—*Selected.*

SCRIPTURE LESSON, No. 34.

NINTH MONTH 2, 1888.

TOPIC: THE PROMISED LAND.

GOLDEN TEXT.—"He that putteth his trust in me shall possess the land, and shall inherit my holy mountain."—Isaiah 57 : 13.

READ Numbers 13 : 17-33.

THE Israelites had journeyed through the wide wilderness, from pasture to pasture, as do the Arabs of the present time, tarrying until the grass and shrubs upon which their herds and flocks fed were exhausted. They were near the southern boundary of the land they were going up to possess, and men were chosen to enter the country secretly and gather what information they could concerning the fruitfulness of the land, the war-like nature of the people, their cities, and whatever else might be of advantage to the Israelites. Our lesson gives the result of this expedition.

The Land of Canaan. The lowland was probably so named because its earliest inhabitants settled on the low plain by the seacoast and in the Jordan valley. The Canaanites were descendants of Canaan, one of the grandsons of Noah, and seemed to have settled in the south near the Red Sea, and gradually, by peaceful means, to have become possessors of the country.

The Canaanites became worshippers of Molech, one of the fire-gods of those idolatrous tribes who occupied that section of country. There were also in the land, worshippers of the true God. It was the home of Melchizedek, and later of Job and his friends.

They came to Hebron. Hebron is one of the most ancient cities in the world still existing. It was well-known when Abraham entered Canaan, thirty-eight hundred years ago. It now contains about five thousand inhabitants, but few of whom are descendants of Abraham.

The wilderness of Paran. Where the Israelites were encamped awaiting the return of the spies. It was in this wilderness that they were so long kept wandering on until a whole generation had passed away, except Caleb and Joshua.

In all ages that which has brought perhaps the most comfort to the Christian traveler has been the *promises* of God, and whosoever keeps strong his faith and trust in these, lives a happy life here and carries his happiness into the great hereafter. After studying the record of the Old Testament, it is very easy to turn from the great leader, Moses, to that greater leader and teacher, the blessed Jesus, and place close beside the ancient promises of reward for a life well spent, his Divine utterances; and with great force comes to mind his injunction, "Seek ye first God's kingdom and His righteousness," coupled with the promise of all needful things to be added. How greatly, from that day to this, has this expression troubled the worldly-minded for want of a proper understanding of it.

A modern writer, one whose life is an exemplification of faith and trust, says:

"Jesus does not say that there shall be no seeking for the needful things that pertain to the outward life, nor can any of his teachings be made to imply that man is to wait for God to feed and clothe him, and those who depend on him for sustenance; but he does say most emphatically and with certainty that the first or chief concern of every life that is lived for the highest and noblest purpose of living, must be to gain and keep a right and title to citizenship in the kingdom of God, and to be controlled and governed by the laws of righteousness, established for the good order and the maintenance of the authority of the Great King. If these are the first considerations, the habit of thoughtful, careful attention to the little duties and obligations of everyday life will lead to a wise examination into every detail thereof, and a sense of obligation to be true and loyal in our intercourse with one another, that our dealings shall be just, and merciful, and unselfish; and as those traits of character that make up the human side of our being are developed under the higher principles that relate to the spirit, there will be no disposition to seek more than can be honorably and conscientiously gained. This sense of right was nobly and heroically adhered to by a man whose friendship it was a privilege to share, who, on being urged to become a partner in a speculative business, replied: 'I cannot engage in any business where my chance of success must be dependent upon the losses and disasters o my fellow-men.'"

"This breathes the very spirit of the gospel. It is taking our Heavenly Father at his word with trust and confidence."

THE world is full of kindness that never was spoken and that is not much better than no kindness at all. The fuel in the stove makes the room warm, but there are great piles of fallen trees lying on rocks and on tops of hills where nobody can get them; these do not make anybody warm. You might freeze to death for want of wood in plain sight of these fallen trees if you had no means of getting the wood home and making a fire of it. Just so in a family; love is what makes the parents and children, the brothers and sisters happy. But if they take care never to say a word about it; if they keep it a profound secret as if it were a crime, they will not be much happier than if there was not any love among them; the house will seem cool even in summer, and if you live there, you will envy the dog when anybody calls him poor fellow.—*Holland.*

A MAN'S first care should be to avoid the reproaches of his own heart; his next, to escape the censures of the world. If the last interferes with the former, it ought to be entirely neglected; but otherwise there cannot be a greater satisfaction to an honest mind than to see those approbations which it gives itself seconded by the applause of the public. A man is more sure of his conduct when the verdict which he passes upon his own behavior is thus warranted and confirmed by the opinion of all that know him.—*Addison.*

CHARITY is a virtue of the heart and not of the hands.—*Addison.*

PHILADELPHIA, EIGHTH MONTH 25, 1888.

THE DEPARTURE OF THE VETERANS.

THE passing away of the old and tried members of our Society is a fact which all who survive must painfully notice, but which is more strongly emphasized perhaps than in any other way by the records that are given, week by week, in these columns. The lists of deaths which we print are composed in large part of Friends who have passed beyond middle life. Looking back to the issue for the 11th instant, there are two recorded of young persons—one of 21 and one of 5; while there are ten others ranging from 58 to 86,—four of them between 70 and 80, and five 80 and over. In the issue for the 18th instant, there are notices of the deaths of three young persons,—one of 2 years, one of 26, and one of 27; and of one in middle life, at the age of 40; while there are six others ranging from 75 to 91. In the present issue there are thirteen deaths recorded where the ages range from 62 to 100, eight being 80 or over. (It should be remarked, perhaps, that some of these may not be members of our body of Friends.)

The sense of loss to the Society is deepened when we reflect that many of these veterans in religious service are those upon whom the burden of the Society has rested. They have had the feelings and convictions of Friends, in the full sense. They were familiar with the traditions and usages of the Society, as well as its written rules. They were accustomed to the administration of its order, consistently and fitly. They were filled with that gravity of spirit which we must associate with the weighty Friend. And, in many cases, they exemplified the deep spirituality and discernment which mark the valuable member of a body of believers. Their course was steady, their walk in life consistent with their profession, their example impressive,—they imparted thus to the Society much of the influence it has had upon the world outside.

The extent of the loss is better measured when we reflect that the Society, until within the last few years, has been in charge of its elder members, and that those in middle life or younger have had but a small part of the weight of its affairs. As the veterans go rapidly away, the transition of responsibility seems sudden, and the doubt arises whether there are successors competent and qualified to take it. Anxiety over this is general: we have no doubt that the one thought is present to many minds, at many times,—the grave and earnest question whether there is now to be a line of successors raised up to follow those strong men and women who have worn the plain hats and the plain bonnets, and who in character and behavior exemplified that of which the simple dress was but an outward indication.

Leaving this serious question for the present, and trusting that in the fullness of time it may have its satisfactory answer, we may reflect that the greater circumstances and conditions about us have nowise changed. Life is not relieved of its duties; the trials, and temptations, and troubles of the pilgrimage are as they always were; the need of strength from the Unseen is the same; the forces which should develop new men and women of the old strength are all as continually operative as they were in the time that is past.

DEATHS.

ELDREDGE.—At Chicago, Ill., 7th of Eighth month, 1888, Isaac Eldredge, in the 67th year of his age; a member of Scipio Monthly Meeting, N. Y.

ELLIS.—At Bordentown, N. J., Eighth month 17th, 1888, Hannah Ellis, in her 100th year. Interment at Mansfield meeting grounds.

FOULKE.—At his home, Quakertown, Bucks county, Pa., Third-day evening, Eighth month 14th, 1888, Benjamin G. Foulke, in his 76th year; an Elder of Richland Monthly Meeting; in 1872, Assistant Clerk, and from 1873 to 1886 Clerk of Philadelphia Yearly Meeting.

HAMPTON.—At Langhorne, Pa., Eighth month 15th, 1888, Mary Hampton, aged nearly 88. Interment at Wrightstown, Pa.

HERITAGE.—At his residence near Swedesboro', N. J., Eighth month 14th, 1888, Benjamin W. Heritage, in his 84th year.

HESTON.—In Philadelphia, at the residence of her son-in-law, Stockton Bates, Eighth month 17th, 1888, Rachel T., widow of Jonathan Heston, in her 80th year. Interment at Fair Hill.

HOOPES.—At his residence, West Chester, Pa., Eighth month 20th, 1888, Pierce Hoopes, in the 87th year of his age; an Elder of Birmingham Monthly Meeting.

HOWEY.—At her residence, Woodbury, N. J., Seventh month 27th, 1888, Elizabeth T. Howey, in her 82d year. Interment at Woodstown, N. J.

KNAPEN.—Sweetly fell asleep in Jesus, at her home in South Stephentown, N. Y., Eighth month 5th, 1888, after three weeks' illness, Phebe Smith Knapen, in the 84th year of her age; a life-long member of Chatham Monthly Meeting. Her residence was remote from Friends and the infirmities which often assail the aged have prevented her from mingling with us at our meetings for many past years, but she loved to sit on her "old arm chair" and read the INTELLIGENCER, and Friends' books, and her Bible (almost worn out, like herself), was her daily companion. She was mostly free from pain during her illness and said she was happy and very comfortable,—that her Master's time was her time; thus she very peacefully

passed away to that "better home" to mingle with many loved ones gone before.

Her pleasant rooms are forsaken now; her peaceful couch has been removed; the "old arm chair" is vacant where her sweet spirit nestled so many years. The sacred volume remains where she left it, and our weeping hearts are desolate. L. S.

MITCHELL.—At Hatboro', Pa., Eighth month 11th, 1888, Sarah Ann Reeve, widow of John Moore Mitchell, late of Philadelphia.

PAUL.—Eighth month 18th, 1888, Sarah Ann, widow of Bettle Paul, of Philadelphia, aged 73 years.

RIDGWAY.—At St. Louis, Mo., Eighth month 15th, 1888, Charles W. Ridgway, aged 62, son of the late Job Ridgway of Philadelphia.

WILDMAN.—At the residence of his son-in-law, J. Comly Powers, Media, Pa., Eighth month 16th, 1888, John Wildman, in his 79th year. Interment at Springfield, Delaware county.

WHARTON.—At Newport, R. I., Eighth month 16th, 1888, Deborah Fisher Wharton, widow of William Wharton, aged 92 years, 9 months, 22 days; a valued minister of the Monthly Meeting of Friends of Philadelphia, held at Spruce street, and sometime Clerk of Philadelphia Yearly Meeting of Women Friends.

CORRECTION. In last week's paper,—in reference to B. L. Knowles,—he had been Principal of the Boys' Intermediate School since 1871, and not since 1876, as printed.

For Friends' Intelligencer and Journal.

REMOVAL OF THE PILLARS.

PHILADELPHIA—the oldest, the largest, and in concentrated membership the strongest of our seven yearly meetings—has latterly been stripped of many of its most valued members. There is scarcely a number of this paper but records the passing away of some of these who, having filled up their measure of usefulness as they went along, lived to a good old age, and departing left the savor of a fragrant memory.

Within the brief space of six months we have been bereft of *four* who stood as pillars in the church, and whose services have long been known and appreciated in Philadelphia Yearly Meeting. All of these were solid and concerned Friends, who by example, as well as by precept, were firm in their maintenance of the law and the testimony; all were members of the select meeting; all had served to the satisfaction of the Friends at the clerk's table of the Yearly Meeting; the Representative Committee, the Indian Committee and the Education Committee have been aided by the earnest efforts and sound judgment of some of these, and two of them were exercised in the solemn service of gospel ministry. It is just six months this day since the first and the youngest of these worthies passed away; and now, at the hour of my writing, the remains of the last and the eldest are being interred at Fair Hill, while in Friends' Meeting-house at Quakertown there is, doubtless, gathered a large assembly to pay the solemn tribute to him who was third in age as well as in time of departure.

The four Friends referred to are Daniel Foulke, Mary S. Lippincott, Benjamin G. Foulke and Deborah F. Wharton. Appropriate obituary notices of the first two appeared in this paper several months ago, and it will be eminently proper that Friends throughout our borders should be made acquainted with the long, the useful and the unblemished lives of the two that have so recently passed away. Those whose opportunities have furnished them with material, and whose affection and esteem may prompt them to the work, can contribute to the interest of many remote members and to the welfare of the whole Society by stating the plain, unvarnished truth concerning these two widely known and justly valued Friends.

"When hearts whose truth was proven,
Like *theirs*, are laid in earth;
There should a wreath be woven
To tell the world their worth."

While we should feel peaceful and happy about the departed, and grateful that the Society of Friends had so large a share of their usefulness, and that there lives were prolonged to the extent that they were, —there is, nevertheless, a feeling of strippedness when we contemplate the blank that is left by their removal. We ask ourselves the question who shall take their places? and while we wait and listen for an answer, we can hear—growing more and more faint—the echoes of our interrogatory. If these valued Friends had not, in early life, turned their backs upon the world, refused to listen to the seductive voice of pleasure and declined worshiping at the shrine of fashion, they would probably have been indifferent members of their meetings, been less respected in the community and known less of the real enjoyment of life. But when their intellectual ability and their strength of character were brought under the *right influence*, they were prepared for that prolonged course of religious labor which was so faithfully and so well performed.

How can we best cherish their memory and acknowledge their worth? The answer must be obvious—by endeavoring to walk in their footsteps, and to do those things which we know would have met their approbation:

"He mourns the dead, who lives as they desired."

THE ISLAND OF NANTUCKET.

AN enjoyable though brief stay at this quaint old place leads me to think that perhaps interest may be awakened by some description of it. Beyond my own observations, I am indebted to a valuable compilation relating to the history, agriculture, etc., of the Island, by E. K. Godfrey.

The island was discovered in 1602 by Bartholomew Gosnold. In 1641, William, Earl Stirling, and Sir Fernando, or Ferdinand, Georges, who appear to have had control of the islands lying to the south of Massachusetts,—"graunted unto Thomas Mayhew, at Watertoune, Merchant, and to Thomas Mayhew his sonne," several islands, amongst which was "Nanticon," or "Nantucket." The deed was dated October 13, 1641, as ascertained by F. B. Hough from official records at Albany, N. Y.

In 1659, in consideration of £80 and two beaver hats, Mayhew deeded the Island, reserving only one tenth, to the ten "original purchasers," viz:

Tristram Coffin,	Thomas Macy,
Richard Swain,	Thomas Barnard,
Peter Coffin,	Christopher Hussey,
Stephen Greenlief,	John Swain,

William Pile.

Each of the above chose an "associate," with whom to settle the Island. The number of Indians at this time was 700. The island was covered with oaks and other trees, the soil rich.

During the year 1688, the island was visited by an English Friend. Matthew Barney, (whom I have met several times), says "this is the first mention or knowledge we have of Friends, in connection with the history of the island." Others came after that; but little, however is known of them, except that they came on religious visits.

In Sixth month, 1698, Thomas Chalkley, the famous Quaker captain, merchant and preacher, (whom Whittier has celebrated in verse), visited the island, and in his journal says he was very kindly received by the people, and that he held several very large and acceptable meetings; previous to which he was questioned by their minister, why he, being such a young man, came here, and upon Chalkley's answering that it was "purely in the love of the gospel," "Then preach, in God's name, in my house tomorrow!" said the minister, and preach he did.

From that date up to 1704, several Friends, ministers and their companions, visited the island. It was during this year that Nathaniel Starbuck and his wife Mary were convinced of Friends' principles. Chalkley in his journal gives a very interesting sketch of Mary Starbuck, speaking of her as a woman of great energy of mind and true and strong Christian character. She and her husband were the first to become ministers from among the Friends on the island, and through their zeal and ministry a meeting was established and a meeting-house built. The meeting so increased in 1708 that a yearly meeting was commenced, and continued here for nearly seventy years, to which many Friends came from all parts including New England, New York and Philadelphia. John Fothergill, a minister, visited the island in 1706, 1722 and 1737. His son Samuel Fothergill came in 1755. During the twenty years above mentioned, over five hundred ministers and their companions visited the island.

M. Barney says: "I think during the first quarter of the century that the Society here on the island attained its greatest sway and power, religiously and numerically, and at one time composed at least one-fifth of all the inhabitants, numbering quite 1,400, having two houses of worship, where many also attended who were not members. The Friends were a respected and honored part of the community, and had an influence for good. They lived frugally and peacefully, and they gradually ceased to be aggressive in their way of spreading their views and principles. Theological speculation in some measure took the place of quiet faith; and a discussion of opinions, rather than a statement of true faith and belief, of sure hope and trust, broke in on the quiet of their homes and religious life, and many were bewildered, rather than really advanced in a Christian course by the claims that a greater light was dawning upon mind and conscience, which would dispel error and blind faith, or show that the Society had grown beyond and outgrown their simple tenets and would again arise in new and fairer beauty and power.

"But whatever may have been the desire and hope for a permanent good and blessing to the Society, all this tended to scatter and divide, as the years of the last half-century have witnessed, until but few remain among us; but the seed is not lost, for when any do go out from among us, they make the old leaven felt in the other Christian organizations to which they attach themselves."

Of the 1,400 estimated as the number of Friends of the first quarter of this century, probably not thirty members remain; and these meet in separate meeting-houses, scarcely three blocks or squares apart, and are known by the world as "Orthodox" and "Wilburite" Friends. I attended the latter meeting on Fair street, on Fifth-day last. About fifteen were present, but the Friend at the head of the gallery told me the size was largely increased by strangers from a distance. A period of profound silence for three quarters of an hour prevailed, when I made a brief offering. From the kindly manner indicated by being introduced to nearly all present I had no reason to apprehend any disunity with my testimony. On First-day last we attended the Orthodox Meeting on Centre street. Dr. R. H. Thomas of Baltimore appeared in supplication and testimony, to which I felt no dissent, but approval, and it was a season of Divine favor. As notice had been given, the usual number was much increased. At least thirty were present.

"Sankoty Head," one of the highest points upon the island, is situated at its extreme east end, and is the first spot seen from the ocean upon approaching. The celebrated lighthouse bearing its name is built upon this elevation. A superb view of the island and ocean can be obtained from its top. It is about one and one half miles from 'Sconset, and eight miles from the town. The law-abiding people here required no police for many years, but about three years ago one was established. Can the influx of strangers, and other than the "old-time usages" have required this? Some of the "old ways" remain. At nine in the evening, after the hour has been rung from the old Spanish bell in the gilded dome of the Unitarian church, the "curfew" follows, denoting the putting out of fires and speedy retiring. The public "criers" are still in vogue, and "Billy Clark" with his horn, and another man with a bell, announce items of interest, auctions, etc., moving with rapid pace through the streets and stopping frequently to proclaim their tidings.

Lucretia Mott was born at Nantucket, First month 3d, 1793, in a house which stood on the spot now occupied by the residence of Captain Obed Starbuck, on Fair Street. How many women and men of note might be enumerated who have had birth on this little strip of land, some thirty miles from the main

land! But the "waters" have not staid their influence for good, and they went forth in their generation, exercising other minds far beyound their natal surroundings,—the Coffins, Macys, Folgers, Husseys and others, with whom to be lineal descendants is no small privilege. But space will not permit further allusion. The healthful benefits of Nantucket are, as has been expressed, "as a voyage at sea, without its discomforts."

SAMUEL B. HAINES.

Sea Cliff Inn, 8th month 14.

[Our readers will doubtless recall in this connection an interesting series of articles on Nantucket, by Christopher C. Hussey, printed in the INTELLIGENCER AND JOURNAL, in 1886.—EDS.]

NEWS OF FRIENDS.

ILLINOIS YEARLY MEETING: NOTICE.

FRIENDS or others who contemplate attending the ensuing Illinois Yearly Meeting, and desire to be provided with homes, will please address the undersigned committee who will provide conveyances from Lostant, on the Illinois Central Railroad, (train time from the North, 6.20, a. m., and 1.40 p. m.; from the South 11.20, a. m.), and also from Henry on branch of the Rock Island Railroad, (train time from South between 9 and 10 a. m., from North between 4 and 5 p. m.)

The sessions of the yearly meeting open for business 9th mo. 17th. Meeting for ministers and elders on Seventh-day, the 15th, at 10 o'clock a. m.

MARY A. MILLS, Clear Creek, Ill.,
HENRY ATHERTON, Clear Creek, Ill.,
OLIVER WILSON, Magnolia, Ill.

—The funerals of Benjamin G. Foulke and Deborah F. Wharton both took place on Seventh-day last. The former, at Quakertown, Pa., was largely attended, the meeting-house, where the company gathered at 11 a. m., being full. Testimony was borne by Watson Tomlinson, Margaretta Walton, Harriet E. Kirk and J. Morton Albertson. The remains of D. F. W. were brought from Newport to Fair Hill, arriving somewhat later than the time appointed, and a meeting was held in the meeting-house, at which Samuel S. Ash and Henry T. Child spoke.

—At West Chester, Pa., on First-day, the 19th, John J. Cornell attended the morning meeting for worship, and was drawn forth in the ministry at length; in the evening he delivered an address on the views of Friends, at the meeting-house. He addressed himself mainly to the young people.

—A correspondent says: At Squan Meeting, N. J., on First-day, 19th inst., John H. Hillman, of Trenton, was in attendance and had somewhat to offer. The First-day School is held before meeting.

—The will of J. Humphreys McIlvain, of this city, lately deceased, amounts to $100,000, and numerous charitable bequests are made. They are as follows: his books to the Library Association of Friends, at Fifteenth and Race streets; to the Industrial Home for Blind Men, $1,000; Industrial Home for Blind Women, $1,000; Home for Destitute Colored Children, $1,000; Industrial Home for Girls, $500; Home for Aged and Infirm Colored Persons, $1,000; Pennsylvania Society for the Prevention of Cruelty to Animals, $500; Society for the Protection of Children from Cruelty, $500; Western Association of Ladies for the Relief and Employment of the Poor, $1,000; Philadelphia Society for Alleviating the Miseries of Public Prisons, $500; Northern Dispensary, $500; Friends' Home for Children in West Philadelphia, $1500; Friends' Charity Fuel Association, $1000; Friends' Boarding House, 1623 Filbert street, $5000; Children's Sea Shore House for Invalid Children at Atlantic City, $1,000. In conclusion, the testator directs that: "The residue of my estate shall be divided and paid to and among all the foregoing named legatees, including the charitable institutions and associations in the proportion or ratio of the sums bequeathed to them respectively."

—We are informed that Sunderland P. Gardner, of Farmington, N. Y., expects to attend the quarterly meetings of Burlington and Bucks, at Mount Holly and Falls, (on the 28th and 30th instant); and also Trenton particular meeting on First-day the 26th.

COMMUNICATIONS.

THE NEED OF MORE FRIENDS' MINISTRY.

Editors INTELLIGENCER AND JOURNAL:

As this welcome messenger came to me this morning I glanced over its "Contents" and was forcibly impressed with "Sermon concluded from last week," "A Sermon by Archdeacon Farrar." While I do not doubt that these contain much that is worthy of our highest commendation,—for truth is free and confined to no sect,—yet is it not a source of humiliation to us, who have claimed so much to look elsewhere for Gospel ministry? Are the days of Fox and Penn ended? Must we like others seek through an educated ministry to learn what truth is? Should we not either abate our declaration of Divine Revelation in the *present*, or rise to the standard of that which we profess?

If an educated ministry is what we need, let us have the independence to say so; and educate our youth for this special qualification. A government that fails to meet the needs of its subjects, or a church that cannot minister to the spiritual wants of its members, is of little value, and should cease to exist as a distinct organization. I am not willing to believe that this point is reached with us,—but it must be evident that if we would fulfill our mission in the world there must be more earnest labor to make ours, by the influence of the spirit, an *acknowledged Gospel Ministry*.

F.

Richmond, Ind., Eighth month 18.

[The remarks of our correspondent in regard to the need amongst us of an increase of strength in the ministry we earnestly sympathize with. No doubt there is this need; the absence of ministry or its weakness must be taken as evidence that the church itself is weak. But we think that no objection can lie to the printing of sermons like that of W. D. Ball, which is almost strictly confined to the life and labors

of George Fox, and certainly presents a sympathetic view of them, not only acceptable to Friends, but proving how his example may and does yet influence the religious world outside our Society.

And we also venture to suggest that the expression "professional" ministry might better represent the thought in our correspondent's mind. It is the ministry made a profession, an occupation, a means of livelihood, which Friends disapprove. That a person of education may be called to the ministry of course we all believe, and while his education was not provided in order that he might preach, it yet may add to the effect and influence of the message which he conveys.—EDS. INTELLIGENCER AND JOURNAL.]

THE LIBRARY.

THE "Proceedings of Friends' Union for Philanthropic Labor" at the meeting in New York in Sixth month last, have been issued in a handsome pamphlet of 132 pages. The papers read on various subjects: "Duties of Friends," Arbitration, Temperance, Corrupt Literature, Social Purity, Prison Reform, Education of the Colored People, Compulsory Education, and Indian Affairs,—are all printed in full, and there is a good synopsis of the business action, with lists of committees, etc. We can only suggest that the pamphlet would be more convenient of consultation if it had a list of contents, or an index, or both.

In connection with this notice we print the following note:

NEW YORK, August 13.

Editors INTELLIGENCER AND JOURNAL:

On page 106 of the "Proceedings of Friends' Union for Philanthropic Labor," our friend John J. Cornell is reported as saying that there were 21,000 charitable institutions in the State of New York. All who read will see at once that such a statement could not have been made. It is an error which the committee in charge of the publishing regret very much. What was said was that there are 21,000 *children* in the Orphan Asylums in the State. I trust you will print this, so that as far as in our power we may correct the blunder. Your friend,

J. WM. HUTCHINSON.

AT THE DOOR.

A HAND tapped at my door, low down, low down,
I opened it and saw two eyes of brown,
Two lips of cherry red,
A little curly head,
A bonny, fairy sprite, in dress of white,
Who said, with lifted face, "Papa, good night."

She climbed upon my knee, and, kneeling there,
Lisped softly, solemnly, her little prayer;
Her meeting finger tips,
Her pure, sweet baby lips,
Carried my soul with hers, half unaware,
Into some clearer and diviner air.

I tried to lift again, but all in vain,
Of scientific thought the subtle chain;
So small, so small,
My learning all:
Though I could call each star and tell its place,
My child's "Our Father" bridged the gulf of space.

I sat with folded hands at rest, at rest,
Turning this solemn thought within my breast:
How faith would fade
If God had made
No children in this world—no baby age—
Only the prudent man or thoughtful sage;

Only the woman wise; no little arms
To clasp around our neck; no baby charms,
No loving care,
No sinless prayer,
No thrill of lisping song, no pattering feet,
No infant heart against our heart to beat.

Then if a tiny hand, low down,
Tap at the heart or door, ah! do not frown;
Bend low to meet
The little feet,
To clasp the clinging hand; the child will be
Nearer Heaven than thee—nearer than thee.

—*Lillie E. Barr.*

LETTERS FROM EUROPE.—XXIV. FEATURES OF LONDON.

LONDON, July 6, 1888.

HORACE WALPOLE, perhaps a century and a half ago, characterized London as "a gigantic mass of littleness," and Besant in a late work describes East London where nearly half the population live, as a collection of "small, mean and monotonous houses." The southern quarter is about as mean as the eastern: the northern is somewhat better, and only at the west end do you find—and that in small number—the broad and lofty mansions that give an air of magnificence to the streets of continental cities. The reason is that whereas the continental cities being exposed to the hazards of war, were so built as to accommodate a large population in a small area, capable of being surrounded by defensive walls and works, the cities of England having long been exempt from any such danger have spread over a wide surface governed only by convenience, and consequently the houses are never tall. Even the mansions of the rich and noble seldom exceed four stories. So that in truth London is an enormous collection of small houses. Regent Street is perhaps the only one which any one would venture to compare with one of the many fine streets of Paris, and it would suffer greatly in the comparison.

Another circumstance which detracts from the appearance of London is the universal blackness that has settled upon the buildings. St. Paul's Cathedral, which is built of white marble and is not two hundred years old, is as black as anthracite coal, except where the rains in certain parts have kept it clear of soot. All the houses which are older than an old man look as if they had been washed with gas tar. The shading wrought by the prevailing rains upon the accumulating blackness sometimes produces beautiful effects. The modern structure which re-

places the ancient, Charing Cross, for example, looks like a mezzotint engraving.

The great public departments in London occupy detached buildings which mostly were the palaces of wealthy nobles. Only the Parliament Houses occupy a handsome building, and that is probably one of the finest in all Europe. It is in that style of architecture which dispenses with domes and columns, and finds in towers, buttresses, arches and a score of details of which I know not even the names, the elements of innumerable combinations of beauty and grandeur. By the side of such buildings as this, where every square foot is wrought with pleasing figures, and large surfaces are broken by buttresses or openings, the long columns and dead surfaces of Grecian architecture appear bare and poor.

The English take great pride in St. Paul's Cathedral. But the plan is borrowed from St. Peter's at Rome: a central dome supported on buttresses over the meeting point of the nave, transepts and chancel; and the likeness to its prototype suggests a comparison which is much to its disadvantage. It covers only about one-third the area of St. Peter's, and is yet the fourth church in the world in size, if not the third as the guide books assert, being excelled only by St. Peter's and the cathedrals at Milan in Italy and Seville in Spain. Like St. Peter's it has the façade of a Greek temple, and the swell of the great dome rising behind the straight lines and sharp angles of the façade is wholly incongruous. Every one admits the error in the case of St. Peter's, and St. Paul's falls under the same condemnation. Its interior is chiefly remarkable for the great number and elegance of the monuments it contains, for it is distinctively the mansoleum of warriors. Here lie Nelson and Wellington and hundreds of their kind. One of the latest perhaps is the tomb of "Chinese" Gordon, who perished at Khartoum. His life would be a profitable study and would shed light upon some of the mysteries of human nature. He had a heart as tender as that of a nursing mother. He loved to lead the sports of boys. Gold and silver were to him but dross. He burned at the recital of the horrors of the slave trade, and perilled his life to end them, and did it, though to accomplish this object he ordered the execution in cold blood a half a score of slave traders, and lost his own life, as probably he knew he would besides. The wonder is how such tenderness and such severity could coexist in the same bosom—such love and such cruelty.

Some of the monuments in St. Paul's, I venture to say, are in wretched taste. I would particularize that of Wolfe who fell at Quebec. His figure is the portrait of the man in the uniform he wore. He is represented as being raised from the earth by two figures. One a female angel with enormous wings raises his shoulders and his head falls forward upon his chest in the most natural manner possible. The other figure that of a naked man passes an arm under his knees and raises them. The two seem about to lift the body and carry it off the field. Of course the angel and the man are allegorical figures, but the unclad man in the presence of the woman and so coöperating with her that she must be aware of his presence is repulsive; and that allegorical personages should perform a feat of strength upon an actual body also seems to me contrary to the canons of natural good taste. An angel might be represented as carrying a man to the skies, because the man is there understood to be allegorical also,—a soul or spirit. But when he is on the battle field clothed in his uniform it seems impossible to reconcile the real with the ideal. There are many other incongruities and some quite as marked, though perhaps none so gross as this.

I wish I could give your readers some idea of Westminster Abbey, but this I could do only by photographs. It is like all great churches, in the form of a cross, the transept, or arms, being short and broad, and the nave or long member of the cross being comparatively narrow, though actually as broad as the transepts. On each side of the transepts and nave is a single row of pillars, taking off an aisle on either side. These pillars may be roughly described as four members bound together. They are, like all the building, of very dark red stone, and spring up to the height of a hundred feet, where the four members divide like the branches of a tree, and interlacing with similar branches from the opposite side form the ribs of a ceiling of great beauty. The head of the cross, which corresponds in construction with the rest of the building, contains the chancel of the church, and immediately behind the chancel is the chapel of Edward, "the Confessor," where the body of that Saxon king is entombed. Outside the chancel and chapel and between them and the outer wall is a passage way or aisle, and clustered against the outside wall, and entered by doors through that wall are seven chapels, the principal one of which, constituting a prolongation of the cross, is the chapel of of King Henry VII., claimed to be one of the most beautiful in the world. Here lie the bodies of the king, and of the three queens, his grand-daughters, Mary and Elizabeth of England, and Mary of Scotland, and sundry other royal personages; and more such personages are in the other chapels which I have spoken of. In all I count twenty-seven kings and queens of England, besides a king and queen of the Saxon Heptarchy. Nobles of State and Church are everywhere, and not the least famous of the occupants are those who lie in the south transept known as the Poets' Corner, beginning with Geoffrey Chaucer, Anno 1400. The opposite or north transept is mostly devoted to statesmen. But the rule of distribution is not strictly observed, for Joseph Addison lies in the chapel of Henry VII., while Anne of Warwick, the hapless queen of Richard III., is in Poets' Corner, as indeed is "Old Parr" whose age, stated on the stone as 152, is, so far as I know, his only title to distinction. "Poet" is a general name, including prose writers, for in this corner lie Macaulay, and Dickens, and Samuel Johnson, with others who wrote little or no verse. There are also some few warriors in Westminster Abbey, among them Major André under a monument given by the king in whose service he died. One of the figures on his monument is that of Washington, whose head has been three times surreptitiously carried away. Among the very few remarkable inanimate objects

in the Abbey is the stone of destiny, on which from the remote ages the kings of Scotland sat when anointed and crowned. It was brought from Scotland by Edward I., who temporarily subdued that kingdom and put to death its valiant defender William Wallace. But the superstitious say it was in consequence of this robbery that the Scottish kings, beginning with James I., attained the English throne, for they were bound to follow the stone of destiny with which the fortunes of their race were linked. It is now fixed in the seat of the old coronation chair in which the kings and queens of England have sat from Edward to Victoria. When one wanders through this building all English history seems to unroll itself before him.

In the Abbey religious services are held morning and evening every day, but only on Sundays are they largely attended; then the church is crowded. In the ritual of the Church of England a large space is given to what perhaps alone is strictly comprehended under the term "oral worship,"—that is supplication, praise and thanksgiving, and the two latter being after the ancient Jewish ways expressed in music, they are a source of attraction to many.

I took the opportunity of attending many different places of worship, and hearing some celebrated preachers. One of the first places I went to was Friends' meeting in St. Martin's Lane. It was in no respect different from Friends' meeting at home, except that the plain dress is entirely discarded. The tone, manner and substance of the spoken communications were just the same. The most recent census I have seen of the religious denominations of Great Britain states the number of Friends as under fourteen thousand. The preceding census gave, I think, eighteen thousand. The decline is rapid. That a religious body holding as I verily believe the Friends hold the central and vital doctrine of Christianity should be rapidly dying out, can only be explained by the existence of some essential defect in its organization. The greatest soul can do no work in this world unless it be embodied in a human tenement with human passions and appetites. It is possibly in the want of such an organization that the defect lies.

I was curious to hear some of the celebrated preachers, and heard a number, but observed nothing remarkable in their sermons. Those I desired to hear were remarkable more for their religious views than their manner, and of course their religious views could not tinge every sermon. The only one remarkable for his manner was Dr. Parker, who for a short time occupied the pulpit vacated by Henry Ward Beecher. His manner is peculiar and to me disagreeable. He mouths his words and contorts his features. He uses false emphasis, shouting out in thundering tones praises of tenderness and gentleness, and rolls about as he speaks. But every sentence he utters has an idea in it, plainly presented, and whether the hearer accept it or not he finds something to consider. It is not by vague and harmonious words that he holds the attention of his enormous audience through a long sermon. His church seats, as an official, told me 3,500 persons. Spurgeon I did not hear on this occasion. He was in bad health and was not occupying his pulpit. I heard him when I was in London six years ago, and found him a man of eloquence and thought. Nothing short of these could hold a congregation of 7,000 persons,—for such was the number of auditors his house was calculated to seat. He has recently had a difference with the council or representative body of his sect, and has withdrawn from the connection. Of course he carries his congregation with him.

One of the churches we attended was the Temple church, built in the year 1185 by the Knights Templar, a body of religious warriors, at once priests and soldiers, vowed to rescue the holy temple at Jerusalem from the Mohammedans. When the Crusades finally failed and the occupation of the Templars was gone, living in idleness they became corrupt to such an extent that their organization was suppressed and their possessions were seized by the kings of the countries in which they were located. By some it was said that the kings sought occasion against them only to seize their wealth and that the only evidence of their misdeeds was confessions extorted by the rack and thumb-screw. However that may be, the king took their property and gave their beautiful homes in London with their gardens and their church to two associations of lawyers, ever since and now known as the Inner Temple and the Middle Temple, who still possess and worship in this church. It is circular in form, after the model of the sepulchre in Jerusalem. The seats of the knights, or stalls as they were called, are around the walls, and all is as it was seven hundred years ago, except that the floor is occupied by pews. It is perhaps a relic of the times when the males of the audience were priests, that the women sit apart from the men, though the service is that of the church of England.

There is very considerable activity in the religious world. I think the trouble between Mr. Spurgeon and the Baptists arises from the advance of the latter on what he calls "the down grade." Open air preachings are frequent, especially by the members of the Salvation Army; but I heard in Regent's Park, a few days ago, a colored man in the unmistakable dialect of "Old Virginny," exhorting his hearers to flee from the wrath to come, when within the sound of his voice another man was demonstrating to a very small audience that there was neither God nor future life. I do not know what proportion of the population attend church, but in London the churches are well filled and very nearly if not quite half the congregation are men, which is far from being the case in our country.

NOTES OF A TRIP TO THE PACIFIC COAST.—III.

According to our itinerary we have but ten days in San Francisco, then we turn northward to Portland, Tacoma, and Seattle. Our route over the Oregon and California Railroad follows the Sacramento river and valley with its splendid scenery. The high mountain peaks of Shasta, Hood, Adams, Helena and

Jefferson, covered with snow, continue in view for two days; the first mentioned is an extinct volcano and we were told there are hot springs on its summit. We find this portion of Oregon very fertile and productive with a delightful climate. On account of unattractive hotel accommodations we spend but a short time in Portland. Leaving this city we ride for miles near the beautiful Willamette river, and crossing the Columbia we arrive in Tacoma on the evening of the 30th. This is a city of rapid growth; in eleven years it has risen from three hundred inhabitants to fifteen thousand. It was the first point touched by the Northern Pacific R. R. on the waters of the Pacific Ocean. It has an excellent harbor, capable of receiving the largest ocean-going vessels, which are loaded at the wharves with coal, lumber and other products of the region. Commencement Bay on the east opens upon the fertile hop-growing valley of the Puyallup, and beyond, in the near distance rises the grand form of snow-covered Mt. Tacoma, 14,444 feet high. During the excursion season parties ascend 11,000 feet without danger or serious fatigue. Here is an institution of learning for girls, called the Anna Wright Seminary, in honor of the deceased daughter of Chas. B. Wright of Philadelphia, ex-President of the Northern Pacific R. R., who has liberally endowed it. Daily steamboats run to Seattle, Port Townsend, Victoria and Olympia, and there is weekly connection with San Francisco by large ocean steamships. It has the largest and best equipped hotel on the Pacific coast north of San Francisco, and here we spend three days.

A day of interest is passed in Seattle, 41 miles north, which is the largest city on Puget Sound, and charmingly situated on a succession of high terraces. It is the centre of a complete system of steam navigation which embraces all the towns and lumbering camps on the sound. Educational facilities are provided by the Territorial University and fine public schools. The coal fields in the neighborhood are one of the chief elements which contribute to the prosperity of the town, and coal is brought to the wharves and shipped to San Francisco. Here we leave the familiar faces of the West Chester tourists who, though not identified with the Phœnix party, have pleasantly greeted us in many places, and in some instances accompanied us on the way. On the 2d, (of Eighth month), we start for Livingston, traveling nearly 1,000 miles on the Northern Pacific, and pass through the territories of Washington, Idaho and Montana. In crossing the Cascade Range we go through tunnels of ten minutes' duration and see the finest scenery in the country.

We get into the Yellowstone Park on the 7th day and prepare ourselves for the five days' tour. In this "Wonderland of America" there are the grandest geysers and boiling spings in the world. Some of these we find near our hotel, in the shape of the Mammoth Hot Springs, whlch have formed a series of terraces and rise one above another, covering no less than ten acres. The following morning we start early for some of the more distant wonders of the Park.

Passing through the Golden Gate, then to Gibbon Cañon, further on we see the Falls of the same name. Electric Peak, Obsidian Cliffs, and Devil's Slide were for a time conspicuous objects. Another day we visit the Mammoth Paint Pot, Fountain, and Excelsior Geysers, both of which we see in action. By noon we are at Upper Geyser Hotel, in the midst of the Geyser district, which covers an area of fifteen or twenty acres and where we find hundreds of these marvelous displays of hidden force. Our guide directs our attention to the Castle, Grotto, Lion, Lioness, Giantess, Turban, Sponge, Fan, Oblong, Mud, and Cliff; and the Bee Hive, which we see in action twice, is splendid, surpassing all. It sends up a volume of boiling water 200 feet high, which we are fortunate to see. From this point our stage takes us 40 miles to the Grand Cañon and Falls of the Yellowstone; on the way we ascend mountains 9,000 feet high from which we have one of the grandest views imaginable. When we walk to Point Lookout there opens before us one of the most stupendous and sublime scenes of nature, the Lower Falls 360 feet high and the awful Cañon of the Yellowstone. These Falls are not the grandest in the world but there are none more beautiful. There is not the breadth and volume of Niagara, not the enormous leaps of some of the waterfalls of Yosemite, but here is majesty of its own kind and beauty. The falls go perpendicularly into the gorge below and pass on into the Cañon which compresses the waters to a width of a hundred feet, and from this rise domes, pinnacles and cliffs of magnificent coloring, and as we stand gazing from a point hundreds of feet above we are oppressed with a sense of danger and linger with intense fascination on the spot. The Park embraces an area of 3,575 square miles, is situated in the Rocky Mountain chain and was set aside by act of Congress 1872 and devoted to the use and pleasure of the people. S. B. F.

Mammoth Hot Springs, Wyoming, Eighth month 9.

For Friends' Intelligencer and Journal.

A DAY AT NAHANT.

Leaving Boston for Nahant, we take the Boston and Maine Railroad for Lynn, and reach that famous shoe-making place in half an hour. We find it a rambling town of frame dwellings, irregularly laid out for the most part, the houses on one side of the street in some sections being without garden or footway, while on the other they have neat gardens and a well-curbed asphalt walk. Lumber and morocco are the chief industries, besides the special one of shoes. Taking a "barge," otherwise known as a stage, we ride along a beach that is a natural causeway between the mainland and Nahant. It is a well-watered solid road, and much driving is enjoyed along its course, both in family and hired teams. An occasional rounded rocky hill, with a villa perched upon its side, surprises our gaze, and the salt-air brings an invigorating freshness. We notice that the fences are made of stones of varied size and shape, but many of them are boulders rounded like our "cobble-stones," and the general effect is rather rough and insecure, contrasted with the massiveness of the material used. But it is a question of utility; the stones are there and must be disposed of to the

best advantage. We reach Nahant, a rocky peninsula in the sea, and ask for some directions. We wander toward the coast and listen to the scizzing of the waves as they come in over the long sea grasses, then see them suddenly dash high in air and break against the stones with a mighty resonance that both awes and calms the soul.

Now, as I sit on the porphyritic rocks, with the ocean in front of me, whirling and spouting among the boulders, a beacon-light on an island in the central line of vision, and on the shore, the summer home of Agassiz to my right,—what more could be desired in a landscape? Having visited the Agassiz Museum yesterday, and beheld the fruits of a portion of his labor—and having endeavored to comprehend and "enter into" the spirit of it, to-day seems crowned with thoughts belonging to his scene of action. We think too of our own "S. R.", whose easy grace of diction framed these scenes anew for distant eyes to see in mental vision. Low-roofed and broad and draped in vines, the summer home of Agassiz is modest and commodious.

A walk up the rugged path gave us a nearer view and we looked into the open window of a one-storied room whose roof was covered with blooming plants, and whose large writing table and simple furniture seemed to indicate that it had been the study-room of the Naturalist. A large photograph of Agassiz hung over the mantel.

Going around to the front we asked the gardener if any of the family now reside there, and he said, "Only Mrs. A.; she is here." A coach stood at the gate and we met a man coming with a choice design of flowers, evidently intended for the esteemed co-laborer of the honored dead.

Nahant is the retreat of many of Boston's prominent people, and they are blest indeed to have such a healthful and picturesque resort.

We left Nahant by steamer for Boston and passed the "Point of Peace," "Revere Beach," and many places of rugged beauty. Boston Harbor is so full of interest that we cannot now enter into a description of it; but we returned with a feeling of satisfaction that the afternoon had been well spent.

PELHAM HALF YEAR MEETING.

Pelham Half Year Meeting, held at Yarmouth, Ontario, on Eighth month 18th, was an interesting occasion to the many strangers there gathered from various parts of "the States," as well as to the members thereof who so cordially welcomed their "American" friends. The day was unusually pleasant, and this in addition to the commodious house, most beautifully located in a fine grove of native maple and beech trees, well filled with intelligent, warm-hearted people, was comforting and inspiring.

The public service, in the hour devoted to worship, devolved upon Isaac Wilson, of Bloomfield, Ontario, and David B. Bullock, of Salem, N. J. To many present the holding of a large meeting in joint session was a new experience, and the impression left was that of satisfaction and profit. The business was transacted with dignity and the attention was close and earnest. The reading and answering of the Queries, with the excellent Advices in the beautiful language of their revised Book of Discipline, was very impressive. Minutes were read, one from Green street, Philadelphia, for Louisa J. Roberts, a minister, and one from Shrewsbury, N. J., for Phebe C. Wright, an Elder; these were received with expressions of welcome, which was extended to the many strangers present without minutes, with equal cordiality. The Extracts from the late Genesee Yearly Meeting were read in part, and to these, as well as to the searching words of exhortation to diligence in the attendance of meetings, both from L. J. Roberts and Isaac Wilson, those assembled gave earnest heed. The session closed under a feeling of thankfulness for the opportunity granted.

The First-day meeting following the Half-Yearly meeting was very largely attended; some not being able to obtain seats remained outside in their carriages at the doors. The solemnity of the people was marked, and the opportunity a most favored one. L. J. Roberts opened the meeting by a brief but fervent prayer, which was followed by a clear and living testimony by Serena Minard to the perpetual presence of God and the nearness to us at all times of the Heavenly kingdom. But the discourse of the day was given through Isaac Wilson, who, with great power presented the spirituality and practical character of the religion taught by Jesus Christ. The delivery occupied nearly an hour and baptized the entire assembly. At the close the voice of thankfulness was heard from several full hearts, and the meeting closed in a solemnity felt to be universal. H.

If we traverse the world, it is possible to find cities without walls, without letters, without schools and theatres; but a city without a temple, or that practiceth not worship, prayers and the like, no one ever saw.—*Plutarch.*

There is nothing so delightful as the hearing or the speaking of truth. For this reason there is no conversation so agreeable as that of the man of integrity, who hears without any intention to betray, and speaks without any intention to deceive.—*Plato.*

Every attempt to make others happy, every sin left behind, every temptation trampled under foot, every step forward in the cause of what is good, is a step nearer to heaven.—*Dean Stanley.*

The broader a faith is, the more imperishable. It is the local that dies. This made Moses perish and his ceremony. Popes and kings and thinkers and soldiers have been destroyed because they loved the ideas of a day, but Christ is as powerful in the nineteenth century as he was in the first, because his principles were as broad as all centuries. The human family cannot outlive them nor migrate beyond them.—*David Swing.*

Peace follows virtue as its sure reward.—*Cowper.*

THE THREE AMERICAS PERMANENT EXHIBITION.

THE heartiness with which both Houses of Congress have dealt with the projectors of the "Three Americas Permanent Exhibition" that it is proposed to establish in Washington in 1892 as a part of the celebration of the discovery of America by Columbus, insures its success. While the subject was under consideration by the House Committee on Commerce Major J. W. Powell, director of the United States Geological Survey, was invited to address the committee on the archæological importance of such an exhibition. His remarks set forth more forcibly than has been done elsewhere the advancement to this branch of science that is likely to result from such an exhibition, and the importance of securing the material for it at once. The copious extracts given below will be found interesting:—

"The value of great national fairs or expositions has been abundantly shown by the history of such enterprises, alike in America and in Europe. A great national fair is a stupendous object-lesson in industrial civilization.

"The discovery of America is the event which it is designed to celebrate, and its importance is unparalleled in the history of human progress. At that time a continent was found peopled by savages and barbarians, who did not occupy the land, but who were scattered along the water-courses and shores in little tribes far distant from one another. In their ignorance the beautiful earth, with all its potential gifts for civilized man, was but a hunting-ground, a berry-patch, a tobacco-garden and a battle-field. But the discovery of this new world gave North and South America to the plough, the mine, the workshop, the highway and the market. A new world was delivered to civilized man as a theatre for new and highly developed industries, and, better than all, as a theatre for new and highly developed institutions, founded upon principles that recognize a wider liberty and more just equality, and a fraternity that embraces a greater scope of imperative duties than had previously been recognized in the history of man. This great gift to mankind was not the result of accident through the drifting of tempest-tossed sailors from far-off Asia to the golden strands of the West; it was not the gift of chance through the wandering of barbaric Norsemen to the bleak lands of the northeast coast. Civilization discovered America by the light of science. Columbus, a great scholar, a scientific investigator, a man whose insight penetrated to the great secrets of nature in the light of the science of his time,—which was indeed but dim,—by means of one of the grandest scientific inductions in history, accepted the conclusion that the earth is a sphere, and with a sublime faith in scientific inductions he sailed into an unknown sea, inhabited by the monsters of mythology, and beset with the dangers of superstitious credulity, and through this ignorance he sailed away until he discovered the new land; and the inductions of science were verified by the appearance of continents and islands, from which great mountains reared their tops into the heavens. There, too, great lakes were found whose billows were destined to rock the commerce of many peoples, and there great rivers were revealed upon whose turbulent currents the navies of industry now ride. To celebrate the discovery of America by Columbus is to celebrate the greatest event of human history.

"But it is not my task to speak of the value to civilization of the proposed exposition, nor of the importance of the event which it is designed to celebrate; nor even to show that such a celebration would be signally appropriate to the people who are the chief beneficiaries of that great scientific discovery, but simply to set forth the extent to which the great exposition may be made interesting and instructive to the people by making an exhibit of the archæology of the New World.

"The *débris* of forgotten culture of the world was long held to be refuse, unsightly and loathsome; but the time has arrived when this refuse of uncultured man is esteemed by the enlightened man as the priceless relics of antiquity. The ruins of an ancient city that were worthless a few decades ago, are, by the processes of modern investigation into the history and growth of human culture, transformed into values that nations covet; and civilized men are everywhere throughout the world engaged in exhuming from the ruins of ancient cities the treasures of history. Societies are organized for the collection of the material, and colleges and universities are engaged in its investigation, and the libraries of the world are daily enriched with the volumes of this new learning.

"The events of history that are recorded by contemporaneous writers are colored with prejudice and blurred with ignorance; but the records that are preserved in the imperishable works of man are not tainted with baneful inspiration and false statement, but tell the truth, and nothing but the truth. In the past, history was the theme for literary explorations; in the present, history is the theme of profound investigation; and history has become a science because it is founded upon archæology. It is thus that the ruins of a temple, a tower buried in its own *débris*, an inscription on a rock, a bronze spear, a stone knife, or a potsherd, has a value. A mound or a monument is a volume of history, and a ruined city a great library.

"The people who were found in America, the tribes of savages and barbarians, are rapidly being absorbed among the people of civilization. Their history was written; their artisans, their warriors, their statesmen and their poets are forgotten; but the vestiges of their history, their archæologic records, are widely scattered. They are found buried in ruined towns and villages; they are covered by innumerable mounds of earth that were built as sites for their council houses, as places for worship, and as cemeteries for their dead; they are found in countless stone-walled graves; they are found in innumerable refuse-heaps, the *debris* of the kitchens of the savage man; they are found in every ploughed field and on every hillside, and scattered over every mountain; and from these sources they must be taken, if we are to reconstruct the ancient history of Amer-

ica. But every dust-laden breeze buries them deeper, every storm of sand serves to hide them more effectually; the furrowing of every field is an agency for their destruction; the working of every road, the construction of every railway, the erection of every building, makes these relics rarer and more valuable; and ere they are lost I beg they may be secured. The whole civilized world is interested in their collection and preservation, and the people of other lands are gathering and carrying them away by cargoes to enrich the museums and the great universities and splendid capitals of Europe; while in America only a few quiet students have become interested in these materials of American history, and until within a few years we have been almost wholly neglectful of things which by time are becoming more and more valuable.

"The wealth and variety of the materials of American history are but little appreciated. The people who inhabited the American continent before its discovery were not all of one race, but of many. In North America alone there were more than seventy-five distinct stocks, having radically distinct languages and mythologies, having independent and diverse institutions, and having diverse and multifarious arts. At the north we have the igloo-dwellers that live by the shores of the frozen seas; farther to the south we have races occupying dwellings made of forest timber; other races wove their habitations of reeds; others built their towns of the clay of mother-earth; and others erected their buildings of stones quarried from the cliffs; while still others hewed themselves habitations in the solid rock. Some dwelt on towering and almost inaccessible cliffs, while other towns were erected among the crags and cinders of extinct volcanoes. Some races were hunters, other races were fishermen, still other races were agriculturists. Some races worshiped the sun, and moon and stars, and the gods of the cardinal points; other races made the mountains and the rivers the object of their principal worship; and all worshipped strange mythologic beasts. All of the tribes were organized into bodies politic as bodies of kindred, but the method of organization was multifarious. Many tongues were spoken: harsh consonantal and guttural languages were found in the cold climate of the extreme north and south, vocalic and musical languages were found in the sunny lands of the middle zones. Everywhere the tribes had learned to use picture-writing, and to record events with pictures of men and beasts and many conventional signs. They made tools and implements of stone and bone and shell and horn and wood. They made canoes and boats of bark and logs, they made rafts and basket-boats of weeds, and they made kayaks of skin; and in such craft they navigated the rivers, the lakes and the seas. The relics of all these mythologies, religions, institutions, languages and arts, must be recovered, if we are to preserve the ancient history of America; and the work must be done soon.

"It is possible to make the four-hundredth anniversary of the discovery of America an occasion to collect and preserve the ancient history of the country, to gather the materials of its archæology, and to put them into one grand international museum at the seat of government of the United States. No other enterprise in connection with such an American exposition would interest the people more, and no other would be more instructive; and it is proposed or suggested by the Citizens' Committee that a great archæologic exhibit be made, and that each nation in North, Central and South America be invited to contribute its quota to this great museum. The erection of an appropriate building for this purpose, indestructible by fire, and of sufficient magnitude for the instalment of so great a collection, would cost about five hundred thousand dollars. The archæologic materials to be found within the territory of the United States are in part, but only in small part, collected and now in the National Museum; and the time is all too short for the completion of this collection, yet by beginning soon it might be well done.

"Such, in brief, is the plan which I was requested to present to you by the Citizens' Committee. It is no less than to collect and put on record for future generations the priceless records that constitute the history of all the native American races. If this can be done, it will be a monument to these native peoples, erected by the invading and conquering and civilizing nations, worthy of Aryan power, and worthy of Aryan culture."—*Science.*

DEEPENING.

We need deepening in too many ways to mention. We need it in the common ordering of daily life. We need to return, so far as we can, to the simple and unconventional ways of living of our forefathers. "Plain living and high thinking" are not impossible, even in this elaborate, artificial period. Some of the best, the most admirable, the most delightful men and women manage to live simply, heartily, hospitably, fearless of Mrs. Grundy, and free from the trammels of bric-à-brac and display. Would that they were the majority! We need deepening in forming a force of purpose in life, and steadily holding to what is clear to us in our highest vision is both reasonable and sacred. If we believe in the coming kingdom, when man will *give*, not *take*, we should be ashamed of ourselves for not doing what we might to bring that kingdom in.

We need deepening in sympathy. Shut up in self, we are blind to the woe that is the average lot. We can do but little to lessen our own anguish, as sooner or later it threatens to engulf us. But there is no limit to what we may aim to do for others' relief. The one best fitted to make home happy—the first step toward making the world better—is he who has a "thorough, hearty and joyful confidence in the providence of God, who really believes and knows how joyously to declare the fact of an infinite loving kindness and tender mercy. . . . This great central confidence and hope manifested itself in many ways and qualities called by other names. It gives a man courage, confidence, sympathy for others, equable spirits, and a steady inspiration."

Deepening in judgment of others, in simple living, in life-purpose, and in sympathy, will not fail to result, if not in happiness, in blessedness, which is still better.—*Eliz. P. Channing, in Christian Register.*

STRENGTH, OR FINISH.

Two men I knew :
One rudely wrote the score
Of sacred tones ;
The other, with a skill that men
praised more,
Carved cherry stones.

They both are dead :
The anthem now upswells
From those rude tones ;
But all that now the other's glory
tells
Are cherry-stones.

Bloomfield, N. J.

Editorial Correspondence Friends' Intelligencer and Journal.

FRIENDS IN CANADA.

AFTER a brief rest at Chicago, a few family and social visits of a strictly private character, I am again in the comfortable sleeping car, this time the "Wagner," where everything a reasonable traveler can ask, except ventilation, is furnished; even the sanitary conditions, if these can be separated from fresh air, are found as nearly perfect as our present knowledge of sanitation calls for. Will not some one of our young inventors seeking new fields of conquest turn his thought to this important subject, and make the tiny compartment that has become a necessity of modern travel all that tired nature craves in seeking its "sweet restorer, balmy sleep." The route chosen is by the Michigan Central Railroad. Leaving Chicago a little after 10 p. m., we move slowly out into the darkness, and in the trust and confidence that hope sustains, we are soon oblivious of danger or distance. As the train comes to a halt at Albion, 190 miles away, the morning is already awake, and struggling through closed shadows the sun smiles a greeting upon the welcoming landscape.

And the landscape we find a great contrast to the great abounding West with its single fields of luxuriant corn, larger than whole farms that are here divided into dainty patchwork, showing all the colors that make glad the heart of the husbandman, as he stands in the shelter of his own roof-tree, and looks abroad upon what the labor of his hands, blessed by sunshine and shower, has wrought. Here are patches of golden heads waiting the ingathering, separated by lines of wooden frame work from the snowy buckwheat, with its delicate aroma, inviting the industrious bee to "lend a hand" in the perfection of its mission; another seam joins it to the rustling Indian-corn that waves a tasseled coronet to its sweet and lowly neighbor, and would join hands with its friend on the other side, the bowing millet, only the wooden rails come between. Then there are pastures where sheep and cattle browse contentedly, and orchards bending under the weight of rosy cheeked apples, and the woodland, remnant of forests that once covered this midland section, all pass rapidly by as we steam along towards Jackson and Ann Arbor, old familiar towns of lower Michigan, but giving little hint from the windows of a car of their size and importance. This is especially true of Detroit; from the unsightly approaches to the river crossing one gets no idea of what a beautiful and attractive city it is. The cars are run upon ferry boats, and we cross the St. Clair to find ourselves in a foreign land, subject to the espionage of the custom-house officials of "Her Majesty." They are courteous in the performance of their duty and cause little detention.

As we pass along through the deep forests and the open country, where in many places huge stumps "extracted" from the soil form dividing lines between farms, we are reminded of what toil the adventurous settler had to bestow upon his fields, and what skill it must have required to drive the shining plowshare into the virgin soil without striking the stumps which in that early day must have been a great hindrance to successful farming in these heavily wooded sections. Much land is still being cleared; many of the stumps remaining in the older clearings are of immense size. The face of the country on the Canada side presents little variation from what we see in Michigan. There seems less hurry; people allow themselves more time and do not rush to meet trains as we appear to do, or run the risk of losing their lives in getting on and off at the stations.

St. Thomas, our point of destination, is reached in due time, a little past noon on Fifth-day. The change from central to eastern time which one encounters in coming from Chicago eastward, is confusing to the occasional traveler. Looking up at the two clocks that hang side by side in the waiting room of the St. Thomas Station, one is surprised to see both running, and yet the difference of an hour between them. Which is right? is the first thought, then he remembers or is told by the courteous traveler at his side one represents the hour by central time the other by eastern time, and going east or west from the station is regulated by that rule.

At St. Thomas friends are waiting with ample means of conveyance, to take the delegates to the General Conference of First-day Schools, and Friends coming to Pelham Half-year Meeting, to Sparta, where their meetings are to be held, distant ten miles or

more from the railroad. The afternoon is most delightful, and the roads smooth and mostly level. The face of the country indicates abounding fertility and the large, well-built farm-houses indicate successful farming. Barns and out-buildings are ample, and one is ready to couclude, this must be a very garden spot for the industrious and intelligent Canadian farmer, which further acquaintance fully realizes.

Some who arrive at noon go all the distance at once, and others only part way, leaving the rest of the journey to Sparta to be made early the next morning. Among the latter was your correspondent who, failing to make connection with the *one* who was to be her companion for the rest of the journey, was content to bide the time in the quiet of a fine old homestead, where generous hospitality of genuine Quaker stamp, made all who entered its portals at home. The social intercourse here, as elsewhere among Friends of the Province of Ontario, indicates a warm feeling towards "the States," and an earnest desire for closer bonds in civil matters, some advocating union and others separate government with reciprocity; not one, so far as I heard, being in favor of continuing the present relations with Great Britain. And indeed one would not think it strange that these our close neighbors would want to share equally with ourselves the overflow of our great and abounding plenty in exchange for the rewards of their own skill and labor, without the onerous duties that now make that exchange oppressive to the industries of both sections. On Sixth-day morning the roads leading to the meeting-house of Friends at Yarmouth were lined with well-freighted vehicles of every description en route for the Monthly Meeting, which was held at 11 o'clock. Those who composed the select preparative meeting had started early, as it was held at 9.30. Your correspondent having been cordially invited to attend was glad to accept, and notwithstanding it required an early start and was a good part of the way through a heavy shower, the carriage, well provided with curtains, with the leather apron in front, afforded ample protection to both occupants.

It had cleared by the time we reached the meeting-house, and the weather continued fine until all the meetings had been held. A very general mistake prevails among Friends in the "States" in regard to the location of this meeting-house, which it may be as well just here to correct. The house is near the town of Sparta; the name of the township is Yarmouth, in the province of Ontario. All who came not previously instructed asked for the town of Yarmouth, whereas there are several towns in the township which embraces an area of twelve miles, as I was informed. The name of the Monthly Meeting is Norwich, composed of several preparative meetings and one small indulged meeting. It is the custom to hold this Monthly Meeting in connection with Pelham Half-year Meeting, when it occurs at Sparta, as it favors a more general attendance of both. The select meeting was very small, but a season of profitable thought and inquiry, a fitting preparation for the larger assembly which gathered into silence as near the hour appointed as is practicable among people who have such long distances to travel in their own conveyances. The testimonies handed forth were of a practical character, calculated to strengthen and build up the spiritual life, and were listened to with close attention. In the business meeting which followed, four queries only were answered, but all were read as they occur, also the advices. They have a very pretty custom here of both clerks rising and standing while the query with the responses was read. The delegates appointed by the several preparative meetings to attend also rose and remained standing until all had been called. There was little other business transacted except the appointment of representatives to the Half-year Meeting. Many expressions of interest in the proceedings of the meeting came from visiting Friends, to whom the participation of the younger members in the affairs of the church was a most encouraging feature.

At three o'clock the Select meeting of the Half-year meeting called together again the ministers and elders, and Friends from other meetings entitled to a seat in that body. The routine of business was the same as in the preparative meeting. The answers to the queries show a degree of faithful effort in the several matters queried after that was very encouraging and helpful. The names of three newly recorded ministers were reported. These were James Zavitz, Samuel P. Zavitz, and William Cornell, the two former of Lobo and, the latter a resident of Sparta and clerk of the Select meeting.

On Seventh-day, the 18th, Pelham Half-year Meeting convened at 11 o'clock with a very large attendance, and an increasing interest. All the delegates of the F. D. S. General Conference, with many others who accompanied them, representing six yearly meetings, were present, Illinois, only, failing to respond to the call.

The exercised Friends engaged in the ministry of the Word on this occasion, were favored to hand forth as ability was given the message of "peace and good-will" that came to the world with the coming of the blessed Jesus. The "diversity of gifts" met the diversity of wants, and the one Spirit that sanctifies and unites in the bond of Christian fellowship, ruled over all: under the precious cover of this overshadowing the meeting closed. The business meeting that followed was mainly a repetition of what had taken place on the morning previous. This Half-yearly Meeting is composed of Norwich, Pelham, Battle Creek, and an indulged meeting held in Malahide township.

Many of the representatives were absent, a few only sending excuses. Let me just here offer a word of encouragement to those who are appointed representatives to any of our meetings, and who find it to be out of their power to attend, to send some word to the meeting, giving a reason for their non-attendance. This would give evidence of their interest in the appointments, and add to the value of the meeting, which so largely depends upon the faithfulness of those holding appointments therein.

Minutes for Louisa J. Roberts, a minister from Green Street Monthly Meeting, Philadelphia, Pa., and Phebe C. Wright, an elder from Shrewsbury Monthly Meeting, New Jersey, were read. The

presence, without minutes, of David B. Bullock, a minister from Salem Monthly Meeting, and Isaac Wilson, a minister of Bloomfield, Ontario, besides several elders from the various meetings represented by the delegates to the General Conference, were welcomed equally with those who brought minutes of unity, and a cordial invitation was extended to all to participate in the business of the meeting.

But the great occasion of all, in which is centered the interest of the whole neighborhood, is the First-day morning meeting, at which people of all shades of religious thought from far and near, come together. The large house, which has partitions that divide it into three audience rooms, was thrown into one, and every bench and seat on the premises called into service to accommodate the throng that gathered, which must have numbered not far from 600, and the outpouring of the people was but a prelude to the outpouring of the Spirit which followed. The silence was broken by Isaac Wilson, whose testimony was a clear and convincing exposition of "salvation by Christ" as held and believed in by our branch of Friends. The persuasive eloquence of the speaker, and his loving entreaty to all who had not known this salvation,—all who had wandered from the "Father's house," to return and accept the offers of his love, will not fail of its purpose in giving hope and comfort to many inquirers. Other testimonies were offered, and the voice of praise and thanksgiving ascended in grateful acknowledgment to the Father of all our sure mercies, for the evidences afforded of his presence in our midst.

In the afternoon the First-day school held a session in which several of the workers from other yearly meetings took part. This was followed by a meeting of the young people, in which they participated, many giving utterance to their hopes and aspirations, and to the help they had received through the ministrations of the gospel of which they had been partakers. This was a most precious and baptising season, that will not be without fruit in the time to come. There is an awakening among the young members of this meeting and a willingness to share the duties and responsibilities of its service, that is very promising. No where else, perhaps, within our borders, is this so marked a feature. It recalls the experiences of the olden time, when so many who were young in years were called to the work of the ministry, and gave abundant evidence of divine appointment. That some such revival has had its beginning in the meetings just held, is very apparent; that it may spread throughout our whole heritage, is the prayer that arises from many who like Simeon of old, are waiting for the consolation of (our) Israel.

On the following evening Isaac Wilson had an appointed meeting at the village of Union about four miles distant, which was well attended.

L. J. R.

Sparta, Ontario, Eighth mo. 20.

There are two things needed in these days: first, for rich men to find out how poor men live; and second, for poor men to know how rich men work.—*Edward Atkinson.*

For Friends' Intelligencer and Journal.

THE CENTENNIAL ANNIVERSARY AT PLAINFIELD.

The Centennial Anniversary of the erection and occupancy of Friends' Meeting House, Plainfield, N. J. was commemorated Second-day afternoon, Eighth month 20, 1888.

The exercises, all of which were exceedingly interesting, being characterized by careful research and deep thought, were listened to by a large, appreciative audience, many of whom though not Friends by *name* entertain a respect and veneration for our Religious Society because its faith was that of their ancestors.

Several Friends from other meetings were present, and the serene, happy faces of many who were nearing or had passed four score years lent a charm and grace to the time-worn galleries; perhaps the oldest of these was our friend Catherine Laing, aged 92. The absence of a former valued member of Plainfield Meeting was noted and regretted, Catherine Vail, having been prevented from attending by a recent severe fall. Soon after the meeting convened Judge Nathan Harper was named as presiding officer, and the exercises were opened by the reading of the 90th psalm. Judge Harper's "Historical Sketch of the Meeting House, its erection and occupancy," followed this was an able document, copious extracts having been taken from the minutes of the Monthly Meeting covering a lengthened term of years. The first marriage recorded in the minutes after the removal of the seat of government of the Province of East Jersey from Elizabeth Town to Perth Town now known as Perth Amboy, was that of Miles Forster and a daughter of the Deputy Governor, Gawen Lawrie. The Meeting held in that section of New Jersey was virtually broken up for a period of fifteen years, owing to the unwise controversy and overbearing disposition of George Keith an active member of the Society, and Surveyor General in 1687.

From this interesting sketch we were informed the Society survived this ordeal, and Friends assembled next in the house of Nathaniel Fitz Randolph, from 1704-1713, when mention is made of a meeting-house. Later, Friends assembled at the house of John Laing not far from the present city of Plainfield, and in Fourth month, 1731, a committee was appointed to manage the building of a meeting-house in the Township of Piscatany on land given by John Laing; this was known as Plainfield meeting which continued on that site twenty-nine years. The committee appointed to have oversight of the building of the *new* meeting-house whose venerable structure has stood the test of a century, reported, as noted on the ancient minutes, that the cost was £523, 16s., 3d., with a balance due the meeting of £1 14s. 2d. The massive timbers bear marks of the rude implements used by workmen of one hundred years ago, but give evidence of strength to defy the storms of *another* century. Among the many notable objects that arrested the attention of the stranger were the wooden pegs arranged at uniform distances over the gallery seats, intended for the convenience of ministers and others who thus found a safe place for

the removed hat or bonnet, and by the keen discernment and quick fulfillment of the thought on the part of an aged Friend, two of these time worn pegs were soon honored by representative bonnets. The early Friends of Plainfield and their ancestors were described at length in "Biographical Notes of the Early Friends of Plainfield," prepared with care by the city clerk, Oliver B. Leonard. Among the numerous names of ancestral fame and honor, that of Vail was pronounced the *leading* one in the *number* bearing it.

"Women in the Society of Friends," a well written paper, was read by its author, Elizabeth R. Lafetra, and followed by an original poem from the same.

A pleasant feature of the occasion was the receipt of a congratulatory telegram from the First-day School General Conference in session at Yarmouth, Ontario, Canada, this was read by Aaron M. Powell previous to his admirable paper, entitled, "Past and Future of the Society of Friends." A distinguishing feature of the last paper was the able and convincing manner in which the requirements of our Dicipline as presented by the several Queries were brought prominently to view, each was dwelt upon with a newness and force which we are not accustomed to hear.

Remarks were freely made by Robert S. Haviland, George W. F. Randolph, Rev. A. H. Lewis, and Mary Jane Field. Though more than three hours were passed in a well filled meeting-house whose old-style windows could not supply the much needed air required on that summer day, thoughts of discomfort gave place to continued, earnest desire to hear whatever was uttered, and the feeling was that entire success had rewarded the well directed efforts of the the Committee of arrangements. An original poem by Edward N. Harned was read, and the concluding of the program was a reading by Anna Rice Powell, of Whittier's, "Quaker of the Olden Time."

A plain shingle tacked to the front of the building bears the inscription,

"1788,"

and as the happy company gathered in social groups upon the green in front of the ancient structure, this *sure* emblem of the past spoke an unmistakable language. May it remain unharmed by Time, until the years of *another* century have performed their circuits. A. C. D.

Philadelphia, 8th month 27.

It is surprising how practical duty enriches the fancy and the heart, and deepens the affections. Indeed, no one can have a true idea of right until he does it, any genuine reverence for it until he has done it often and with cost, any peace ineffable in it till he does it always and with alacrity. Does any one complain that the best affections are transient visitors with him, and the heavenly spirit a stranger to his heart? Ah! let him not go forth on any strained wing of thought in distant quest of them, but rather stay at home and set his house in the true order of conscience, and of their own accord the divinest guests will enter.—*J. Martineau.*

ON THE EDUCATION OF THE COLORED PEOPLE OF THE SOUTH.[1]

I consider that it would be rash to say that any other social or public question in the United States is second to that of the Education of the Colored People. The dangers that threaten the country from intemperance, from unrestricted immigration, from the subjection of our industries to foreign control and the depression of our working people to foreign conditions—no one of these, serious as they all are, appears more full of the elements of evil than that presented by an immense mass of our citizenship, ignorant, and without adequate means of instruction.

I said "without adequate means of instruction." If this seems an expression too sweeping, let us see how much it must be qualified.

It was the Census of 1880 which caused alarm to those who comprehend and care for the steps which the nation takes toward good or evil. The figures then collected showed that instead of making progress in education, many States were retrograding. In most of the South, illiteracy, instead of losing, was gaining ground. The number of persons who could not read had increased in at least ten States, and in the worst of them,—South Carolina,—the percentage of this class was upon the very verge (48.2) of one-half. You will appreciate the alarming character of this figure when you consider that the illiteracy of the whole of the Northern States is under 5 per cent. —in Pennsylvania 4.6, in New York 4.2, in New Jersey 4.5—in exceptional States like Iowa and Nebraska under 3 per cent. Comparing Iowa and South Carolina, the illiteracy of thelatter is as 20 to 1.

It needs no argument to convince any one that the nation cannot endure such a burden as this. No free government can maintain itself, when, in large communities, nearly half of its people over the age of ten are unable even to read.

It was a surprise that in the decade between 1870 and 1880 more ground had not been gained. The disposition in the South generally had become less unkindly to the public schools, and the ability of the people to support taxation had increased. A vast number of voluntary institutions,—from schools of primary grade up to the rank of colleges,—had been put into operation. The distribution of aid from the Peabody and Slater Funds, and perhaps other private benefactions, had been systematically maintained. With all these agencies at work, a diminution of the frightful burden of ignorance had been hopefully anticipated, and the failure to realize it was naturally a disappointment.

But no one need be surprised that illiteracy in the South is slowly, very slowly, overcome. The forces at work against it are inadequate. Consider for a moment the chief of them, that on which always the chief labor must fall, the public school system. Looking at our system in the North, the product of more than half a century's assiduous and sympathetic care, supported by large revenues and cheerfully borne taxation, we are yet conscious
